Free Library 26 Dec 12

VITAL BOOKS ON TIMELY TOPICS

THE SUPREME COURT AND THE CONSTITUTION

By CHARLES A. BEARD

Author of "American Government and Politics," etc.

A concise consideration of the charges made in regard to the usurpation by the Supreme Court of powers not granted in the Constitution.

Cloth, $1.00 net; postpaid, $1.10.

THE TARIFF IN OUR TIMES

By IDA M. TARBELL

Author of "The History of the Standard Oil Company," etc.

The story of the strenuous fighting during fifty years of tariff making; a narrative of big interests and industrial movements.

Cloth, $1.50 net; postpaid, $1.63.

GOVERNMENT BY ALL THE PEOPLE

The Initiative, the Referendum, the Recall as Instruments of Democracy

By DELOS F. WILCOX, Ph.D.

Author of "The American City," etc.

A timely exposition of the arguments in favor of the initiative, the referendum, and the recall as practical and effective instruments for establishing popular self-government, with a careful consideration of the failure of the old system of checks and balances.

Cloth, $1.50 net; postpaid, $1.63.

THE NEW DEMOCRACY

By WALTER E. WEYL, Ph.D. *THIRD EDITION*

Political and Economic Tendencies in the United States.

"The best and most comprehensive survey of the general social and political status and prospects that has been published of late years."—*The Pittsburgh Post.*

"A strong analysis of the whole subject. It will be read widely and will exercise a large influence."—*The Evening Mail.*

"A masterly, scathing, and absolutely fearless arraignment of things that ought not to be in a republic, and of tendencies that no democracy ought to tolerate,"—*Boston Herald.* *Cloth, $2.00 net; postpaid, $2.12.*

CONCENTRATION AND CONTROL

A Solution of the Trust Problem in the United States

By C. R. VAN HISE

President University of Wisconsin, Madison, Wis.

An indispensable work for all taking part in the Presidential Campaign, as the most important problem confronting the people is the control of the trusts. Condenses all recent information relating to the trust situation. *Cloth, $2.00 net; postpaid, $2.24*

MARCUS ALONZO HANNA

His Life and Work

By HERBERT CROLY

Author of "The Promise of American Life."

The complete story of Mark Hanna's life, and his extraordinary career as an archetype of the business man in politics.

Illustrated. Cloth, gilt top, $2.50 net; postpaid, $2.70.

THE WISCONSIN IDEA

By CHARLES McCARTHY

"A great feat, which deserves the careful study of every true reformer."—*Chicago Record-Herald.*

Explains State regulations of railroads, public utilities, the referendum, the recall, primaries, etc., as identified with the famous "Wisconsin" development.

Cloth, $1.50 net; postpaid, $1.62.

SOCIALISM AS IT IS

By W. ENGLISH WALLING

A Survey of the World Wide Revolutionary Movement

"Not mere theories, but the actual material of present-day politics."—*New York Globe.*

Cloth, $2.00 net; postpaid, $2.13.

IMPORTANT SOCIOLOGICAL WORKS

MOLL

THE SEXUAL LIFE OF THE CHILD

By Dr. ALBERT MOLL. Translated by Dr. EDEN PAUL.

Introduction by Prof. Edward L. Thorndike, Columbia University, N. Y. C.

Facts for earnest men and women, parents and teachers, concerning the growth and the moral and spiritual welfare of children, through the gradual development of the sexual life with its attendant dangers.

Cloth, $1.75 net; postpaid, $1.89.

ADDAMS

A NEW CONSCIENCE AND AN ANCIENT EVIL

By JANE ADDAMS *FOURTH EDITION*

"Miss Addams's volume is painful reading, but we heartily wish that it might be read and pondered by every man and woman who to-day, in smug complacency, treat with indifference and contempt the great struggle for social purity."—*The Nation.* *Cloth, $1.00 net; postpaid, $1.10.*

Published by **THE MACMILLAN COMPANY** 64-66 Fifth Ave. N. Y.

The Nation

A WEEKLY JOURNAL.

FOUNDED IN 1865.

[*Entered at the New York City Post Office as second-class mail matter.*]

The Nation is published and owned by the New York Evening Post Co. Oswald Garrison Villard, President; William J. Pattison, Treasurer; Paul Elmer More, Editor; Harold deWolf Fuller, Assistant Editor.

Three dollars per year in advance, postpaid, in any part of the United States or Mexico; to Canada $3.50, *and to foreign countries comprised in the Postal Union* $4.00.

Address THE NATION, Box 794, New York.
Publication Office, 20 *Vesey Street.*

Educational

The Western Theological Seminary

N. S., Pittsburgh, Pa.
Founded by the General Assembly, 1825.

A complete modern theological curriculum, with elective courses leading to the degree of B D Graduate courses of the University of Pittsburgh, leading to degrees of A M and Ph.D., are open to properly qualified students of the Seminary. Exceptional library facilities—34,000 volumes. A new dormitory, equipped with latest modern improvements, including dining room, gymnasium and social hall, is now ready for occupancy. Next term opens Sept. 17, 1912 For information apply to Pres. James A. Kelso, Ph D., D D.

*THE URSULINE ACADEMY, A HOME-*School for Girls, delightfully and healthfully situated on the outskirts of Middletown, New York, also accepts young ladies and children during the summer months, and carefully provides for their protection and comfort. Students, who wish to cancel College or High School conditions, will find Summer Courses of Study provided. Terms on application. THE URSULINE ACADEMY, Middletown, New York.

PENNSYLVANIA, Bryn Mawr.

The Misses Kirk's College Preparatory School

Prepares for Bryn Mawr and other colleges. Certificate privileges. Number of pupils limited. Special schedule arranged for each. Percentage of pupils who have entered Bryn Mawr College unusually large. Gymnastics, outdoor sports. 14th year opens Oct. 3, 1912.

NEW JERSEY, Morristown.

MORRISTOWN SCHOOL

COLLEGE PREPARATORY BOARDING SCHOOL FOR BOYS. Small classes. Individual attention. Partial self government. Large new gymnasium. ALL outdoor sports under expert supervision. Especially healthful location 30 miles from New York. Lower School for Boys of 10 to 14.

A YEAR OF STUDY IN FRANCE.

School for Americans of both sexes. Near Paris. Individual training. In a French family. Only French spoken. Credit given by Universities of Chicago and Illinois. Exceptional advantages. Address PROF. WILLIAMSON, University of Chicago.

BETHLEHEM PREPARATORY SCHOOL, Bethlehem, Pa. Prepares for leading colleges. Catalogue, H. N. FOERING, B.S., Principal.

Fine and Industrial Arts in Elementary Schools

By WALTER SARGENT
Professor of Education in Fine and Industrial Arts, The University of Chicago, The School of Education

Just Published. **75 cents.**

This book gives a survey of the place which the various phases of fine and industrial arts should occupy in elementary schools.

It discusses the educational significance of drawing, design, and constructive activities; the practical values of subjects and their relation to industrial education; and the general nature of the work suitable for successive periods of the school course. Suggestions for specific problems and a discussion of the standards of attainment which may reasonably be expected at each stage of the work are included.

The various subjects are adequately illustrated with drawings, and with photographic reproductions of the work of children.

GINN AND COMPANY
29 BEACON STREET, BOSTON

HOW WE THINK

By JOHN DEWEY
Professor of Philosophy, Columbia University

A practical application of modern psychology to the problems of education.

Cloth. 230 *pages.* $1.00.

The Nation

NEW YORK, THURSDAY, JULY 4, 1912.

The Week

Woodrow Wilson's nomination at Baltimore on Tuesday was a vivid illustration of one of the doctrines which he has long preached. This is the doctrine that the American people are capable of taking charge of their own affairs. Neither in politics nor in great business do they need little cliques of self-satisfied men wise in their own conceit to tell them what they must do. All the people know more than any one man or set of men. Their mature verdict is sounder. So it certainly was in the Democratic Convention. All the supposedly astute managers, all the veteran brokers in politics, were against Wilson. He had no one but the amateurs to take charge of his fortunes. But they had zeal, devotion, and quenchless hope. And behind them was that slowly forming but finally resistless sentiment of the average delegate, aided and enlightened by the telegraphed appeals of average citizens at home, which at last made the popular will felt and snatched victory from what appeared to be destined defeat. In nominating Wilson the great body of the party rose up to assert itself against the professional compellers of conventions, who had kindly undertaken to dispatch the business.

The result is to make him his own man as few candidates have ever been. He has not had to strike hands behind the arras with a single boss. No pledges have been exacted from him. He has not been compelled to hamper and fetter himself in advance. It was not a series of trades and dickers which brought him to the head of the poll at Baltimore, but simply the deepening of the general conviction, until it became invincible, that he was the candidate best fitted to lead the party at this juncture. His nomination, thus achieved, not only leaves him erect and unclogged, but discovers an array of defeated and discredited bosses almost without a parallel. They lay in heaps all along the Wilson trail. This fact, known of all men, is what makes Mr. Roosevelt's impudence so delicious in saying that Wilson cannot meet the crisis because he will be necessarily in the hands of the bosses. All that is necessary to meet this ridiculous and gangrened charge is to pronounce the name of one man—Jim Smith. If Roosevelt ventures to repeat his absurd charge about Wilson and the bosses—obviously all that he can think of in the first moments of his keen disappointment over Wilson's nomination—people will only laugh at the man who chooses to forget his own submission to Platt and Quay, and Wilson's flinging of Smith over the party breastworks. Of all assertions to make against Woodrow Wilson, Theodore Roosevelt has chosen the most preposterous.

How absurd to ask Mr. Roosevelt whether Gov. Wilson's nomination makes any difference in the Colonel's plans! How can anything at any time affect any of his plans? "I never go into a fight on a contingent basis," said the Colonel on Tuesday. "I shall, of course, continue to stand for the Progressive nomination." Mr. Roosevelt dealt a body blow to contingency when he announced last winter that he would be a candidate at Chicago if the people wanted him. He hit contingency on the solar plexus when he declared at Chicago that there would be a third party, if the people wanted it, and that he would lead the third party, if no one else was chosen. All his life the Colonel has been slugging contingency through the ropes with his "ifs" and his "provideds," his "on the one hands," and his raging distinctions between the man who this and the man who that. There is nothing contingent about the words of a man throughout whose proclamations an initial loud defiance trails behind it a flock of very meek qualifications. No, the Colonel never goes into a fight on a contingency; his preference is for a sure thing.

Tammany has before now been exposed to contumely in Democratic National Conventions. In 1884 it was the Wigwam leaders, with their wonderful instinct for getting into opposition to the man who promised to save their party, that Gen. Bragg referred to in his famous phrase about Grover Cleveland: "We love him for the enemies he has made." Again in 1892, when the Tammany delegation went to Chicago tied up—like to like—to the fortunes of David B. Hill, its members were almost mobbed in the streets and were, throughout the Convention, made the object of abuse and execration. But it was reserved for this year at Baltimore to bring the New York Democracy to the pitch of hostility and contempt. The Tammany display of incompetence has been masterly, and has so gone on from initial blunder to succeeding futility as to arouse the suspicion that the intention from the start was to make New York an absolute nullity in the Convention. Certainly, no set of men have ever been called upon to sit day after day in a National Convention exposed to such objurgation and insult as have beaten upon the defenceless heads of Murphy and his dazed and angry followers.

Still another Progressive Republican leader from a Progressive Republican State has announced that he has no use for a third party. This time it is Senator Works, from Gov. Johnson's and Frank J. Heney's California. What Senator Works put into words on Monday has been in the minds of many Progressive Republicans ever since the Chicago bolt that is not yet a bolt, but soon will be, perhaps. Even from the Progressive standpoint is it worth risking the entire future of the Republican party for the sake of anticipating victory by four years? With no third party in the field two things are certain: the defeat of Mr. Taft and the complete capture of the Republican party by the Progressives in time for the next campaign. With a third party in the field the outlook is not merely defeat, but such complete disruption as will leave the Democratic party in undisputed ascendency for years to come. And thus the thought forces itself upon the mind of the leaders: Mr. Roosevelt cannot afford to wait till 1916, but the Progressive element in the Republican party can afford to do so. Why should the permanent advantage of the Progressive movement be sacrificed to the immediate necessities of Oyster Bay?

One point in La Follette's sharp and highly effective arraignment of Theodore Roosevelt has peculiar force. La

Follette concedes the Colonel a vast popularity, but argues that his very popularity shows that he is not a real Progressive. In the nature of things, the Progressive movement in Illinois and Pennsylvania should not have won. What Roosevelt did in those States was to rally behind him those who felt that, not Progressivism, but Roosevelt, was a winner. The course of the Colonel's campaign justifies La Follette. It began with at least the pretence of principles. There was the new Magna Charta proclaimed at Columbus. Then it narrowed itself down to the question of Presidential primaries. Then it narrowed itself further to the question of getting Roosevelt delegates in any fashion. Then it tapered down further still to the question of preventing any other Progressive than Roosevelt from getting the nomination for the Presidency. Gov. Hadley's statement that the Taft people were willing to accept any Progressive candidate proves that the great fight for the people had resolved itself into a campaign of utter selfishness. To this extent, to be sure, the Colonel was justified: no other Progressive could show financial backing to the amount of $3,000,000 for a mere primary campaign.

It should not be overlooked that the Republican tariff plank quietly dropped the great discovery of 1908 that customs duties should be levied in accordance with the difference in "the cost of production," at home and abroad. Whether the phrase was devised as merely one more protectionist juggle, or was honestly intended—as no doubt it was by President Taft—time has shown that it was worthless in practice. So it has now been discarded. Attacked from the first by economists, who maintained that it set up a standard impossible of precise ascertainment, it was little by little perceived by practical men to be elusive and fallacious. Even the Tariff Board, composed of men who wrestled honestly and intelligently with the problem, was forced to inform Congress that it had found a "wide difference in efficiency and cost" among American mills. No fixed "cost of production," high or low, could be taken safely as the basis for tariff legislation. As Representative Redfield pointed out in his admirable tariff speech in the House:

> Costs cannot be predicated on a few mills or a short period. Already in some of the mills on which report is made the facts given are altered. The Tariff Board has come, lived its feverish and troubled life, and will turn over its work to a more efficient and continuous successor, which will, we trust, learn from its career that industrial problems cannot be grasped with a "hop, skip, and jump," and that, in manufacturing, the unseen rather than the obvious facts are controlling.
>
> But the experiment has not been in vain, if we have learned that it is as wrong to tax ourselves to support inefficient mills as to sustain incompetent doctors and lawyers. Attention having been called to the cost of production, we have found that to be a complex and difficult subject, variable in nature and multiform in character. Even by those who have long studied the science of costs, the exact relations of its various elements are not always known.

To the Socialists the possibility of a third party with Mr. Roosevelt at the head is naturally a source of apprehension. They have always suffered whenever a Radical candidate has been in the field. Hearst cut into their New York city vote in 1905, and Bryan's candidacy four years ago made a sad disappointment of the confident Socialist hope for a million votes in the country. With progressive ideals triumphant in the country and the Colonel standing ready to offer as sharp a brand of radicalism as may be necessary, the Socialists are menaced in their monopoly as the party of protest. Their leaders recognize, however, that the issue between revolutionary Socialism and progressivism must be fought out some time, and the sooner the trial is made the better for the future of the party. If the acid test of Rooseveltism leaves them as strong as they are to-day, they will not be unduly downcast.

The Sulzer bill "for the improvement of the foreign service" is being pressed for passage by commercial organizations, as well as by all those who wish to see efficiency and not favor the rule of appointment and promotion in all branches of the Government. The specific provisions of the bill are few and simple. The first one is that appointments of secretaries in the diplomatic service and of consular officers may be to grades instead of to places. Under the absurd arrangement that we have followed from the foundation of the Government, if a consulate at one place ceases to be necessary, the President may close it, but he may not use the consul at another place, where he may be greatly needed, until Congress gets around to creating a consulate there. A secretary of embassy cannot even be transferred temporarily from an underworked post to one that is being overworked—unless he chooses to take the risk of losing his pay. For the salary attaches, not to the man, but to the office. How long would any but a governmental organization have continued so foolish a practice? Then the bill directs the Secretary of State to report to the President from time to time, along with his recommendations for promotion or transfer, the names of officers or employees who have demonstrated special efficiency, and also the names of persons who have shown fitness for appointment in examinations. The idea in this section is evidently that repeated hints in the right direction may avail something with an indifferent Executive, while furnishing the requisite machinery for one of the proper sort. And, finally, provision is made for these examinations.

The action of the Federation of Women's Clubs, now assembled in convention at San Francisco, in voting to inaugurate a movement to substitute artistic and humorous supplements in place of the present vulgar "comics" of our Sunday newspapers, will at first glance seem to many newspaper publishers a good joke. They will insist that they are merely giving the people what they want, and will then prove it to you by showing you the enormous circulation gains a newspaper makes when it turns to the coarse and vulgar pages that pass for wit. It clearly comes down to a matter of dollars and cents. If the women's clubs can so arouse public opinion as to make the newspapers feel it, there will be a prompt improvement. That this education of the popular taste will take a long, long while, is apparent when one recalls the masses of readers in all our large cities who find their chief mental relaxation in the silly adventures of some caricaturist's creation.

Telegraph companies seem to have got their eyes open to the advantage of having rates that will induce the public to make greater use of their lines. The announcement that in certain zones the charge will hereafter be 30 cents instead of 40 is the best possible evidence of the success of the low-rate "day and night letter" arrangement, which the officials undertook with misgivings some months ago. The new rate, in its turn, while not nearly so great a boon as the opportunity of these "letters," will doubtless promptly justify itself in the figures of gross and net earnings. Taken in connection with the reduction made a year or more ago in the charge for upper berths in sleeping-cars, these decreases afford what solace there may be in the lowering of the cost of some luxuries as a set-off against the rise in the price of a good many necessities.

At least one member of the United States Supreme Court is not sold body and soul to the powers of reaction. Justice Holmes's eyes are not always turned steadfastly towards the past. "As I look about me in this country to-day," Justice Holmes told the students at Williams College, "I find that the young men are better than we were at their age." The ancient grievances of youth against its elders do not hold to-day. The tradition of timid old age laying a palsied hand on the ardent spirit of youth is completely outworn. Mid-Victorian parents may have believed that their sons were going to the devil, and may have tried to keep them back. The modern parent does something more than abstain from holding his children back. He gives them free rein. He pays them the express compliment of confessing that they are better than he was at their age. He pays them the implicit compliment of imitating them. It is a churlish young generation that would sneer at those whom only the accident of birth has made their elders.

The Cuban uprising seems to be rapidly nearing its end. The matter is one for self-congratulation in this country. In Cuba, as in Mexico, it has been shown that if the sinister play of foreign influences be cut off, and if the constituted authorities feel secure against unwarranted intervention by our Government, our neighbors may be depended upon to fight out their own troubles. The chronic disorder that obtains in parts of Latin America is one thing. The crises that every nation must pass through before it attains self-discipline, are something quite different. This does not positively assert that Cuba and Mexico are in a class apart from the rest of the Caribbean republics. But there is sufficient reason for believing them different, to justify their being given a fair chance. In the case of Mexico there are the very best reasons for believing that a new era will follow the severe test the country is now passing through. And in Cuba, too, the suppression of the present uprising without the intervention of the United States will act as a double discouragement to revolutionary ambitions in the future.

Whether the collapse of the Orozco insurrection has actually come or is to be delayed for a few days, there is little reason for doubting that the authority of the Madero Government will soon be firmly established in Mexico, and that the country will set tranquilly about working out the serious problems that confront it. The magnitude of the task can hardly be overestimated. It behooves President Madero to restore, in the first place, the habit of public order which the long ascendency of Porfirio Diaz had imposed on the people. But whereas, under Diaz, order was obtained by the sacrifice of popular freedom and the serious oppression of the laboring classes, it is for Madero to set the Mexican people on the way towards solving the problem of combining internal peace with a fair measure of self-government and far-reaching social reforms. It is not only the evils of the Diaz régime that have to be undone. The unwarranted hopes aroused by the uprising against Diaz must be held in check. Neither free political institutions nor such an agrarian reconstruction as Mexico stands in need of can be worked out in a month or a year. The future of the Mexican people is still beset with uncertainties. But it is now fairly well assured that for some time to come the present Government will be allowed to proceed with its task, unhampered by serious revolutionary disturbances.

The Franchise bill which has just been introduced in the House of Commons carries with it far-reaching changes. Aside from the possibility that it may become the vehicle for a woman-suffrage amendment, such as Mr. Asquith has pledged himself to accept, the direct questions dealt with in the bill are of the highest importance. The abolition of plural voting is, perhaps, the most outstanding feature, but the removal of the property qualification and the reform of the registration rules will have a far broader effect. It is estimated that the bill would wipe out half a million plural votes. That makes about 800 votes to a constituency, and, inasmuch as the plural vote is supposed to be divided in the ratio of one Liberal vote to three Conservative, the loss would be considerable to the latter party. By reducing the registration period from a year to six months, the Government experts believe that no less than two million voters will be added to the electorate, and that is only one-half of the adult males who are at present disfranchised. There are more than 12,000,000 male persons above twenty-one years of age in England, and less than 8,000,000 names are on the register. So even the enactment of this proposed measure would leave the franchise something short of manhood suffrage. The advance, nevertheless, would be marked, and that is why the Franchise bill takes rank with Home Rule and Welsh Disestablishment in the forefront of the Government's coalition programme.

The apartment-house has at last reached Calcutta, and old inhabitants are shaking their heads over the passing of the day of spacious compounds and large-hearted hospitality. There was a time, says the *Englishman*, when everybody lived in a bungalow, kept troops of servants, rode horses, and spent leisure hours in sports and pastimes suited to the luxurious life of the planter in the tropics. In those days the idea of more than one family in a house would have been put aside as preposterous. But the entering wedge was the boarding-house, which sprang up as rents increased and smaller salaries were paid. This mode of living became very popular, so that Calcuttans of a former generation were driven to complain that Members of Council and heads of firms resided in single rooms cheek by jowl with their extreme juniors. Here was the beginning of the end of the extravagant hospitality and gayety that made Calcutta famous. "Where people once gave balls and large dinner-parties, they now collect a few friends for tea and tennis, after arguing with their co-tenants as to the use of the single-court tennis lawn, which has replaced the acres of garden that surrounded each house."

REMODELLING CONVENTIONS.

Every National Convention, like every opening new year, brings forth its crop of good resolutions. Unhappily, the analogy holds for a stage further, when we note the pitiful lack of practical results from all the discussions and decisions on what ought to be done. Twenty years have now passed since Patrick Collins of Massachusetts and a group of sympathetic colleagues tried to induce the Democratic party to adopt a rule limiting the attendance at its future National Conventions to the delegates and alternates, their outside officers, the National Committee, the working members of the press, and a few distinguished guests. The thought these gentlemen had was that the deliberations of a great party were a serious duty, to be undertaken in a spirit befitting their importance and conducted with proper dignity, instead of being turned into a raree-show for the benefit of a horde of curiosity-seekers, "fans," and "rooters," hotels and dramshops and ticket-scalpers. The movement was widely and heartily approved, but nothing was effected at the time, and before 1896 came around the lessons of 1892 had been forgotten.

This year's Conventions have merely emphasized the need of reform. As we have already pointed out, the one at Baltimore has shown that a Convention can be made both a workable and a deliberative body; can be unbossed, and as Bryan has made clear, that a delegate who knows how can get a hearing on the floor, whether the managers desire him to or not. Again, the Convention at Baltimore could have been made far more endurable for all concerned if business hours had been insisted upon. Why a Convention should meet at noon when it could just as well gather at 9 A. M., is not explained. Neither is an adjournment at 4 P. M. rational, on the ground that the delegates have sat for four hours; since, on reassembling at 8 P. M., they are compelled to remain in their seats for twelve hours listening to speeches no one wishes to hear, and to "demonstrations" as senseless as they are useless. The managers at first acted as if they must prolong the Convention; it was said that their contract with Baltimore required them to hold sittings for at least three days. But even when the deadlock was on, there was an effort to adjourn, as if for purposes of dickering, when a vast majority of the delegates, as the vote showed, were ready to remain in their seats.

That the "demonstrations" could be pretty well controlled was also made evident. At least, a vigorous chairman could have prevented the carrying of banners, and notified the balconies that they would be cleared if any interference were attempted, while an agreement among the leaders of delegations would have prevented delegates from attempting to stampede the Convention. Again, the nominating speeches could well have been cut from thirty minutes to half that time. No such set speeches ever made a vote for a candidate, or ever will. By the time they are made every delegate knows how he is to vote. Moreover, these advocates of a candidate are much in the attitude of paid lawyers; hence their eulogies are discounted in advance. Everything that can be said in a man's favor is said long in advance of the nomination. To repeat it is to waste time. Certainly, fifteen minutes is long enough to brief any man's case. As for the demonstrations, ten or fifteen minutes of racket was thought wonderful in the days of Horatio Seymour, and it was regarded as a great achievement to swell this to twenty minutes for Grant and then to twenty-five or more minutes for the Plumed Knight of 1884. Now it is a question of rivalry. If one candidate gets an hour and five minutes of cheering, the friends of the next must give at least an hour and fifteen.

Turning from the matter of discipline and the procedure of the Convention, it is clear that the effect of binding instructions on State delegations is likely to be serious in the future if there continue to be several candidates in the field. It was frequently asked in Baltimore what would happen if, with Presidential primaries in virtually all the States, there should appear in the next Convention not two candidates as well-matched as Clark and Wilson, but four. Or, to put it differently, how would the existing deadlock have been broken if Harmon and Underwood had entered the Convention with about 200 votes each, pledged to stand by them until a majority of each delegation voted that their particular man had no chance of winning? Such instructions long prevented an agreement at Baltimore. What if there had been more of them? This is a vital question for the future of the convention system, and for those who see in the Presidential preference primary the best way of obtaining the real expression of a party's desire as to its national leader. Some way out of this dilemma will have to be found. Meanwhile, if the National Convention is to remain, it should be reformed along the lines of Patrick Collins's suggestions of twenty years ago.

LEGISLATION BY "RIDER."

The recent revival of the project to limit tenure in the classified civil service in Washington to five years, shows how hard a vicious movement dies. Before the merit system had thoroughly intrenched itself in the good opinion of the public, the assaults upon it in Congress used to take the form either of bold repeal bills, which never escaped from the committee-room where they were solemnly placed on file, or of motions to strike out the appropriations for the Civil Service Commission, and thus starve to death an institution which could not be got rid of by more direct methods. The motion to strike out was always supported by Representatives of the Grosvenor stripe, and Senators with the proclivities of Gorman, as long as support could be confined to making speeches full of flings at an "office-holding aristocracy," and stories of absurdities in examinations which never had any foundation in fact; but a roll-call, putting every man on record, promptly drove the spoilsmen to cover and killed their scheme.

A dozen years of security have caused a great many of the clerks in the Washington departments to feel that they can afford to abandon their voting citizenship in their respective States and settle down as permanent residents of the District of Columbia. Here, then, is a large army of disfranchised citizens, powerless to retaliate upon the members of Congress who vote to put their positions back on the spoils list. Note the cleverness of the authors of the "rider" on the Sundry Civil Appropriation bill, in confining the effects of their proposed blow to this particular group, but leaving untouched the civil servants employed in the Federal offices in their several districts and still able to revenge themselves at the polls!

Though rejected by the Senate, the five-year tenure clause will remain a menace down to the last stages of the bill's career; and if it passes the conference committee in the course of the trading to-and-fro between the two Houses, the responsibility for defeating it will be put up to the President. The only means open to him will be to veto the entire act. Such a dilemma faced President Cleveland just before the expiration of his second term. One of the last bills presented for his signature was the annual Indian budget, upon which a Western Senator had succeeded in grafting a very vicious mining job. In view of the short time given him for consideration, the President's simplest course would have been to let the bill become a law and leave his successor to wrestle with the sequel. But Mr. Cleveland had mighty little "soft" stuff in his composition. He killed the act, and, at the special session which immediately followed President McKinley's inauguration, a bill had to be rushed through Congress simply continuing the appropriations of the year before till a more satisfactory measure could be framed. But the next regular Indian appropriation bill was free from the taint which had stirred Mr. Cleveland's righteous wrath.

Of course, the most obvious way of correcting this continually recurrent evil, with its incentive to log-rolling and its embarrassments for a right-feeling President, is to keep the annual supply bills clean of elements which do not belong in them. The moment any such bill is permitted to carry "riders," good or bad, the doors are opened for abuses of all sorts. Unhappily, the difficulty of inducing Congress to pay reasonable attention to independent measures of constructive legislation has led even the most scrupulous members to wink at the practice of attaching a progressive amendment here and there to some item in a budget. Such a device is always subject to a point of order in the first stage of a bill's consideration; but often the floor leaders are persuaded, by appeals to their good nature or threats of filibustering tactics later, to ignore an opportunity to make the point, unless the amendment contains a feature manifestly abominable. And so the bill comes up for final passage with a lot of alien matter clinging to it. By that time nearly everybody is tired out, and objections which might otherwise find voice are waived for the sake of getting through with the matter.

In this era of overhauling and revision, it seems strange that nobody has urged one Constitutional amendment which would be enormously valuable to the whole people, and which has been tested with good results on a smaller scale. In New York and a dozen other States the Governor's veto power extends to items in an appropriation bill. The same power should be conferred upon the President, whose sphere of activity is many times as broad as that of any Governor, and who is confronted with problems correspondingly momentous. A reform of that sort would surely appeal to the rank and file of the taxpayers, to whom it would probably mean a saving of millions every year. It would mean also an increased concentration of responsibility; so that we should no longer force upon our Chief Magistrate a share in our lawmaking, and hold him to that extent accountable for the joint product of Congress and himself, while denying him one tool, at least, with which to perform his part of the work acceptably.

CORPORATIONS AND PUBLICITY.

The remedy which the *Review of Reviews* brings forward as a cure for public hostility towards the corporations lacks freshness to-day. We are now moving forward at a speed which makes it seem decades since it was first suggested that the general mistrust of corporate ideals and methods could be removed if the corporations and the public could be brought together for a heart-to-heart talk. This solution was based on the thoroughly sound theory that misunderstanding is at the bottom of every strained situation existing among men and groups of men. The muckraker had intensified popular suspicion of the corporations. The only thing for the corporations to do was to take the public into their confidence. The public is not unreasonable. Let corporate capital take the citizen by the buttonhole and say: "Here is what we do and are trying to do, if you will give us a chance, and here is what we cannot do at present without being driven into bankruptcy; be fair with us and be patient." The great public-service institutions would better themselves by substituting for the old policy of the people be damned, the new policy of the people be informed.

The theory was sound and there were enlightened corporations which hastened to adopt the practice of justification by words. But unfortunately the corporations, as a rule, have adopted a very superficial interpretation of publicity. They have used the advertising columns for pleasant little chats with their customers. They have assured the public that the corporations are really the public's corporations, and they have tried to show in how many ways the companies have been trying to minister to the general welfare and comfort. We have had amiable, insinuating little confidences which are really no confidences at all. The public's memory is not always short. In New York, for instance, people remember very well how every improvement on the city railways has been fought by the managers on the ground that the financial condition of the companies would not permit it. But no attempt was made to throw open the corporation books in order to prove the point. The motormen on the surface cars in winter had to risk their health and lives because vestibuled cars meant ruin for the company. The vestibuled cars came at last, but the published history of the Metropolitan Company showed that it was not the cost of the new cars that threw the city railway into bankruptcy. Side-doors in the subway had to be fought for; fans had to be fought for; even decent lighting in the subway had to be fought for. We have these improvements now, and the Interborough is not threatened with insolvency. What could publicity have done for the Interborough when the public was demanding these improvements? Real publicity would have shown that the company could afford to make the changes and that it refused to do so only in a spirit of greed.

One other point must not be overlooked. When we speak of public hostility to the corporations, it should be remembered that it is against the great nation-wide aggregates of capital that this hostility is chiefly directed. When we speak of the evil influence of the corporations on our civic and economic life we think of the Standard Oil, the Tobacco Trust, the Sugar Trust, and the railways. It is absurd to speak of real publicity in this connection. It is delightful to imagine the Sugar Trust taking the public into its confidence and whispering into its ear all the interesting secrets that the public has recently found out by the roundabout way of the

Federal Courts. It is pleasing to think of publicity and the Standard Oil, that garrulous concern, whose officials on the witness stand, during the last forty years, have had a positive mania for blurting out their innermost thoughts. One can imagine how delighted the Tobacco Trust would be to lay before the public the innocent little methods by which it has made its way in the world. And when we come to the railways, with their interesting little tangles of directors who are also express company directors and rail-mill directors and road-supply directors—why, it is quite plain that any railway would be perfectly happy to expose its inside workings to the public.

When the *Review of Reviews* speaks of corporation publicity, it does not mean publicity at all, but corporation courtesy. And, as a matter of fact, courtesy, in a broad sense, is what the public demands of its local service corporations. There will be crises, of course, when the public will insist on real publicity, as when the battle for the three-cent fare was raging in Cleveland. At that time it was a specific question of earnings, expenditure, and profit, and the statistics were fought out in the newspapers. But what the public wants year in and year out is not publicity, but decent service. When a corporation shows itself willing to meet a reasonable public demand halfway; when it stops making foolish protestations of its inability to do things which a half-year later it does very easily and profits by; when, in other words, it tries to serve as well as to make dividends, there will be no need for confidential little talks with the public.

EXCAVATING A STATESMAN.

There is a form of archæology which is pursued with great vigor in the heat of political campaigns and parliamentary battles. It consists in the digging up of a public man's past. This exercise differs from the science of archæology proper in several respects. In the first place, the work is always carried on by a man's enemies, whereas Troy and Tiryns and Cnossus have all been dug up by lovers of antiquity. In the second place, the object is different. The scientific archæologist always sets out with the purpose of ascertaining the bond of unity between the past and the present. The political archæologist always searches into the past in order to prove the present a liar. Like Schliemann and Flinders Petrie, he loves to lay bare one level below the other in a great career. From this stratum he unearths a letter written in a moment of indiscreet confidence. Deeper down he discloses a damaging roll-call. Deeper still he finds a youthful literary work giving voice to sentiments quite opposite to those displayed on the topmost stratum of the public man's career. And the more violent the contrasts between the various culture levels, the greater is the satisfaction of the man with the spade. The mute evidences of catastrophic change which make the historian ponder over the vicissitudes of civilization are hailed with joy by the partisan investigator of political records of the past.

It is a business that can be sadly overdone. In theory there is no better way of confuting a man than by the words of his own mouth. In practice, it depends on how deep down into a man's past one has gone to work his confusion. It also depends on the nature of the clash between a public man's present and his past. Between the turncoat and the statesman who has moved with the times there are many gradations. Before accusing a man of having changed his mind, there should be at least *prima facie* evidence that the earlier state of mind was the right one. It has become an effective mode of debate for a man to acknowledge that he has changed, and that he is glad of it. Bismarck made classic use of the argument nearly thirty years ago:

> It does not in the least affect the intrinsic merit of the proposition from the point of view of Imperial interests, if the gentleman should show that my present position is inconsistent with views formerly expressed. . . . As a matter of fact, there is no such inconsistency, as I shall show. But even if there were, what does it prove? I can only reply that there are a great many people who during an entire lifetime have given birth to just one idea, with which they have never fallen into contradiction. I do not belong to that class. I learn from life, I learn as long as I live, I am learning to-day.

An effective rejoinder, and one that has been made a thousand times, though it may be pointed out that to use it with full effect one must be Bismarck.

Just where is one to find the safe middle ground between the Bourbonism that refuses to change and learn, and the demagogism that shifts and veers to every breath of fortune? Success usually intervenes to confuse the issue. One who would have been a demagogue in failure is an evolutionary statesman in success. But in general it is a fair enough rule to say that a public man shall be given broad scope in matters of opinion, but should be held sharply to account on matters of fact. It is recorded of a celebrated American that when he became a candidate for a high Federal office, he was much perturbed over the fact that he had years before written a book in which he spoke harshly of a certain religious sect. A shrewd man of politics before whom the case was laid, advised against sophistication in the matter. "Just say you were very young when you wrote that." Usually that would be enough. But when it is a question of reconciling, not contradictory expressions of opinion, but the divergence between promise and accomplishment, there is every reason why public men should be held to strict accountability. A statesman may evolve from conservatism to radicalism without having his motives impugned. But when a statesman declares that under no circumstances will he do a thing, and does it, the plea of a changed outlook will not hold as an excuse. The violation of a pledge can never be explained away. The most a statesman can do is to ask his opponents what they intend to do about it. In that there is a certain picturesque strength, but to put the debate on moral grounds is absurd.

Contemporary politics supplies interesting examples of men who in the course of time have drifted far from their original moorings. Joseph Chamberlain began as a radical and a republican and has changed to an imperialist Tory. In France, MM. Briand and Millerand have developed from anarchism and socialism, respectively, into very safe Ministerial timber. When Briand, as President of the Cabinet, set out to suppress the great railway strike with the aid of the army, M. Jaurès republished a pamphlet written by Briand in favor of the general strike as the surest means of ushering in the social revolution. But even in such a case a man may shrug his shoulders and say, "I think differently now." Yet no amount of thinking differently will absolve a man from changing "I won't" into "I will" and "I will" into "I won't."

ROUSSEAU IN ENGLAND.

One of the results of the celebration of the Rousseau centenary in France—or, possibly, of the Franco-British *entente*—has been the translation into French of the volume of the late Churton Collins, "Voltaire, Montesquieu, and Rousseau in England." It is the third part of the work to which the French critics are naturally paying the most attention just now. It was a picturesque episode in Rousseau's life—more picturesque than important, one would say. He had no particular sympathy with English ideas. He could not speak a word of English. He passed his year (1766-67) in England, not because he was drawn there by the curiosity of an investigator or student, but simply because, to him, as to so many other Continental agitators or disturbers of the political peace, the island home of liberty offered a refuge.

Rousseau, at the end of 1765, was in an awkward and even perilous position. The Parliament at Paris had decreed the arrest of the author of "Emile." He thought to retire to Geneva, but she refused to harbor him. Berne was of the same mind. He repaired to Motiers, which was then under the sovereignty of the King of Prussia, but even there sentiment was strongly against him, and he retreated to the Lake of Bienne. But there, too, he was not left to his peaceful meditations. A formal order of the Government required him to depart. He thought for a time of fleeing to Corsica, but at the critical moment Madame de Boufflers transmitted to him an invitation from David Hume to accompany him to London, and Rousseau accepted it.

The passage of the Channel in January by the two philosophers was more than traditionally trying. They were twelve terrible hours in crossing from Calais. It is amusing to note that the cool and impassive Hume was deathly seasick, and lay groaning in his berth all the way over, while the excitable and neurasthenic Rousseau stayed on deck, wet to the skin and half-frozen, but doubtless surrendering himself to the most thrilling emotions. What some of them were may be imagined from the fact that the moment the ship touched land, Rousseau burst into tears, threw his arms about Hume, and hailed him as the saviour who had led him to the soil of freedom. One fancies that this did not help Hume to get over his seasickness. Indeed, as is well known, Rousseau was a pretty formidable guest for the Scotch philosopher. The Frenchman's eccentricities, almost running at times into manias, his suspicions and his vacillations, made him as "gey ill to live with" as Carlyle, or even more. The two fell near to bitter quarrelling more than once, though Rousseau quitted England with the warmest feelings of gratitude to Hume.

Luckily, the burden of Rousseau's entertainment in England was widely distributed. The interesting foreigner was made a lion of in London. His affectations, his Oriental dress, the stories of his adventurous and irregular life, all conspired to make him an object of universal curiosity. Attentions were showered upon him. Gen. Conway, the Secretary of State, called upon him. Garrick invited him to a supper, and later gave a special theatrical performance in his honor. To this Rousseau was on the point of declining to go, at the last moment, on the plea that he could not leave his dog alone at home. It required some argument by Hume, who explained that the King and Queen had taken a box, to convince the French radical that it would never do to put a slight upon royalty, to say nothing of his actor-host, for the sake of a dog. According to a contemporary letter by Lady Bunbury, which Mr. Collins printed, Rousseau thanked Garrick effusively, and assured him that he had alternately laughed and wept all through the play, though he could not understand a single word. But the pleasures of the city soon palled upon the man of whom Sainte-Beuve said that the note of love of nature first sounded clear in his writings. Rousseau essayed various retreats in the country. Finally a house was offered him at Wooton, the owner, in order to meet Rousseau's ideas of independence, charging him a nominal rent. There he had his dog, his Thérèse, with her inexplicable ascendency over him, and his thoughts in solitude. But he was not happy. Exposed to impertinent intrusions, he felt himself more persecuted than ever. At last he wrote an angry note to his landlord, and determined to return to France. He wrote to the Lord Chancellor to ask for a bodyguard adequate to protect him, while travelling to Dover, from his implacable enemies. That official drily replied that his postilion would suffice. Rousseau hastily sailed from England, May 22, 1767.

His brief stay in England is, of course, insignificant compared with the permanent impression which his political philosophy made on English thought. As in his own land, and elsewhere, it roused violent antagonisms at the same time that it won ardent sympathy. That its influence silently persists in England to this day, there can be no question. The interrelations of French and English literature are a mine much worked in recent years by scholars of either country. More than "spirits twain" crossed the Channel with Rousseau.

RECENT FRENCH NOVELS.

PARIS, June 22.

"Les Dieux ont soif" (Calmann-Lévy—360 pages, 3.50 francs), by Anatole France, is sure to make the knowing reader ask—Is Saul also among the prophets? The simple perfection of language is the same as ever—not precious, but common words of ray serene set in the limpid flow of easy and accurate and adequate phrasing. The thought is refined and cynical as ever, more like scintillations of Mephistopheles noting day by day what fools we mortals are than like Shakespeare's kindly sprite or Renan's dispassionate observer from Sirius. And in this new book Anatole France still speaks for the Olympians—

> The gods laugh in their sleeve
> To watch man doubt and fear.

But "the gods that are athirst," of whom he has written the book, are anything but Olympian or given to laughter; and their thirst is for the blood of their fellows. He might almost be suspected of writing his book on a return journey from among those *intellectuels* to whose angry diapason he tuned his voice of late when their particular Justice was not accepted by the universality of France; or from that still later time, when his tones were tremulous with the People trying to make something of Earth. For his conclusion is that of a far different and cruder prophet—

> Once there was the People—Terror gave
> it birth—
> Once there was the People, and it made a
> hell of Earth!

There he stops.

The hero of the book is "Evariste Gamelin, painter, pupil of David, member of the Pont-Neuf section"; and his life for us begins—

> early one morning in the former church of the Barnabites, which for three years, from the 21st of May, 1790, had been the general meeting place of the section. . . .

> On the front the religious emblems had been hammered out and in black letters over the door was inscribed the Republican device: "Liberty, Equality, Fraternity, or Death." . . . The Saints had been taken from their niches and replaced by busts of Brutus, of Jean Jacques, and Le Peltier. The table of the Rights of Man was set up on the stripped altar. . . . The prisons were crowded; the public accuser was working eighteen hours a day. To the defeat of armies, to the revolt of provinces, to conspiracies and plots and treason, the Convention was opposing the Terror. The gods were athirst.

Gamelin follows his dream—for Anatole France also, with all his keen eye for human depravity, allows the excuse of the "mystic" dream in which the depraved acts are perpetrated. It lasts a few months, amid the light of common day, with lurid flashes, at the beginning from the preposterous assassination of Gamelin's own hero, Marat, by Charlotte Corday, then through his own term as a member of the Revolutionary tribunal, to his last mystic meditation in the cart which bears him to the guillotine after Robespierre.

> Women who recognized Gamelin cried out to him: "Get on, blood-drinker! Assassin for eighteen francs a day! He's not laughing now—see how pale he is, the coward!" They were the same women who but lately insulted the conspirators and aristocrats sent by Gamelin and his colleagues to the guillotine. Gamelin thought and believed he understood. "I die justly. It is just we should receive the outrages cast up at the Republic, for we should have defended her from them. We have been too weak; we have made ourselves guilty of indulgence. We have betrayed the Republic. Robespierre himself, the pure, the holy, has sinned by gentleness and meekness; his faults are wiped out by his martyrdom. Like him, I have betrayed the Republic; it is just that I die with her. I have spread blood—let my blood flow! May I perish! I have deserved it!"

At that moment, a window blind opens, and some one tosses into his cart a red flower. On the hand, quickly withdrawn, he catches the glint of the ring which he had engraved with the head of Marat for his Elodie. "His eyes swelled with tears, and it was all penetrated with the charm of such an adieu that he saw the bloody knife above the Place of the Revolution."

It would not be Anatole France's book if there were not another chapter. Elodie—with Gamelin's successor—listens to the cab driver telling how the tripe-seller had daubed the head of Marat with blood, saying: "That's what he loved!"

> Before the chimney she looked with melancholy at the ring-finger of her left hand, at the little silver ring where the face of Marat, all worn and crushed, could no longer be distinguished. She looked at it till tears veiled her sight, took it off gently, and threw it into the flames. Then, shining with tears and smiles, beautiful with tenderness and love, she threw herself into the arms of Philip.

Such a book may prove Anatole France's greatest work; and he comes to it better fitted than for his "Joan of Arc." Of course, those of the old order who struggle to remain what they have always been are too imbecile in his pages, though generally amiable; and those of the new order are regularly too unconscious that bloodshed is crime and too self-conscious of the right of their kind to remake the world by cutting off heads. But in the romance, as in the reality, the deeds which stand out to us in terrible relief are but a part of the daily details of life, eating and drinking, making merry and marrying. Much of it can hardly please those who have been praising Anatole France most; but Lord Acton, who knew, doubts our right of "assuming that it would be possible for an honest historian to have a friend."

With Georges Ohnet's two books—"Pour tuer Bonaparte" and "La Serre de l'Aigle" (Ollendorff, illustrated, 3.50 francs each)—we have a rude descent from Olympus to the atmosphere of those middle classes to which most of us, like the late Mr. Gladstone, say we are proud to belong. We are still in the stream of Revolutionary passion, now directed against Bonaparte, who was making the work of the Revolution practical in France, while doing away with the unpractical leaders that had managed to live through it. The romances are built up around the conspirators of the counter-Revolution—Saint-Régeant and Georges Cadoudal.

Here there is no undertone of suspected philosophy to make us uneasy, no dull dust of daily life to draw our attention from the main show. The story is told in the emphatic style of the traditional historical romance, with all the melodrama and real tragedy ground into our quaking hearts. It has been disputed whether Georges Ohnet belongs to literature; but it is beyond dispute that he has story-telling ability beyond those of his generation. The historical basis of his stories also should not be depreciated, even though the advanced heads of some of the characters with every step they tread knock out a star in heaven. It is to be regretted, at least for readers who are sons of Puritans, that the love-making of the Countess spy should be punished within our hearing in crude and cruel kind. The instruments of Napoleon philosophize, in a middle-class way, of all they have seen: "Put into the balance the deeds done by this side and by that—and see if it sinks in favor of one party. They balance seemingly, equal ferocity and crime."

"'Mon cher,' said Braconneau, 'that is the philosophy of civil wars. Let's go to bed!'"

As he mounts the scaffold, Georges Cadoudal gives the responses to the priest's prayers, but stops short before "at the hour of our death."

> "What's the use?" he said, tranquilly, "since it is now the hour of death." He embraced the priest, made a gesture of adieu to his companions, lifted up his great round head and looked at the public crowding round him; and he cried with a loud voice: "*Vive le Roi!*" The moment after, he was dead.

"La Jeune Fille bien élevée" and "Madeleine jeune femme" (Calmann-Lévy—3.50 francs each), by René Boylesve, bring us powerfully to our own time. Georges Ohnet candidly applies to his series the term "Legend and History"; here we have the every-day life of French men and women. Of the first of the two novels, which have the same characters, the author, who is rising near to the head of the line of living French novel writers, says:

> In it I composed, without afterthought, the story of the life of a young girl brought up as they were commonly in our provinces in the last century (that is, twenty-five years ago). . . . My heroine was born at a time when the spirit of inquiry, the taste for criticism, and the thirst for emancipation were in fashion: it was not I, her painter, that groaned beneath the weight of provincial customs; it was she, my model, whom I saw thus pained. And if, on the other side, I showed consideration for "prejudices" or persons of the old time, it was not I who counselled my contemporaries to go backward to old things; it was my model, discerning in spite of herself all that was deeply true in her, who asserted in spite of herself a stronger attachment, more resisting than the enticements of the day, for the support and shelter which came to her from centuries ago. . . . An invitation to reflect on life, at length and as deeply as may be, even with bitterness and difficulty—this is the proper moral action of the novel-writer—the extreme limit to which he can go without straining his kind of writing. . . . While differing from direct moral and social action, it is none the less important, for we have to remember that through ignorance of real man and flattery for seductive ideas the gravest public errors are committed, and that for lack of psychology most private disorders are produced daily.

All this explaining is kept out of the thread of the story and limited to a short address to the reader when the author takes up the story of his "well-bred young girl," now that she has become a "young wife." Two notable books, indeed, with moralities important to all who reflect on society, that is, the living men and women around them. They are written in the language of refined French conversation, not dragging, except as life always grows long. The heroine is a daughter of a middle-class family of Touraine, which for centuries has lived on a plane of high, if narrow, tradition, plainly, with high thinking and cultivation, religiously, marrying and giving in marriage by principles which are rules. English readers who feel that there must be a substantial life in France beyond that of the commoner yellow-covered novels will find interest and edification in the story of Madeleine's girlhood and select convent schooling, in her marriage into a class without her traditions or cultivation, and so beneath her, in her cheerful adaptation to it and salvation from scath of the new world around her by the old habits of principle, which are, in spite of herself, her second nature, in the resignation with which she takes up the burden of life. Perhaps, the lack of principle to guide in brand-new society is accentuated; perhaps there is a generation yet younger which is swinging round to the old traditions. Marcel Boulenger, who is a younger rising novelist, says that in his province marriages for money are sought by parents, and pleasure in life without responsibility by the children they marry to each other, far more avidly than in René Boylesve's books. There, at least, the grandmother has something heroic and the young wife has strength of soul. Perhaps a still later knowledge of men now coming to maturity in twentieth-century France would lead one to say that M. Boylesve has drawn his male kind more harshly than France, ever renewing herself and her children, fairly deserves.

"Petite Madame" (Plon—3.50 francs), by André Lichtenberger, continues the unreflecting, delightful story of Jacques and Jotte, just married, greatly pleased with themselves, a little uncertain how to behave to their various parents, who, on their side, hardly know whether to laugh or cry. In reality, they are all good as good, and we have their charming chronicle—like that of our author's *petit* Trott, whom the Academy long ago crowned king of child's stories. And it ends in Life's triumph, as usual as the sunrise:

> Behind the white curtains there was a mewing noise. Jacques drew them back. There was a wriggling creature, and Jotte's eyes brightened. She half arose: "Give him to me!"
>
> A little clumsy, a little squeamish, respectful, very proud, Jacques lifted up the little squirming red being which was his son and laid it carefully beside its mamma. . . . Among these three beings silence reigned. . . . The time is past when Jacques and Jotte had only to play according to the sprightly lack of care of their young fancy. . . . The master of their life is this child.

Who knows if this story, too, may not be continued in our next? It is certainly delightful and edifying reading for all, even for those who have been persuaded that Frenchmen have no word for Home. André Lichtenberger, writing for French readers, does not consider such a question, or he might very well answer—"Our word is Family, Monsieur, Madame, et Bébé."

NEWS FOR BIBLIOPHILES.

In 1895, Falconer Madan of the Bodleian Library published "The Early Oxford Press," being a bibliography of printing and publishing in Oxford down to 1640. He has now just issued, through the Clarendon Press, a second volume on the literature of Oxford, being a study, bibliographical and descriptive, of all known books relating to Oxford printed there and elsewhere during the two hundred years, 1450 to 1650. It is a grand piece of work, upwards of seven hundred pages, octavo, of which more than one-fifth is an elaborate index. It will interest few people in the United States, but those whom it interests it will interest deeply.

The first 147 pages of the volume describe the books about Oxford, but printed elsewhere up to 1640. the end of the period covered by the first volume, being thus a supplement to that volume. There are also incorporated in their chronological places additions and corrections to Vol. I. The so-called first Oxford book "Exposicio sancti Ieronimi," the colophon of which bears the printed date 1468, has long been a bone of contention among bibliographers, the claim being made, and generally accepted, that the actual date was 1478, a lower-case "x" having dropped out in preparing the types for the press, a not uncommon occurrence in early-printed books. As an Oxford man Mr. Madan has been slow fully to accept this explanation. Here he sets down six reasons or arguments for the acceptance of 1478 as the true date, and adds: "The cogency of each of these arguments may be weakened, but they have considerable cumulative force, and at present, although the *onus improbandi* lies entirely with the assailants of the earlier date, the balance of probability is markedly against 1468." This is a more positive statement than he was willing to make sixteen years ago.

The bulk of the volume, pp. 148-499, describes Oxford books from 1641 to 1650, and in it Mr. Madan goes over entirely new ground. During the four years, 1642 to 1646, when Oxford was the Royalist headquarters, the presses were peculiarly prolific. The great collection of Civil War pamphlets collected by George Thomason (who was particular to put the date of reception by him on the title-page of each pamphlet), now in the British Museum, has alone made possible any adequate description of the output of the presses of Oxford and London during this period. Duplicate editions, reprints, and forgeries add to the interest and complexity of the study of the books of the period, making a comparison of types, devices, ornaments, and even water-marks necessary. Books with counterfeit imprints were exceedingly common. "Out of 191 Oxford imprints in 1642 no less than 58 are London counterfeits," says Mr. Madan, and the proportion is only slightly less in 1643 and 1644. A list of nineteen very plausible Oxford imprints are given, which, in 1642-1647, are always counterfeit. The symbol "√" prefixed to these counterfeit titles indicating that the book was not printed where it professes to be printed was inadvertently omitted from the table of explanation of abbreviations. Another symbol ")" indicating that the piece so designated is an extract from a larger work, was also omitted. Mr. Madan himself pointed out these omissions in a letter to Mr. Pollard of the Bibliographical Society.

Another book, one chapter of which treats of the Oxford Press, is E. Gordon Duff's "English Provincial Printers, Stationers and Bookbinders to 1557," just published by the Cambridge University Press (Putnam). These papers comprise the Sandars Lectures on bibliography delivered in Cambridge in 1911. The date of 1557 has been chosen by Mr. Duff as a limit for his conspectus because in that year a charter was granted to the re-formed Company of Stationers, which prohibited printing by any person not a member of the London Society, and this virtually put an end to all provincial printing. The following is a list of those towns outside of London and Westminster in which printing presses had been established prior to 1557, with the (approximate) date of the first book printed in each town:

Oxford. 1478 (colophon of first book actually dated 1468 but probably a misprint).
St. Albans. 1480.
Hereford. 1505.
Exeter. 1505.
York. 1509.
Cambridge. 1521.
Tavistock. 1525.
Abingdon. 1528.
Ipswich. 1547.
Worcester. 1549.
Canterbury. 1549.

In an Appendix is given a list of all identified books printed by or for the several provincial printers for the period covered.

The little book (it is published at four shillings net) contains interesting, authoritative, and up-to-date information hard to find elsewhere.

Correspondence

THE PRESIDENTIAL TERM.

TO THE EDITOR OF THE NATION:

SIR: The following letters may be found in the Congressional Library, and are, so far as I know, unpublished. They may be of interest at a time when the proposal to limit the Presidential tenure to one term of six years is to the fore.

A letter of Jefferson's, written from Paris, on September 20, 1788, gives his correspondent particulars of certain letters just received from America. He writes that the Virginia Convention proposed an amendment of the Constitution

> for rendering the President incapable of serving more than eight years in any term of sixteen. New York has followed the example of Virginia, expressing the substance of her bill of rights (*i. e.*, Virginia's), and proposing amendments. These last differ much from those of Virginia, but they concur as to the President, only proposing that he shall be incapable of being elected more than twice, but I own I should like better than either of these, what Luther Martin tells us was repeatedly voted and adhered to by the Federal convention, and only altered about twelve days before their rising when

some members had gone off, to wit, that he should be elected for seven years and incapable for ever after.

So Jefferson. William Short, sometime Jefferson's secretary, and for several years the American chargé d'affaires at Paris, wrote to the great Democrat from Philadelphia, April 23, 1816: "All of us I think see now the object of the reëligibility of the President." Short continues:

> You saw it I think, from your first inspection of the Constitution. Would it not be worthy of you to endeavour to have this remedied. I do not think you would find it difficult, and it certainly would be a benefit conferred on your country that would be worthy of your best exertions; let the term be for seven years or more and no reëlection, and let the incumbent after his term be incapable of any other office, but endowed for his life with the allowance that may be made to the Vice-President.

Washington, D. C., June 27.

THE RADICALS AND ROOSEVELTISM.

To the Editor of The Nation:

Sir: One of your New York contemporaries is fond of asking why a boss must be an ass. Permit me to ask why so many "radicals" are so gullible, shallow, and naïve? The notion that Roosevelt is a radical candidate, that he has particular claim to the support of radicals and social reformers, is utterly baseless and absurd. Roosevelt is and always has been a very practical politician; he never found any difficulty in getting along with the Platts and Quays; he never hesitated to go to the Harrimans for campaign money; he never allowed his civil-service professions to interfere with his needs and interests.

Aside from these things, let us see what true radicalism generally means or implies. Radicals are, as a rule, peace men, while Roosevelt is a Jingo, a militarist, and a big-navy shouter. Radicals favor arbitration without ifs and buts, while Roosevelt denounced the splendid Taft arbitration treaties with the venom and frenzy of a maniac. Radicals are free traders and revenue-tariff men where free trade is at present impossible, while Roosevelt is a protectionist (and an ignorant one at that by his own admission). Radicals would approach the Trust problem via the tariff, while Roosevelt called the late Professor Sumner and other economists dishonest cowards for maintaining that it is futile and foolish to "regulate" tariff-fed monopolies. Radicals are opposed to favoritism, autocracy, tyranny, megalomania, demented ambition, while Rooseveltism is essentially another name for arrogance, malice personified, insane ambition, lust for power, personal government.

Radicalism does not need Rooseveltism It is doing very well in the United States. "We are all radicals now." Who is opposing regulation of woman's labor, universal accident compensation, conservation, strict control of public utilities, further railroad regulation, etc., etc.? The direct primary, the referendum, the recall—though not the silly recall of decisions—are likewise steadily gaining ground. Even the courts are brushing aside ancient fallacies and technicalities. The whole country is "progressive," and there's no stopping the march of "social and industrial reform." The evolutionary revolution, so to speak, is world-wide. We are witnessing great changes everywhere, and no erratic, blatant would-be despots are bringing them about.

The notion, then, that our salvation, in the United States, depends on Rooseveltism and a third party composed of soreheads, unbalanced egotists, noisy and shallow humbugs, and dreamers who know nothing of politics, is grotesque. Third parties cannot live by spite, fury, and hatred alone. They are begotten of necessity. There is no necessity for a third party of the Roosevelt kind. We may, indeed, find it necessary to organize a party pledged to free trade, to economy, to peace, and arbitration, to sound currency reform, to just and scientific taxation, but Roosevelt and his chief backers would find no welcome in *such* a party. The failure of the Democracy to live up to its principles and opportunities may render a third party necessary. Just now nothing calls for it The time is not ripe; there are no converts or recruits ready to take up the cause of industrial freedom and justice, of equal opportunity, in the philosophical sense of these terms. The real radicals will wait, and in the meantime they will help to destroy Rooseveltism, which is fatal to sanity, health, and decency in politics and government.

Chicago, June 26.

GEORGE BORROW.

To the Editor of The Nation:

Sir: As one who hoped for a time to keep George Borrow permanently among his heroes, and who still keeps him exceedingly high on his list of extraordinary *poseurs*, I have read with great interest your account of him in the *Nation* for June 27. Never having gone through any extended biography of Borrow, save that which is furnished in a way by his best known books, I hoped to find in your sketch, not something that would add to my wonder at the man, which is still great enough, but something that would restore my admiration for him. For admiration and credence both left me, in large measure, when I encountered the almost unreadable screed of rage and spite with which the "Romany Rye" draws to its end. Without being especially orthodox in a religious way, I had been rather shocked, in reading "The Bible in Spain," at the almost complete absence of evidence that Borrow cared for the Bible as such, or had any higher motive for his tremendous zeal in distributing it than his desire to spite the Pope and the priests, and to undermine their power. Accordingly, I searched "Lavengro" and "Romany Rye," (books written later, though they tell of earlier events in his life) for something that could be called, in the best sense, Christian feeling. I was disappointed, finding, indeed, a marvellous and refreshing story of adventure, whether fact or fiction, but a growing rabidness of comment, directed against any institution or any person that had offended his overpowering vanity, a passion which, combined with love of the mysterious and the singular, ruled his life.

As to the fact that Borrow did not express himself in the ordinary way concerning inanimate nature and the emotions aroused by its contemplation, I think it may well be doubted whether he knew what other writers were in the habit of saying on this or any other ordinary topic of literature. Outside those fields of learning which he especially exploited, he was, one may suspect, strikingly ignorant of current writing. In the thirty-second chapter of "Lavengro," speaking of himself as a young man who has gone to London seeking his fortune, after a number of years in a lawyer's office, he says: "Yes, . . . up to the moment of which I am speaking, I had never read a newspaper of any description."

Whether we have lost much by his habitual reticence concerning the emotions and reflections inspired in him by the contemplation of external nature, we may perhaps judge from a study of the following passage, which I take, putting certain parts in italics, from the seventieth chapter of "Lavengro":

> Night came on, and a beautiful night it was; up rose the moon, and innumerable stars decked the firmament of heaven. I sat on the shaft [of his tinker's cart], my eyes turned upwards. I had found it. there it was twinkling millions of miles above me, mightiest star of the system to which we belong; of all stars, the one which has the most interest for me—the star Jupiter. Why have I always taken an interest in thee, O Jupiter? I know nothing about thee, save what every child knows, that thou art a big star, *whose only light is derived from moons.* And is not that knowledge enough to make me feel an interest in thee? Ay, truly, I never look on thee without wondering what is going on in thee; what is life in Jupiter? That there is life in Jupiter, who can doubt? There is life in our own little star, therefore there must be life in Jupiter, which is not a little star. But how different must life be in Jupiter from what it is in our own little star! *Life here is life beneath the dear sun—life in Jupiter is life beneath moons—four moons—no single moon is able to illumine that vast bulk.* All know what life is in our own little star; it is anything but a routine of happiness here, where the dear sun rises to us every day; then how sad and moping must life be in mighty Jupiter, *on which no sun ever shines, and which is never lighted save by pale moonbeams!* The thought that there is more sadness and melancholy in Jupiter than in this world of ours, where, alas! there is but too much, has always made me take a melancholy interest in that huge distant star.

Cambridge, Mass., June 28.

THE DEATH OF BARON TAKASAKI.

To the Editor of The Nation:

Sir: The recent death of Baron Takasaki, the Japanese poet laureate, or, to speak more exactly, the chief of the poetry office, makes me pause awhile and think over what he always expressed in regard to poetry, that is, the Japanese *uta* poetry. He used to begin his talk by quoting Kageki Kagawa's well-known phrase: *"Uta wa sugata, sugata wa shirabe,"* which is quite difficult to translate literally, but with permissible change of words will mean this: "It is the true poetry when its graceful appearance becomes at once the life-movement or rhythm." The Baron said: "We have a word *rashii* (look like); that is the secret of our Japanese *utas*. The flower-poem should look like a flower-poem, the moon-poem like a moon-poem, the summer-poem like a summer-poem, the winter-poem like a winter-poem, and so on." Such language is too delightfully simple, and, of course, he meant something more. When he said: "Be natural," I believe that he put a great value on the moment when one's rhythm of soul responds and vibrates most truly to the life and motion of nature; the chief merit of a writer as a poet lies in how well and constantly he has been preparing to receive such a moment; it is indeed at such a moment that he will seize the universal in the particular through the virtue of his own personality. Our Japanese *uta* poetry, at least in Baron Takasaki's idea and conception, is neither art nor writing, but one's own personality itself; before you talk on poetry you should begin by making your personality refined, ennobled, and strengthened. And the time when your personality rises to be high and strange is when it is righteously led by humanity and arm-in-arm will dance with that humanity on life's highway; therefore, the question of the Japanese *uta* poetry is the question of humanity. "There is no real poetry in mere words or phrases," he always exclaimed. He always talked of *Uta no michi*, or the path of poetry, as if to say the path of humanity or benevolence; and he often made the former mean the latter, and always commingled them. Righteousness was, in his mind, the very first lesson of poetry, without the support of which the delicacy and beauty of life and nature could not be properly felt, because the *uta* poetry was nothing but the way of mankind, that is of humanity.

Although not from any so-called Imperialism, but from his immovable faith, so simple and pure that all Japanese should love their own native land, he was first of all the poet of patriotism: when he said he was sure that he was a real Japanese, I think he meant in his heart of hearts that, while not so sure of being a poet, he was also a real poet from the fact of his being a real Japanese. His talk with the Emperor, on "Nothing Difficult to Write *Utas*," is a famous story; it happened some thirty-three or four years ago in the steamer sailing back from Kobe to Tokyo, which carried his Majesty the Emperor on board, who, to pass his lazy summer-time away, had been indulging in the thought of *utas* and the writing of them, and when the Baron interrupted him with the famous words, "Nothing difficult to write *utas*," he was irritated and again maddened by this most audacious declaration. But it was the great lesson the Baron offered to the Emperor which made him gladly turn spiritualist in poetry from being a mere poetical rhetorician from that memorable day. It was the very first triumph of the Baron's long life that he made the Emperor his believer; and the Emperor's faith was never shaken in the long years when the Baron occupied the honorable dais of the chief of the poetry office. Indeed, he made a student's obeisance to him.

I am not a fit person to criticise the Baron's poetical work; I am at the present moment only wondering what effect his conception will have on the future, as I and others know well enough that he battled hard against the descending tendency of the present age, and was often pessimistic, and even recognized his failure.

YONE NOGUCHI.

Kamakura, Japan, June 1.

RELIGIOUS PROPRIETY.

TO THE EDITOR OF THE NATION:

SIR: According to press reports, the prayer of Cardinal Gibbons at the opening of the Democratic Convention at Baltimore was greeted with applause from the audience. No one will deny that divine blessing on the labors about to be begun by the Democratic delegates was eminently appropriate and desirable, but that men should have applauded the clergyman who uttered the prayer is incomprehensible to a person brought up in any of the commonly accepted religious creeds. Clapping of the hands, with us, at least, is universally recognized as an expression of approval of some act of a public performer. But it is difficult to see the appropriateness of applauding a supplication for God's blessing; unless, indeed, the audience is to be thought of as approving the clergyman's manner of executing a detached action in which they take no religious part. Theoretically, at least, when a person prays in public, he is the mouthpiece for the assembled worshippers, who are humble suppliants with him and craving divine assistance.

At the conclusion of Cardinal Gibbons's supplication to the Almighty, "amen" would have clearly signified concurrence and assent, but what on earth can have been the attitude, mental, moral, or spiritual, of a gathering of human beings who would clap their hands on such an occasion?

Literature

AMERICANISMS.

An American Glossary: Being an attempt to illustrate certain Americanisms upon historical principles. By Richard H. Thornton of the Philadelphia Bar. London: Francis & Co. 2 vols., pp. vii, 990, vi.

In 1774 a writer in a Boston magazine proposed "a plan for perfecting the English language in America, through every future period of its existence," and suggested the formation of a society "consisting of members in each university and seminary, who shall be stiled 'Fellows of the American Society of Language,'" and that "the Society annually publish some observations upon the language, and from year to year correct, enrich, and refine it, until perfection stops their progress and ends their labours." Six years later John Adams submitted to the consideration of Congress "the expediency and policy of erecting by their authority a society under the name of 'The American Academy for Refining, Improving, and Ascertaining the English Language.'" In 1781 a first attempt to discuss Americanisms was made by President Witherspoon of the College of New Jersey, to whom, indeed, we are indebted for that word. Later the field was entered by Pickering, Webster, Bartlett, De Vere, Farmer, Norton, and others. But more than a generation has gone by since the publication of Bartlett's and De Vere's books; both of those are unsatisfactory in many ways, and a new work was greatly to be desired. This has now made its appearance in London. A decade or so ago Sir James Murray complained in these columns that it was not to the credit of American lexicographers that they left to their English brethren so much work that ought to have been done by themselves. This well-deserved rebuke is emphasized by the present work, which comes from the hand of an Englishman by birth, though Americans can take at least some satisfaction in the fact that Mr. Thornton is an American citizen.

"It would be difficult, and indeed impossible," writes Mr. Thornton, "to construct a definition of an Americanism which should be comprehensive and concise"; and he has wisely refrained from making the attempt. But in this compilation he has included (1) forms of speech now obsolete or provincial in England, which survive in the United States, (2) words and phrases of distinctly American origin, (3) nouns which indicate quadrupeds, birds, trees, articles of food, etc., that are distinctively American, (4) names of persons and classes of persons, and of places, (5) words which have assumed a new meaning, and (6) words and phrases of which he has found earlier examples in American than in English writers. Mr. Thornton adds:

> This is an attempt to illustrate "certain Americanisms" only: those, that is, of recognized standing or of special interest. Accordingly, it will be found that over 80 per cent. of the illustrative quotations are half a century old. No attempt has been made to register the voluminous outpourings of modern slang; and the reader who wishes to investigate such phrases as "Adam and Eve on a raft" or "to get a wriggle on" will have to pursue his researches elsewhere. But some slang words and phrases are too characteristic to be left out, although modern; while others belong to the period of the hunter and the backwoodsman.

The plan of the work is thus made clear. At the end is a useful "Index of authorities cited," filling six pages. Mr. Thornton's illustrative extracts are drawn chiefly from five sources—periodical publications, books describing pioneer life, a few historical works, books of the "Jack Downing" type, and the debates in Congress. Those drawn from the last source are particularly valuable, as probably no one but the compiler has had the courage to attack the debates. But it is to be regretted that letters, diaries, and journals—which would yield so much of value—have scarcely been used at all. It is to be noted also that extracts before 1765 are extremely few and those few largely taken from the Oxford Dictionary. We think it would have been better had these been omitted altogether, for they do not adequately illustrate American literary usages of the seventeenth and eighteenth centuries, and the space could better have been devoted to more modern terms. In the index of authorities cited are a few mistakes. No such publication as the *Boston Weekly Messenger* was issued in 1743. "F. Bailey" should be F. Baily. J. Hall's "Letters from the West" were published in 1828, not 1820. The author of "Short Patent Sermons, by Dow, Jr.," was not E. T. Gerry, but Elbridge G. Paige. Why so many American authors in the second quarter of the last century wrote anonymously or pseudonymously does not appear, and in regard to some of these Mr. Thornton is apparently in error or has neglected to give the proper names. "Streaks of Squatter Life" was written by John S. Robb; "Some Adventures of Capt. Simon Suggs" and "The Widow Rugby's Husband" by Johnson J. Hooper; "Chronicles of Pineville" and "Major Jones's Sketches of Travel" by William T. Thompson; "Letters descriptive of the Virginia Springs" and "A Pleasant Peregrination through the Prettiest Parts of Pennsylvania" by Philip H. Nicklin. "R. Carlton" was Baynard R. Hall; "Elnathan Elmwood" was Dr. Asa Greene; "Arthur Singleton" was Henry C Knight. And Seba Smith's "Jack Downing Letters" have not been sufficiently differentiated from those written by Charles A. Davis.

Turning to the work itself, one finds its execution to be admirable, though Mr. Thornton's principle of selection is not always obvious. Thus, he records *pro-slavery*, but not *anti-slavery; Jersey*, but not *York; Old Tenor*, but not *New Tenor*. And there are some notable omissions—such, for instance, as *Pilgrim Fathers* and *spoils system*. A few criticisms occur to us. *Agolia* is a ghost-word, it being (as well as *agalia*) Brackenridge's error for *argali*. *Anti-federalist*, as originally used, can hardly be described as "a name applied to the followers of Thomas Jefferson," as he was in France when the Federal Constitution was drawn up. *Author*, meaning editor or publisher, should not have been admitted, as the word was so used in England early in the eighteenth century. *To bone up* means not "to bristle up," but "to get up" a subject. In his comment on *Britisher*, Mr. Thornton has been misled by Freeman, who was mistaken in supposing that Wesley "could not have applied the name 'American' to the English folk of any of the Thirteen Colonies," and that there was anything new in the use of the word British during the Revolution as applied to the royal army. Several years ago Sir James Murray informed the reviewer that the word Britisher was first applied to a British vessel. But it may be added that the English were called "Britishites" in this country in 1788. *Brother Jonathan* and *Jonathan* are really inseparable, and should have been treated under one head, but Mr. Thornton has missed an opportunity of showing that the former term had nothing to do with Gov. Jonathan Trumbull of Connecticut. We do not know why *to condition* is labelled "originally a Yale word," since the earliest example is from a Harvard source. Under *ell* or *L*, the elevated railway is not recognized. May not *ganty* be a misprint for *genty*, and *goss* for *cos?* (Printers were no more infallible then than now: in the *Boston Gazette* of July 25, 1768, Edward Winter advertised "Lecturizing Rods," which became "Electurizing Rods" on August 8, and "Electrical Rods" on August 15). No example of *Jayhawker* is given as a nickname for a native of Kansas. The statement that *johnny-cake* was "originally *journey-cake*" is, we think, a mistake, as *johnny-cake* occurs earlier; but that itself is doubtless a corruption of *jonakin*, a form found in 1676. The Boston Liberty Tree was not "the great elm on Boston Common," but stood at the corner of Washington and Essex Streets. Under Mecklenburg Declaration a warning should have been uttered in regard to its genuineness. The first extract under *O. K.* should have been dated 1850, not 1828. It is not true that *phebe* is "a bird which lives outside the dictionaries," for it is in several dictionaries under the spelling *phœbe*. *Poppycock* means "nonsense," "rubbish," rather than "bombast." *Scalage* is labelled "Not in the Century Dict.," but it will be found in the two volumes issued in 1909. It should have been explained that *Scophilites* were so called from one Scovil (Schovel or Schofield), who had been commissioned by Gov. Tryon of North Carolina to suppress the Regulators. In the first extract under *to slick*, the word means not "to make smooth" or "to set in order," but to beat or lynch, a sense of the word apparently not recognized in the dictionaries, though occasionally met with between 1825 and 1850. The significance of some of the extracts under *terrapin* is missed from Mr. Thornton's failure to point out that the word was applied in derision to Jefferson's gunboats.

Attention is called to these matters, mostly trifling, in order that corrections may be made in a second edition. What is greatly needed is a dictionary that shall illustrate American literary usages for three centuries, but such a work can be compiled only on the coöperative plan, a plan but for which the English Dialect Dictionary and the Oxford Dictionary would have been impossible; and it is to be hoped that the present volumes will act as a spur to the members of the American Dialect Society. Meanwhile, Mr. Thornton has placed us under the deepest obligations for his "American Glossary," in which single-handed he has recorded about 3,000 terms and 15,000 extracts. Almost exactly a century ago a Philadelphian said: "I wish to see the list of our Americanisms abridged as much as possible." If there are at the present time any who hold this narrow view, they would do well, for their own peace of mind, to avoid the present work, for it is filled with expressions many of which are vigorous, effective, picturesque, and racy of the soil.

CURRENT FICTION.

Wide Courses. By James Brendan Connolly. New York: Charles Scribner's Sons.

At his best, Mr. Connolly tells his stories with vigor and directness. Even when he falls below par, as in "Lightship 67" and "Captain Blaise" of the present collection, he is still readable. "The Wrecker," which stands first, is not entirely successful, though it contains one haunting phrase which comes honestly by its Celtic blood. "Who's to deny a woman whose son lies drowned?" "Laying the Hose-Pipe Ghost" is an amusing tale of Navy red-tape, told in a kind of subdued slang that adds much to the effect. "Jan Tingloff" is more serious, and the things that happen to him have an air of grim reality. The description of the old side-wheeler foundering in a gale is extraordinarily vivid. But the best of this volume is to be found in the two stories dealing with Kieran, pump-man on an oil-tanker — Don Quixote Kieran, *alias* Cogan Capeador. Here Mr. Connolly does more than tell a tale; Kieran has a personality, human, attractive, and picturesque. Wander-fever, or romance, or the spirit of adventure (the name does not matter) drives him from one end to the other of the seven seas. Athlete, Navy man, wind-jammer, bull-fighter—there are few things he has not been. He also composes chanties and sings them along the decks in spite of the opposition of the bruising bosun. The latter swore Kieran would never dare finish his Flying Walrus song; so one day the deck-hands made a ring (while the Captain looked the other way) and stood around to watch Kieran being killed. But it was the bosun who soused his damaged head in a bucket after the fight, and Kieran forebore to finish the Flying Walrus because he thought that would be rubbing it in.

The Department Store. By Margarete Böhme. Translated from the German by Ethel Colburn Mayne. New York: D. Appleton & Co.

This "novel of to-day" is a lengthy, continuous exposition of conditions good and bad in a department store in Berlin. With German thoroughness the writer begins long before the beginning. We must follow the love affairs of the parents of a girl who later becomes saleswoman in the store, their deaths and her adoption. We must be made acquainted with her adopted parents and their previous histories; with the neighborhood and its little home industries and shops, before we are fitted to assist at the founding of the great store built up modern-wise on the declining opportunities of small dealers and artisans. The "obviously ungifted" boy Joshua Manassa develops as he grows up the commercial genius on which the house is founded, and stands throughout the most striking figure in the book. A Jew, who for expediency changes his surname, a man who never lets feelings interfere with business, a lavish giver where his interests will not suffer, a stern moralist, and a man of absolute self-control, his god is "the holy spirit of labor, of progress." "Like the spirit of God upon the face of the water, did his direct influence hover over the whole concern." One of his sons begins life with idealizing notions of what may be done in a great commercial establishment, but time and a visit to America make havoc of his half-Socialistic ideas and their influence survives only in an art department, where three-colored photographs and antiques are sold. The salesgirl in this department represents fidelity and enthusiasm, and, of course, wins a substantial matrimonial reward. For the rest, the characters are merely all engaged in intrigues, great and small, commercial and sentimental, for which, indeed, Joshua "does not stand," but which pervade his shop and his circle. The rise of the vast emporium, its triumph over rivals, and its embracing in one or another capacity all the little workmen and workwomen whom it had put out of business, is told in minutest detail. It is one long, sumptuous catalogue of furnishings, bargain sales, elaborate windows, intricate advertisings. These and the sorry heart-affairs of chiefs and underlings are the story. It is itself a huge show-window, which shows, assuredly, but does not teach. The translation in the main flows smoothly; a few palpable snags need not be particularized. We take it that it is not the translator who imports from the West Indies "a live, beauteous, almond-eyed Hindu."

The Lone Adventure. By Halliwell Sutcliffe. New York: George H. Doran Co.

We may hope that this adventure will remain lone, for it is very wearisome. A large part of the book can be summed up in one of its phrases, "And still nothing happened." The author has attempted to write in the style of Maurice Hewlett a romance of the Jacobite rising of 1745. But there is something more in Mr. Hewlett's style than odd words, inversion, and tortured metaphors; there is imagination. Take that away, and the remains would resemble the style of Mr. Sutcliffe. He seems to work on the theory that "terror and pity may be caused by diction." He is determined to write in figures, and the result is sometimes like this: "Since his soul was launched into the open sea of life, Rupert had known many a Gethsemane." The extraordinary vacancy of plot and the deliberate eccentricity of style could be forgiven if there were any interest in character. Five or six times the hero, who has suffered unjustly under the reproach of being a scholar, passes through a psychological experience which proves to him that he is a man; yet the reader is left unconvinced.

The Yoke of Silence. By Amy McLaren. New York: G. P. Putnam's Sons.

A tidy little love story in a Scottish setting. There are glimpses of an old castle with an *oubliette* and seaward-looking terraces; there are a husband and wife parted by a woman unscrupulous in love and worse as to money; there are doubts and fears and meetings and partings and peace-makings. There are a few Scottish folk of marked personality, a nice baby, and a perfectly appointed yacht. Need more be said?

TWO BOOKS ON GEN. LEE.

Lee the American. By Gamaliel Bradford, jr. Boston: Houghton Mifflin Co. With illustrations. $2.50 net.

Robert E. Lee, Man and Soldier. By Thomas Nelson Page. New York: Charles Scribner's Sons. With portrait and maps. $2.50 net.

Each of these books is very good of its kind, but perhaps the greatest value of each lies in the testimony it bears to the charm of Lee's character and to the growth of his reputation as one of the very noblest figures in American history. Naturally, from this point of view, special value attaches to Mr. Bradford's book on account of the writer's Northern birth and affiliations. It was to be expected that Gen. Lee would be a spotless hero to Mr. Page; it is more impressive to learn that he is quite as spotless a hero to Mr. Bradford. It is the latter who writes, "I have loved him, and I may say that his influence upon my own life, though I came to him late, has been as deep and as inspiring as any I have ever known. If I convey but a little of that influence to others who will feel it as I have, I shall be more than satisfied."

Mr. Bradford will doubtless have his modest wish granted, and perhaps he will obtain another desire that stands out from his book. He is a devotee of the art of "psychography," the portrayal of souls, and Sainte-Beuve is his master. He actually adds to his book an interesting, though possibly a superfluous, appendix entitled "Lee and Psychography." This means that his volume is not a straightforward, formal biography, but a group of chapters under such titles as Lee Before the War, Lee and his Army, Lee in Battle, and the like. Each chapter is, in the main, made up of quotations bearing on the central topic and of comments upon these, both citations and comments being excellent for their purpose. Indeed, Mr. Bradford seems thoroughly entitled to the praise of being a master in literary mosaic-work. Whether a grouping of mosaic chapters into a mosaic volume furnishes a book that one puts down with entire satisfaction, whether the method is not fitter for the essay than for the treatise, ambitious or unambitious, whether psychography, as its exponents practice it, will ever yield us real portraits, are questions one will probably answer according to one's temperament. Mr. Bradford's chapters, it is sufficient to say here, show careful and wide study of the sources, great sympathy with Lee and the people he represented, and exceptional literary and psychological acumen.

Mr. Page's book is the long-tried, straightforward type of biography, giving a full, chronological, eulogistic, and apparently accurate account of his hero's career. It was begun as an enlarged edition of the writer's "Robert E. Lee, the Southerner," but it soon grew into a new book, especially through largely increased emphasis upon military details. The result is a volume which ought to satisfy for a long time the demand for a fairly extensive biography of Gen. Lee, sympathetic, popular in the best sense, and based on the most trustworthy military authorities on both sides. Mr. Page's practice as a trained narrator has stood him in good stead; he knows and loves the South, and he has made what seems to us to be a very competent and conscientious study of the available sources of information.

There is little emphasis upon Lee's career prior to the Civil War, but the treatment of the four years of struggle is sufficiently full to satisfy most requirements, amounting as it does to five hundred pages. Excellent summarizing chapters precede and follow this stretch of military narrative; then we have equally good chapters on Lee's character and on the calm close of his life. Throughout, the writer's spirit is attuned to that of his subject, and there is scarcely a partisan sentence that can arouse opposition in a fair-minded reader. In other words, while disagreement with Mr. Page is permissible, heated controversy with him ought to be impossible. We have made a long stride forward towards true national unity when such a statement is suggested by a book as loyally pro-Southern as this.

It is probably in its tone and in its level excellence of execution that the chief merit of Mr. Page's biography lies, but it should be added that, in our judgment, he succeeds in what is perhaps his main special contribution, not so much to our knowledge as to our manner of envisaging his subject, viz., in bringing out the fact that the greatness of Lee's character and achievement was in large measure the result of the admirable qualities of the aristocratic society of which he was the consummate exponent.

The Pacification of Burma. By Sir Charles Crosthwaite. New York: Longmans, Green, & Co. $4.50 net.

This volume is devoted to the history of Upper Burma, a district of about 120,000 square miles, which, in consequence of native misrule, was annexed by Great Britain and made a province of the Indian Empire on February 26, 1886. The story of the creation of orderly administration, as told by the first Chief Commissioner of Burma (February, 1887-December, 1890), Sir Charles Crosthwaite, on whom fell the brunt of this Herculean task, is of special interest, not only because "Burma will be, in all likelihood, the last important province to be added to the Indian Empire," but also because it is indeed

> worth while to put on record a connected account of the methods by which a country of wide extent, destitute of roads and covered with dense jungle and forest, in which the only rule had become the misrule of brigands and the only order systematic disorder, was transformed in a few years into a quiet and prosperous state (p. 3).

The original military force for the pacification of Burma was about 14,000, which was increased by March, 1887, to about 16,000. Primarily, it had been intended to have half this army consist of Burmans, but their lack of responsibility rendered them impossible, and the non-English contingent was ultimately confined to Indians. At first, under the new conditions that had to be met, there were frequent minor reverses, as well as some degree of friction between the civil and the military police; on the other hand, affairs were simplified by the fact that the Buddhist monks, numbering between 20,000 and 30,000, remained strictly neutral. The first great problem before the English was the suppression of dacoity (organized gang robbery), a task rendered the more difficult since the Burmans themselves, in their terror of dacoit vengeance, usually refused the English any information or other assistance. Yet gradually dacoity was crushed, the regular policy being that

> the rank and file of those who joined insurgent or brigand bands were treated leniently. They were freely pardoned, if they had not committed murder, on condition that they surrendered with their arms and engaged to live quietly in their villages. Where it was necessary and possible, work was provided for them. When I left Burma there were thousands who had so surrendered and were living honest lives. Very few, I believe, went back to the wild life (p. 123).

By the spring of 1888 pacification had advanced so far that it was possible to consider the reduction of the troops and their replacement by military police. Early in 1886 these police numbered about 3,300, in 1888 between 5,000 and 6,000, in 1889 about 18,000, and in 1912 about 15,000. The rapid change of conditions in 1887 is shown by the fact that at the beginning of the year the troops held 142 and the police 50 posts, whereas at the end of the year the figures were 84 and 175, respectively. On October 28 of the same year the Village Regulation Act was passed, which

> established on a legal basis the ancient and still existing Constitution of Upper Burma. While emphasizing the responsibility of the village headman, it gave him sufficient powers and the support of the law. It also enacted the joint responsibility of the village in the case of certain crimes. . . . It gave the district officer power to remove from a village, and cause to reside elsewhere, persons who were aiding and abetting dacoits and criminals. This enactment . . . was framed in accordance with the old customary law and with the feelings of the people. It strengthened our hands more and gave us a tighter grip on the country than anything else could have done (p. 81).

In 1888 the process of disarming the natives was begun, and in the same year Burma definitely became a frontier province of the Indian Empire.

There were, however, a number of outlying districts which demanded attention, notably the Shan States, long torn by internecine strife. As the successor of the Burmese State, England felt herself in duty bound to control all the territory that had been lawfully claimed by Burma. Accordingly, late in 1886 the reduction of the Shan States was begun, the general policy being as follows:

> Letters explaining the principles which would guide the British Government in its relations to them were written to the various chiefs. They were assured that there was no desire to interfere in the internal affairs of the States. British supremacy must be acknowledged, peace must be preserved, the people must not be oppressed. Subject to these conditions and to the payment of a moderate tribute, the British Government undertook to recognize the Sawbwas [native chiefs] who were in effective possession, to uphold their rights, and to give freedom and open the way for commerce. . . . There was no intention of fighting the Shans. On the contrary, it was desired to win their friendship and to induce them to trust us. Already the duties, imposts and monopolies which strangled trade in the King's time had been swept away. It remained to establish peace and to open the trade routes which the prevailing anarchy had closed. . . . The leaders of the expedition . . . were to take every precaution against giving avoidable offence or trouble to the people, to gain the goodwill of chiefs, priests, and villagers, to interfere as little as might be with their prejudices, their religious houses, and their private life (pp. 147-149).

Meanwhile there was constant guerrilla fighting, and the difficulties of the English were enormously increased by the configuration of the country. District after district was reduced to peace and order. In some cases, as in that of Kentung, Siamese intrigue had to be counteracted; elsewhere China had to be considered, particularly in view of the large number of Chinese in Upper Burma. All this time the still more difficult tasks of civil organization proceeded apace—the building of roads and railways, the construction of official buildings, forest surveys, provision of medical aid, and the like. The success of the new administration may be gauged by the fact that, without the levying of a single additional tax, the revenue of Upper Burma rose from £222,000 in 1886-87 to £1,120,000 in 1888-90.

A chronological conspectus might with advantage have been appended to the book, and there are one or two disturbing errors and omissions. Some of these are easy to correct. The context shows, for example, that Sir Charles left Rangoon on February 27 instead of March 27 (p. 24), and it is obvious that the capital of India has not lately been moved from Delhi to Calcutta (p. 76). On the other hand, there are passages involving a manifest error which cannot so be corrected. Thus, according to p. 265, Lieut. Hawker was mortally wounded at Muklon on February 21, but on p. 267 the place and date are given as Mukton and March 15, respectively. The disturbing feature of such oversight is that it arouses some mistrust as to the accuracy of other specific places and dates.

Railway Transportation: A History of Its Economics and of Its Relation to the State. By Charles Lee Raper. New York: G. P. Putnam's Sons. $1.50 net.

In 1885 appeared from the pen of President Hadley the first systematic American treatise on railway transportation. In its concise marshalling of facts, its clear enunciation of principles, its brilliant and incisive style, this book has not been surpassed. But because so much railway history has been made during the last quarter-century, a new edition was desirable. Hence the announcement on the title-page of Professor Raper's book, that it is based with the author's permission upon President Hadley's "Railroad Transportation," aroused the expectations of those familiar with the earlier work. But the reader soon learns to his disappointment that this book is Hadley with Hadley left out.

In the first place, the emphasis has been changed. Whereas President Hadley gives only five out of thirteen chapters to foreign countries and lays stress upon our own history, intermingling with his historical treatment his brilliant elucidation of fundamental principles, Professor Raper gives but five out of seventeen chapters to the United States, and these are the least valuable chapters in the book.

In the matter of style the contrast is so marked as to be almost distressing. Unhappy choice and actual misuse of words repeatedly mar the text, and the constant repetition of such adverbs as "wonderfully," "tremendously," "vitally," detracts from the effectiveness of the discussion. Such inventions as "transportational" and "damageability" are hard to forgive. We are confronted with such terms as "densely populated people," "important significance," "increasingly slight," and "inefficiently cheap." We are told that the "length of their haul is very short," that the railways have caused places of raw materials, of manufacture, and of consumption "to be brought into unity"; that no important area of the United States is without the choice of a number of market centres "around which the minor markets all rotate," and that Berlin was not the centre "from which the Prussian lines originated or focalized." Poor sentence structure often obscures the author's meaning, and a habit of throwing the verb to the end of the sentence disturbs the reader's equanimity.

The chapters on the United States, so far as they relate to the period previous to 1885, are distinctly inferior to those of Hadley, and the treatment of the later period lacks distinction. The author seems erroneously to identify the distance principle of rate-making with the cost of service principle. He states that the long and short haul clause of the Interstate Commerce Act forbade a greater charge for a shorter than for a longer distance on traffic moved in the same direction *at the same time*. It is, of course, untrue that the shipments must be contemporary. It is difficult to understand how our transcontinental traffic has been "profoundly influenced by the steamers that operate through the Suez Canal."

The value of the book consists in its summary of recent European transportation history. One may differ with the author's conclusions as to the results of policies in the various States, and may properly take exception to unsubstantiated opinions introduced by the phrase "we think," but the historical treatment seems in general to be carefully done. Many statistical comparisons of European and American conditions fail to give due recognition to the lack of comparability of data, and hence leave the reader with inaccurate impressions. It is impossible, for example, with the different accounting systems, to compare accurately relative costs of operation, rates of dividends, or capitalization per mile. Confusion is also caused by the use of the term average *rate* when the author clearly means average *receipts*.

On the question of State ownership, Professor Raper is a conservative. His conclusions are that government ownership, with a few notable exceptions, has been a burden on the taxpayers, that it has not been "particularly efficient" or "especially cheap," that the people of the United States do not desire at present to "possess" the highly centralized administration necessary for nationalization, that Government operation is not needed in the United States to supply facilities or to correct the abuses of private operation, and that its "only possible defence would be Socialism." He suggests in the place of State operation the extension of the parcels post in the United States, but his brief discussion of this subject is superficial and fails to take account of many factors in the problem.

Italy's War for a Desert. By Francis McCullagh. London: Herbert & Daniel.

The note struck by Mr. McCullagh in his very title is maintained to the last page. It is a bitter indictment of Italy's motives and methods in her invasion of Tripoli. The Italian people, the press, the navy, the army, are handled with no pretence at courtesy. In his introduction Mr. McCullagh tells of being visited in his English home by a party of Italian gentlemen, headed by the "futurist" leader, Signor Marinetti, who challenged the author to a duel. We can very well believe that the hot Italian blood must have boiled repeatedly under the pitiless scourging administered by Mr. McCullagh, whose reputation as a veteran war correspondent was sure to give weight to his charges. He ridicules the Nationalist movement in Italy, which, in the mind of its most fervent advocates, has taken on the aspect of a crusade for the restoration of the Roman Empire. He takes delight in drawing comparisons between Scipio Africanus and the half-disciplined Sicilian troops who have again and again turned in cowardly flight before an enemy vastly inferior to them in numbers and equipment. The spirit of the following sentences permeates the book:

> The real explanation of the Italian inactivity for over half a year, despite the fact that there are no less than twenty-four Italian generals in Tripolitania, is this—the Italian soldier is a poltroon. When not a poltroon he is an Anarchist or a mutineer.

According as one looks at it, the present story is very badly or very cleverly planned. Mr. McCullagh begins by conveying the impression of extreme prejudice. He carries it to the point where many a reader will be tempted to put down the volume with distrust. But if the reader persists until he comes to the heart of the book, the massacre of the suburban Arabs perpetrated by the panic-stricken Italians during the three days following the battle of Sharashett on October 23, of last year, his attitude towards the author will change. Here the accusation of prejudice will not hold. Mr. McCullagh's own statements are reinforced by a mass of irrefutable testimony. As one reads the heart-rending story of those dreadful three days when the Italian army ceased to be an army and became a horde of maddened soldiery, virtually running amuck; of men and women and children who were shot down in squads without semblance of a trial, one can easily understand why Mr. McCullagh and several of his colleagues should have handed in their papers to the Italian commander as a protest. Four thousand Arabs perished during these three days, according to our writer. Three thousand is the testimony of French correspondents friendly to the Italian cause. One feels that Mr. McCullagh has made out a case. But he could have made it stronger by not stopping to pick fault with anything and everything Italian.

Jean de la Fontaine. By Frank Hamel. New York: Brentano's. $3.75 net.

The first lines of Mr. Hamel's book are more sympathetic than all the rest; in them he tells the story of the little girl who tried to say the Lord's Prayer in French, and being haunted by the fable of the fox, the crow, and the piece of cheese, began "Notre Père sur un arbre perché." Turning then to the slim events of La Fontaine's tranquil life, Mr. Hamel sets them forth in a straightforward and unpretending fashion which makes easy reading, but which does not quite satisfy. With no sharp vision of La Fontaine's personality, and with little distinction of style, he yet manages to indicate with some clearness the man's exterior and material surroundings. But he scarcely goes further. There is hardly any critical study or illuminating comment. It is simply a relation of facts, with a certain number of anecdotes for embellishment. Mr. Hamel apparently takes these last directly from d'Olivet, "*le pauvre abbé*," whom M. Lafenestre calls one of the least clairvoyant of La Fontaine's biographers. It was d'Olivet who said the poet was an idiot because he never in his life did anything for himself appropriately.

As for the letters from Limousin, Mr. Hamel finds them disappointing "as a disclosure of the poet's real self," because they are not love letters "in the

BURLINGAME PUBLIC LIB.

strict sense of the term." There is no "outpouring of emotion on paper addressed to one woman and containing a revelation of a real and lasting passion. . . . They contain nothing more soulful than friendly feeling and intellectual comradeship." How could it have been otherwise? La Fontaine never felt a breath of true passion in his life. On the contrary, his "real self" was made precisely of the stuff of these letters: good-humored observation of people about him and a lively interest in the last handsome woman who had crossed his path. It was all light and delicate and essentially poetic. Mr. Hamel is as far from a sympathetic understanding when he calls La Fontaine in his youth a "country bumpkin" as he is in using the term "old reprobate" later on. Both these expressions, in an attenuated sense, may have some applicability; but they both miss La Fontaine, the young dreamer in the woods of Château-Thierry with his ears full of bird-songs, or the merry old man at a Parisian dinner table who still loses his head over the pretty girl sitting next to him. Mr. Hamel's words are like the meshes of a sieve through which the poet, after a momentary check, slips with ease. When it comes to discussing his works, this lack of sympathy becomes plainer. The "Contes" are condemned without reprieve. It is not necessary, we are told, for us to read them. They are mentioned only because "in his biography it is necessary to write of them." But if Mr. Hamel wished to preserve our morals from the influence of the "Contes," he should not have quoted the passage from "Les Oies du Frère Philippe," for its natural effect is to make one wish to know more of a matter so deliciously human. The two chapters on the "Fables" are little more than a catalogue, interspersed with quotations, paraphrases, and translations. These last, mostly by Elizur Wright, are halting and commonplace, though an exception may be made for one by the Rev. W. Lucas Collins, from the fable of the young mouse who sees his first cat, and cries in his innocence:

He must have strong affinities of soul
With our great race—his ears are shaped
the same.

Mr. Hamel disregards almost entirely the interpretation of human nature by the fables, as well as the more immediate references to the court of Louis XIV and the society of the century. His few remarks on the subject are perfectly conventional. Taine, in his complete and brilliant development of this theme, illustrates from the fables the king, the princes, the court, the nobility, the curé, the bourgeois, the doctor, the magistrate, the professor, the student, the peasant. Mr. Hamel sees something else: "A wonderful procession of animals stalks through the fables, almost every kind of zoölogical specimen being represented. There are rats enough to require the services of many Pied Pipers of Hamelin, lions enough to stock the equatorial forests, wolves enough to make the Steppes of Russia seem crowded, bats and birds, gnats and frogs galore." To be fair, let us add that he goes on to say that the poet "modernized" the old animal stories "to the extent of reflecting in them the manners and foibles of his day. All the social orders were represented and classified." But for the central fact of La Fontaine's poetry, is not this statement rather bare and summary?

The book is printed on extremely thick paper, which swells its 380 pages to a great size. There is an excellent photogravure frontispiece, and there are a number of prints.

Notes

The National Education Association will meet in Chicago July 6 to 12.

The late John Bigelow's "Retrospections of an Active Life" will be completed in the autumn by the publication by Doubleday, Page & Co. of Volumes IV and V. Volume IV covers the years 1867 to 1871, and Volume V, 1872 to 1879.

The same house has in hand: "Browning and His Century," by Helen A. Clarke; "Reminiscences of the South Seas," by John La Farge, being the diary which the artist kept while in Samoa and Fiji; "Æsop's Fables," illustrated by Arthur Rackham.

The Century Company will publish in August "C. Q., or In the Wireless House," by Arthur Train, and later in the year "A Romance of Billy-Goat Hill," by Alice Hegan Rice.

Sir Archibald Geikie, president of the Royal Society of London, has written a monograph on "The Love of Nature Among the Romans" in the last decade of the Republic and the first century of the Empire. The work will be issued by Murray.

Allen H. Eaton is bringing out, through McClurg, "The Oregon System: The Story of Direct Legislation in Oregon."

A forthcoming book in the list of Stanley Paul & Co. is "The White Slave Market," by Mrs. Archibald Mackirdy and Mr. Willis, who was formerly a member of the Australian Parliament.

"The Cahusac Mystery" is announced by Sturgis & Walton; the author is H. Hesketh Prichard.

Jane Addams's "The Spirit of Youth and the City Streets," first published in the autumn of 1909, has just been added to the Macmillan Standard Library.

The Newdigate prize at Oxford has been awarded this year to William Chase Greene of Balliol College, Rhodes scholar from Massachusetts, for a poem on "King Richard the First Before Jerusalem." Mr. Greene was class odist and salutatorian at Harvard in 1911. He is a son of Prof. Herbert E. Greene of Johns Hopkins University, and a grandson of William L. Greene of Dorchester, for many years publisher of the *Congregationalist*. The Newdigate prize of twenty-one guineas for English verse was founded by Sir Roger Newdigate in 1806, and is open for competition each year by the undergraduates of Oxford University. Among those who have won the prize are Matthew Arnold, Robert Stephen Hawker, Oscar Wilde, and John Addington Symonds.

"The Symbolism of Voltaire's Novels" (Columbia University, Lemcke & Buechner), by W. R. Price, is a detailed investigation, with special reference to "Zadig," of Voltaire's satire of contemporary social conditions, and an attempt, by ingenious detective work, to make the veiled allusions clear and specific. The author seeks to identify names, characters, political hints, and to fit the allegory to the times; in short, to show what Voltaire was talking about. Dr. Price uses symbolism as "anything which stands for another thing or for other things." A wide field is thus thrown open to a mind ingenious at solving rebuses or charades, and this sort of mind Dr. Price possesses. The book shows industry and learning based on a thorough study of Voltaire. The conclusions, however, cannot rely for acceptance on absolute proof, but only on probability, and the reader is sometimes left wondering whether the writer is not carried away by the explorer's enthusiasm. One of the most interesting passages relates to the origin of the name "Voltaire." The volume is clearly a dissertation, not pretending to literary form, and, unfortunately, the author's erudition has not been seconded by competent proof-reading at the press.

Under the title "World Organization as Affected by the Nature of the Modern State," Dr. David Jayne Hill has published eight lectures given at Columbia University, in March, 1911, on the Carpentier Foundation (Columbia University Press). The purpose of the lectures, which are both historical and critical, is to show "the growth of juristic consciousness among all civilized nations," and "the peculiar adaptability of the modern state for entering into a world organization in a juristic sense." What form such organization shall take, Dr. Hill does not pretend to indicate in detail; but he reaches the conclusion that the usual and accepted principles of jurisprudence are sufficient for the adjudication of all international disputes; that substantial progress has been made, through the various Hague agreements, in the direction of universal justice among nations, and that the development of a "society of states" presents no insuperable difficulties. Disarmament appears to him to be a natural result of such organized international relations, rather than an ideal to be striven for as such. The book is not easy reading, but it is, nevertheless, one of the most thoughtful of recent contributions to the difficult subject of international conciliation.

"Replanning Small Cities," by John Nolen, fellow of the American Society of Landscape Architects (Huebsch), is made up of a general survey of the subject, studies of six American cities from this point of view—namely, Roanoke, Va.; San Diego, Cal.; Montclair and Glen Ridge, N. J.; Reading, Pa., and Madison, Wis.—a section on how existing cities may be replanned, an appendix containing extracts from American and foreign legislation relating to the matter, and a bibliography modestly described as a "Short List." The illustrations are especially interesting. They include the bay front of San Diego as it is, and as proposed, general plans for Reading and Madison, and L'Enfant's plan of Washington. Mr. Nolen points out that the notion that comprehensive plans are only for large cities is a misconception, the reverse being nearer the truth: "There is scarcely anything in the smaller places that may not be changed." To the movement to make such changes his book should give definite impetus.

Prof. Alexander Viets Griswold Allen, who has been made the subject of a memoir (Longmans), by the Rev. Charles Lewis Slattery, rector of Grace Church, New York, was born in 1841 in Otis, Mass., where his father was rector of the Episcopal church. The home was filled with the best traditions of New England evangelicalism—its seriousness, its consecration, its culture; filled, also, with what so often accompanied these, a hard struggle for an existence. After strenuous financial efforts, Alexander Allen was graduated at Kenyon College, Gambier, O., and entered the Divinity School, in the same place. In his time the insurgent wave of modernism was just beginning. He kept, however, his fundamental beliefs, his passion for truth, his sweetness of temper, and his closeness to his parents. After two years spent in Andover Theological Seminary, he founded a little Episcopal mission church among the mill-hands of the neighboring Lawrence. The enterprise was successful, but his characteristic work was yet to come. In 1867 the Episcopal Theological School was established in Cambridge, Mass., and the Lawrence rector was called, at the age of twenty-eight, to be its first professor of ecclesiastical history. Those who were in his class-room almost always awoke with surprise to a realization of the vitality of the past. Dogma was to him concentrated life, needing but expansion to become living and absorbingly interesting. And so his greatest book was appropriately "The Continuity of Christian Thought." Other books followed—a "Life of Jonathan Edwards," "Religious Progress," "Christian Institutions," "Freedom in the Church." After the death in 1893 of Phillips Brooks, his brother, Dr. Arthur Brooks, undertook a Life of the Bishop; and when Arthur Brooks died two years later, Professor Allen was asked to complete the work. The last of the three volumes appeared in 1900. It was an appreciation of Phillips Brooks rather than a critical estimate. This, with twenty-eight articles contributed to books, papers, and magazines, completed Professor Allen's literary output. He delivered the Bohlen lectures in Philadelphia, Lowell lectures in Boston, Dudleian and Noble lectures at Harvard, besides lecturing in the regular courses at Harvard and in Union Theological Seminary, New York. He received the degree of D.D. from Kenyon College, and from Harvard and Yale Universities. He died in Cambridge in 1908. Dr. Slattery had the difficult task of telling a story where, in popular estimation, there was none to tell. For a life with so little incident presents to the biographer few peaks to which to attract passing attention. Yet for those who are concerned with the movements of thought, a career which, like that of this seminary professor, was in close touch with every vital current of his time, has no need of events in order to procure profound interest. And Dr. Slattery has wisely made Professor Allen's letters largely tell the story.

"Outlines of School Administration" (Macmillan), by Arthur C. Perry, is an attempt to put in form for textbook use the present methods of school administration in the various nations which have made really significant progress in public education. The matter is placed under five headings, school organization, school direction, school supervision, school management, and class management, the methods in vogue in the various countries being grouped about these several topics. As a textbook on comparative methods, one might wish that the books were less tinctured with the personal bias of the author on various problems involved.

"The Criminal and the Community" (Lane), by James Devon, has a rare personal flavor which makes it a refreshing contrast to the literature of impersonal criminal science. Dr. Devon is the enemy of all institutionalism and of all study of men by the method of statistics and averages. For him the criminal is first of all a person, and "one such case thoroughly known is a better basis for a study of the subject than any amount of tables." He himself speaks from the authority of many years of personal experience as medical officer in Scotch prisons and poorhouses, which he utilizes for a highly instructive, and evidently clear-sighted, account of the motives and conditions of crime, more particularly of the conditions leading to petty crime and first offences. The striking feature of the book is his proposal to liberate prisoners when responsible citizens offer to become their guardians. Arguing from a purely utilitarian standpoint, Dr. Devon contends that imprisonment is a flat failure. It is not very effective as a deterrent, and no useful purpose is served by the prisoner's degradation. The prison may sometimes benefit his health, but it enfeebles his mind and at the end of his sentence sends him out into the world without an occupation, often without friends, and wholly unfitted for communal life. Its only use is to hold him until provision has been made for his supervision and livelihood; and if no such provision is made, it is absurd to release him at all. However reformed and improved, the prison suffers from the vice of institutionalism; and the same is true of the system of liberation on probation in charge of an officer. The normal life of a man is in the society of those who are personally interested in him, preferably in a family. What Dr. Devon contends for, then, is the policy of boarding out which has been found to be successful in the case of pauper children and the insane. He thinks that there are few criminals without responsible friends who would be willing to assume their charge. At any rate, he holds, the problem of crime is insoluble until those in the outside community are ready to assume a personal responsibility.

To show what is the difference between the Scottish and the English peoples may fairly be said to be the object of Dr. Donald Macmillan's "Short History of the Scottish People" (Doran). It is an attempt at a pendant to Green's "Short History," and, like its prototype, is to the greater glory of its subject. Not many years ago it would have been to the glory of the Kirk and the Covenant; as it is, the ecclesiastical thread is closely followed. And there was right in it. It is said with perfect truth (p. 301), "If there is one institution which the people of Scotland ought to love more than any other, it is the Church of Scotland." But the Kirk and the Covenant have fallen on historically evil days, and so it is now the people of whom we have a picture, "quietly working out their own salvation while kings and lords were destroying each other" (p. 194). And the judgment of the people is used to rescue the most shady characters. That Moray was called "the Good Regent," absolves him of the charges of meanness and treachery. In the same perfervid popularism, Burns is reckoned the greatest Scottish genius. Yet the book is an interesting and solid piece of writing, enlivened by a queer jumble of style. On one page the cat jumps, and on another we expiscate the truth. References, too, are sorely needed, even marked quotations being simply "by a recent writer." The five maps mentioned on p. xx are not in the review copy.

Lieut.-Col. Andrew C. P. Haggard's "France of Joan of Arc" (Lane) belongs to the well-known class of "popular" histories. Two-thirds of the volume are occupied by a commonplace recital of the events of fifty years preceding the arrival of Jeanne on the scene; but there is nothing in the way of information which could not be had from a school textbook of moderate worth. Originality of treatment and a good style, had they been present, might have served as an excuse; but so far as appears, the author proceeds as if he were treading fresh ground, and as if the reader were supposed to be ignorant of the fact that the subject had ever been touched by Anatole France, Andrew Lang, or Gabriel Hanotaux. The style is sometimes melodramatic, sometimes facetious. We are told in one place that "Charles VII had been only able to regale" La Hire "with the very scraggiest kind of a dinner." The only thing approaching an idea to be found in 350 extraordinarily thick pages is the statement that, in the author's opinion, Jeanne had no divine mission: France would really have been better off under English rule; therefore, since the Maid, in spite of this, delivered her country from the English, the supposition is that the Divinity could have had nothing to do with the matter.

Miss Betham-Edwards knows her France well, as her various writings testify. She has now gathered into a volume entitled "In the Heart of the Vosges" (McClurg), a number of sketches—some of which have appeared in periodicals—ranging from the towns of Alsace to unfrequented corners of the Pyrenean valleys, back and forth to Picardy, French Flanders, and the Alpes Maritimes. The sketches are discursive and uneven, and the chronology of her wanderings is sometimes uncertain, but the whole is very readable and lifelike. We get glimpses of Lourdes, Narbonne, Marseilles, Nice, Monte Carlo, and other interesting places, and are here and there reminded of that great prototype of travellers in search of combined agricultural and social information—Arthur Young. But Miss Edwards does not penetrate beyond the surface of things, and where she attempts art criticism, as in her chapter In Gustave Doré's Country, she is disappointing. Otherwise generally accurate, she speaks of Carcassone's Saint Bartholomew (in 1560) as still showing its traces, "after five hundred years."

We have received copies of the new edition of Grant Allen's Historical Guides to "Venice" and to "Umbrian Towns," and also of "Smaller Tuscan Towns," which has recently been added to this series (Holt). The authors of this latest volume are J. M. and A. M. Cruickshank, who compiled that on Umbria. It follows the well-defined plan of its predecessors, being more compact and practical than Hare, but purposely not so businesslike as Baedeker. We may record here another volume in the Mediæval Towns series (Dutton). It is on Avignon, its compiler being Thomas Okey, the industrious book-maker.

"The Life of Cesare Borgia" (Brentano's), by Rafael Sabatini, seems at the outset to be a masked eulogy. On reading farther, however, one discovers that the author frequently insists that the Borgias may have been very wicked gentry, but that the iniquities attributed to them have not been proved. He busies himself to show that hearsay, and not documentary evidence, is the basis on which the charges against them rest. We regret that, in a work whose essence is polemical, Mr. Sabatini furnishes almost no footnotes and references. He writes perfervidly, taking a savage relish in demolishing his opponents. Nevertheless, the book is worth reading for anyone who desires to have this perpetually recurring question of the Borgias presented from an unconventional angle. The figure of Cesare Borgia is drawn with vigor.

"The Welsh Border" (London: David Nutt), by M. A. Hoyer and M. L. Heppel, is the tediously complete record of a half-walking and half-railway trip which these two English women took as an inexpensive and (for them) adventurous summer outing. Their plan was to follow Offa's Dyke—a wall of dirt raised in the eighth century by that warrior king to hold the Welsh in check—to follow this mound for its full two hundred miles, from Mold down to the Severn; and this they accomplished to their complete satisfaction, though the original material they collected would hardly eke out a magazine article. This diary, every page of which cries out for the editor's blue pencil, is illustrated with two mediocre photographs, thirteen unsatisfactory sketches, and a hopelessly indistinct map.

Few sides of Arabic letters are so touched with the tears for mortal things as the little hoards of manuscripts which are found from time to time hidden in the walls of old houses in Spain. More even than the spectacular hill of the last sigh of the Moor, they tell of the final ebbing of the Moslem tide from Europe, and of what it meant for the Moslem masses. For they speak the silent sorrow of a people going into exile, though with a pathetic hope, never fulfilled, of some future return to their own. They were evidently hidden in 1610, the year of the expulsion of the Moriscos, and are, in a sense, a belated justification of that expulsion. For they show very clearly how very Moslem their owners still were, even after external acceptance of Christianity, and more than a century's isolation from the Moslem world and exposure to a Christian environment. Instead of Arabic they had to speak some Spanish dialect, but they wrote it in Arabic characters, the so-called Aljamia, and continued to read their own Arabic books. These ranged from popular tales, most valuable for folk-lore, and usually written in Aljamia, to standard theological and legal treatises. Of one such hoard, found in 1884 at Almonacid, near Zaragoza, and now the property of the Junta para ampliación de estudios at Madrid, a detailed description by pupils of Professors Ribera and Asín has just been published ("Manuscritos Árabes y Aljamiados de la Biblioteca de la Junta," Madrid, pp. xxxii. 320). It covers sixty-seven manuscripts and a very large number of fragments in loose leaves, and gives eighteen photographic facsimiles, ranging in date from A. D. 1043 to 1601. The work has been admirably done, and gives by far the best view yet accessible of the religious and literary situation among the Moriscos of northern Spain, immediately before the expulsion. Of especial interest, after the folk-lore tales, is the preëminent position which the books of al-Ghazzali evidently held.

Dr. Edward Brooks, who for several years was Superintendent of Public Schools in Philadelphia, died at his home near that city on Saturday, in his eighty-second year. As an author Dr. Brooks had devoted himself largely to retelling many of the classics in simple form.

Dr. Ernest S. Roberts, master of Caius College, Cambridge, whose death we record, was the author of a work in two volumes, "Introduction to Greek Epigraphy"; in the second volume he had the collaboration of Prof. E. A. Gardner.

Science

The Columbia University Press has undertaken the publication of a new series, entitled "Studies in Cancer and Allied Subjects." Three volumes in the series will be issued in the autumn.

Among the books announced by McBride, Nast & Co. are: "Gardening Indoors and Under Glass," by F. F. Rockwell; four additional volumes in the House and Garden series, and "Cattle, Sheep, and Pigs," by Frank Townsend Barton.

Sir John Rogers's book, "Sport in Vancouver and Newfoundland" (Dutton) is a somewhat diffuse account of hunting and fishing in the two countries mentioned. While something may be learned from it by the intending tourist-sportsman, it cannot be recommended as an authority. When an author speaks of a prominent sportsman as "Caspar Whitman," and tells of taking "Twenty-five trout and five charr . . . the trout were all ouananiche," in Newfoundland, his readers are not inspired with great confidence in the accuracy of his other statements. Sir John was much put out by the number of anglers enjoying themselves on the banks of the Newfoundland salmon streams, and recommends that the local Government let the waters to private parties, in order that the waters may be better preserved—for the rich sportsmen. As a matter of fact, Newfoundland has the proud distinction (and long may it remain), of keeping all its waterways open to every fisherman who is willing to pay the small tax of $10. The photographs reproduced in the book are fair, the sketches execrable. There is no index.

"Milk and the Public Health" (Macmillan), by Dr. William G. Savage, an English health officer and bacteriologist, is a convenient book. A part of it is rather too special for the general reader, but the larger portion discusses the dangers of milk and the methods by which the supply may be improved and safeguarded, and in such fashion that the intelligent layman may read with profit. Of course, English conditions are considered, but that does not impair the value of the discussion, and the author is familiar with the work done on this side of the Atlantic. Dr. Savage holds that there is no convincing evidence that boiling milk impairs its nutritive value. Pasteurization he believes to be an efficient and useful procedure, and valuable pending improvement in the milk business; it is, however, more harmful than beneficial unless rigidly supervised and the conditions of its employment carefully regulated. Preservatives in proper amounts are not necessarily harmful to healthy adults, but are likely to harm invalids and young children when given for any considerable length of time. They are generally unnecessary, and their use encourages dirty methods of collecting and handling milk. In the controversial matter of tuberculosis, Dr. Savage is convinced that bovine tuberculosis is a source of human tuberculosis.

It is seldom that a scientific subject is treated in popular form with such thoroughness as has gone into the making of A. E. Garrett's book on "The Advance of Photography; Its History and Modern Applications" (Dutton). The author has adopted, with only a few alterations, the historical account given in Vogel's "Chemistry of Light and Photography"; the rest of the book is new. Every one knows, of course, that photography is used in many ways, but it is only when a detailed account is before one that an appreciation of its indispensable assistance to all branches of art, business, science, and life in general is quite possible. The very difficult task has been attempted of explaining briefly, not only all the processes and appliances of photography, but also its chemical and physical laws and related phenomena. Although the action of light on matter is complicated and obscure, the author succeeds remarkably well in leading up to it from the simpler actions. The book can be highly recommended, both for accuracy and interest.

The Carnegie Institution has issued another monograph (No. 160) on "The Absorption Spectra of Solutions," by H. C. Jones and W. W. Strong. The experimental part of the work is elaborate, many photographic plates being given of the absorption spectra of rare salts, and the effects of temperature on them. The first chapter is devoted to the theory of the emission and absorption of energy by the atom and the electron. Although the writers state that our present theory is very simple, most physicists are inclined to the opinion that the mechanism of radiant energy is about the most baffling problem in modern science. It is disappointing that monographs which furnish such an immense amount of data, should contribute to this problem of radiant energy so little definite help.

The growing independence of psychology and the self-sufficiency of its body of facts appear in Prof. Knight Dunlap's "System of Psychology" (Scribner). This interesting volume is not an elementary textbook. It is the first draft of a general psychological hypothesis. Both the draft and the hypothesis are unusual. It ought to be a seven-day wonder that a psychologist of Professor Dunlap's repute pronounces a thorough literary training the most important prerequisite of psychological study. This science, he says, "least of all can be communicated or comprehended in a special jargon," but requires all the assistance that can be given by command of the resources of the language of the masters in letters. At the very outset, Professor Dunlap confesses that "the data of psychology cannot at present be definitely described except in terms of theories which are more or less 'philosophical.'" He also says that the very first propositions about elementary facts cannot be rid of ambiguity save by acute philosophizing. The volume faithfully reflects this belief. It is the only work of its kind which reveals an appreciative acquaintance with the results of contemporary philosophical analysis. It builds upon not a few important distinctions which psychologists have not been drawing, and which will, doubtless, harass the student for a while. For instance, the venerable theory of mental images is rejected, and the seemingly paradoxical anti-idealistic doctrine is maintained that sensations are not in the brain, but just where they are experienced as being. The status of relations is, for the author, not below that of entities; and so he is opposed equally to idealism and materialism, which respectively exaggerate and minimize the metaphysical importance of relations. Professor Dunlap deals only with the facts and problems of normal adult psychology. His philosophical point of view makes the result hard reading, but profitable.

"A Text-Book of Botany for Colleges and Universities," Vol. II, "Ecology" (American Book Company), by Professors Coulter, Barnes, and Cowles of the University of Chicago, has been prepared by experts. Though Professor Barnes died in 1910, it is clear that he had a large part in the preparation of this volume, for the physiological aspects are as fully presented as the structural, and therefore the whole work is symmetrical. As the term "Ecology" would indicate, all the relations are here considered of an organism to its surroundings. The book breaks new ground in two essential ways: first, it attempts more or less successfully to simplify the terminology; and, secondly, it substitutes throughout mechanical causation for teleology and adaptation. The last chapter is devoted to a philosophical discussion of adaptation. It has been carefully written, and embodies views which are likely to meet with wide acceptance.

Drama

THE STAGE AND "MORALITIES."

The revival of "Everyman" ten or a dozen years ago was not without considerable influence, it appears, upon the dramatists of the day. All were astonished at the impressive effect made by this manipulation of abstract qualities. That Life and Death personified could reach to the poignancy of great tragic moments had been almost forgotten. Along with out-and-out allegory the morality had been consigned to the whims of the long ago. But when the Elizabethan Stage Society in 1901 gave a presentation of "Everyman" it was seen at once what a broad range of dramatic possibilities the play possessed, and several writers were moved to try their hand at work of much the same sort. These matters are interestingly discussed by J. W. Barley, who in "The Morality Motive in Contemporary English Drama" has taken a startlingly up-to-date subject for his doctor's dissertation.

Mr. Barley mentions a formidable list of plays in whose composition the influence of "Everyman" was pretty certainly present. It was acknowledged by Yeats, the author of "The Hour Glass," wherein a Wise Man, a Fool, an Angel, and other types figure as characters, and which inveighs against the preaching of materialistic philosophy. Then there is Arthur Symons's "The Fool of the World," having Death and a Pilgrim to prompt a probing of the eternal mysteries. But perhaps Nugent Monck, in "Life's Measure," came nearer than others to catching the morality tone and manner. Young Man eager for fame devotes himself to Labor, who has explained to him the need of incessant toil. Motherhood implores him not to forget his soul in his work. The Fool and the Poet—laughter and beauty of life—urge him "to mingle the service of self with that of his fellowman." He is obdurate. Age comes on, and with it a sense of the emptiness of life. Love, in the garb of a pilgrim, touches his heart when it is too late, for woman spurns him. Death overtakes him, and is inexorable; yet he has seen the light, and thus something is saved from the ruin. "The Passing of the Third Floor Back" and "The Servant in the House," which Mr. Barley likewise places in this general movement, are too well known to need reference here. They, with the others, illustrate the desire of recent authors to restore to the stage something of its old preaching function, and, specifically, by abstractions or unmistakable types.

Still further practice of this *genre* would most probably benefit writers not a little. To adjust the morality to modern conditions means ability to see life whole, and what it signifies in the old simple terms of love and hate, greed and self-sacrifice, vanity and humility; it means reducing existence to its elements. Who shall say that history might not repeat itself; that, as the Shakespearean drama grew out of the all-embracing moralities, so similar experimenting might not furnish the secret of how to present situations naturally and at the same time vitally for all ages? Modern generations have unquestionably suffered in almost losing the instinct for the abstract and the allegorical. Probably to a great many persons to-day "Everyman," like "Pilgrim's Progress," is a "Sunday-school story," even to those whom the play for the moment moved. It must be confessed that at least the imitations of this drama did not give to abstractions the objectivity through which alone these can become powerful. Their authors could not assume that perfect understanding on the part of the audience which used to exist in the days when the "Nice Wanton" strutted so bravely and naturally to doom. Simple allegory, just now, is apt to appear child's play. Broadly speaking, it has been hurt by the hold of literalness on the one side, and on the other by that very complex allegory, beloved of Maeterlinck, which all too easily merges into an almost unintelligible symbolism. Virtue and Vice, set in a confusing rainbow of poetic images, are not, any more than when in the employ of the too conscious teacher, truly effective.

Properly managed, practice in dramatic allegory should facilitate the sketching of types of human existence and distinguishing of genuine types from mechanical divisions. This is a matter to which the American playwright especially has given little thought. Types he has fancied that he was dealing in. He has drawn the Yankee, the Southern colonel, the cowboy; latterly the captain of industry, the political boss, the travelling salesman, the slum child and the pampered darling. But these are, after all, markings on the surface only. Let most of these characters be placed within the true old framework of the morality, and what becomes of them? Many of them would vanish in mid-air, having none of the underlying qualities of which real types are composed. The capitalist and politician should not always be painted black, and the slum child is not always the special victim of injustice. It was, of course, natural that the rapid development of American life should centre attention largely upon externals. But just now life in this country is growing to be surprisingly homogeneous. Even the traditional geographical distinctions seem to be passing. The Down-Easter, the Southerner, and the Westerner meet together and seem to understand one another. What this means for the stage is that writers have got to re-classify their material by getting deeper into it and by placing the emphasis upon the qualities which have long been held essential. They could not do better than to keep the plan of the moralities well in mind. For, after all, the chief concern for the writer is to be able to recognize and label the good and the bad, whether in youth or in age, in a sombrero or in a silk hat. Adopting broad outlines, as was done in "Everyman," is likely to lead to drama of wider and truer appeal than is the sort of artificial specialization which has been tried so much of late.

Music

In commenting on the recent death of Giulio Ricordi, the Italian music despot, whose control of the works of Verdi and Puccini gave him tremendous power over all the Italian opera houses and many houses in other countries, a German journalist calls attention to the fact that Ricordi also controlled the rights to the performances in Italy of Wagner's operas. While admitting that he provided for some very good performances of these operas in several Italian cities, the same writer remarks that Ricordi took care not to have Wagner given too often to the detriment of other operas owned by him, including those of Boïto and Franchetti. The successor of the deceased publisher is his son Tito, who was in America two years ago to help stage "The Girl of the Golden West."

On the second day of last month a number of prominent French musicians and men of letters made an excursion from Paris to Bougival. The object of the excursion was to put a tablet on the house in which Bizet died on June 2, 1875. Addresses were made by Pierre Lafitte, Xavier Leroux, and others, in which the speakers dwelt on the fact that Bizet was a genius whose greatness was not known until after his death. "Carmen" and "l'Arlesienne" were referred to as immortal types of genuine French melody, of music racy of the soil. The town of Bougival was a favorite resort of Sardou, Halévy, Dumas, Turgenieff, and other noted men. When Bizet went there the last time his health was impaired and his heart broken by the conviction that "Carmen" was a complete failure, a conviction forced on him by the adverse criticisms, the indifference of the public, and the steadily diminishing box-office receipts.

The Berlin buffo tenor, Julius Lieban, has retired from the stage after singing in that city twenty-nine years. He first attracted attention as a member of Angelo Neumann's travelling Wagner Company, and his best rôle was Mime in "Rheingold" and "Siegfried," in which, in his best day, he almost equalled Albert Reiss.

Humperdinck's melodious and emotional "Königskinder" (the most inspired opera written since "Carmen," with the possible exception of Paderewski's "Manru"), has won lasting favor in all the German cities where it was properly sung. The critics were ready with their usual carpings and doubts, but the public took the opera to heart at once.

At a recent London conference of men interested in the commercial side of music, one of the points discussed related to the differences between publishers and music sellers in regard to prices, a topic upon which there appeared much to be said on both sides. One of the recommendations was that the present discount system should be abolished, and the one-price system adopted, and that the price should be clearly marked on every sheet of music sold. It was argued that as the booksellers adopted a similar system a few years ago with reference to novels, the music trade could safely follow the experiment.

The most fertile of all composers, Max Reger, has completed his opus 123, which is entitled a "Concerto in the old style for a small orchestra." The publishers are Bote & Book, Berlin, and the first performance will be at Hamburg on October 28.

Jean-Jacques Rousseau was famed in his day as a composer. His opera, "Le Devin du Village," was first sung in 1752. A few weeks ago it was revived in Paris, by way of celebrating Rousseau's bicentenary. Rousseau was also the author of the first musical dictionary in the French language. In it no distinction is made between "suite" and "sonata." In the musical war between the Italians and the French, he sided at first with the Italians, declaring that the French language was not suited for musical settings. Oddly enough, it was a German, Gluck, who, by the elegance of his style and expressive use of words, convinced Rousseau of his error and made him take back what he had said.

The late Jan Blockx was not so well known, the Belgians think, outside of his native country as he deserved to be. He began his career at the age of twenty-five by bringing out a collection of Flemish folksongs, entitled "Ons Vaderland." The best of his operas, "The Tavern Princess," was produced in New York by Hammerstein, and carried his fame all over Europe; but his other works have been mostly ignored abroad. In 1900 he began a "Till Eulenspiegel," but never got beyond the first act.

Art

A History of Fine Art in India and Ceylon. By Vincent A. Smith. Oxford: The Clarendon Press (Frowde). Large quarto, 386 illustrations. $19.25 net.

As a condensed discussion of the chief monuments with complete bibliographies, this book immediately approves itself as useful. And in general the distribution of space is judicious. Sculpture is most fully treated, occupying about half of the five hundred pages. The introductory chapter is devoted to a general sketch of the architecture. The later semi-European buildings of the Mogul Emperors and the fascinating development that Persian miniature painting received in their courts are noted at length. Here excellent plates in gold and colors illustrate the sumptuous refinement of this heterodox art. As a conspectus of the field the book may be compared with such a work as Dalton's "Byzantine Art and Archæology," gaining, however, a more personal quality through the author's long contact with the material and through his frankly communicated prejudices.

There is in the book an odd mixture of detachment and special pleading. For our author the extra pair of arms of a Siva is always an offence. Why this is worse than a centaur, a satyr, a sphinx, or a beast-headed Egyptian god does not appear. In fact, in the best bronzes of dancing Siva the superfluous arms seem valuable factors in animation. For such specific dissent our author atones by a valiant attempt to justify the term "fine art" as applied to India. It is significant that the endeavor puts him constantly on the defensive, and it seems to us that the case is far from proved.

India seems the classic instance of a civilization deeply versed in the industrial arts, but failing to make the next higher step. Against Mr. Havell and recent native critics who celebrate the glories of the ancient Asoka style, it might be reasonably argued that India first enters the field of the fine arts with the great Mogul emperors of the seventeenth century. The apologists for the archaic work virtually rest their case upon religious considerations. The advocate of Indian art must meet the following difficulties: (1) The lack of any principle of proportion in the old temples, (2) the tasteless profusion of sculpture upon these temples, which is destructive both of its effect as sculpture and of any repose the building might inherently have had, (3) the fact that the finest monuments of Buddhism are not found in India, where the cult originated, but in China, Turkestan, and Japan, (4) the correlated fact that Indian art always improves by exportation, as may be seen in Ceylon, Cambodia, Tibet, (5) the ready penetrability of India by foreign strains, successively Hellenistic, Sassenian, old Persian, Chinese, Italian, and neo-Persian. Such facts seem to show quite obviously that India never attained the degree of unity and national self-consciousness that makes possible a progressive and consistent racial expression through the fine arts. In a narrower sense than was the case even in Egypt, art remained the abject handmaid of religion.

Excepting the Mogul art, which was that of ultra-refined invaders, and perhaps neither more nor less significant than the courtly art of France in the eighteenth century, there are not a dozen plates in this volume, containing nearly four hundred, which give your reviewer the sense of a thing nobly conceived and finely executed. And it should be recalled that these plates represent flattering excerpts from confused ensembles. The merit which appears in the cut would be obscure in the monument itself. Immensely richer would be similar excerpts from any famous mediæval building in Europe. Notre Dame at Paris, for example, would offer perhaps a hundred times more evidence for greatness in sculpture than our author has been able to present for all India.

Yet precisely because India remained in the incipient stages of art, this history is most instructive. No great plastic or graphic art could grow out of any nation that consistently believed life to be evil and the world of appearances to be illusion. Tempered with such robuster practices as ancestor worship or with the delicate epicureanism of the Zen sect, the skeptical monism of India became fecund of art in China and Japan. Some degree of conscious love of life underlies all the finer expressions of art, and some degree of racial and national consciousness must be attained before a race or a nation can attain a central and representative art. Art as mere symbolism, art as a transitory adornment to be repudiated as moral perfection and sagehood were reached—these were the leading ideas of the best minds of India, and these are obviously anti-æsthetic ideas. No wonder then that, save as her conquerors have brought in the pride of life, India has remained in the sub-æsthetic stage.

The essential abstractness of the old Brahmanism, with which Buddhism ever temporized, forbade it appropriate visible symbols. Thus the painting and sculpture of old India seem a kind of base and ineffectual vulgarization of ideas incommunicable under the conditions of objectivity required by the fine arts. The real sages of whatever persuasion must have disapproved such futile symbolism. There is abundant literature of many sorts in India, but no ancient pundit ever thought it worth his while to write on the fine arts. Contrast with this condition the early æsthetic literature of Greece, China, and Japan. In fact, to a Hindu adept of old-time the modern native vindications of the art of India would seem supremely inconsequent, and the art itself would probably look no more important than the Alaskan totem poles do to æsthetic frequenters of ethnological museums.

In our quarrel with his title we have perhaps done less than justice to Mr. Smith's solid, learned, and informing book. It is an indispensable repertory of facts for all who would follow the subject into the realm of ideas.

The death is reported of Oscar L. Lenz, the sculptor, in his thirty-ninth year. He had studied in Paris under Saulierre, and in this country was a student of Saint-Gaudens. He executed part of the designs of the Court of Honor at Chicago, the Colonial group at Charleston, S. C., and some of the figures in the Pennsylvania Railroad Station in New York.

Finance

JULY INVESTORS AND THE BOND MARKET.

With the turn of the half-year, there has naturally been a revival of interest in the bond market and in the prospects for quick employment of the funds paid out as July 1 interest and dividend disbursements. The question is not only occupying attention here, but in the European markets as well, for they have all been more or less disturbed for weeks past by both the efforts to finance the half-yearly payments and by the embarrassment of various bond syndicates which have found themselves loaded with bonds for which they could not find a market.

At London there has been real disturbance attending the steady fall in the price of British consols; and the belated efforts of the Government to appropriate a portion of the sinking fund in order to stop the decline in the national security have excited wide comment throughout the financial world. In Paris also an effort has been made to strengthen the market for French rentes and to fortify the position of the banks, which for months past have been tied up with various securities that they could not sell advantageously. In Germany the situation has been further complicated by the stringency of the money market, which is emphasized by the unusual inducements offered by the Berlin banks to procure heavy advances from London, New York, and Paris. At Amsterdam also a glut in the bond market has made it impossible for the bankers to bring out the new issues which are ordinarily offered at this time of the year.

In comparison, therefore, with conditions prevailing abroad, the American market has been much more comfortably situated, despite the fact that new security issues here for the year 1912 to date have surpassed the records of all other years. Figures for the half-year are not yet available, but for the five months ending May 31 it has been shown that railway and industrial issues aggregated $1,265,000,000, as against $991,000,000 in the same five months last year and $917,000,000 in 1910, the increase above 1911 being 28 per cent., and above the year preceding 35 per cent. That the rate of new security issues here promises to establish for 1912 a certain high record was emphasized on Wednesday of last week, when the Governing Committee of the Stock Exchange, holding its last regular meeting before the summer vacation, admitted to listing the largest aggregate in par value of new securities that has been introduced to trading on the Exchange since the billion dollars, par value, of United States Steel stocks were put on the list in 1901. The aggregate was more than $430,000,000, and while part of it represented substitution of new securities for old, still a very large proportion reflected the issuance of entirely new corporation stocks and bonds.

Thus, while it can be shown that the demand on capital is continuing on a large scale, and that securities are being turned out in tremendous volume, it is plain that on the surface, at least, there has been neither the congestion seen at London nor the money market disturbance which has so long been the feature of the market in Berlin. One development which has had considerable influence here is the increased inquiry from the savings banks, which last year and the year before did very little bond buying around July 1. These institutions for several weeks past have been quietly picking up high-grade bonds, and, because of the larger excess of deposits above withdrawals, are now in a position, barring unforeseen complications, to continue such investment purchases for some time to come.

Because of the country's Presidential election next November and of the extreme violence shown at the nominating Conventions, unusual interest is manifested in the probable attitude of the investing public after the disbursements during June of nearly $260,000,000 in interest and dividends. The city of Philadelphia last week found it possible to obtain par for a small block of 4 per cent. bonds. Other municipalities have marketed small issues of high-grade bonds on that basis. But in cases where large offerings have been attempted it has been difficult to obtain the support of individual investors on any such terms. An international banker of unusual shrewdness in judging investment conditions gave it as his opinion that none of the great railway corporations would find it possible to sell even the best bonds this year at terms which offered the investor much less than 4½ per cent.

With all the important banks and trust companies, the chief inquiry still is for short-term notes or for bonds with only one or two years to run. The demand for short-term notes is still so broad as to suggest that there will be further important issues made by corporations having in the near future to borrow large amounts. For the year to date the volume of notes put out by railway companies has been $60,000,000 less than last year, although an increase in industrial note sales, induced by the abundance of money at low rates of interest, has in considerable measure offset the decrease. The bulk of the gain in the total of corporation emissions this year has been in stocks bearing a liberal rate of interest; the high yields shown by these has compelled the railways to withhold from the market new bonds carrying a moderate rate of return.

It now remains to be seen how far the heavy financing of the year to date will operate against a broad expansion in the bond market later in the year. It was the flattening out of the bond market boom of 1908 which contributed to shortening the industrial recovery which succeeded the panic of 1907.

JUST OUT

Hall's Elements of Physics

By EDWIN H. HALL, Professor in Harvard University, viii+576 pp. 12mo. $1.25.

In this natural successor of Hall and Bergen's *Textbook of Physics*, several chapters have been expanded, new exercises added, the Directions for the Exercises have been taken from the body of the text and placed in the back of the book, and certain traditional laboratory exercises have been replaced by lecture-room experiments.

Snow's Fundamentals of French Grammar

By W. B. SNOW, Head of the Department of Romance Languages, English High School, Boston. xi+267 pp. 12mo. $1.15.

The author has carefully restricted himself (particularly in the case of the exercise material) to the important aspects of the topic in hand. Irregular forms are attacked early, before analogy crosses the efforts of the learner. The verbs are treated by tenses instead of by conjugations. Phonetic transcriptions are placed at the bottom of the page, where they need not interfere with those who do not care for them. Prepositions and word-order have been treated with unusual fulness.

THE LIFE OF NIETZSCHE

By Mrs. FOERSTER-NIETZSCHE

VOLUME I.—THE YOUNG NIETZSCHE
Volume II.—*Preparing.*

This life is written by Nietzsche's sister, whose life-long devotion to her brother, as intellectual companion and as nurse, is well known. Now for the first time published, simultaneously in English and German, it will supersede all other biographies of the philosopher, by its completeness and its fresh material. It draws upon all available sources, including hitherto unknown documents possessed by the biographer, and upon her own wonderful memory. In it the author vividly presents her brother's personality and environments in a narrative of engrossing interest.

Palæstra is the common-sense in Latin; some 30 pamphlets for class or self-instruction by figures, cuts, texts on subjects of daily life, supported by Roman authors; vast vocabulary, no translations; reading, writing, speaking exercises; half published; $2.50 will bring all issued; complete $5.00; no samples. ARCADIVS AVELLANVS, Williamstown, Mass.

On the Art of the Theatre
By EDWARD GORDON CRAIG
8vo, boards, with illustrations, $2.00; by mail, $2.14

The most important book about the theatre published in years.

Charles H. Sergel & Co., Chicago

Just Published

Examples of Industrial Education

By **Frank Mitchell Leavitt**, Associate Professor of Education, University of Chicago.

By describing various examples of public industrial schools or classes which have been organized in the United States and by thoroughly analyzing the various problems incident to the movement for establishing such industrial training, the author has succeeded in giving a vital discussion of present-day conditions. A constructive plan is outlined on which this type of education may be organized by public schools. General principles are clearly established.

The book is a valuable one for students of education, for reading circles, for educators in general.

Price $1.25

GINN AND COMPANY
29 BEACON STREET, , BOSTON

Just Published

English Composition, Book Two

By **Stratton D. Brooks,** President of the University of Oklahoma, formerly Superintendent of Schools, Boston, Mass.

$1.00

Teaches the student to express his ideas with simplicity, accuracy, and fullness, to read critically, and to reason soundly. The principles treated are illustrated by selections from the best literature.

AMERICAN BOOK COMPANY
New York Cincinnati Chicago

Selections from Chaucer
Including his earlier and his later verse and an example of his prose.

By CLARENCE G. CHILD, Professor of English in the University of Pennsylvania. With introduction, notes, and glossary. *Cloth.* 259 *pages.* 75 *cents.*

JohnBrown: ABiography Fifty Years After

By OSWALD GARRISON VILLARD

SOME TRIBUTES TO THIS REMARKABLE HISTORICAL WORK.

Philadelphia PUBLIC LEDGER. "A tremendous book, more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesman Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with a great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

PORTLAND OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The NORTH CAROLINA REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy, and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able even to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

Third Edition.

Fully illustrated with portraits and other illustrations. With copious notes and bibliography.
$5.00 *net. Postage* 26 *cents.*

The Nation

NEW YORK, THURSDAY, JULY 11, 1912.

The Week

That the Judiciary Committee of the House, by unanimous vote, should have recommended the impeachment of Judge Archbald, is testimony at once to the seriousness of the charges against him—as well as to the weight of the evidence supporting them—and to the determination of the Committee and the House to do everything in their power to uphold the purity of the bench. This last is, at the present time, the chief consideration. We have had a great deal of railing at the judiciary, and, along with it, a large amount of positive assertion that impeachment is so futile that we must rush to the recall. If now, in the Archbald case, we can have a demonstration of the efficiency of the Constitutional method of getting rid of an unworthy judge, the result cannot be other than wholesome. Judgment must, of course, be withheld on the merits until the whole matter is heard, but there is no reason whatever for hesitation in praising the promptness and vigor with which the House Committee has proceeded. If the allegations against Judge Archbald are sustained, he will appear of all men most unfit to hold judicial office, since he would be that most repulsive figure—a judge with an itching palm.

The appointment of Charles D. Hilles, private secretary to the President, to the chairmanship of the Republican National Committee, has, without regard to Mr. Hilles's qualifications for the place, the high merit of keeping Mr. Barnes of New York out of the job. Mr. Taft's easy acquiescence in poor counsel is at times so conspicuous that even so bad a blunder as tying up his fortunes with the leader of the Old Guard seemed at one time possible. Mr. Taft may stand for constitutionalism and orderly progress without identifying himself with the constitutional and social-economic views of Mr. Barnes, whose methods, in any case, are more suited to older politics than to the modern conditions under which this year's campaign must be fought out. Campaign management seems destined to become a young man's calling, ever since Mr. Hitchcock showed what he could do four years ago. Mr. McCombs, who did such valiant work for Woodrow Wilson, and Mr. Hilles now join the ranks of the young men who win their games by foot-work and speed at the net rather than by accurate placing.

The call for Mr. Roosevelt's new party is cast in the traditional form of the revolutionary manifesto. It has its list of grievances and its appeal to eternal principles. The manner of the declaration of independence is there; but the substance is missing. New governments and new parties arise when men are spurred on by a sense of intolerable wrongs. Their indictment against tyrants and institutions blazes with specific crimes and misdemeanors. But what are the clear-cut causes that have impelled Mr. Roosevelt and his followers to raise the standard of a new party? They do not exist. As against the twenty-eight specific accusations which the author of an earlier Declaration of Independence submitted to a candid world, we find ourselves floundering today in a bog of characteristic Rooseveltian generalities. Once more we meet the crooked political bosses, and the privileged classes, and the few arrayed against the many. Once more we are asked to sympathize with honest business and to condemn dishonest business. Above the loud clarion note of defiance we catch the familiar overtones of "on the one hand" and "on the other." Only one thing is clear: for what and for whom the new party is to stand. It is the party of the first part, of Number One, of Theodore Roosevelt.

Some of the Colonel's over-zealous flatterers are representing him as the first "people's candidate" for President in American history. This is a mistake. As lately as 1899 Admiral Dewey, still the popular hero of the hour, was seriously considered for such an eminence by a political group who believed that he could command the support of those citizens who disliked the McKinley Administration, yet hesitated to seek refuge in Bryanism. Further back than that, however, occurred a movement which the standard histories ignore because of its untimely end—a plan set afoot in 1867 to make Gen. Grant a "people's candidate." President Johnson was then at the zenith of his unpopularity, the Democrats were all at sea, and the shrewd thing seemed to be to find a man who could command the votes of the old soldiers, regardless of former party affiliations. The chief engineer of the project was Alexander T. Stewart, the New York merchant. Unfortunately for its success, the Republican managers discovered what was going on and took up Grant themselves, albeit he was then a Democrat. Grant's recognition of Stewart's interest in him found expression in his nomination of Stewart for Secretary of the Treasury. Whether Garfield or Pinchot, Perkins or Munsey or Stubbs, is first in the line of recognition as the Colonel's discoverer might be doubtful but for the fact that the Colonel himself appears to have got ahead of all of them.

We shall have to begin to talk about "Wilson luck." To have been nominated in the face of Tammany opposition was as good a send-off as a reasonable man could ask, but it has been quickly followed by the resignation of "Tom" Taggart as National Committeeman from Indiana. Why Mr. Taggart should have taken this step is not clear. It has not been his way in the past to resign. All that the Washington correspondents can say in explanation is that he intended some time ago to leave the Committee, but wanted to remain until he could go "with prestige." Having swung the Indiana delegation to the support of a candidate who represents all that Taggart does not, he feels that he has won sufficient prestige to retire on. But whatever his motives may be, for the act itself his party and the country are indebted to him. Eight years ago he "managed" the Parker campaign, thus adding a handicap. It is not that Mr. Taggart has been, on the whole, unsuccessful in politics, but that his successes have been of that peculiar kind which menaces his party.

Gov. Marshall has not set the prairies afire, but as the first Democratic Governor of Indiana since 1892, naturally was struck by the Vice-Presidential lightning. He made a hard and successful fight against Taggart early in his Administration, but, unlike Gov. Wilson, failed to keep it up, although his sympathies were plainly with the better element of his party. The result was that last January he was constrained to say openly that he felt as Lincoln did upon one occasion, when he remarked: "It seems, gentlemen, that I haven't very much influence with this Administration." A recent address of the Governor reveals him as a high-minded, if somewhat old-fashioned, Executive. He is impressed with the spectacle of "the partition walls between the departments of government being rapidly torn down." He also believes that "the most dangerous idea that an official can possess is the idea that the people have elected him to put in force and effect every vagary and theory and notion which may come into his head." He has a sensible word upon primaries:

> You may abolish the caucus, if you will, and adopt in its stead the primary; you may go farther and have a second primary to determine who shall run in the primary for the nomination to be voted for at the election; you may keep on adding machinery and machinery to the system of nominating and electing officials, and your effort will come to naught until a public sentiment, which puts upon the conscience of every man his great responsibility for good government in this country, is aroused.

Another instance of Taft's bad luck, many will be inclined to call the row in the Treasury Department. On top of Ballinger and the Hitchcock report advocating the Government ownership of telegraphs—a report given to the press without the President's knowledge—the troubles now centring upon Secretary MacVeagh will give color to the belief that discipline under this Administration is not what it should be, and that a lack of firm Executive control leads to jealousies and insubordination and a woful failure to get good team play in the Departments. There cannot be two opinions about the letter which Assistant Secretary Andrew gave to the press after his resignation had been demanded. Without discussing for the present the merits or demerits of the existing management of the Treasury, the fact seems clear to us that it is a gross impropriety for a minor official like Mr. Andrew to rush to press with his grievances; and that it is of obvious importance to keep up the reputation of high officials at Washington for administrative efficiency.

An interesting side-light on the sources of some of the "information" submitted to Congress by the Tariff Board is to be found in a letter to the London *Economist* by its Washington correspondent. He states that figures were given respecting the cost of production in certain English mills, which the Tariff Board reported as coming from "sworn chartered accountants." The natural inference was that these men had been employed for the purpose of getting at the facts by our Government. But the *Economist's* correspondence asserts that there is "unquestionable evidence" that these statements of mill costs were "surreptitiously purchased from some unknown persons who had obtained them from the statements prepared by certain chartered accountants who had been employed to go through the books of these mills in adjusting a labor dispute." This may not have been dishonorable, but it certainly was a queer way to get statistics as a guide to legislation. If the Republican party had not shamefacedly given up its attempt to ascertain scientifically the difference in cost of production at home and abroad, the incident would be worth following up. As it is, it may be safely left alongside those official figures of German costs which Aldrich refused to make public.

The Supreme Court of Indiana has brought up the State Legislature with a round turn. At its last session the Legislature desired to amend the Indiana Constitution. Now, that instrument provides two methods for making changes in itself. A Legislature may propose an amendment, which must be approved by a succeeding Legislature, and then by the people, before it can become a part of the organic law. This was too slow a process for the Hoosier law-makers, and so they resorted to the device of passing a series of amendments and calling the whole a new Constitution, which they proposed to submit to the voters this autumn. This arrangement, however, fell foul of the second method provided in the Constitution for its own alteration, which is that no new Constitution shall be submitted to the voters until, in accordance with a legislative act, a majority of them have declared in favor of a Constitutional Convention. Clearly, the proposal of the Legislature of 1911 was in agreement with neither of these methods. But advocates of the "new Constitution" had two arguments for it. One was that the people may create a government, or change one already in existence. The other was that the Governor could not be enjoined as a member of the Board of Election Commissioners from putting the question of the adoption of the proposed instrument on the ballot. The Supreme Court, by a divided vote, holds that the Governor can be so enjoined, and declares: "We have not heard the voice of the people raised in a demand for a new Constitution."

If one may judge from the new lifeboat rules which the Government has issued for lake, bay, and sound steamers, the lesson of the Titanic has been but lightly heeded. The regulations begin bravely enough: "Lake, bay, and sound steamers carrying passengers must be equipped with sufficient lifeboat and lifecraft capacity to accommodate at one time all persons on board, including passengers and crew." Then comes this surprising proviso:

> Provided, that such steamers navigating during the year from May 15 to September 15, will be required to be equipped with only such lifeboats and lifecraft capacity as will be sufficient to accommodate at one time at least 30 per cent. of all persons on board, including passengers and crew; provided, however, that such steamers lying at all points within a distance of five miles from land over waters whose depths are not sufficient to entirely submerge the vessel, will, from May 15 to September 15, be required to be equipped with such lifeboat and lifecraft capacity as will be sufficient to accommodate at one time 10 per cent. of all persons on board, including passengers and crew.

It is true that the months from May to September are not those of severe storms or high seas on inland waters, but it is equally true that they are the months of crowding and overcrowding on the craft that ply these waters. To require means of escape only equal, at most, to those which proved so tragically inadequate on the Titanic, and in certain cases only one-third of this maximum, is to neglect the solemn warning of such disasters as that to the White Star liner and the Slocum.

There may be little in our civilization to remind the world of ancient Greece, but part of that little is being displayed at Stockholm, where the Olympic games have opened with victories for American athletes. That an American should win an event bearing so Attic a name as the pentathlon will be regarded by the patriotic as indicating what we can do in any direction when we try, a conviction that will be strengthened rather than upset by the further fact that the winner comes from the Carlisle Indian School. Our victories ought, too, to be popular with the citizens of all nations, for when an American wins an event, Germans or Swedes or Englishmen or Irishmen will frequently make the pleasing discovery that the winner, although calling himself an American, is but one or two generations from Germany or Sweden or England or Ireland, and may thus not improperly be acclaimed as one of their heroes. If this seems to give us an advantage over our competitors, it is the legitimate advantage of the natural attractions and the liberal institutions, including the deliberate policy of welcoming the alien, that has drawn so many millions of other breeds to our shores. To us these victories may suggest that, for certain lines of achievement at least, the melting pot has not yet unfitted us.

The end of organized rebel resistance in Mexico is in sight. Orozco's men have been defeated at Bachimba, and Chihuahua City has been evacuated. There is still some brave talk on the rebel side of refusing to disband and taking to guerrilla tactics. But there is no visible distinction between guerrilla work and the operation of "independent flying columns," into which it is said that Orozco may divide his men. All along the rebels have been waiting for cheerful news from those mysterious flanking columns operating in the rear of the Federal army; but these columns are probably nearer to the vicinity of Mrs. Harris than of the city of Torreon. The abandonment of Chihuahua means the end of forced bank loans and other forms of "taxation" by which Orozco's men have lived. The shortage of ammunition which has been offered as the chief explanation of the revolutionist reverses is now emphasized by a shortage of cash. Orozco's secret backers have by this time grown chary of sending good money after bad.

To multitudes who have never seen a specimen of his work or even known just what his work was, the death of Robert Barrett Browning will be an affecting event. He was the living link that still bound us, in the twentieth century, to the two poets of the nineteenth whose romantic attachment will live, not merely as long as their verses, but as an integral part of them. This interesting connection with a vanished age is emphasized by the place of his death, for if the Brownings were English and Victorian, among their marks of distinction was a rather un-English appreciation of alien lands and particularly of Italy. Rydal Mount and Farringford, accordingly, are no more truly among England's literary shrines than is Asolo, where the creator of Pippa planned to build Pippa's Tower for his final dwelling-place. Owing to legal circumlocution, he was not able to realize this dream, but the spot has long been the home of his son. Lovers of coincidences will set it down in their memories that the end has come in the year of the centenary of Robert Browning's birth—but still in the morning of his fame.

Mr. G. K. Chesterton, while walking in his garden, stumbled over a flower tub and fell to the ground, fracturing his right arm. Thus the matter-of-fact, anonymous author of the Associated Press dispatch records an event which was not an accident, as the ordinary person will think, but an incident which was hardly worth publishing broadcast to the world. The newspapers last week did *not* state, "Yesterday Mr. Chesterton walked an hour in his garden and did not stumble and fall." The newspapers of last month did not state, "Yesterday Mr. Chesterton was climbing to the top of a 'bus in Oxford Street and did not trip over a step and hurt himself." And yet the fact that Mr. Chesterton has for years been walking upright in defiance of the law of gravitation is a much more wonderful thing than the fact that for once he should have yielded to the universal pull that holds the cosmos in balance. What really happened was not that Mr. Chesterton fell to the ground, but that the earth rose to meet Mr. Chesterton. All this will be fully explained by Mr. Chesterton as soon as his right arm is well again, which we hope will not be long.

The verdict in the Camorrist trial at Viterbo is another victory for the Italian Government in its campaign against the criminal secret-society organizations. The latest phase of the struggle began half a dozen years ago, when Camorrist domination in Naples reached a point where the central Government stepped in, suspended the municipal administration, and placed the city under a royal commissioner. How deep-rooted the secret-society evil is in southern Italy was shown both before and during the trial. In order to obtain a fair hearing for its own side of the case, the Government was compelled to transfer the trial to Viterbo, several hundred miles from Naples, and to conduct the proceedings under extraordinary precautions that have attracted the attention of the world. Even then it was difficult to obtain a jury willing to take the risk. That the jury should have brought in a verdict of guilty is a sign that the old fear of the Camorra's vengeance has weakened in the course of the long trial. It is also evident that the Viterbo jurors must have had intelligence as well as courage to steer their way through millions of words of testimony over a period of more than a year. In this country it is unfortunately the case that a long trial and multitudinous witnesses usually do not mean the conviction of the guilty.

The success with which the republican Government in Portugal has hitherto met Royalist attempts at invasion from Spain shows plainly that the majority of the Portuguese people is enlisted in support of the new régime. The danger from the Royalist forces is by no means over, but up till now the expected uprising of the peasants against the republic in conjunction with the monarchist invaders has not taken place. In Lisbon, too, the outlook for the Government seems to be improving. The existence of the new republic has been repeatedly threatened by labor disturbances in the capital. The overthrow of the monarchy had the usual result of letting loose all kinds of wild hopes among the laboring population. By this time the lesson has apparently been learned that the millennium will not come by way of a constitutional revolution. Finally, we have the statement that the Portuguese Government may settle its differences with the Vatican, an arrangement which would increase the security of the republic.

PROGRESSIVE MORALITY.

Mr. Roosevelt's telegram to William Allen White is the frankest expression he has yet given of his plan to beg, borrow, or steal votes, under any disguise or any name that may be convenient. Attention has already been called to the extraordinary effrontery of running Presidential electors on the pretence that they are for Taft, but with the purpose of inducing them to vote for Roosevelt, if they are elected. This from a party that shrieks about cheating is tolerably cool. Thou shalt not steal is a binding Commandment, but thou shalt not sneak-thieve is like unto it, and covers a meaner form of crime. Yet Mr. Roosevelt has now gone further in his desire to annex what is not his own. He telegraphs Mr. White that he will be "entirely content" if the new organization shall call itself "Progressive Democratic" in any State where that plan seems the best means of deceiving the people into voting for Roosevelt electors. Such impudence and indecency have not been seen in American politics since the time when Birdofredum Sawin gave his great mind to devising a programme for "all right-thinkin', honest folks thet mean to go it blind," with the aim of bringing about the result which Mr. Roosevelt now evidently seeks to compass, namely:

> I vote my way; you, yourn; an'
> both air sooted to a T.

All this shuffling and subterfuge would be disgusting in any political leader or party, and in the present instance it is positively abhorrent. For it comes from men who have not merely set themselves up as the apostles of righteousness, but have made the asserted trickery of the men whom they are opposing their chief stock in trade. They have filled the air with cries that the others are cheating politicians. The third party, they profess, is undertaken as a moral protest. Yet from the first it sets sail under false colors. It proposes to be all things to all men if by any means it may bamboozle some. In one State it will seek to filch the regular Republican organization; in another it will have an openly bolting ticket; and now it appears that Mr. Roosevelt is willing to wear even the Democratic label if it will anywhere win him a few votes. A jockey may ride in any colors, changing them as he sees fit, and no one will think the worse of him, but for the straight, square, downright Colonel to be willing to masquerade as here one thing and there another is proof of how far he and his followers have "progressed" in political morality. Their plan of campaign is now exactly the one that Jay Gould adopted—that is, in Republican counties to be a Republican, but in Democratic counties to be a Democrat.

We suppose that the third-party moralists have felt themselves driven to such immoral shifts by the enormous difficulties of organizing a nation-wide independent movement. Those difficulties stand confessed. They are, in our opinion, greater in some States than they should be. In New York, for example, the obstacles placed by the new ballot law in the way of independent nominations are formidable—much more so than they ought to be in fairness. The right to bolt and to resent and oppose unfit nominations by party machines is one that we profoundly believe in, and the laws should not make its exercise unduly onerous. Still, the facts are what they are; and if Mr. Roosevelt and his friends have looked the whole field over and counted the cost and resolved to create a new party, it is for them to do so in honest and straightforward fashion on the basis of the situation as it actually exists. In the long run, we believe, they will gain by being explicit and direct. Already they have suffered by the evidence that they are willing to get ahead by dodging round laws and morals. American humor is not yet extinct, and it will inevitably beat in increasing volume upon a party that shouts about its own courage and pure motives, but instantly sets out to assume various opportune disguises. The country is still unwilling to call old notions fudge, and trickery will not smell any sweeter by naming it progressive.

Mr. Roosevelt has been indulging in one of his old flings at the press. See, he says, how fully the newspapers print all the news they can get about the new party—give its announcements and manifestos in full—yet how chary of comment they are. The implication was that editors were agreeing to attack Mr. Roosevelt by a conspiracy of silence. Would that this were possible! There has, in fact, been no lack of editorial remark upon Mr. Roosevelt's political venture, and we can assure him that there will be plenty more of it if he continues to allow in himself the political immoralities which he condemns in others, even bettering the instruction he has had from unscrupulous politicians. In particular will he get a full amount of that attention of which he is such a glutton, if it appears more and more clearly that his present course is one of mad ambition or undying rancor, or both. For it can be said of Americans, as it has been of Englishmen by Lord Rosebery, that "they delight in a fair fight and a fair victory, but nothing is so revolting to them as anything which bears the semblance of ungenerous treatment of an enemy." The third party will be doomed if it be made merely an instrument of personal vengeance.

WILSON AND THE THIRD PARTY.

Everybody is wise after the event. Since Wilson's nomination at Baltimore there has been almost universal agreement that he was the strongest candidate whom his party could have named. No other, it is now generally admitted, could better unite or so well lead inspiringly his own party, while no one else had anything like his chance of taking full advantage of the divided and distraught condition of the Republicans. This was all along urged by those who took the clearest view of the situation; and the truth of their contention is now amply vindicated by what is being said and done in all parts of the country respecting a third-party movement. That the selection of Wilson was the soundest Democratic strategy has already been demonstrated. We did not need the innocent revelation of the ingenuous Kermit that "Pop was praying for Clark." The fact stands out as plain as daylight that the choice of Wilson was a severe blow to Roosevelt and the third-party incubators. It makes the Colonel seem much weaker, and bids fair to leave him looking ridiculous.

He himself, to be sure, informs the reporters that only about one-twentieth of the letters and telegrams he has received since Tuesday of last week urge him to abandon his project of flocking by himself. They must have been hardy friends who sent him that advice. For one who ventured to give it, there must have been ten who secretly wished that he would take it. And as for the nineteen-twentieths who exhorted him to fight harder than ever, they were but carrying their goods to a market already glutted. We know from the *Anti-Ja-*

cobin that it is very easy to "bid the rest keep fighting," without being a very valiant warrior yourself. Among the formerly outspoken Roosevelt leaders there have been many—and those carrying most weight—to declare that they will have neither part nor lot in a third-party movement. And if so large a number of prominent men have taken this position, one can readily imagine the extent of the disappointment and reaction among the insignificant enthusiasts who were for the Colonel because he was the only man who could win. If he is now obviously driving straight to defeat and mortification, they will make haste to dismount from his chariot.

There is a lengthening and really formidable list of men who were previously enlisted in Roosevelt's army but who have now openly deserted. No one did more for him at Chicago than Senator Borah, but Borah submits himself to the will of his party, goes to the White House, and comes away declaring that he intends to support Taft. Another Progressive Republican Senator, Works of California, declines to say at present whether he will fall in behind the President, but lets it distinctly be known that he means to stay with the Republicans and that he is not at all for a third party. Senator Works's exact language was, as printed in the *Congressional Record:* "In my judgment, the man who attempts to form a new party, as conditions now are, will not be serving the interests of the people. . . . Better far to see the great Republican party go down to temporary defeat, and redeem it four years hence, than attempt the uncertain and dangerous remedy of forming a new party." Of like mind is Gov. Hadley of Missouri and Gov. Deneen of Illinois. Still more significantly, Gov. Osborn of Michigan was moved last week to assert that the nomination of Wilson had given the Progressives a satisfactory candidate, and that all excuse for putting up Roosevelt independently had now been destroyed.

Roosevelt may be or may pretend to be blind to the inevitable effect of Gov. Wilson's nomination upon the Progressive movement, but the Progressives themselves are not. They know what has happened. Before it was revealed that the Colonel's prayers had been for Clark, everybody knew that the Rooseveltian hopes were pinned to the Speaker's success, or to that of some one who could be dubbed a reactionary or a tool of the interests. The actual outcome at Baltimore made dough of all this cake. There is, indeed, a fine whistling to keep the courage up at Oyster Bay, but the news from other parts of the country is all of discouragement and surrender.

The truth is that a great many Rooseveltians were badly caught by the Wilson nomination. It was entirely unexpected to them. What they had counted upon was the selection of another candidate, and then they were all ready to exclaim at the folly and recreancy of the Democratic party in rejecting so fine a man and so genuine a progressive. It was solely for this purpose that they had praised Woodrow Wilson so highly. He was admiringly pictured as the man whom the Democrats ought to take, but certainly would not take. And these incautious followers of the Colonel—especially his newspaper supporters—had made every preparation to emit cries of woe over the selling out of the Democrats to the bosses and the interests, to write "Ichabod" upon the Baltimore Convention for having turned away from the one shining hope, Woodrow Wilson, and then to shout in thunder tones that the salvation of the country depended upon Roosevelt and a third party. But those plans went lamentably wrong. As the Colonel would say, the third party has been hit "middling hard." The arguments adduced in Wilson's behalf are already verified in the groggy condition of the Roosevelt third party.

AMATEURS OF REVOLUTION.

The series of articles contributed by Mr. H. G. Wells to the London *Daily Mail* on the present labor unrest has an interest other than that which attaches directly to the subject he discusses. These articles are valuable as revealing the temperament and mental attitude of Mr. H. G. Wells. The phase is a highly important one. Mr. Wells is one of a class of men who for some time have stood forth as critics of modern life, in their double capacity of litterateurs and sociologists. These men—Wells, Shaw, Galsworthy—have been ruthless in analyzing the cruelties and follies of present-day society. If we look for one distinguishing mark that characterizes them all, it will be found in a violent outspokenness. Thorough is their motto. Their particular aversion is that timid, Mid-Victorian spirit which refused to face life resolutely. To G. B. Shaw the term Liberal is the severest possible form of reproach. It stands for cowardly half-measures, for a policy of fighting conflagrations with rose-water, for sweeping dirt into corners, for muddle, as Mr. Wells calls it, for patchwork, for cheap palliatives like milk depots, tenement-house reform, and factory legislation. In contrast to such a policy of shrinking advance, the new men are at pains to emphasize the revolutionary temper. For them it is not a question of patching up this world of ours, but of rebuilding it from the bottom up.

Where in the works of these ruthless world-builders do we find the revolutionary gospel developed? That is just the rub. We find in none of these men the revolutionary dogma thoroughly worked out. Instead we meet a mass of irreconcilable contradictions. They would sweep away modern society, and yet they would keep it. They would have men different, and they would have them the same. Mr. Wells, in his new novel, "Marriage," has some very bitter things to say of the modern philanthropic "movements." He denies the right of well-to-do people to force their way into the homes of the poor under the pretext of charity. It is bad enough to have to live in the slums, without having a lot of fussy busybodies prying around the kitchen and poking under the beds. He detests the district-visitor; it is quite the spirit in which Charles Dickens's poor resented the intrusions of the beadle. This is Mr. Wells the imaginative artist, interested primarily in the souls of men, conscious of that human passion for freedom from interference which is compensation for so much human unhappiness. But when we come to Mr. Wells the pamphleteer and student of sociology, it is quite a different matter. How, he asks in these *Daily Mail* articles to which we have referred, how may the present labor unrest be allayed, how may the threatened revolution be averted? In this manner:

> There will have to be a vigorous development of the attempts that are already being made in garden cities, garden suburbs, and the like, to re-house the mass of our population in a more civilized and agreeable manner. Half the money that goes out of England to Switzerland and the Riviera ought to go to the extremely amusing business of clearing up ugly corners and building jolly and convenient workmen's cottages—even if we do it at a loss. . . . It is quite impossible for

> workmen and poor people generally to plan estates and arrange their own homes; they are entirely at the mercy of the wealthy in this matter.

Now what is this but the old Mid-Victorian Liberalism, with its humdrum, non-revolutionary methods, and with its theory of the duty owed by the rich to the poor? It is true that Mr. Wells says this work must be done "not in a mood of patronage, but in a mood of attentive solicitude." But the distinction is not obvious. How Wells the social reconstructor is going to build sanitary workingmen's houses without first fussing about in unsanitary workingmen's kitchens to the great dissatisfaction of Wells the novelist, is not quite apparent.

We may take the case of John Galsworthy. Unlike Wells and Shaw, with whom he has taken rank as a popularizer of the cause of social justice, Mr. Galsworthy is not endowed with a genius for publicity. He is less demonstrative, less emphatic, and probably more sincere than either of the other two. But in him, too, we find irreconcilable differences of attitude towards life. He has written with profound and touching sympathy of the life of the poor, and the moral of those mordant little sketches of London poverty is that this wretchedly organized society must be taken in hand and human waste must be made impossible. But compare this with Galsworthy of another mood, the Galsworthy who wrote "The Pigeon." In that little play we are invited to consider three social types—the drunkard, the general ne'er-do-well, and the woman of the gutter. And the point driven home is that it is useless to attempt salvage work with the outcasts of society because, in the first place, it cannot be done, in the second place they are happier as they are, and in the third place they are entitled to live their lives after their own fashion. This is very good Romantic doctrine, but how can such a philosophy be reconciled with any system of ameliorative social effort? Is it fair to that much-abused object, society, to assert that the wastrel cannot help being what he is and is best off in being what he is, and then to blame society because there are broken men and fallen women?

Thorough in manner and thorough in temperament, these men who have won so prominent a place in the world of social thought are really not at all thorough in their philosophy. They have not worked it out to the rock-bottom of fact. They have not tried to make it consistent. Much of modern social philosophy takes pride, in fact, in being inconsistent. But while this attitude might do for a detached observer of Ibsen's anarchistic temperament, it is a fatal defect in one who would strive towards effective, practical leadership. By contrast with our amateur revolutionists, the old-fashioned Liberal was really a very strong figure. His aims may have been petty, but he believed in what he was doing. He never had any doubt that his milk-depots and summer-camps for the children of the poor were productive of results. He dealt with palliatives, but he believed in them. These new men believe in revolution, and believe that it won't do much good.

CHEAPENING GOVERNMENT ARCHITECTURE.

It was supposed to be in a spasm of economy that the House voted recently to repeal the Tarsney Act. This is the law under which the Supervising Architect at Washington is empowered to invite the submission of plans for public buildings by outside architects. Figures were submitted to Congress intended to show that this method was more costly than the old one, in accordance with which a Supervising Architect like the unlamented Mullett was able to inflict his standardized horrors in the way of public buildings upon the country. This was really the only argument made for the change: if a few hundred thousand dollars could be saved by no longer employing the leaders in the profession to add beauty and variety to our official architecture, and by leaving all the work to employees at Washington, why not do it? A readiness to squander millions upon pensions is consistent with absolute penuriousness when it comes to Government building.

In reality, however, it is by no means certain that the new system is more costly than the old. The whole question turns, of course, on architects' fees and the expenses of office work. In a statement sent by the Supervising Architect to the Committee on Appropriations, an analysis of costs, under the two methods, was undertaken. In this it was freely admitted that the difficulties in the way of entire accuracy of estimate were very great. So many items enter into the comparison, and some of them are so elusive, that a precise contrasting of one system with the other is almost impossible. Yet in the compilation referred to, it was reckoned that if all the construction work done in 1909 had been carried out by the Supervising Architect's office a saving to the Government of some $276,900 would have resulted. These official figures, however, have been closely scrutinized by a committee of architects, who contend that there was a neglect of certain allowances and percentages which would make a very great difference in the conclusion. This committee, taking a range of years—1905 to 1910—found that the total building contracts awarded amounted to $32,796,000, and that it cost the Government for work done in the Supervising Architect's office, during that period, $2,002,780. But this is above 6 per cent., slightly more than a private architect receives for his entire service, including local supervision.

Into this mathematical and financial dispute, we do not think that it is necessary to enter. It is a nice question, one way or the other, and the balance of cost on either side would probably not be very considerable. It is, of course, desirable that our official architecture should not countenance needless extravagance. If it were to be demonstrated that public buildings erected by private architects were excessive in cost, for purely professional charges, there would be a natural suspicion that something was wrong, and that reforms in practice should be made. We are bound to say that we believe the presumption to be all the other way. If Government architecture is cheaper than private, all other things being equal, it would be the one marked exception to the general rule that Government work is more expensive than that done by individuals or corporations. But even granting that the plan of calling in eminent architects may be somewhat more costly in operation than it would be to turn everything over to the Supervising Architect's Office, it does not in the least follow that the latter course would be wise.

Some things are more important than trifling economies. We believe that if the question were submitted to any competent and impartial jury, they would agree that a possible saving of $200,000 a year by the repeal of the Tarsney Act would not begin to make up for the loss the country would suffer. People of taste could not think without a shudder of going back to the period when our post-office buildings and our Federal court-houses were turned out at a central Government office like so many dry-goods boxes issuing from a factory. If we are to have public buildings at all, the finest skill and artistic judgment ought to be enlisted. Great public monuments ought not to be run on the cheap. They cannot be without lowering at once the value of the work and the sense of national dignity. We are entitled to the best public architecture, and if it costs slightly more than the mediocre, we may be sure that the people will cheerfully foot the bills. As we have said, the high probability is that it does not cost more; but in any event, it would be deplorable to take such a step to check the architectural revival in this country as would be involved in excluding our finest talent from competing for the monumental building which the Government has to undertake. It is strongly to be hoped that the Senate will see the point more clearly than did the House, and leave the Tarsney Act in full vigor.

A VANISHING HOME-INDUSTRY.

The art of telling bedtime stories is visibly on the decline. It is being destroyed by the same factory methods that have driven the spinning wheel out of existence and threaten the integrity of the home-baked loaf of bread. There seems to be no end to the "Readings for Children" which the publishers are turning out. Nowadays, one may read anything to infants. The Bible, Shakespeare, the mythology of the Greeks and the Norsemen, the librettos of Wagner, the leading principles of Marxian Socialism, may be had in words of one syllable. Specialization has invaded the nursery. The tired business man, having been relieved of the necessity of mental effort in the theatre and in so much of contemporary literature, is now being freed from the mental strain of talking the children to sleep. From the children's point of view, it is probably all for the best. The machine-made story, prepared under expert supervision and in accordance with the latest pedagogical principles, is easily superior to the old home-made article. In the long run the process may even work towards the encouragement and preservation of filial respect. Our young may no longer be driven to conceal their contempt for the amateurish efforts of their parents.

But if the children, as a class, profit by the substitution of modern, scientific, sanitary methods for the old happy-go-lucky methods of small production, their elders are not so well off. The natives of India and Zanzibar may rejoice in the products of Manchester and Birmingham, but the wide dissemination of cotton goods has been attained at the heavy cost of transforming the British workingman from an artisan into a machine. Those attractive little "Readings for Children" may make life easier for parents, but can the time and energy saved atone for the loss of a valuable mental and spiritual exercise? Here was a field in which every father and mother was privileged to experience the highest pleasures known to man, the joy of creative effort in the realm of art. To play Homer to an audience of unspoiled souls; to play Aristophanes, Dante, Shakespeare, Dumas, and Jules Verne—what greater opportunity could the ordinary man and woman ask for escaping from the world of ordinary duties and interests into the world of pure imagination? The loss will be felt, as we have said, not by the great infant public, but by the adult artist. And it is a loss of actual enjoyment as well as of spiritual profit. There is less unselfishness in the business of amusing children than we imagine. When Gladstone crawled about the floor, a fiery charger, with his grandchildren on his back, the steed was probably quite as happy as his riders.

Let it be confessed: in its highest form the art of story-telling is a difficult one to master. It calls for imagination, but the imagination has to work under severe restrictions. To the great artist this only adds to the joy of the work, of course; but to those of humbler range, convention is a serious handicap. And our infant audiences are mercilessly conventional. They insist that a story shall be told for the fiftieth time as it was told for the first time. For every child who will be bored by the slaying of the familiar dragon in exactly the same number of sword-strokes, a dozen children will protest vehemently if the dragon is chopped up into forty pieces, instead of the thirty-five pieces he was chopped up into last night. It is exactly as it was with the audiences for whom Sophocles and Euripides wrote. They knew the story by heart. There was no concrete surprise in store for them. They were interested in obtaining new emotional combinations out of the old material. How to be exact and yet be interesting, how to make familiar things fresh, how not to disappoint the giggle of delight that is waiting for the old man with a crooked leg to fall downstairs before it breaks out, how to work up with proper effect towards the little thrill of horror that shakes the little body when the giant's' club just misses the head of the giant-slayer—it is an art which calls for effort and devotion, but which carries with it its own rewards.

So we repeat. Your parents of the future, provided with "Readings for the Very Young," may have an easier time of it when it comes to the children's hour of entertainment. But it will be at the cost of their own soul's entertainment. It will be the substitution of the phonograph for the living voice of Caruso or the living touch of Paderewski's fingers.

EUCKEN'S PHILOSOPHY OF LIFE.

I.

The sudden and widespread popularity of Eucken's philosophy in England and America;* the personal impressiveness of the man; the fact that he is hailed everywhere, by the broader sort of theologians, by the more "tender-minded" of idealistic philosophers, and by all who are suffering from spiritual unrest, as a new saviour of religion and the soul; and finally his appointment as exchange-professor to Harvard for next year, when also Bergson comes to Columbia, both being leaders in the present war upon intellectualism—all these combine to make Eucken and his philosophy an object of special interest even to those who, like the present writer, have little sympathy for his mode of philosophizing. Eucken is now in his sixty-seventh year. Although his first work of importance appeared in 1878, his larger popularity is a matter of five or ten years past. His introduction to English readers dates mainly from 1909, when his best work, "Lebensanschauungen der grossen Denker," was translated under the (somewhat misleading) title of "The Problem of Human Life." In 1908 he was awarded the Nobel Prize for Literature, "for the most remarkable literary work of an idealistic nature." In the past four or five years translations, new editions, and new works, all upon the theme of the spiritual life, have appeared with bewildering rapidity, yet apparently not too rapidly for the demand. His translators, who, with possibly one exception, are his former pupils, all bear witness to his power of inspiring a warmly personal and at the same time reverential devotion. For them he is the prophet of a new religion, whose message will be incomprehensible except as it reveals the man. And they are doubtless specially justified in warning us that the impression to be derived from a translation will be necessarily inadequate.

---

* *Life's Basis and Life's Ideal:* The Fundamentals of a New Philosophy of Life. By Rudolf Eucken. Translated, with an Introductory Note, by Alban G. Widgery. New York: The Macmillan Company. $2.50 net.

The Truth of Religion. The same. Translated by W. Tudor Jones. New York: G. P. Putnam's Sons. $3 net.

The Problem of Human Life as viewed by the Great Thinkers from Plato to the Present Time. The same. Translated from the German by Williston S. Hough and W. R. Boyce Gibson. New York: Charles Scribner's Sons. $2 net.

Religion and Life. The same. New York: G. P. Putnam's Sons. 75c. net.

For clearly one of the secrets of Eucken's influence, at least in his later works, is a certain impressive eloquence, a peculiarly German impressiveness, which is hardly reproduced in English. And it is particularly unfortunate that the translation which is least successful in this respect, though generally faithful, is that of "Life's Basis and Life's Ideal" (another misleading change of title—the original title would be "The Fundamentals of a New View of Life"), which we must regard as now the most authoritative statement of his point of view. Reading the translation alone, one would dismiss the work as doubtless full of edification, but colorless, unsubstantial, and intolerably monotonous. Yet the German is, if anything, rather vivid and rich, full of striking figures and of sentences that are rhythmical and well-formed. Indeed, it is the kind of style, when coupled with the constant suggestion of a revelation just beyond, to keep the reader turning page after page. Nor is it all a matter of style. Unquestionably Eucken has sounded the depths of our personal, let us say, our religious experience, and has meditated deeply upon the larger aspects of life; and if he were writing verse we should marvel at the depth and truth of his philosophical reflections.

But since he is writing prose, we marvel rather at the absence of reasoned and constructive argument. I will not say that there is no basis of idea. Rather, there is one idea, indeed a pregnant idea, which, however, remains ever pregnant, ever in process of gestation—the independence of the spiritual life, *die Selbstständigkeit des Geisteslebens.* Nothwithstanding the systematic development announced in his tables of contents, a limited range of variations upon this theme constitutes (if we omit the historical works) the nearly unchanging content of every chapter, every volume, and almost of every page. In the series of works entitled "The Unity of the Spiritual Life," "The Struggle for a Spiritual Content of Life," "Life's Basis and Life's Ideal," and "The Meaning and Value of Life" (the last two have virtually identical tables of contents), it would be difficult to find many later passages which give the impression of saying anything new. All that we can make out is a gradual transition from a "personalistic" to an absolutistic point of view. We may say nearly the same if we add to the series "The Life of the Spirit" and the two books on the philosophy of religion. Everywhere we are greeted with the same message: modern culture is alien to spiritual ideals; the regeneration of life demands a complete repudiation of all existing philosophies and a deepening of the inner and spiritual. In all this he rarely or never descends to the level of concrete illustration or the consideration of an existing social or ethical problem. Yet he remains everywhere eloquent and impressive. Altogether, the impression left by a few hundred pages of the spiritual life is distinctly Wagnerian. One is tempted to think of a *Liebestod* very long extended. Yet I doubt if the *Liebestod* is without logical progression; and when Tristan dies he is dead. The spiritual life may always begin another volume.

II.

Eucken's philosophy is a *Lebensanschauung*, or *Lebenssystem*, that is to say, not a system of metaphysics or a cosmology, but a view of life; and for him all other philosophies are so many life-systems. His own idea of life may be approached through his analysis of existing systems, in which, it may be noted, he is at his best. Among the older systems he has the highest regard for Christianity, which alone, he thinks, contains the elements of absolute religion. But Christianity now needs to be reconstructed in the light of modern thought. It must separate the substance of religion from its historical accidents, adopt a more virile tone, and emphasize the joyousness of the Christian life. There is no hope in modern idealism; this is an empty intellectualism which issues only in a vague and meaningless panpsychism. The typical product of intellectualism, however, is naturalism, the view of life offered by modern science. Naturalism plumes itself upon its appeal to positive fact; yet all the while it is unable to explain the fact of conscious life in the world or the relation of that life to nature. Socialism takes too mean a view of life. In reducing the life-problem to an economic problem, it makes the human all too human. Socialism, like naturalism, is the product of modern democracy and mediocrity. It is an average-man-every-day view of life (*die Durchschnittscultur des Alltages*), which makes reason the equivalent of social agreement. Socialism forgets that every deepening of life has grown out of individual independence—that, for example, it owes its own life to a few men "of vital power and character," such as Marx. As against the submission of spirit to nature which is implied in the systems of naturalism and socialism, æsthetic individualism attempts to reassert the independence of the spirit by seeking a realization of life in the enjoyment of art. This, however, is a mere pretence of independence; in reality it is a passive submission to moods and conditions. Such, then, are the existing life-systems as they appear to Eucken. With the exception of Christianity, all are in some way tainted with intellectualism and naturalism. Intellectualism begets naturalism, and naturalism presents us with a world which is foreign and hostile to the spirit.

If, now, a representative of naturalism should undertake to defend himself in the usual fashion, by an appeal to logic or to fact, Eucken would properly decline to reply. For, in his view, both logic and fact are departures from an original spiritual unity, and the only result to be expected from their guidance is more and more confusion. Yet in the meantime they point to a spiritual origin. The unity of nature postulated by natural science, the unity of society and of the personal self—in other words, the fact that men are able to deal with nature, to form and carry out plans, and to come to terms with one another—all this presupposes a spiritual basis underlying the life of nature and of man. Nor, in the end, is even naturalism a mere digression. It lies in the very nature of spirit that, in its progress towards a larger life, it should first divide and set up a world hostile and alien to itself. This is the negative stage, represented in our modern culture by a sharp opposition between the world and the spirit. But this only sets us the task of appropriating our world. We may not dismiss it as a final and insurmountable fact, taking refuge in our subjective consciousness, in the comfort of life or the enjoyment of art. Nor (though Eucken fails to show why) is any reconciliation to be expected from a further development of naturalistic logic. What is now demanded is a complete repudiation of this alien view of the world and a return to the spirit; yet not a return to the unity of the past, but rather a renewal of spiritual power in a higher synthesis and a new creative activity, such as mark the initiation of the great epochs of history. In brief, then, the present culture offers nothing but paradox, confusion, alienation, and division. No merely human and individualistic philosophy can save us—no considerations of self-preservation, social and economic welfare. The motive must be sought in a unity transcending nature, a universal, cosmic Life, in which "all walls of partition and all differences fall away" and our individual lives are both unified and finally realized in the personal life of God.

Thus far one might say that Eucken is simply a romantic edition of Fichte and Hegel. But in justice we must heed his denial. He points out that Hegel was an intellectualist, for whom the successive conflicts and reconciliations are simply so many terms in a syllogistic process the course of which was determined from the beginning. For Eucken each new epoch in the life of the world or of the soul is a new creation—never merely a deduction from antecedent terms, but a putting forth of new power which, in defiance of all the past, recreates the world. "It is by hard work alone in relation to men and to things that our life acquires a spiritual character." For this reason Eucken has adopted as the latest name for his philosophy the term "Activism"; and this power of dealing freely with the past, or with any alien terms, is what he chiefly means by "the independence of the spiritual life."

Hence, to give him his position among the philosophers, we might say that, as against Hegel, he holds activity rather than thought to be the essence of reality. But this means that, with Schopenhauer, Bergson, Nietzsche, the Pragmatists, and William James, he defends the rights of the will against the intellect. Yet he rejects the term voluntarism as too narrow and one-sided. He finds pragmatism "more inclined to shape the world and life in accordance with merely human conditions and needs than to invest spiritual activity with an independence in relation to them." Nietzsche is too much of an individualist and subjectivist and too rude and ill-tempered; and yet I think that Nietzsche is the one among all with whom he is in real sympathy. With Nietzsche he stands for the right of joyousness in life and for the supreme rights of genius; with him he condemns the Christian praise of pity and despises modern democracy; and the independence of the spiritual life is simply another edition of the transvaluation of all values. Like Nietzsche, again, he is a mystic, only an energetic rather than a quietistic mystic. No special insight is needed to grasp the significance of these comparisons. It is easy to see that Euckenism, in spite of its individual character, is also a true representative of what is just now uppermost in philosophical thought.

III.

"The independence of the spiritual life"—can we give this expression any clear and concrete meaning, that is to say, any meaning not dependent upon special spiritual insight? Boyce Gibson[*] finds the key to Eucken's meaning in his "spiritual conception of history," and, though I cannot see that the pupil is much clearer than the master, I shall endeavor to follow his suggestion. In the first place, "the spiritual life," though possibly the only phrase available, is a weak rendering of Eucken's *Geistesleben*. The term "spiritual" is too colorless and romantic, even when freed from pietistic associations. According to Eucken, the spiritual life is the intensively self-conscious life, the life which is intensively conscious of its own movement.

Now, with this in mind, we may grasp the spiritual conception of history if, following an undeveloped suggestion of Eucken's, we raise the question, What is the difference between history as a mere movement in time and history as a movement conscious of its own movement? The question contains its own answer. The movement in time is a strictly determined chain of causation; at every instant the future is already determined by an irrevocable past. The father begets the son, the son the grandson. In a mere movement in time the son can do nothing but transfer the inheritance of the father. But now let the son clearly realize that he is a bearer of heredity; in that self-consciousness, according to Eucken, the whole situation is revolutionized. First, a discrete series of aims is replaced by a unity of aim. The dull and stupid man (*i. e.*, the man lacking in self-consciousness) acts from present impulse, caring not what the past was or what the future is to be; but any self-consciousness of the movement of life involves, so far, a comprehensive, an all-at-once, view of present, past, and future. But now, as Eucken holds, this increased comprehensiveness is, just in itself, a new creation of activity, a new power "inwardly" centred, which asserts itself in independence of the mere time-series of conditions. For me, conscious of where I stand in the time-series, the question is not wholly what my father was, but what I wish myself and my son to be. Nor is the past any longer an irrevocable and finally "hard" fact. Let it be what it may, I shall undertake to make of it what I will. Like a good chess-player, I engage to reply to any move of the outer facts, be they past or present, with a counter-move which shall give me my game. So of any present situation in the life of a nation. A nation conscious of its own history is thereby freed from the power of blind tradition. At the same time it may be more than ever bound to the past. But the bond is no longer the compelling power of an irrevocable fact, but now the "inner" bond of sympathy and free choice. And thus, through the self-consciousness of its own movement, the life of the nation acquires an "inner" coherence and independence of the time-order of outer conditions, which is at the same time ever freshly creative. This inner independence is involved, then, in the difference between any movement in time and the same movement conscious of itself.

This, I trust, will serve to show what Eucken has before him, and also that he has something real before him, when he tells us, for instance, that a spiritual movement is a movement transcending time; or that every higher synthesis, or organization, of human activities is a new creation of a power transcending nature; or, again, that all the forces determining human life, as life, are spiritual forces. It is not difficult to see that the idea contains tempting possibilities for the philosophy of history and religion; and, in the case of Eucken, it imparts an intelligibility to much that would otherwise be mysterious, but which I am nevertheless unable to reproduce. More interesting from a temporal standpoint is the force that it gives to his criticisms of the historical and social sciences.

For what, for the most part, is our boasted historical method but the reduction of spiritual movements to time-series of events? Again, what economist pauses to consider the effect upon "economic laws" of the study of economics? And what criminologist, in his search for the cause and conditions of crime, thinks it worth his while to study crime as a self-conscious process? Perhaps it will be said that what is needed here is a little more psychology. I doubt, however, whether any of the sciences is more indifferent to the significance of consciousness than psychology itself, which, by the way, is a favorite object of Eucken's contempt. In spite of all criticisms, our psychology is still deeply rooted in the associational tradition that the mind is a time-series of states. When the psychologist is confronted with the fact that we are now directly conscious of the past, he simply invents a "memory-image" to represent the past in the present and keep the series discrete. The result is that, while our psychology is an excellent account of the relation of cards in a pack or, as Bergson has put it, of the relation of pictures in the cinematograph, it is utterly foreign to the life-experience of any human being.

Hence, I should say that, in his affirmation of the spiritual realities as against the social sciences, Eucken is preaching a doctrine of vital importance. For fifty years past, under the influence of the biological theory of evolution, most of our theories of human life have been based upon the conception of the animal species. We hardly pause to reflect that, of all the species, man alone is capable of forming a history. And it can hardly be doubted that our forgetfulness of this most momentous of all distinctions has reacted unfavorably upon the tone of moral and social life. So far Eucken's criticism touches the point. If, however, we ask what he has done to make his criticism effective in the regions where it is most needed, the answer must be, nearly nothing. He has hardly taken the trouble to formulate it in a manner to compel recognition. Nor may we suppose that the formulation is quite clear to himself. Apparently his repugnance to modern science is the aristocratic repugnance of a gentleman to a tough, with whom a rough-and-tumble argument, conducted according to Aristotle's rules, would be unseemly and vulgar. Hence, he never grapples with his antagonist; and the result is that he lacks the stimulus and the contrast necessary to develop his conception of the spiritual beyond the iteration of a few very general aspects. Had he undertaken to state some of the concrete consequences of being intensively self-conscious, he could hardly have failed to include a clear perception of the world before us, the world of nature and of our fellow-men, and of our individual distinctness in and from that world. But then he must have admitted that neither intellectualism nor individualism is lacking in spiritual motive. Nor could he have failed to see that the despised democratic movement is itself the outcome of an awakened self-consciousness, and thus a true development of inner and spiritual power.

---

[*] *Rudolf Eucken's Philosophy of Life.* 2d ed. London. 1907.

The same may be said of his criticism of natural science. Here, too, I think he shows a penetrating sense of the realities. Our imagination is so completely filled with the victories of science, as exhibited in antitoxines and aeroplanes, that we fail to note the paradox that these results are reached through a point of view which makes nature wholly indifferent to human aspirations. James says somewhere that no man can steadily contemplate the certainty of his own death. Just as little can a man fix his attention upon the universe as presented by cold-blooded science, especially as that universe is revealed by the modern telescope, without a desolating sense of the nothingness of human life. After all, are we not mere intruders? And, in the face of the "starry firmament without," what is left of "the moral law within"? Hence, as Eucken points out, beneath the comfort and splendor of our modern life there runs an undercurrent of pessimism as to the value of life itself.

But, here again, Eucken's anti-intellectualism blocks the only way out of the difficulty. For the paradox is not merely ethical; it is a logical paradox as well. Modern science congratulates itself (perhaps too hastily) upon having drawn from its web the last shred of anthropomorphism, or animism. The question arises, then, whether it has not broken the last thread which would bind the world to our human imagination and make it humanly intelligible and knowable. And perhaps it is not irrelevant to note that the turmoil of ideals which, for Eucken, is characteristic of our modern culture is now paralleled by a similar turmoil in the field of scientific conceptions. If, however, we are to spiritualize—to humanize—our world, if we are with any confidence to reject the interpretations of naturalism and find in nature the justification of a more spiritual view of human life, one of the first things necessary is a painstaking analysis and reconstruction of the motives and conceptions of science—in other words, a new logic of science. And if, as Eucken teaches, the independence of the spirit is reached "by hard work alone in relation to men and to things," here, surely, is a task of a distinctively spiritual kind, calling for the finest talent and courage. A mere beginning here would go far to insure him against the charge, which he evidently apprehends, of romanticism and sentimentalism. It is evident, however, that the task is too technical for his tastes.

Such, then, is the independence of the spiritual life. I cannot admit, with Eucken's pupils, that, as the prophet of a new religion, he is not to be tied down to exact modes of thought and expression; for as a critic of philosophical movements, he challenges philosophical criticism. His conception of the spiritual is inarticulate and his criticism of science, ineffective. Nevertheless, his philosophy rests upon the firm grasp of an idea of immeasurable significance both for the philosophy of religion and for any comprehensive view of human life—the idea, namely, of the originality, the inner unity and independence, of any process so far as it is conscious of its own movement. Probably no other idea is more in need of consideration in the present state of thought.

WARNER FITE.

NEWS FOR BIBLIOPHILES.

The Society of the Dofobs, an association of book-collectors of Chicago, whose first publication, the "Love-Letters of Nathaniel Hawthorne," is one of the most valuable of book-club publications, has just issued a Byron book. This, like the Hawthorne letters, is a publication of manuscripts in the great W. K. Bixby collection.

The volume is a quarto, on Italian hand-made paper, printed at the De Vinne press, fifty-two copies only. The preface and comment are by W. N. C. Carlton, librarian of the Newberry Library. The manuscripts of the poems, seven in number, are reproduced in exact facsimile even to the water-stains on the paper. Fortunately, these facsimiles are printed on one side of the sheet only, otherwise they might be expected to be offered upon the market some time in the future as original Byron autographs. These manuscripts were formerly in the possession of Mrs. Augusta Leigh, Byron's half-sister, by whom, in 1848, they were sold to John Dillon. Later they formed part of the collection of Sir Theodore Martin, and in 1902 were acquired by Mr. Bixby. Among them are four of the so-called Thyrza poems:

"On the Death of—Thyrza."
"Away, away, ye notes of woe."
"Stanzas to Thyrza."
"And thou art dead, so young and fair."

Mr. Carlton tells of the efforts of various editors to identify "Thyrza," but he himself expresses no opinion, being, he says, "content to leave the question where Mrs. Leigh left it." She wrote, in 1848: "My brother told me no one knew who she was and evinced so mournful and deep a feeling at that question, I never ventured to repeat it."

Of equal interest are the reproductions of two poems addressed to his half-sister Augusta, beginning "Though the days of my glory are over" and "My sister, my sweet sister." The facsimiles show numerous and interesting differences between the text as originally written and that of the printed editions.

The volume also contains fourteen letters of Lord Byron, all, except a short extract from one letter, apparently here printed for the first time. There is, too, a list of the books which Byron seems to have taken with him on his last expedition to Greece—a list printed from the original manuscript dated at Zante, July 9, 1824. Reproductions of five portraits of Byron, two being from drawings by George Henry Harlow, add to the interest of the book.

From the Riccardi Press (whose books are published by the Macmillan Company) has just appeared "The Revival of Printing: A Bibliographical Catalogue of Works issued by the chief modern English Presses. With an Introductory Essay by Robert Steele." It is printed in one of Mr. Horne's types, the fourteen-point font, called the "Riccardi type." Three hundred and fifty copies have been printed on paper and twelve on vellum. There are nine collotype facsimiles of pages or portions of pages of representative books from the Kelmscott, Vale, and Essex House presses and letterpress facsimiles of pages from the Daniel, Ashendene, Cuala, Merrymount, and other presses. The "bibliographical catalogue" is little more than a list. Minor items, such as catalogues, leaflets, etc., printed at several of the presses are undescribed. These nugæ, though of no importance in the development of printing, are sought after by collectors of books from private presses.

Mr. Steele, in his Introduction, bewails the fact that the "revival" of printing has had so little effect upon every-day printing. He says: "As far as regards newspapers and periodicals it has had no influence whatever. One weekly review alone is printed in an acceptable type—one newspaper has adopted a less disagreeable one than the others. In book-printing, by the side of a certain amount of unintelligent copying and mere plagiarism, there is a genuine attempt to get a better result from existing materials and the first trace of public appreciation of this effort."

Correspondence

NEWSPAPERS AND HISTORY.

To the Editor of The Nation:

Sir: Every one is familiar with the extensive use of newspapers made by the most recent school of historians, especially in dealing with American history. Mr. Rhodes's admirable practice in this matter is of no less force than his specific argument upon it. Used with tact and discretion like his, the newspaper of a past age may be made to yield not only important facts, but even more precious insight into the public tone of mind in viewing and dealing with those facts. Nevertheless, when one remembers how largely the accounts of the first half of the nineteenth century are based on the record of the daily journals, it is interesting to turn to a passage in which Jefferson (Works, Ford, IX, 73)—doubtless generalizing too freely, as he was somewhat inclined to do—brands the yellow journalism of his day in terms which would hardly be thought too severe for the most advanced description of the article at present:

> Nothing can now be believed which is seen in a newspaper. Truth itself becomes suspicious by being put into that polluted vehicle. The real extent of this state of misinformation is known only to those who are in situations to confront facts within their knowledge with the lies of the day. I really look with commiseration over the great body of my fellow-citizens, who, reading newspapers, live and die in the belief, that they have known something of what has been passing in the world in their time; whereas the accounts they have read in newspapers are just as true a history of any other period of the world as of the present, except that the real names of the day are affixed to their fables. General facts may indeed be collected from them, such as that Europe is now at war, that Bonaparte has been a successful warrior, that he has subjected a great portion of Europe to his will, etc., etc; but no details can be relied on. I will add, that the man who never looks into a newspaper is better informed than he who reads them; inasmuch as he who knows nothing is nearer to truth than he whose mind is filled with falsehoods and errors.

This was written in 1807. Have we improved or derogated in a hundred years?

NATIONAL VERSUS INDIVIDUAL MORALS.

To the Editor of The Nation:

Sir: The *Nation* always finds space in its columns to denounce and scourge crime and wrongdoing in the individual—be the wrongdoer a unit or a mob made up of many units. Experience shows that the mob is generally inspired or incited by a single master mind or leader, without whose leadership it would lack cohesion to achieve the maximum of mischief. Mr. Roosevelt undoubtedly possesses the qualifications of mob leadership in a superlative degree. Whether, by the time this comes to your eye, Mr. Roosevelt has been defeated or is a Presidential nominee, does not affect the truth of his having an enormous following among the American people.

Mr. Roosevelt, by a single act of his career—the theft of the Panama Canal zone—branded himself, although the courts of law have not, as a common felon; and no amount of casuistry or specious pleas as to "eminent domain" or "greatest good to the greatest number" can alter the moral iniquity of that crime. If it were merely an error of judgment, subsequently regretted and repented of, it might be condoned; on the contrary, unless he is grievously misquoted, Mr. Roosevelt has gloried and taken pride in the act which can be described most dispassionately as both cowardly and thievish.

Now the fact remains that he, and by inference, his code of morals, are endorsed by about half of the American people. If he happens to be defeated before the Convention, or at the polls next November, the newspaper verdict will be that "the people can be depended upon in the final analysis to do the right thing." That may mean that 55 per cent. of them have a clean-cut conception of a correct standard of morals. It might also exhibit the melancholy fact that 45 per cent. had no such ideals. They would reject Mr. Roosevelt with scorn if it were proved that he cut a purse or belabored a helpless cripple with a club. But condoning virtually identical acts, more reprehensible if anything because of the protection afforded by his exalted official status, would clearly show that the attitude taken by the *Nation* as to a uniform and inflexible standard of morals, admitting of no juggling with differences between the acts of the layman and the official, is not the attitude of a large percentage of the American people, nor of more than 50 per cent. of them if Mr. Roosevelt happens to be our next President.

DICKENS'S "TYPICAL AMERICAN."

To the Editor of The Nation:

Sir: In these centenary days of Dickens. I have found even his "American Notes" to repay a re-reading. Less and less does it live up to Hood's original praise as "good sense, good feeling, good fun, and good writing"; more and more just appears Macaulay's estimate of it as containing "several good dialogues and excellent descriptions though, on the whole, a sad failure as giving a true impression of things goes." But there is a deal between its covers that is genuinely amusing, and, after all, accurate enough of those days in the early forties of the last century.

Take, for instance, the thumb-nail sketch of what "Boz" evidently held to be a typical American. He met him on a Pittsburgh canal boat, when the passengers of two of those leisurely craft were, at a certain stage of the trip, put into one vessel, which became badly overcrowded. There was then, as there would be now, not a little grumbling among those whose engaged quarters were thus cramped by the incoming of the travellers from the disabled boat, but no one made anything like a formal protest till a quiet little man, whom nobody had noticed before, suddenly cleft a passage among the people, and, without addressing any one in particular, began a soliloquy, as follows: "This may suit you, this may, but it don't suit me. This may be all very well with down-easters and men of Boston raising, but it won't suit my figure nohow; and no two ways 'bout that; and so I tell you. Now, I'm from the brown forests of the Mississippi, I am, and when the sun shines on me, it does shine—a little. It don't glimmer where I live, the sun don't. No. I'm a brown forester, I am. I ain't a Johnny Cake. There are no smooth-skins where I live. We're rough men out there. Rather. If down-easters and men of Boston raising like this, I'm glad of it, but I'm none of that raising nor of that breed. No. This company wants a little fixing, it does. I'm the wrong sort of man for 'em, I am. They won't like me, they won't This is piling of it up a little too mountainous, this is."

At the end of each of these terse outbursts the little fellow would turn on his heel and start off the other way, checking himself quite as abruptly as he reached the close of the next short sentence, and again turning back. The narrator goes on to write:

> It is impossible for me to say what terrific meaning was hidden in the words of the brown forester, but I know that the other passengers looked on in a sort of admiring horror, and that presently the boat was actually put back to the wharf and as many of the unfortunate "Pioneer" people as could be coaxed or bullied into going ashore were got rid of. Before we had again put off, a number of his companions tried to thank the little man, but he waved aside their "Much obligeds" with. "No, you ain't. You're none of my raising. You may act for yourselves, you may. I've p'inted the way.' Down-easters and Johnny Cakes can follow if they please. I ain't a Johnny Cake, I ain't. I'm from the brown forests of the Mississippi, I am."

Everybody made way for him, giving him the chair at the head table which was nearest the antiquated old stove, and Dickens adds: "I could never find out that he did anything but sit there, nor did I hear him speak again until, in getting ashore at Pittsburgh, I stumbled over him as he sat on the cabin steps, and caught him muttering to himself with a short laugh of defiance: 'I ain't a Johnny Cake, I ain't. I'm from the brown forests of the Mississippi, I am.' "

VISUAL LESSONS IN MORALS.

To the Editor of The Nation:

Sir: May I have space in your columns to call attention to a new and interesting experiment in education?

In our schools we demand for our children the best science, history, English that we can procure—science, history, English of the world at large. But in morals the majority of our children have only the kind that prevails in side streets. How does a gentleman behave in sports? What is the right kind of thrift? Who will answer those questions for the boy or girl? The home whence he or she comes, the companions he or she happens to have. We should not regard these as good authorities in any other subject.

To supply this lack is the aim of the visual lessons in morals, as devised by Mr. Milton Fairchild of Baltimore, with which experiments have recently been made in several cities. The purpose is not to create scenes and actions for the occasion, but to draw upon material taken from life which shall be pertinent and real. The result is moral teaching based not upon mere theory, but rather upon sound ideas in actual application. The boys and girls see in the illustrations upon the screen the principle exemplified, acted out, as it were, in real life. It becomes amazingly a part of the child's personal experience.

These lessons are not merely entertainment, nor are they made primarily entertaining. But treated seriously as "lessons," they hold the children closely and make them think. They are given in school time by trained persons, they are a part of the curriculum, and the teachers of the school follow up the lessons in various ways.

Well, the proof of the pudding is in the eating. Certainly, the experiment with this system in Syracuse, which was instituted by our local Harvard Club with the coöperation of the School Board, has met with signal success. Full results can be known only after years of experience; but we feel more than satisfied with our one trial, and are firmly bent upon repeating it. The idea of visual instruction in morals is large and sound, and it should be widely tried.

HORACE A. EATON.

Syracuse, N. Y., June 21.

KEATS AND CARTWRIGHT.

TO THE EDITOR OF THE NATION:

SIR: Two poets more dissimilar in spirit and manner than William Cartwright (1611-1643) and John Keats can hardly be imagined, yet there is a singular correspondence (hitherto unnoticed, I believe) between certain lines of the former and one of the most admired passages in the "Ode on a Grecian Urn" (lines 8-14):

> What men or gods are these? what maidens loth?
> What mad pursuit? What struggle to escape?
> What pipes and timbrels? What wild ecstasy?
>
> Heard melodies are sweet, but those unheard
> Are sweeter: therefore, ye soft pipes, play on;
> Not to the sensual ear, but, more endear'd
> Pipe to the spirit ditties of no tone:
> Fair youth, beneath the trees, thou canst not leave
> Thy song, nor ever can those trees be bare.

Two points in this passage will strike the attentive reader after a moment's reflection. One is the half exclamatory, half interrogative repetition of *what*; the other is the idea of a silent music, here represented as sweeter than that which the ear perceives. Keats is so pleased with these elements of his poem that he repeats both before the close. Thus, in stanza IV:

> Who are these coming to the sacrifice?
> To what green altar, O mysterious priest,
> Lead'st thou that heifer lowing at the skies,
> And all her silken flanks with garlands drest?
> What little town by river or sea shore,
> Or mountain-built with peaceful citadel,
> Is emptied of this folk, this pious morn?

And, for the other, we have in stanza III:

> And, happy melodist, unwearied,
> For ever piping songs for ever new.

Now Cartwright, not once only, exemplifies each of these devices, though his silent music, it is true, is not identical in character with that of Keats. The edition from which I quote, the only one yet published, is that issued by Humphrey Moseley in 1651. Here we have (p. 289) the noticeable parallel in manner:

> What mean those glorious pairs?
> That youth? that Virgin? those all drest?
> The whole, and every face a feast?

Cartwright likes to think of the members or lineaments of the women whom he celebrates as ordered and harmonized like music. Thus (p. 209):

> Whose parts are with such Graces Crown'd,
> That th'are that Musick without sound.

And again (p. 303):

> Her very looks were tune, we might descry
> Consort, and Judge of Musick by the Eye:
> So that in Others that which we call Fair,
> In her was Composition and good Air.

In one passage the device of the repeated *what* and the idea of the silent music of the face or the bodily frame are united (p. 300):

> What Morns did from her smiling rise?
> What day was gather'd in her Eyes?
> What Air? what Truth? what Art?
> What Musick in each Part?
> What Grace? what motion? and what skil?
> How all by manage doubled still?

We have no independent evidence that Keats had read Cartwright, though, not to mention Chapman, Shakespeare, and Milton, it is known or believed that he was acquainted with Ben Jonson, Beaumont and Fletcher, Massinger, Ford, Marston, Donne, Drayton, and William Browne.

Literature

DOSTOIEVSKY.

A Great Russian Realist: Feodor Dostoieffsky. By J. A. T. Lloyd. New York: John Lane Co. $3.50 net.

The Brothers Karamazov. By Fyodor Dostoevsky. Translated by Constance Garnett. New York: The Macmillan Co. $1.50 net.

Mr. Lloyd's biographical study has been followed within a few weeks by the first volume of what is planned to be a complete and unabridged translation of the novels of Dostoievsky. Evidently we are on the eve of a revival of interest in the man who by general consent holds a place by the side of Tolstoy and Turgenieff among Russian prose writers. Dostoievsky died in 1881. Five years later the Vicomte de Vogüé published his famous book on the Russian novelists, and within the next ten years Dostoievsky, like his two great contemporaries, attained a full measure of success in Western Europe. His principal novels were translated into English, though for the most part in garbled form. But whereas the fame of Turgenieff has remained constant, and Tolstoy has overshadowed the world, Dostoievsky's popularity during the last twenty years has undergone a sharp decline outside of Russia. Of all his books "Crime and Punishment" has remained fairly familiar. Perhaps also the autobiographical "Memoirs of a House of Death" should be mentioned.

One reason for this loss of popularity may be found in the formidable competition of Tolstoy. If Turgenieff escaped eclipse it was because his supreme artistry did not come into competition with Tolstoy, whose triumphs were primarily those of the mystic and moralist. But Dostoievsky lacked the preserving gift of high artistic form. He was just enough like Tolstoy in his moral outlook and his message to be his rival; and on the artistic side he was Tolstoy's inferior. If, after twenty years, there has been a reawakening of interest in Dostoievsky, it must be partly in sheer reaction against the predominance of Tolstoy. But to a very considerable degree it must also be that the late revolutionary outbreak in Russia, by letting loose the elemental passions in a full play of massacre, assassination, and civil war, has brought to the front the man who above all others found his preoccupation in the dæmonic capacities of the Russian spirit. The younger generation of Russian novelists, Gorky, Andreef, Artsibasheff, stand in much closer relation to Dostoievsky than to Tolstoy or Turgenieff. Andreef's "The Seven Who Were Hanged" is of the stuff that Dostoievsky's own studies in horror and psychological analysis were made of.

The earlier chapters of Mr. Lloyd's book arouse misgiving. They are badly planned. Before the writer has laid his foundation of fact he is busy framing estimates and conclusions. There is a long-drawn-out parallel with Gustave Flaubert that leads nowhere. The frequent tirades against Mrs. Grundy might easily be spared. Mr. Lloyd has an irritating habit of running away from a specific topic to indulge in broad discussions of Dostoievsky's genius. This demands citation from his author at large, and results in the confusion of individual works and dates. To one familiar with the subject the method presents no great difficulties, but the general reader will have to feel his way through a tangled chronology. It would also have been better if Mr. Lloyd, in dealing with the separate novels, had furnished us with a brief scenario before taking up his analysis. As it is, the reader is left to piece out the story for himself, now and then with insufficient data. All this is said less in criticism of Mr. Lloyd than in justice to him. For it would be a pity to let first impressions deter one from making complete acquaintance with a book which improves rapidly as it goes on, and ends by being a highly successful piece of biographical and critical literature.

It does not follow that we are bound to subscribe to the writer's opinions and judgments in individual cases. We do not, for example, believe that Dostoievsky attained "his final utterance" in his last novel, "The Brothers Karamazoff." In boldness of conception this might very well rank as the author's masterpiece. Its mere length is impressive; nearly half a million words, one should say, and that but a fragment. But unfortunately the execution fell far short of the plan. Dostoievsky's worst faults show here in exaggerated form. The book is ill-jointed and fearfully verbose. Its analysis of character degenerates too frequently into psychological acrobatics. Mr. Lloyd believes that in "The Brothers Karamazoff" the author outdid himself "in depth, in the sensing of what lies beyond the barriers of logic, in the divination of unuttered and unutterable secrets." One might as well be frank and admit that Dostoievsky in this book frequently loses himself in the meshes of his own word spinning. The personality of his men and women is in danger of being diluted in the verbal flow. The search of the interplay of motive can be carried to the point of sublety where character disappears and only the shifting impulses of the moment remain. There are in "The Brothers Karamazoff" pages of extraordinary depth and poignancy. There is one scene which, for pathos, it would be very hard to match in modern fiction. But of the book as a whole, it must be said that it exemplifies Dostoievsky's common fault in choosing to be the chronicler of the soul instead of its historian.

But if one disagrees with Mr. Lloyd in this one instance and elsewhere, it is still true that he nearly always makes out a good case for himself. His chapter on "Crime and Punishment" is very good. His chapter on "The Idiot," is still better; it is the best in the book. In every chapter one must give the writer credit for a thorough familiarity with his subject and his happy gift of selection, an important feature in a book that should serve to reintroduce a great writer to a foreign public.

CURRENT FICTION.

Our Little Town. By Charles Lee. New York: E. P. Dutton & Co.

The Widow Woman. The same.

Paul Carah, Cornishman. The same.

The house of Dutton has been fortunate in its introductions of new English writers to the American audience. It is always a little astonishing that such discoveries should be possible. The means of communication between England and America are now tolerably good. Literary news, like other news, is, one would think, common property on both sides of the water. Even minor gossip about books and authors is now cabled or sent by wireless to our more enterprising journals. And yet, once a year or so, some accomplished writer, with a string of books to his credit, is suddenly produced, like a rabbit from a hat, and held up for our wonder and praise. It is good for us, no doubt, this occasional reminder that old England has still a thing or two up her sleeve. It was not so long ago that Arnold Bennett flashed upon our astonished vision. More recently has come the Irish illumination of G. A. Birmingham; and now the Cornish shore receives a new interpreter in a Charles Lee, of whom the American reader has never heard before, but of whom he will wish to hear again.

Cornwall has not lacked celebrants, from Hawker to "Q," but none of them has approached the Cornish coast village in quite Mr. Lee's vein—a vein of quiet, dry humor—humor of a quality now growing a little old-fashioned. "Our Little Town" is presented in a series of sketches which recalls Mr. Barrie's "Auld Licht Idyls" and "A Window in Thrums." The village worthies and unworthies are painted singly and in groups, with a light, affectionate touch, and for the most part from their own point of view. In "The Widow Woman," which is hardly more than a short story, though it is published as a novel, the writer uses a somewhat coarser pen, and produces a more broadly humorous sketch—in substance more like W. W. Jacobs than Mr. Barrie. "Paul Carah, Cornishman" is a story on a larger scale. The hero is a young Cornishman, who, after an absence in America of some years, returns to his native village, intending to cut a dash. He is a Gascon in temperament, a natural braggart, and egotist. He is not received with the enthusiasm he has looked for, and has a struggle to make any place at all for himself in the self-satisfied and skeptical little community in which he has expected to find himself so important. In the end his conceit and foolhardiness involve him in a smuggling scheme which makes him the tool of a designing shopkeeper. Paul goes to jail; but emerges in due season as cool if not as jaunty as ever, and leaves the pair who have really opened their hearts to him—an old man's heart and a girl's—with hardly a qualm—his face turned eagerly towards fresh and, let us hope, even more disciplinary adventures. Again, the comparison with Barrie suggests itself: Paul Carah is closely akin to Sentimental Tommy, and his creator, in a cheerful ruthlessness of portraiture, brings the reader once again to a state of pleasing confusion as to whether to love the hero or despise him.

From the South of France. By Thomas A. Janvier. New York: Harper & Bros.

"A Book of Widows" would be a not inappropriate title for these five Provençal tales, since each of them deals with a widow and her more or less successful further adventures towards matrimony. In tone the stories range from the delicate half-humorous sentiment of "The Roses of Monsieur Alphonse" to the clever farce of "A Consolate Giantess." They are all written from a point of view of sympathetic detachment, and the light of the Comic Spirit is over them. The charming Madame Bellarmine is able to renew the romance of her youth; poor Madame Beaumelle, with just as good a will, fails in her attempt, owing to the unfortunate circumstance of her having nearly doubled in size. Madame Jolicoeur is helped in deciding between her two lovers by her admirable Persian cat. The Consolate Giantess, who owns a travelling zoölogical exhibit, is a sort of highly proper and sentimental Wife of Bath, with this advantage over her prototype, that she owns a lion who periodically eats her husbands, and thus increases his value as a show attraction.

As the title suggests, all the stories are decked out—perhaps a trifle too gayly—with local color; they have "Provincial roses on their razed shoes." They give the impression of careful arrangement and finish: sometimes the finish is a little too obvious. The style, though at times it is rather aggressively reminiscent of French idiom, has both distinction and charm, and the dialogue is invariably delightful.

Tales of a Greek Island. By Julia D. Dragoumis. Boston: Houghton Mifflin Co.

Within the covers of this book lies an hour of refreshing absence from that number of things that tend to make us all as unhappy as kings. In the island of Poros are not only its classic associations and its enchanting scenery, climate, and coloring, but a beneficent dearth of motors, carriages, and even of roads. To walk and climb and sail under perfect skies with mountains and the sea for patron saints is the happy occupation of the visitor to this favored corner of Greece. For the natives there are fishing and olive-growing, orange-packing, raisin-gathering, and lemon-raising; hewing of wood and drawing of water. For them life is laborious and often darkly shadowed, but the kindliness, courtesy, and love of beauty in every Poriote's nature make these islanders attractive figures. Mrs. Dragoumis writes of them with the knowledge born of sympathetic listening. "District visiting as practiced in England is quite unknown." But she listens to the men who work on her husband's property and to the women at their tasks in the fields and gardens, and hears "much of their lives and their thoughts and sayings." She keenly sees the pathos in their lives and the poetry in their natures, and the likeness to the ancient Greek in language and expression and often in type. Her figures appear and reappear in her stories and become old friends for the reader.

Young and old, foolish and wise, oppressive and neighborly, they are vividly real. Especially delightful is the prominent figure of old Kyra Sophonia, wisest, shrewdest, kindest of women, with a helping hand for every one in need, a word of counsel for the perplexed, and a sting for the cruel.

Ensign Russell. By David Gray. New York: The Century Co.

The world never grows tired of this sort of story—the sort which relates to naval and military adventure, preferably in the tropics, where the adventure, however thrilling, is of less interest to the reader for itself than for its effect on the development of some good-looking young officer. Six such stories are here told with great spirit, in rapid-fire style, as direct as a bullet. In the capital opening story, Ensign Russell's courage comes to him. In the second he is shown as amply captain of his soul. Made by his commanding officer the instrument of a grim retaliatory joke on a fat, foolish, insolent politician, the Ensign, bettering instruction, brings confusion to the member of Congress and amazement to his chief, after the fashion that we who sit at home at ease do dearly love. Next, he falls into and out of his first undying passion. Later, in rather less effective adventure, he coaches a racing crew and confounds the Britisher. Finally, he and events convince a missionary who would abolish war that civilian and soldier alike have much to learn. The last story, dealing with an ingeniously tangled affair of murder and fellow-feeling, dispenses with Ensign Russell's presence but provides Capt. John Dare, who, though older, is just as good.

RELIGIOUS DISSENT IN ENGLAND.

The Early English Dissenters in the Light of Recent Research (1550-1641). By Champlain Burrage. Two volumes. Illustrated with facsimiles. New York: G. P. Putnam's Sons. $6.50 net.

The stimulus given to the study of the history of the radical protestant sects in England by the researches of Mr. Waddington and Mr. Dexter has happily roused the energies of a growing number of students anxious to take up the mantle of the older champions. Professor Walker, Edward Arber, Dr. Dale, Dr. Lofton, and others have certainly carried on the work in an admirable spirit and with considerable success. One of the most recent additions to their ranks is Mr. Burrage, an American, who has capably edited several interesting documents and written some brief papers during the last few years. He now attempts an extended treatment of the whole subject of English Dissent, of which the present two volumes are the first installment.

After demonstrating that separatism did not rise from English Anabaptists in Henry's and Edward's reigns, he traces with a wealth of personal and bibliographical detail the history of the leaders and their congregations from 1567 to 1641. He concludes that Browne can fairly be called the Father of Congregationalism; that the first Baptists appeared about 1590, though the first to baptize by immersion did not appear till 1641; and that the Independency of the Civil War must be traced to the congregations which Jacob, Peters, Hooker, and Davenport founded on the Continent after 1605; from the Continent they carried the seed to America and thence brought it to England. (I, 33, 360.)

Mr. Burrage has dealt, however, with only those parts of separatist history before 1641 which he felt had not been adequately treated already. He also limits his bibliography to works written by Baptists and Congregationalists, and seems to have confined his researches pretty closely to a study of the source material provided by the separatists themselves. The excellent critical apparatus is one of the most imposing we have seen; but it is almost too much in evidence; the indication of the number of fonts of type used on the title pages of tracts, the use of "vv" for "w," are such extreme examples of accuracy of citation that we should not be surprised to learn that Mr. Burrage wrote his book with quills and blotted it with sand. At least half of the text of the first volume and the whole of the second is occupied with quotations, the reproduction in full of the titles of tracts, or bibliographical notes. It is on the whole admirably done, but the trees, we fear, have obscured the forest. Indeed, Mr. Burrage seems to have suspected as much, for he has listed at the beginning of his first volume the contributions he thinks his book makes, apparently in order that his critics may find them. Of sixty-four contributions, thirty-five are genealogical and twenty-one bibliographical. On the whole, the amount of new material of the first class is not considerable.

Close scrutiny convinces us that the first impression produced by this scrupulous reproduction of minute detail is not an altogether safe criterion of the completeness and accuracy of Mr. Burrage's research. We miss the use or mention of such important manuscript collections as the Morrice MSS. and the Gurney MSS.; of the considerable amount of new material about Jacob and other leaders, whose lives Mr. Burrage is studying, cited or printed in Usher's "Reconstruction of the English Church." Indeed, the whole literature of the subject as written by Churchmen he excludes from consideration (I, 1), and leaves indications which lead us to doubt his knowledge of its contents. It is difficult otherwise to explain the inadequacy of his "foreword"; his apparent surprise at learning that the Privy Council interfered in ecclesiastical affairs (I, 38, 39), and his general failure to understand the relation of separatist history to the history of the church and to general political and constitutional history. Surely, too, his bibliographical comments (I, 1-21) and his notes of libraries are not sufficiently new or critical to be printed in volumes so obviously intended for specialists.

In an author who is so anxious to give his reader the quotation exactly as he finds it that he reproduces even the typographical peculiarities, it is astonishing to find him freely interlarding his quotations with bracketed suggestions as to the meaning of such significant words as "church" and "Puritan," with the evident intention of influencing the reader's interpretation of the document. (I, 180, 186, 192, 197, etc.) In one instance (I, 361-362), the author of the tract uses the words "Brownist" twice, and Mr. Burrage informs the reader that he really meant "Barrowist" the *second* time! He also attempts (I, 80), to correct a contemporary statement that certain men were "all" members of the High Commission, and quotes Dr. Dixon as authority. But a glance at the list of commissioners in as familiar a book as Prothero's "Select Statutes," 233, would have saved *him* an error. We have dealt with these minor matters because such extravagant care in detail raises a presumption of his absolute accuracy which is more than likely to impose on the casual reader, and lead him to believe Mr. Burrage impeccable. None of the faults we have indicated are vital, but we venture to think they are all at least as important as most of those on which Mr. Burrage himself spends so much time.

Nevertheless, Mr. Burrage has rendered important service by printing so large a collection of sifted and verified facts for the use of future students and by making accessible to all many letters and papers hitherto at the disposal of a very few. We cannot agree with him that he has written a history of dissent to the year 1641. The narrative is too scanty and too incomplete; the perspective wholly lacking; the text too crowded with material which belonged in his foot-notes or appendix to convey to the general reader any connected notion of the story. Nor does Mr. Burrage seem to realize the significance of his own evidence, which proves many substantive facts of great importance not listed among his contributions or stated in the text. To our thinking, for instance, he has thrown a flood of light on the origin of the Quakers, for his evidence proves that the ground was well prepared for Fox by the advancement of many of his ideas by the most radical separatists, at least a generation before he announced them. Nor do we find Mr. Burrage's suggestion as to the origin of Independency during the Civil War convincing; it wholly fails to account for its strength and his explanation of the rise of its ideals is not much better. While praising his diligence, and fully recognizing his eminence as an antiquarian and genealogist, we doubt his capacity as a historian.

Napoleon and King Murat. By Albert Espitalier. Translated from the French by J. Lewis May. New York: John Lane Co. $4 net.

In the summer of 1808 Joachim Murat and Caroline Bonaparte became King and Queen of Naples by the grace of Napoleon. Heralded by a most brilliant military reputation, King Murat made his entry into Naples amid *vivas* of unbounded enthusiasm. His plumes, his horses, his outward magnificence took the fancy of the beauty-loving Neapolitan loungers. He in turn was stirred in his vanity and ambition by their flattery and admiration. On the shore of the Bay of Naples, in that centre of *far figura*, of artificial pose, his vanity throve as in a hot-house. His ambition began to soar. He dreamed of adding Sicily to his kingdom, and even of uniting all Italy under his sceptre, not because he patriotically burned with a noble zeal for a free and united Italy, but because Italian Unity seemed to afford him personally a means of gratifying his ambitions and exalting his vanity. It was inevitable that such ambitions should lead him into conflict with Napoleon and along the fatal path which leads from ingratitude to treachery. Queen Caroline, saner, cooler, and more diplomatic than her husband, many times intervened to restrain him and to pacify her imperial brother. But when Napoleon's fortune began to waver after the disasters of the Russian Campaign, the seeds of ambition and treachery developed in her breast also; even before his defeat at Leipzig she made use of her authority as Regent at Naples to take steps to join the allies against him. King Murat himself, with bombastic protestations of everlasting devotion to his benefactor, had accompanied the Russian expedition and led the cavalry magnificently. But after the decisive failure of the French at Leipzig, Murat secretly sent word to Metternich that he would desert to the side of the allies if they would recognize him as King of Naples and of Sicily or the equivalent of Sicily. During the eighteen months which followed, Murat carried on despicable double-dealings with Metternich and with Napoleon, pretending to be the friend of each, but trying to use the difficulties of each as a lever to raise himself to the headship of a united Italy. For a brief moment in the early part of 1814 his policy of deceit seemed about to be crowned with success; in reality it exposed his untrustworthiness and his impotence; in 1815 he was a fugitive from Italy, toppled from his throne by Metternich and spurned by Napoleon.

M. Espitalier, on the basis of careful research, mainly in the archives of Paris and Naples, has laid bare with scholarly accuracy the shallow deceptions and tortuous policies which were dictated by the colossal vanity and foolish ambitions of this quondam King of Naples. Some of this ground has already been traversed in the French works of Edouard Driault and Commandant Weil. But M. Espitalier goes into greater detail on many points; by correcting the chronology of certain secret negotiations he has shown for the first time in their proper sequence several obscure events, and made thereby a distinct contribution to the literature of the Napoleonic period. The English translation is unusually good and not without literary merits of its own; it gives something of the flavor of Murat's curious epistolary performances.

The Principles of Bond Investment. By Lawrence Chamberlain. New York: Henry Holt & Co. $5 net.

It ill becomes us, says Lawrence Chamberlain, to leave the principles of bond investment, as we have left so many other financial principles, to the dissertations of French economists. Yet scholarly treatises on this subject in English are rare. Prior to the appearance of the work before us, it would have been difficult to point to one such treatise that was complete in technical details, ample in historical allusion, and satisfactory in its literary features. An extended work possessing all these qualities is entitled to a very cordial reception.

An exceptional interest should attach to the negotiable bond in the minds of Americans, for, as Mr. Chamberlain reminds us, it was reserved for the New World to develop to the full the sealed instrument's latent capabilities. A security still virtually unknown to English common law, the modern negotiable bond "was conceived in the peculiar necessities of early American finance, and bravely and wisely nurtured by the Federal courts." To what stature it has already attained will be seen from the early chapters of this book. Here an effort has successfully been made to seize the fundamental principles of investment and to show how aptly bonds conform to them. The importance of bonds as a channel of investment is illustrated by the extension of jurisprudence within the past half-century to embrace the exigencies arising from this new mode of financing.

The second of the four divisions into which this work of 550 pages falls is concerned with civil loans. It is followed by a discussion of corporation loans, and, last of all, there are chapters on the mathematics and movement of bond prices. A unique feature of the book is the fact that, while its subjects are treated with the preciseness that one would look for in a manual or textbook of a dry science, the reader is always conscious that he is in the presence of the greatest forces of national development. Indeed, this may almost be characterized as a tract for the times. In the material life of the world, and particularly of this country, there is to-day no larger question than that of public and corporation indebtedness. A structure of indebtedness has been created whose foundations need to be safeguarded with the incessant care that is devoted to the dikes of Holland. This book is, in all its implications, a reminder of that fact.

We see this clearly in the chapter on State debts. Mr. Chamberlain, after speaking of the honorable history of our national debt, and particularly of the payment of the debt in 1835, says that it is not surprising that the conditions which made possible the extinction of the national debt should effect an opposite result upon State debt. The national moral consciousness, he contends, "has always been more sensitive and more sober than that of the constituencies." There seems to be a closer connection between magnitude and integrity in American political units. The national moral consciousness seized upon the seven fat years beginning before 1830, to discharge the national obligations, and even to distribute surplus revenues to the States. But the States, for their part, saw in their own swelling revenues only an opportunity to embark in speculative enterprises of internal improvement upon such a vast scale, and by means of such enormous bond issues, that in some cases a tax of hundreds of dollars per capita would have been necessary to liquidate them.

Equally pertinent is this succinct characterization of railways and their securities:

> The fact that this immense railroad carrier business has gradually lifted itself from a plane of business adventure and financial piracy to that of a national institution—not only for transportation, but for investment—and that this semi-public business is intimately associated with almost every phase of the nation's well-being, is a sufficient guaranty that, in the main, governmental regulation of this business, especially by the Federal authorities, will work toward a better conduct of transportation and more certain elements of stability and value in railway securities.

It is needless to say that Mr. Chamberlain's association with bond investment entitles him to speak with authority on the technique of that business. Bonds of every character are here discussed, as well as the functions of bond houses. In the form of an appendix we find a chapter on The Gamble in Governments by National Banks, by Prof. W. H. Lyon of Dartmouth, reprinted from *Moody's Magazine*.

Notes

John Galsworthy will bring out, through Heinemann, a new volume of essays, "The Inn of Tranquillity."

Putnam is about to issue "The Power of the Federal Judiciary over Legislation," by J. Hampden Dougherty.

"A Man's World," a novel of New York life by Albert Edwards, will be brought out this month by Macmillan.

"The Lady of the Decoration" is to be continued. The sequel—telling what happened to "The Lady" after her marriage—will be published by the Century Co. in the autumn.

Routledge & Co. have in hand "A Zola Dictionary" of characters and scenes found in the Rougon-Macquart novels.

Oxford books in preparation, announced by Frowde, include: "A Concordance to Dante's Latin Works," by E. K. Rand and E. H. Wilkins; "Problems of the Roman Criminal Law," by J. L. Strachan-Davidson; "The Science of Etymology," by W. W. Skeat; "Demosthenes's Public Speeches," translated by A. W. Pickard-Cambridge; "Tacitus's Histories," translated by W. Hamilton Fyfe, and "Philostratus's Apollonius of Tyana," translated by J. S. Phillimore.

Among the forthcoming books of Longmans, Green, & Co. are: "Miriam Lucas," by Canon P. A. Sheehan; "Catherine Sidney," a novel by Francis Deming Hoyt; "The Three Sisters of Lord Russell of Killowen: Sketches of Convent Life," by the Rev. Matthew Russell, S. J.; "The Authority of Religious Experience," by the Rev. Charles Lewis Slattery; "Creation and Man," by the Rev. Francis J. Hall; "Toys and Toy-Making," by George Johnson; and "The Inner History of the National Convention," by Sir Edgar Walton.

The Hampton Negro Conference will be held at Hampton Institute July 17 and 18.

"Descriptive Writing" (Macmillan), by Prof. E. M. Albright, is a book of 275 pages, 175 of which are devoted to illustrative selections. In the hands of the instructor the book will serve a purpose, but in the hands of the student it will be unwieldy and misleading. The importance of description in composition courses, though it is recognized generally, can surely be exaggerated. As a companion volume to that by Professor Albright, the Macmillan Company has published "Expository Writing,' by Prof. M. G. Fulton. Following an introduction of thirty-four pages are selections that cover 550 pages, classified according to the principles illustrated, and various enough to suit the demands of well-nigh any instructor.

The Ralph Fletcher Seymour Company of Chicago has printed at the Alderbrink Press in an edition of 400 copies on paper and ten copies on Japan vellum Maurice Hewlett's "The Birth of Roland" ($3.00) The tale is a simple narrative of a pseudo-heroic character related in Mr. Hewlett's familiar pseudo-antique style, with an occasional touch of the pseudo-robust; and this, we are informed, is the first edition The little book is well printed, prettily bound, and embellished with ornamental initials and some interesting illustrations.

To the ninth volume of the "Oxford English Dictionary" Sir James Murray has now added the thick double section, TH-THYZLE (Frowde), containing 4,069 words and 20,133 illustrative quotations. This collection is composed almost exclusively of words of Old English, Scandinavian, and Greek origin. Within its limits Sir Thomas More found an English shibboleth, challenging any foreigner to follow him without tripping through the consonantal ambushes of "Thwarts [? *error* for Thwaites] thwackt him with a thwitle." Possibly More himself might have stared and gasped if he had been obliged to try his tongue on a modern English passage of this texture: "Thlipsencephalous and theophilanthropic thanatophidiologists theorize on thyrotherapy." Among the learned and inkhorn terms science and theology are prominently represented: thirteen columns are devoted to formations with *thermo-*, and 140 derivatives are listed under *theo-*. Perhaps the most interesting change of meaning in the latter group is seen in the whitewashing of *theist*. Less than a generation ago men in the colleges were getting their feet set in the paths of orthodoxy by taking a course in Flint's "Theism." In the good old times, when men looked askance upon curiosity in matters theological and Dean Swift could characterize the deist Toland as an "atheist and the son of a"——woman of no reputation, *theist* was a word of exceeding ill odor. So late as 1734 we learn that Oates "did but use the Privilege of a Theist or Freethinker," and in 1662 "Rebels, Theists, Atheists, Philologers, Wits, Masters of Reason, Puritanes" are all rolled into one common lump of reprobation.

It is pleasant to meet among the new comers the friendly, humorous face of *thank-you-ma'am* also *"thank'ee-marm,"* labelled "U. S.," recalling the old-fashioned courtesies taught by the New England schoolmistress, defined as "a hollow or ridge in a road, which causes persons passing over it in a vehicle to nod the head involuntarily, as if in acknowledgment of a favor," and supported by the unassailable authority of Longfellow, O. W. Holmes, and W. D. Howells. Even more piquant is the history of that world-renowned personage who stands in the file as *Thomas Atkins*, but is more generally known and sung as "Tommy." Mr. Atkins seems to have been created by the English War Office, which in 1815 pitched upon him as it might have pitched upon John Doe or John Smith, and inserted his name in the model form of a cavalry soldier's book: "Thomas Atkins Private No. 6 Troop, 8th Regt. of Dragoons." In 1837 he appears again in "Form No. 2, No. 55, Thomas Atkins, Sergeant, Born in the Parish of St. Mary in or near the Town of Portsmouth, in the County of Hants, by Trade a Labourer." Finally, after a long, merely nominal existence, he emerges as vigorous and immortal as Jack-the-Giant-Killer or John Bull, is criticised by the "Times newspaper," and is defended by Mr. Kipling when he steps "into a public-'ouse to get a pint of beer.' Readers of the Dictionary in this country will note with astonishment this definition of *theme:* "'An exercise written on a given subject, *esp.* a school essay; an exercise in translation. Now *rare*"!!! No hint of the theme-readers, the theme-racks, the "theme-itis," and the millions of themes written annually in "these States," from Maine to California.

Assuming that the heights reached by the author cannot be attained without strong traits of character, nor maintained without a varied and interesting experience, one reads "Some Pages of My Life" (Scribner), by the Rt. Rev. W. Boyd Carpenter, D.D., Canon of Westminster and late Bishop of Ripon, with a feeling of disappointment. We do not get what it was surely in the power of the writer to give. Chapter after chapter is devoted to childhood memories of no inherent importance and hardly likely to interest any except the bishop's immediate circle of kinship and acquaintance. That his "Jinnies" (dolls) and other playthings should get only a trifle less space than his relations with Queen Victoria, with whom he came into very close personal contact, surely betrays a lack of due sense of proportion. The best advice to the reader who has not plenty of time is to omit the first third of the volume altogether. In the later chapters one has interesting glimpses of some of the prominent figures of the age, such as Browning, Tennyson, Gladstone, the Duke of Argyll, the Queen, and the Empress Frederick, over whose body he read the burial service in accordance with her own request, made to him in person during a visit at Friedrichshof, three months before her death. Extracts from a few letters from Queen Victoria show that she felt a deep respect and affection for him and came to him freely for spiritual aid and solace. Although disagreeing with Gladstone's later political course, he had a profound respect for his deep religious convictions, and gives him credit for entire sincerity and freedom from any but the most unselfish motives. While calling upon Gladstone at the Treasury on a matter of ecclesiastical business, he incidentally mentioned Sibbald's translation of the "Inferno," a copy of which he had in his hand. Gladstone sprang from his chair, seized the book, and, turning rapidly through its pages, delivered a long discourse on the moral discipline to be gained from the study of the "Divina Commedia." "This power of discharging the mind of its burdens and concentrating the whole attention upon some fresh topic is either a great gift or a very useful habit," is the writer's comment, "but it is one which lesser people can only enjoy at a distance." In the retrospect of his seventy years, Bishop Carpenter is neither discouraged nor unduly optimistic. He is glad to feel assured that materialistic philosophy is in decline, but recognizes the snare of materialism in practical life, growing out of our love of the comforts and enjoyments made possible by the mastery which we are acquiring over the material world.

We can see that opportunities of comfort may breed self-indulgence, indifference to responsibility, blind carelessness about the future of the nation. We see the evidence of such dangers in the decline in the birth-rate [the bishop himself had eleven children], and in the petty tyrannies practiced by aggressive minorities. When the bulk of the people, preoccupied in pleasure-seeking, forget their obligations, power passes into the hands of the active minority. When rights are demanded and duties forgotten, the tail will soon wag the dog. These things need thinking about.

The two handsome volumes, issued under the title of "The King's Book of Quebec" (Ottawa: The Mortimer Co., $25), fittingly commemorate the tercentenary celebration of July, 1908. The book is designed to carry on two movements: one to create a public opinion in favor of preserving the battlefields of Quebec "in a manner worthy of their traditions," as Lord Grey puts it; the other, of supreme importance, to "unite more closely Canadians of French and of British descent." In 1905, Sir Wilfrid Laurier, then Prime Minister of Canada, said: "La pensée dominante de ma vie a été d'harmoniser les différents éléments dont se compose notre pays. Je ne saurais dire encore que j'ai réussi autant que je l'aurais voulu, autant que je l'avais espéré, mais la pensée est vraie et elle finira par triompher." The same thought, the same patriotic ambition, dominates the mind of Sir Wilfrid Laurier's successor as Prime Minister, Robert Laird Borden; and it formed a marked feature of the policy of Sir John Macdonald, the most able and far-sighted statesman Canada has yet produced. For those interested in the history of the city of Quebec, the mere fact that the preparation of these volumes was entrusted to Dr. Arthur Doughty and Col. William Wood will be sufficient introduction. Both are recognized authorities on the subject; both have written extensively in regard to it; and both possess the not too common combination of historical judgment and accuracy, and the ability to write entertainingly. Broadly speaking, Dr. Doughty has supplied the historical background, and Col. Wood describes the pageant and its significance. In a brief preface, Lord Grey, who as Governor-General had much to do with the organization and success of the celebration, emphasizes its importance from a national, imperial, and international point of view. He reminds us, incidentally, that in coming to Canada in 1908 for the express purpose of taking part in the 300th anniversary of the birthday of Quebec, King George V was paying his sixth visit to the Dominion. Lord Grey also makes the interesting suggestion that when the time comes for a Louisbourg commemoration, the princes of India might fittingly be asked to coöperate, because, as he points out, the exchange with France of Louisbourg for Madras, in 1748, while it weakened the British position in America, "helped to establish the Pax Britannica which insures to the princes of India the security of their rule."

The solution of the world-wide Jewish question which Werner Sombart propounds in his booklet, "Die Zukunft der Juden" (Leipzig: Duncker & Humblot), is a double one. For the Jews of Eastern Europe there is no relief but in some form of Zionism. The present deplorable economic condition of the Russian Jew will enter upon an acute crisis when the United States closes the gates on immigration, as Prof. Sombart believes we are now preparing to do. There is no hope of relief within the Russian Empire. So the choice is between emigration to a separately constituted Jewish territory and extirpation. The problem of the Jew in Western Europe is not an economic but a social one. The anti-Semitic spirit shows no diminution. Intermarriage is no remedy, since the offspring of mixed marriages are never allowed to forget their tainted origin. Every attempt on the part of the Jew to lose himself into his environment is bound to fail. The right solution lies in quite the opposite direction. The Jew should endeavor to develop his racial identity to the utmost, take pride in his racial culture, give recognition to the great fact that he can best serve his own cause and that of civilization by emphasizing the differences which mark him off from his neighbor. The ideal civilization is based on ethnological diversity. The more races, tongues, national cultures, the better for progress. Let the Jew accept the limitations imposed upon him by circumstance and make the best of it. It is not essential to the happiness of the German Jew that he shall be allowed to hold an army officer's commission. It is in general a foolhardy policy to thrust yourself in where you are not wanted. Thus Professor Sombart, in the same breath, urges the Jew to be proud and to be submissive, to develop his native powers to the utmost and not to intrude. We very much fear that the line which separates legitimate pride from unwarranted ambition is a metaphysical one.

One of the earliest mediæval works on geography is the "Book of the Knowledge of All the Kingdoms, Lands, and Lordships that Are in the World," published by the Hakluyt Society. The author, an anonymous Franciscan friar, who may have written in 1350, has been criticised as a mere compiler of traditions, but this view is not accepted by the Hakluyt editor, Sir Clements Markham, who thinks that the friar was a great traveller, and that he "diligently collected all the geographical information he could obtain. . . . The Franciscan was the first to mention and give the names of most of the Canary Isles, the Madeiras, and Azores, . . . and the first to give an account of Africa south of the Atlas in any detail. He gives a clear and precise definition of the famous Rio del Oro, the Niger of Ptolemy and Pliny, the Nil Cana of the Arab geographers, and the modern Senegal." There exist three, perhaps four, codices of the work, one being illustrated by the arms, flags, or devices of all the countries, in colors. This is the earliest representation of the flags of all nations It is not maintained, however, that the friar visited every part of the known world Its illustrations are effectively reproduced and form a valuable addition to the book. The work was first published in 1877 by Don Marcos Jiménez de la Espada, who made unsuccessful efforts to ascertain the name of the anonymous traveller.

D. Francisco Rodríguez Marín, author of many important studies on Spanish literature of the sixteenth and seventeenth centuries and on folk-lore, has been appointed librarian of the National Library at Madrid, to succeed the late Menéndez y Pelayo.

The second annual volume of Meyer's Konversations-Lexikon, consisting of a thousand pages and several hundred illustrations, has just been published. As a record of the principal events of the twelve months previous to November last, the progress of science, the literary productions, it is of great value. In the article on the Tripolitan war, the last event noted was on November 7. The account of the parks and playgrounds of Europe and America is illustrated by colored plans of the park systems of Boston, Baltimore, and Chicago.

The thirty-second Annual Report of the Colonial Institute of Hamburg shows with what thoroughness Germany prepares men for its growing colonies. Hamburg, like Frankfort, maintains many important educational establishments, and in both of these cities plans are on foot for consolidating their scientific schools and institutions of learning into local universities, dealing more with the practical interests of great commercial centres than with the abstract studies of the existing German universities. The Imperial educational authorities unite with the local teaching force to give weight and value to the work of the Hamburg Colonial Institute, and its teachers and students exchange visits and instruction with those of Berlin and other centres of university life and work, so that the old and new subjects and methods of study may be compared. Imperial and local authorities coöperate with merchants and their associations in forwarding this new local enterprise. The Hamburg Colonial Institute sent representatives to German colonies and to those of other countries, to study conditions, for example, in Egypt, where, in Cairo, the chief school for Mohammedan instruction counts thousands of students; and their reports are published, thus supplying valuable information. Sixty-one instructors, drawn from all parts of Germany, many of them specialists of note, using the scientific institutions of Hamburg, which is rich in special collections made by its merchants and sea captains in all parts of the world, gave courses of lectures on colonial history and law and sanitation and geography and geology, on Mohammedanism, on African languages, on Asiatic and English and modern Greek languages, on agriculture and botany and zoölogy in the German colonies.

"The Truth About Egypt" (Cassell) contains an account of the progress of events in the politics of that land during the five years of the administration of the late Sir Eldon Gorst as British Agent. The author, J. Alexander, quotes from the newspapers and from official documents, to illustrate and enforce his narrative. As a history the book is highly illuminating, and as an indictment it is conclusive. "Egypt for the Egyptians" is a factional cry of extremists in the towns. It would not be for the true good of the country as a whole, nor for stability and honesty of administration. It is the motto of the discontented among a conquering people, who feel themselves prevented from attaining the fruit of the conquest made by their forefathers over a sect of the hated Christians.

A volume of somewhat similar character is Lovat Fraser's "India under Curzon and After" (Holt). The author was editor of an Indian newspaper and possessed many sources of information not ordinarily available. The book is not a defence of the Viceroy, nor an attack upon him; it is an account of recent events as they appeared to the writer. He sets forth with lucidity the difficulties of administration which confronted Lord Curzon, and the means adopted for their solution. The field is a wide one, and the details are almost bewildering, but the story is one of great interest to all concerned. The book was prepared for an English and American public to whom the problems of foreign occupation contain questions of very great moment.

It is a pity that John Foster Fraser's tale of wanderings in Algeria, Tunisia, and Morocco should have so catch-penny a title as "The Land of Veiled Women" (Cassell). For though there is a good deal about women in it—mostly of the unveiled kind—the strength of the book is in its vivid descriptions of the multitudinous and many-colored life of those lands. Mr. Fraser has been about the world and has learned how to look for and at things, and so, without any professed Oriental knowledge, he has come out with a wonderfully good book. Even his folk-lore and superstitions are right, and if his canon law is a bit shaky, he errs with a host of much more solemn and dull writers. There are forty excellent photographs and four good colored prints.

A report of a missionary conference which is broadly interesting and not oppressively pious is a new thing, and "Islam and Missions" (Revell), the report of the conference in January, 1911, at Lucknow, has abundance of matter in it to attract any one who is at all under the spell of the East. There are articles on Panislamism, on the recent political changes in Turkey and Persia, and on the present situation in Malaysia, India, Afghanistan, and China, the reading of which will amply repay any one. It is plain that missionaries have come at last, consciously and openly, to face their environment as it is, and to see their work as an expression of the broad Christian civilization. It has long been that, as a matter of fact, but this explicit recognition is to be welcomed. It goes with the other great fact, the even more sudden recognition by politicians, sociologists, and scholars, of what missions have done and are doing.

Dora Greenwell McChesney, a writer, and the daughter of the late Prof. Joseph McChesney of the University of Chicago, died in Paris on Friday. She was born in 1871. She became especially interested in the period of the English civil war, from which she chose material for several books. Her writings include: "Kathleen Clare, Her Book, 1637-1641"; "Miriam Cromwell, Royalist"; "Rupert, by the Grace of God," etc.

Henry Arden, a graduate of Cambridge University, England, and a member of Lincoln's Inn Bar, who had come to this country to practice law, is dead in Los Angeles, Cal. He was the author of a work in four volumes, entitled "Banning and Arden's Patent Reports." He was also much interested in scientific subjects.

The death is reported of the Rev. Robert Borland, minister of Yarrow, Selkirkshire, Scotland. He is remembered in this country for his "Yarrow, its Poets and Poetry."

Miss Sophia MacLehose, whose death is reported from Glasgow, was the author of "Tales from Spenser's Faerie Queene," "The Last Days of the French Monarchy," and "From the Monarchy to the Republic in France."

Science

Logic, or the Morphology of Knowledge. By Bernard Bosanquet. 2 vols. Oxford: The Clarendon Press; Henry Frowde.

The Science of Logic. By P. Coffey. Vol. I. New York: Longmans, Green, & Co. $2.50 net.

Formal Logic. By F. C. S. Schiller. New York: The Macmillan Co. $3.25 net.

The simultaneous appearance of three substantial works on formal logic gives somewhat piquant evidence of the fact that specialists in the science of correct reasoning do not all reason alike. For the three books together offer the advanced student the opportunity of comparing, or of choosing among a neo-Hegelian, a neo-Thomistic, and a pragmatistic form of that ancient discipline; while none of them can be said to represent, or to be much influenced by, the very latest fashions in logical theory.

The first, Mr. Bosanquet's book, which appears in a second edition, was reviewed in the *Nation* at the time of its original publication. In the new edition the text is little altered, but footnotes are copiously appended, and a few passages of some length, of which the most important have already been printed in periodicals, are added. The other two treatises offer an especially curious contrast. Coffey's "The Science of Logic" is dedicated to Cardinal Mercier, one of the principal patrons of the neo-scholastic movement; and it "attempts to present the Principles of the traditional Logic expounded by Aristotle and his Scholastic interpreters, and to show how the philosophical teachings of Aristotle and the Schoolmen contain the true basis for modern methods of scientific investigation." The present volume of some four hundred and fifty pages carries the subject only through the doctrine of the syllogism; a second, dealing with induction, is promised. Father Coffey has not wholly neglected more recent writers, but he falls rather far short of a strict adherence to his professed "guiding principle": *vetera novis augere et perficere.* It is disappointing in any new logic-book to find the subject of "opposition" treated in the traditional and faulty way, and not given the perfectly systematized, demonstrative, and "elegant" form of which it is susceptible, when it is based directly upon an enumeration of the possible denotative relations of any two terms. The matter which gives the author most concern is to show that the syllogism is not a *petitio principii*, that the deductive proof of Socrates's mortality does not first require that the major premise, "all men are mortal," be established by a complete induction which already includes the case of Socrates. Father Coffey presents the issue clearly, but deals with it in a manner which will seem convincing only to other Scholastic logicians. Much of the traditional logic, however, is presented with a high degree of clarity and precision: especially good is the chapter on the Predicables.

For the traditional, even in formal logic, F. C. S. Schiller has scant respect. His book is dedicated "to the memory of the last great liberator of the human spirit, William James"; and it is paradoxically designed to provide both a textbook in the science and a proof that no such science exists or should be taught. For the latter purpose Mr. Schiller has, naturally, more zeal than for the former; and he has, in fact, achieved something different from either. He has written a somewhat garbled and misleading version of the usually accepted form of logical doctrine, and accompanied it with a running exemplification of most of the kinds of bad reasoning which figure in the traditional list of fallacies. He has thereby, undeniably, shown his scorn of the customary logic better than he could have done by a more scrupulous observance of the canons which he derides; and he has also, perhaps, the better justified his contention that the teaching of formal logic is a futility. For the author himself is abundantly instructed in that subject. His principal thesis is that it is not "possible to study the formal truth of thought irrespective of its truth in point of fact." This proposition itself is not free from ambiguity; but in the only senses in which it implies a repudiation of anything that serious logicians have maintained, it should mean either that there are no such things as relations of compatability and implication between judgments which can be distinguished from that relation of a judgment to its object which constitutes its factual truth; or else that there are no general rules whatever respecting inference that can be laid down in advance of a particular inference and used as criteria of the correctness of the latter. Neither Mr. Schiller nor any other rational animal ever habitually held either of these opinions and acted in accordance with them.

Nor do most of the arguments which he advances have any tendency to prove either thesis. The arguments consist largely in treating certain well-known and avowed limitations of formal, especially of deductive, logic as if they were proofs of its falsity within its proper limits; in treating the disagreements of logicians as if they were contradictions in logic; in treating the errors of some logicians as if they were evidences of the absurdity of logic; and in imputing to logic some strange doctrines and procedures of which even the most "traditional" of logicians have seldom, if ever, been guilty. When all these irrelevancies are discounted, there remain as a residuum some just, though hardly novel, observations upon the limited range within which cogent proof is possible, and upon the constancy with which human reasoning is beset by the danger of falling into some of the fallacies of ambiguity or of presumption. And on the question whether the syllogism is a *petitio principii*, Mr. Schiller has some remarks which Father Coffey might with advantage consider.

During the brief time that Dr. William Lutley Sclater, the well-known English ornithologist, was director of the Colorado College Museum, he found time to prepare the volume, "A History of the Birds of Colorado," which is now issued by a London house and imported by Stechert. It compares favorably with any handbook thus far produced in this country. As the study of birds becomes more and more intensive, the range of the handbook is more restricted. For many years in England there have been produced volumes relating solely to the ornithology of a single county or shire, and in America bird books of individual States are beginning to appear. Dr. Sclater has wisely cast aside all ultra-Anglican views and has adopted American nomenclature and names for use in the work. We note as one idiosyncrasy the omission of all authorities for scientific names. The idea of a State history is well carried out by means of a map, detailed analyses of physical features and fauna, a bibliography of nearly three hundred titles, and especially by a gazetteer of all the localities mentioned, with their exact location and altitude. The three hundred and ninety-two species of birds known to exist within the State are treated in the usual handbook manner under the captions of Description, Distribution, and Habits. In the literary style of the descriptions we discern a marked improvement over much of the similar work of American writers. Sixteen photographs enhance the interest of the volume. Although the letterpress covers almost six hundred pages, the lightness of the paper renders the volume easy to handle; there is a thorough index.

"Biological Aspects of Human Problems" (Macmillan) is the title of a very attractive book prepared from manuscript notes and material found among the papers of the late Dr. Christian A. Herter, and put into shape for publication by his widow with the aid of some of his friends to whom his views were familiar. According to Dr. Herter's prefatory statement the original notes were begun some years ago in the hope that a discussion of certain human problems from a biological point of view would be helpful to his children. There is no indication of the age of the children for whom this discussion was intended, but the result is far from being a guide for babes or the very young; it is rather a serious examination of many questions whose bearings only adults, and adults of intelligence, may be expected to appreciate. The point of view is frankly rationalistic, and the self-preservative and sexual instincts are treated as fundamental. Herter holds that a doctrine of vitalism is yet far from being necessary, and that even scientific fatalism may enlighten and encourage serious natures, the mechanistic view not necessarily leading to hopeless resignation. These questions carry the author far afield and bring up many matters relating to health and disease, to instinct and heredity, to the influence of excesses, and especially to the protective agencies, a subject with which Herter was particularly familiar. Interesting is the suggestion that it might well repay a great Government to make a systematic examination into the prolongation of life, using some sort of a longevity squad for this purpose. The later chapters take up the relation of the fundamental instincts to the arts and religion and education. The treatment here must be considered as suggestive rather than final, as this part of the manuscript was admittedly incomplete. It is of course quite probable that earlier parts of the book, although apparently finished, would have undergone much alteration had its lamented author lived to print it himself. Even in its present form, the book is well worth reading as an expression of the attitude of a trained biologist to the big human problems. The revision of the text is in some places defective. Thus we note "Schleider" for Schleiden, and the statements that Kühne discovered the retinal red in 1840 (!), and Harvey the circulation of the blood in 1645 (!), and suppose *Bacillus vulgaricus* (p. 131) to be a misprint for *B. bulgaricus*.

Drama

Putnam will bring out this month "The Dramatic Festival," by Anne A. T. Craig, with a "foreword" by Percival Chubb and an introduction by Peter W. Dykema. The book deals with forms of plays and festivals appropriate for presentation in schools.

The Shakespeare Summer Festival at Stratford will begin this year on August 3 and will last four weeks. F. R. Benson and his company will appear nightly, and the following plays will be performed each week: "Antony and Cleopatra," "A Midsummer Night's Dream," "Othello," "As You Like It," "Henry the Fifth," "The Merry Wives of Windsor," Sheridan's "The Rivals," and McCarthy's "If I Were King." In addition there will be classes in folk-song and folk-dance, a folk-drama conference, and lectures on various other subjects connected with the drama.

In 1895-6 Strindberg was in Paris, engaged in those queer alchemical studies which ended in his temporary madness. In 1899 he wrote "There Are Crimes and Crimes," a tragi-comedy in four acts which deals with a rather special portion of Parisian life. Over its author there still hung, one is tempted to believe, the poison of his bitter experience. For even to readers not acquainted with his career, the atmosphere of the play must seem tainted with unreasonableness. Characters are obsessed by superstition, and not one has the strength of positive conviction. That life is full of perilous moments when sin is easily begotten, is its tenuous theme; and the moral is enforced that the crimes of our imaginings are as real and almost as terrible as those committed by outward act. The work has just been issued by Scribner in an authorized English translation by Edwin Björkman. As is not uncommon with Strindberg's dramas, the plot of this play is a mere nothing. Maurice, a poor young writer, has grown cold towards the mother of his child, and the chance that a play of his, now to be presented, will be a success turns his head still further from this humble, devoted mistress. He becomes enamored of his friend Adolphe's flashy mistress, and she of him. Flushed by the first-night performance of his play, and by these newer feminine charms, he wishes that his child, a serious obstacle to his desires, were dead. The next day the child dies mysteriously, and Maurice is held as a poisoner. The charge is also trumped up that his play is a plagiarism. From momentary fame he plunges into degradation. Of course, it turns out that the child suffered a natural death, and that Maurice was no literary robber; his affliction was needed to disclose to him life's spiritual values. Jeanne, the first mistress, forgives, Henriette, the second, returns, tamed, to a respectable home, and Adolphe has all along remained charitable because of a sin in his own past. Strindberg has here stuck to his habitual manner of regarding the deep forces of existence as being considerably detached from man's will-power. Like a puppet, Maurice is put through a necessary development, in the process of which his reason and conscience, which should be his guides, become paralyzed or futile; nor is he projected against a sturdy background of human sanity. Every personage in the play understands and partly condones his wickedness, and the general impression is created that life holds terrible situations which one can survive only because sin is so general as to be mitigating. Under the circumstances the need of humble repentance, which is urged by the author, is not altogether convincing.

Music

Richard Strauss's "Rosenkavalier" had 228 performances in the opera houses of Germany during the past season, while "Elektra" had only forty-four. Next year, judging by the fate of all Strauss's operas, the "Rosenkavalier" will be given forty-four times, and its successor, now in preparation at Stuttgart, more than two hundred.

One of the busiest of musicians is Teresa Carreño, the eminent Venezuelan pianist. During the past season she gave eighty-seven concerts, the last at the Lower Rhine Music Festival at Aix-la-Chapelle. Her summer home is in the Bavarian Highlands. Mme. Carreño's name will be mentioned in the annals of music as that of one of the foremost pianists of her time; as the composer of the Venezuelan national hymn; and as the first teacher of America's greatest composer, Edward MacDowell, as well as the missionary who has done more than any one else to make his music famous in European countries.

The two weeks from July 12 to 23 will be devoted at Neuenburg to a grand music festival, at which there will be a competition of Swiss singing societies, aggregating 10,000 members. The choral novelty of the festival will be a "Lyric Ode" by Joseph Lauberer.

In arranging for a big celebration of the Wagner centenary next year, the Dresdeners point with pride to the fact that it was in their city that three of Wagner's operas, "Rienzi," "Flying Dutchman," and "Tannhäuser," had their first performances on any stage, and under Wagner's own direction. They tactfully ignore the fact that, had it not been for the preposterous stupidity of their ancestors, "Lohengrin" also would have had its first production in Dresden Wagner wrote it specially for the royal opera in that city, of which he was, moreover, the conductor. He had an ideal cast for it, too; but "Lohengrin" was not wanted. It remained in his desk for three years, till Liszt took pity on Wagner and brought it out at Weimar. The Philistines and Mediocrities had their way in Dresden at that time, as they often have had elsewhere. Mozart had to struggle against the same evil influences. So did Bizet and Weber. Being less robust than Wagner, they succumbed, at a pitifully early age.

The story of Gustav Mahler's three years in New York will doubtless form an interesting chapter in the elaborate biography of that great man which the Berlin publishers, Schuster and Loeffler, have just asked the eminent musical critic and author, Richard Specht, to prepare. Herr Specht, whose address is Vegagasse 11, XIX Vienna, Austria, has written a card to the German newspapers calling upon all those who have letters from Mahler or other documents, important or otherwise, to let him see them, promising to return them promptly. He will doubtless be pleased to get the fullest possible information from any who had acquaintance with Mahler in New York.

One of the parts which Ferrari-Fontana will sing at Milan next season is that of Lohengrin. The Scala has now issued a complete list of ten operas to be produced during the season. It includes "The Girl of the Golden West," "Carmen," "Salome," "Robert the Devil," "The Jewels of the Madonna," "The Inquisitive Women," "Rigoletto," "The Love of Three Kings" (a novelty by Montemezzi), and Rossini's "Moses in Egypt" and "Cinderella." The almost complete ignoring of Verdi during the centenary year is incomprehensible, for the Scala is Italy's leading opera house. To be sure, there will be plenty of Verdi cycles and festivals elsewhere, some of them under Government auspices.

Saint-Saëns was not impressed by the idea of performing "Aïda" at the Pyramids, as was done on the day of his departure from Egypt. "What a sacrilege!" he said on his return to Paris. "In the face of these eternal stones they stupidly materialized a work of the theatre! And that at the gravest time in the conflict of Italy with Turkey. If this fashion is approved 'The Flying Dutchman' will be played out at sea and 'Orpheus'—in hell!"

Two hundred different operas by 121 composers were sung last season in 665 houses in 435 German cities and towns, according to the "Deutsche Bühnen-Spielplan," which gives full details regarding these performances, as well as those of stage plays without music. Of these latter there were more than 2,000 performances by half that number of playwrights. Of operetta composers ninety-three were represented, and, as always, some of their works were given more frequently than any operas or plays without music. While Lehar's "Merry Widow" showed some decline, his "Count of Luxembourg" was sung no fewer than 1,794 times, though this was its second season. Last year it had 1,365 performances. Leo Fall held his own, and so did, of course, Johann Strauss, whose ever-fresh "Fledermaus" was given 550 times.

It is not unusual at present for the box office of the Paris Opéra-Comique to take in 10,000 or 11,000 francs on one evening. These sums, not very large from the American point of view, seem fabulous when compared with what used to be the receipts half a century ago. Gounod's "Faust," for example, was sung at the same house 223 times in the weeks from March 19, 1859, to December 31 of the same year. Of these performances 6 brought in less than 500 francs apiece, 33 more fell short of 1,000 francs, 104 had 1,000 to 3,000-franc houses, 43 ranged from 3,000 to 4,000, 27 from 4,000 to 5,000, while only 10 exceeded 5,000 francs each. It must be borne in mind that while the receipts have increased, the expenses have also been multiplied.

Berlin was afflicted with 1,214 concerts last season. Vienna managed to get along with 431, Munich with 347, Dresden with 275, Hamburg with 271, Leipzig with 269, Breslau with 185, Stuttgart with 129, Karlsruhe with 87, and Prague with 83. Frankfurters had the opportunity to hear 207 concerts, no fewer than 46 of which were devoted to chamber music, which thus stood at the head of the list, whereas, in the other cities named, vocal and piano recitals predominated.

Art

Causeries on English Pewter. By Antonio de Navarro. New York: Charles Scribner's Sons. $5 net.

The author, better known as the husband of Mary Anderson, to whom these essays are dedicated, avows that his main object "is to dissipate the popular belief that the pewterers were entirely bourgeois," and "the old belief that pewter was synonymous with vulgar art." As the silversmith and the pewterer were so closely allied, it is true, of certain foreign makers especially, that the former were adept in working up pewter before they essayed the same thing in silver: François Briot, for instance, as related in the pages of Jacquemart.

The book is exceedingly chatty, and devoid of any pretence of giving technical data. There are interesting chapters on old pewter; pewter church plate, the evolution of the tankard regarding which "it may be accepted that the flatter the lid, the earlier the piece"; the wooden trencher and its use, from the primitive trenchers to the ones of pewter ribbed and moulded, and the development of the latter to those with gadrooned and waved borders, which held sway in the eighteenth century. Round trenchers of wood were sometimes called roundels, but Mr. de Navarro writes of an inventory of the goods of the Countess-Dowager Rivers, dated 1644, which was found among some manuscripts of the Earl of Verulam, and which reads as follows: "In the pantrie . . . round trenchers iii dozen, square trenchers 2 dozen, a case with thin trenchers to cover glass." This simply knocks on the head the article on "Old English Fruit Trenchers," by Prof. A. H. Church, in his essay in "Some Minor Arts as Practiced in England." There is a chapter devoted to pewter forks, very few of which have survived, and only those of a late date, the soft metal being cast away or used for solder. Then come spoons, of which vast numbers are constantly found, and which are possibly the earliest specimens of silver domestic plate. Regarding salts we are told that the "Great Salt" was left on the table during the entire meal, and that honored guests were seated above, and those of minor degree, below the salt, though Mr. de Navarro does not believe in this distinction. We read of church flagons, and of chalices next, then reach the chapter of retrospect, which is a summary of the history of the Pewterers' Company, by Charles Welch (1902), whom the author quotes as stating that "all the well-to-do members of the trade kept a stock of 'feast vessels,' which they lent on hire to noblemen and other wealthy persons, and to public bodies for use at great banquets." The final chapters are on the entourage and custody of pewter.

Some of these essays have appeared in *Country Life*. The book contains seventy-two plates and a fair index.

"Charcoals of New and Old New York" is the title of F. Hopkinson Smith's forthcoming book (Doubleday, Page & Co.).

Among the early autumn publications of McBride, Nast & Co. are: "Reclaiming the Old House," by Charles E. Hooper; "Furniture Designs—Chippendale, Hepplewhite, and Sheraton," with an introduction by Arthur Hayden; "Dyes and Dyeing," by Charles E. Pellew, and "A Book of Distinctive Interiors."

"Appreciation of Art," by Blanche G. Loveridge, Granville, O., is in the vein of popular lectures, being a crude and undigested mass of information, frequently misunderstood, and conveyed in the loosest of English. Occasional misprints, while adding variety, seem thoroughly in keeping with the whole effect.

Half a century ago several gentlewomen, the Misses Burne-Jones, Burden, Morris, and others, used to meet at William Morris's studio in Red Lion Square, to embroider hangings in silk and cloth from the master craftsman's designs. Morris himself had convictions about embroidery, which he held was "not worth doing unless it is very copious or rich or very delicate or both." He regretted the degradation of the once noble art into mere fancy work with its monstrous spectacles of Landseer's dogs and Scott's heroines tastelessly copied in the Berlin wool work that exacts the very minimum of skill and thought. While not all embroideries with which Morris and his assistants tried to stir public interest were strikingly beautiful, they at least respected right design and sound materials. Protests, furthermore, against debasements of the art led to a gradual improvement, which is still going on, in ecclesiastical and secular embroidery. The many embroiderers whose inspiration has come from the handicraft revival will find M. Jourdain's "The History of English Secular Embroidery" (Dutton) extremely useful. English embroidery in the Tudor and Stuart periods realized Morris's prescription of sumptuous design and color. The early eighteenth century showed delightfully delicate things. The illustrations of embroideries of these centuries are from public and private collections: even without Mr. Jourdain's scholarly text they would be admirable models for the needle worker. The narrative contains much curious information about famous embroideries, particularly fascinating among which, on artistic and historical grounds, are the rich velvet panels and other embroideries worked by or under the direction of Elizabeth, Countess of Shrewsbury. History knows this lady as wife of the custodian of Mary Queen of Scots, and as the object of an epigram made by a cynic when her temper was bewailed by her spouse: "There is onlie one shrewe in the world and every man has her." An expression of the countess's forceful character survives in vast embroideries, among the finest artistic monuments of Elizabeth's time, at Hardwick Hall, now belonging to the Duke of Devonshire. A supplementary chapter devoted to samplers contains data that help to orient the American colonial sampler.

Robert Wiedemann Barrett Browning, only son of Robert and Elizabeth Barrett Browning, died on Monday at Asolo, Italy, where he had established an industrial school as a memorial to his mother. Barrett Browning, as he was known, was born in 1849. He lived the greater part of his life in Italy. When Elizabeth Browning died, the Florentines asked that the boy be educated in Italy. This the father declined to promise. Barrett adopted art as a profession, and studied at Antwerp. In 1878 his Worker in Brass, exhibited at the Royal Academy, attracted considerable attention. After his student days, he returned to Italy and lived with his father in the Palazzo Rezzonico, Venice, where, on December 12, 1889, Robert Browning died on the very day that he had succeeded in persuading the local authorities to consent to his purchase of a piece of ground at Asolo. It was on this ground that Robert Browning had hoped to build his "Pippa's Tower." Here the son Barrett erected his home. Browning's most notable literary venture was the publication in 1899 of "The Love Letters of Robert and Elizabeth Browning."

Finance

POLITICS IN WALL STREET.

Until half-past two o'clock on Tuesday of last week the stock market was moderately strong, though very dull. Then the page tickers announced that Wilson's nomination, by acclamation, was conceded. Steel common, which had been one of the most active stocks, declined from 72 to 71¼. Brooklyn Rapid Transit, Amalgamated Copper, Union Pacific, Interborough-Metropolitan preferred, Reading, and two or three other stocks in which traders had been dealing, ran off ½ to 1½ per cent. each. Sales were in small volume. The weakness continued for a quarter of an hour, and then prices all recovered. Steel common closed at 71½, against a closing the day before of 71⅜. It was a very perfunctory response to an interesting political event.

On the floor of the Stock Exchange a trader who rushed in on the news of Wilson's nomination to undo certain bargains, remarked afterward: "I'm for Wilson, though his nomination did cost me $87.50. That's what I think of him." The following morning, Wednesday, the news from Baltimore being complete, the stock market opened at an advance of ½ to 1 per cent., declined straightway 1 to 2½ points, recovered half-way, and closed dull. It has since been irregular with periods of heavy selling.

These facts are set down in some detail, as they mark, perhaps, the extreme of a stock market's indifference to politics. There had been a spring rise in stocks, which culminated at the end of April, because, as many thought, it would be inexpedient to carry a bull movement any further, with the political situation looming up in so formidable a manner. May and June were months of political excitement, and, yet, the average price of, say, twenty railway stocks and twelve industrials, which are commonly used for statistical purposes, never varied so much as 4 points—through the tumultuous Taft-Roosevelt campaign, through the Chicago Convention, through the threat of a third party, and through the Democratic Convention at Baltimore, despite the fact that at Baltimore Wall Street and its people were denounced as perhaps never before in similar circumstances.

It is true that speculative opinion, or, more correctly, the comment passing for such, during May and June, ran back and forth between extremes of alarm and complacency, but of actual speculation in securities there was so little that brokers complained of the difficulty of making ends meet. The volume of speculative contracts outstanding in Wall Street during this period was smaller than perhaps at any time in the previous three years. Brokers were carrying very few stocks. That being the case, the absence of violent fluctuations in stocks, as the advantage wavered between contending political forces, is easily understood. There was no margin account for professional speculators to prey upon.

The more significant fact is that the real holders of stocks were no more inclined to part with them, on any interpretation of the political situation, than impulsively to increase their holdings. The process of merchandising stocks and investment securities to the ultimate investor proceeded in a leisurely manner. New flotations appeared one after another, were underwitten by syndicates and distributed to investors, all as if nothing unusual were taking place. The indifference of the stock market to political happenings, therefore, has been the indifference of the real owners of securities and capital. Speculators without the slightest bias of their own would have been only too willing to go either one way or the other—that is, to follow any real buying or selling.

And the explanation of the indifference of the holders of securities and the owners of capital is not far to seek. Though it has been widely advertised that Wall Street was for this candidate or that, Wall Street has, in reality, had no fixed political faith. In 1896, and again in 1900, Wall Street was solid on the sound-money issue. A Silver Democrat could not be tolerated there. But to-day in the same Wall Street there is every shade of political belief. Before the Chicago Convention many Roosevelt men could be found in banks and on the Stock Exchange; they are fewer since Mr. Taft's nomination. If Wall Street had been able to name the ticket at Baltimore it might have put Harmon first, but the vote would not have been unanimous; there would have been many Underwood, Clark, and Wilson votes, and a deadlock might have resulted. There would have been even some Bryan votes, though Wall Street's opposition to Bryan is a habit.

Further, it is not uncommon nowadays to find the heart of a Socialist behind the mind of a banker—the principles of a radical Progressive underlying a preference for the present for conservative politics. Several weeks ago the head of a large banking institution took a poll of its employees. A majority were "Progressives." It was very different when in 1896 Wall Street believed that gold had to triumph if property were to be preserved. The day after Wilson was nominated, men who had been for another candidate at Baltimore said of the nominee: "Well, what's the difference?"

BOOKS OF THE WEEK.

Just Published

THE LIFE OF NIETZSCHE

By Mrs. FOERSTER-NIETZSCHE
VOLUME I.—THE YOUNG NIETZSCHE
Volume II.—*Preparing.*

This life is written by Nietzsche's sister, whose life-long devotion to her brother, as intellectual companion and as nurse, is well known. Now for the first time published, simultaneously in English and German, it will supersede all other biographies of the philosopher, by its completeness and its fresh material. It draws upon all available sources, including hitherto unknown documents possessed by the biographer, and upon her own wonderful memory. In it the author vividly presents her brother's personality and environments in a narrative of engrossing interest.

"I know of no book on the subject which combines so many good qualities. It is written in simple language with the minimum use of such terms as might puzzle the novice, yet the wide range of subjects covered, and the accuracy of their presentation, ought to make it very valuable to many students who have long passed the elementary stage. I shall recommend it to those who inquire of me for the best book for the amateur."—**Dr. Henry Norris Russell, F.R.A.S., Director of the Observatory, Princeton University.**

JOHN BROWN: A BIOGRAPHY FIFTY YEARS AFTER

By OSWALD GARRISON VILLARD

Some Tributes to this Remarkable Historical Work

Philadelphia PUBLIC LEDGER. "A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative, often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesmen Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

Portland OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the TOPEKA CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The NORTH CAROLINA REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

Educational

The Western Theological Seminary

N. S., Pittsburgh, Pa.

Founded by the General Assembly, 1825.

A complete modern theological curriculum, with elective courses leading to the degree of B.D. Graduate courses of the University of Pittsburgh, leading to degrees of A. M. and Ph.D., are open to properly qualified students of the Seminary. Exceptional library facilities—34,000 volumes. A new dormitory, equipped with latest modern improvements, including dining-room, gymnasium and social hall, is now ready for occupancy. Next term opens Sept. 17, 1912. For information apply to Pres. James A. Kelso, Ph.D., D.D.

*THE URSULINE ACADEMY, A HOME-*School for Girls, delightfully and healthfully situated on the outskirts of Middletown, New York, also accepts young ladies and children during the summer months, and carefully provides for their protection and comfort. Students, who wish to cancel College or High School conditions, will find Summer Courses of Study provided. Terms on application. THE URSULINE ACADEMY, Middletown, New York.

Pennsylvania, Bryn Mawr.

The Misses Kirk's College Preparatory School

Prepares for Bryn Mawr and other colleges. Certificate privileges. Number of pupils limited. Special schedule arranged for each. Percentage of pupils who have entered Bryn Mawr College unusually large. Gymnastics, outdoor sports. 14th year opens Oct. 3, 1912.

New Jersey, Morristown.

MORRISTOWN SCHOOL

COLLEGE PREPARATORY BOARDING SCHOOL FOR BOYS. Small classes. Individual attention. Partial self government. Large new gymnasium. ALL outdoor sports under expert supervision. Especially healthful location 30 miles from New York. Lower School for Boys of 10 to 14.

BETHLEHEM PREPARATORY SCHOOL, Bethlehem, Pa. Prepares for leading colleges. Catalogue, H. N. FOERING, B.S., Principal.

STANDARD ENGLISH CLASSICS SERIES

Palgrave's Golden Treasury of Songs and Lyrics

By **William Peterfield Trent**, Professor of English, and **John Erskine**, Associate Professor of English, Columbia University. **50 cents**

A particularly satisfactory edition for the young student and general reader. It supplies all the literary facts, and indicates all the literary points of view necessary to the enjoyment of the great anthology. The original prefaces and notes are reproduced, and where necessary a brief elucidation is added. Biographical accounts of each writer and of Palgrave have been furnished, and an extended introduction discusses the lyric in general, with particular attention to the lyric as found in this collection.

The publication of Palgrave's Golden Treasury in the Standard English Classics Series indicates an excellent edition at the lowest cost.

The Nation

NEW YORK, THURSDAY, JULY 18, 1912.

The Week

Senators whose fervent patriotism refuses to let a little thing like a treaty obligation stand in the way of our doing what we like with our Panama Canal, may be brought to soberer thoughts by the consideration that preferential tolls might not pay. It is Senator Root's contention that if this Government should confer toll exemption on American ships, it might, after years, be cited by foreign shipowners before the Hague Tribunal and assessed in enormous damages. It is quite possible to argue, of course, that after putting one treaty into the waste-basket, it would be perfectly easy to refuse to do business with The Hague on any subsequent matter; but no Senator has yet had the hardihood to put the case in these words. What is quite discernible at Washington is a growing disposition to give the question of tolls the serious consideration it demands. With men like Root and Burton against the violation of the Hay-Pauncefote treaty, there will be less disposition on the part of the Western Senators to rush things through with a "Hurrah, boys, what do we care for anybody!" To enact such legislation for the Canal Zone as the immediate situation demands, while leaving the question of tolls for ripe consideration, would seem to be a sensible course of action in the present session of Congress.

Old-line politicians may be confounded but they are no longer surprised at Gov. Wilson's innovations in the conduct of political affairs. They must gasp, however, over the news from Sea Girt that the Democratic candidate will run his campaign for election to the Presidency without the aid of the National Committee. This is, indeed, an experiment in national politics, and decidedly a novelty. Most of Mr. Wilson's essays in opening new paths to a desired goal have been based upon sound knowledge and observation and have attained the end sought. His present plan contemplates what is, roughly speaking, a commission form of government for the national campaign. Mr. William F. McCombs, who directed so ably the Governor's fortunes prior to the nomination at Baltimore, nominally will be the Chairman of the National Committee, but his responsibilities will be shared by an advisory commission made up of such men as Senators O'Gorman and Gore, Representatives Burleson, A. Mitchell Palmer, and Henry, and Democratic Committeemen and others of the type of William G. McAdoo, Davies of Wisconsin, Hudspeth of New Jersey, and Daniels of North Carolina. Other men who represent the same element in the Democratic party may be added. A majority vote of the board will decide all questions arising during the campaign—except when Gov. Wilson has other ideas. The candidate will be, as it is put, "in close touch" with the management.

The question of a successor to Lorimer is interesting in both its legal and its political aspects. The Constitution provides that "if vacancies happen, by resignation or otherwise, during the recess of the Legislature of any State, the Executive thereof may make temporary appointments until the next meeting of the Legislature, which shall then fill such vacancies." "Resignation or otherwise" certainly covers expulsion, but the Senate has simply voted that Lorimer was never elected a Senator. No vacancy, therefore, has happened during the recess of the Illinois Legislature. The seat which Lorimer has been tentatively occupying became vacant upon the expiration of Senator Hopkins's term, March 4, 1909, at which time the Illinois Legislature was vainly balloting for a successor. Quay was refused a seat in the Senate after the Governor of Pennsylvania had appointed him, following the adjournment of the Legislature without an election. Those "old Senators" who are of the opinion that Gov. Deneen cannot appoint a colleague to Senator Cullom apparently have the weight of precedent to sustain them. Quay, it is true, held on to his supporters at Harrisburg, and in the end returned to Washington with an unquestionable title. Lorimer may be able to obtain reelection to the House from a subservient district, but it would be political suicide for Illinois legislators to send him back to the Senate, as it has been already for many of those who voted for him three years ago.

The vote by which the House on Thursday of last week sanctioned impeachment proceedings against Judge Archbald, stood 222 to 1. The solitary Congressman voted as he did because Judge Archbald is his constituent. Here is another manifestation of that peculiarly local interpretation of the moral law which goes among us under the foolish name of loyalty. When a convicted practitioner of high finance leaves jail and revisits his native town, the populace turns out with a brass band and engrossed resolutions of confidence, and the school children are brought forth in their holiday clothes to do honor to the man who gives the lie to all their copy-books and catechisms. There is loyalty and loyalty. A man's neighbors should be the last to turn against him; but it is sheer idiocy, or worse, to close one's eyes to evidence and the moral law just because the man lives around the corner or has given a library building to his native town. The Pennsylvania Congressman who voted for Archbald probably thinks he did the most natural thing in the world in standing by his constituent, whereas he should have been among the first to demand that his constituency and his State be cleansed from the disgrace of an unjust judge upon the bench. Only the prophet has a hard time in his own valley. The discredited financier and the crooked politician are always sure to be "vindicated" by their neighbors.

The Colonel's disapproval has fallen on Boss Flinn's scheme for an identical set of electors on the Taft and Roosevelt tickets in Pennsylvania, the total electoral vote of the State to be cast for the ticket receiving the larger number of votes at the polls. Several reasons occur why Oyster Bay should dislike the plan. An identical set of electors would give the election the character of a second primary between Roosevelt and Taft as members of the same party. In view of the Colonel's passionate desire for Democratic votes, that would be a dangerous experiment to make. It is well enough to be a Republican in a State where, by so doing, Mr. Taft can be forced out of the party and compelled to run on a ticket nominated by petition. That means punishing the devil and not compromising with him. In the second place, there is no telling what may happen on election day. Closer to the heart of Pennsylvania Republicans than either Roosevelt or Taft, is Protection. Woodrow Wilson running on a radical tariff-reduction platform is a peril which will drive the protectionists to consider which man, Taft or Roosevelt, has the better chance against the Democrats. The progress of the third-party movement throughout the country does not augur a Roosevelt triumph. Pennsylvania Republicans may, at the last moment, decide that the chances are, after all, better with Taft.

La Follette's latest attack upon Roosevelt is the most smashing he has yet made. Coming from any source it would be damaging, so formidable are the facts it arrays, and coming from the pioneer Progressive, who held the true faith when Roosevelt scorned it, it is peculiarly deadly. The Wisconsin Senator retorts upon the Colonel his charge of "fraud" at Chicago with terrible effect, showing that no one was more ready and anxious than he was to "steal" delegates. But perhaps the most destructive part of La Follette's arraignment is that in which he shows that Mr. Roosevelt deliberately sacrificed the Progressive cause to his personal ambition. Comparing his selfish attitude at Chicago with Bryan's course at Baltimore, to the infinite moral disadvantage of the Colonel, is the last stroke of the Senator from Wisconsin, and one that Oyster Bay must regard as wickedly insulting. The question is how long will the Colonel endure these repeated assaults of La Follette without replying? Has he suddenly abandoned his proud boast that nobody can hit him without getting a ruder buffet in return? The fact that Mr. Roosevelt has deeply wronged La Follette surely will not restrain him from following up betrayal with abuse.

When the Governor of a State incites to lynch murder and mob rule, as Blease of South Carolina has done repeatedly, it must be out of the conviction that the supremacy of the white race and the maintenance of our civilization demand the suppression of the lawless and vicious black man. If at times Blease's temper has given suggestion of insanity, and his language has run strong with the vocabulary of the gutter, much must be forgiven the man who stood for the moral integrity of our institutions. To bring charges of graft and official misconduct against the Galahad of South Carolina, to accuse him of trading in pardons and exacting tribute from illegal rum shops, as several witnesses have done before an investigating committee of the South Carolina Legislature, is to put a terrible strain on a man's self-control. Certainly, the self-appointed champion of South Carolina's manhood is not the one to remain quiet. So he proceeds to vindicate the superiority of a civilization of which he is the fair flower in such terms:

> His statements at Augusta are false, and the cowardly little puppy knows it. . . . I defied the Supreme Court, and Judge Jones got mad and ran down off the bench and called to his wife to bring him his biggest razor, and he shaved the feathers off his legs and jumped into the ring.

It must be a very mistaken friend of the negro, indeed, who would want to see the colored people of the South raise themselves to the moral and intellectual level of a Blease.

It would be just like the enemies of the people now ensconced in the United States Senate to pass the bill for publicity of expenditures in connection with nominating campaigns for the office of President and Vice-President. The bill was passed by the lower house ten weeks ago, and has since been held up in the Senate Judiciary Committee. If the bill should become law, say, on August 4, it would not affect the Chicago or the Baltimore Convention already held, but it would apply to the convention that is to assemble at Chicago on August 5. Thus one of Mr. La Follette's fondest hopes would be realized, and the exact measure of George W. Perkins's love for the common people would be ascertained. La Follette has here developed a pretty little moral issue of his own. He supplements the Colonel's "Thou shalt not steal" with the commandment, "Thou shalt not take money" from the Harvester Trust, or from the Steel Trust, or from William Flinn, or from Timothy Woodruff.

Two words that regularly come forward in the newspaper columns with every renewal of the Olympic Games are "olympiad," used in a wrong sense, and "decadence." Time may teach the world the correct use of the term "olympiad," but we cannot foresee an Olympic celebration that will not call forth solemn editorial discussion of the decadence of every nation that has not carried off so many firsts in the Stadium. England, of course, is the chief sufferer from that special form of self-analysis. In England, they take decadence with their breakfast, lunch, and dinner. Has Britain's manhood lost its taste and capacity for virile sports? What has really happened is that Britain's monopoly in certain sports has been broken. The other nations have taken up her games and learned how to win at them. We did it first in this country, and with our more extensive resources, soon learned to beat the English in their own field. The Europeans are now taking up the games, with the result that our victory at Stockholm has been by no means so emphatic as our victories in the earlier Olympics. But that is not because Britain has been decaying, or because we are in danger of decay.

After every golf tournament, such as took place at Apawamis last week, in which both amateurs and professionals compete, philosophers of the game find themselves asking what are the real reasons for the superiority of the professionals. Rough and ready answers are unconvincing. It will not do to say that professionals are better players simply because they are paid to be. Nor can it be maintained that they outplay amateurs because they are more seasoned, or keep more steadily in practice, or engage oftener in competition. There are amateurs and amateurs. Some of them are as veteran at golf, and are as often on the links as any professional, and surely take part in more tournaments. There are amateurs who drive as long a ball as professionals; others who play their iron shots as far and straight; others who are the equal of any professional on the putting greens. Why, then, do the best of them never quite rank up to the most skilful professionals? It is a question which has been earnestly debated in England; and the answer arrived at there would doubtless hold for this country. It is that, on the whole, the playing of the professional golfer is more even than his amateur brother. All clubs look alike to him. In the hardest stroke and the most delicate touch he is equally at home. Bad lies do not discomfit him. Out of the long grass or from the sand, he will play with the utmost confidence and sureness. Moreover, the top-notch professional is deadly straight in his shots. It is said that a map of the course of the ball of Ray, who won the open championship, would show that it went over the Muirfield links almost exactly as the crow flies. Long hitting, straight shooting, accurate approaching, deadly putting, nerves that no misfortune can unsettle—these are the high qualifications of the golfer, and the professional excels by uniting them better than the amateur.

Monday was the date for the English workingman's insurance act to go into effect. No law has been so bitterly attacked and even execrated, before going into operation, though even its fiercest antagonists have been forced to approve the "principle" of the legislation. The House of Lords accepted it without serious demur. But details of the bill have been assailed as grossly unfair and onerous, and there has been a vast deal of wild talk about meeting it with passive resistance. This was foolishly encouraged by the Unionist leaders, who thought in that way to embarrass the Government and possibly to bring about a postponement of the operative date of the bill. "You will never be able to carry out this act," has been a frequent taunt, in the House of Commons as well as in the Tory press. But as the day drew near for the law to be enforced, the Conservatives became alarmed at the spirit of lawlessness which they themselves had done so much to provoke, and began to call upon their followers not to attempt to withstand an act of Parliament. The case was well put by the veteran Unionist, Prof. A. V. Dicey of Oxford, who wrote to the London *Times:*

> Allow me to join as briefly and emphatically as I can in Mr. Lyttelton's protest against any attempt to resist by any illegal means the operation of the National Insurance act. I hold with him that the act is in many of its provisions almost intolerable, and may prove unworkable. I am also convinced that occasions may arise—though they are very rare—where resistance to the law of the land may become a duty. No such occasion has as yet arisen. Employers and servants will injure a good cause if, instead of insisting on the amendment of the act, they use rash language which implies an intention to break the law. We have had far too much lately of both passive and active resistance to the just authority of the state, and this resistance has in some instances met with the tolerance, if not with the encouragement, of men in power.

London has been having one manifestation of Imperialism which is both new and striking. It is a Congress of all the Universities of the British Empire. The desirability of summoning such a gathering was suggested two years ago by the Principal of the University of London, and it was fittingly at that institution that Lord Rosebery, as Chancellor, bade the delegates welcome. More than fifty universities were represented. The great expansion of higher education which this means was dwelt upon by Lord Rosebery. He said that if such a congress had been held in 1830, and had been purely English, "it would have been an interesting, private, and confidential meeting of two representatives." If it had been British, Scotland would have added four more. If it had been Imperial, it would have taken in merely Dublin and McGill. But to-day fifty-three men come from all parts of the Empire. Even in England proper, no less than five universities have been founded within the past twelve years; and with them Sydney and Calcutta, Saskatchewan and the Cape, are joining hands. Lord Rosebery put the weighty significance of the marvellous development in the following question: "May we not believe that had Daniel Webster lived to deliver his famous eulogy on the British Empire—in a small space the most eloquent that has ever been delivered, and that by an American statesman—would he not have been able to add to his famous figure of the universal drumbeat of the Empire, that it was now belted round with Universities?"

The Italian Government is not altogether pleased with the optimism of the Italian press concerning the progress of the war. One of the best known of the war correspondents, Signor Cipolla, has been outlining in his paper, the *Stampa*, a plan for forcing the Dardanelles and attacking Constantinople by means of airships now being built in Milan and elsewhere. A telegram by a correspondent of the *Berliner Tageblatt*, commenting on this fantastic plan, has been confiscated by the Roman censor on the ground that "it reproduces the opinions of Arnaldo Cipolla as to the manner in which Italy can most rapidly finish the war with Turkey." In its own way, however, the Government continues to furnish the papers with comments on the war. Thus there appears in the *Popolo Romano* an inspired article on Turkish and Italian finances, which presents the latter in a very rosy light. While Turkey is said to be on the verge of bankruptcy, the economic conditions of Italy are described as being wonderfully sound. The Italian budget at the close of June is said to show a surplus of 60,000,000 lire, and the balance of trade an increase, however slight, in exports as against an insignificant decrease in imports. In any case, the article states, an appeal to Italian capital would show that the country is sound not only as to its military organization, but that "the national spirit and the general administrative capacity are rising to the occasion." This is at least good Governmental whistling to keep up courage.

The failure of the Chinese loan negotiations after so much fuss and worry is not to be ascribed entirely to the action of the Chinese Government. It is true that the authorities at Peking were compelled to take cognizance of the objection raised by the patriotic element in the provinces against the incurring of any further foreign liens on China's right to manage her own affairs. It is a continuance of the old anti-foreign spirit which took form, half a dozen years ago, against foreign railway enterprise in the Empire. But while the leaders of provincial opinion have succeeded in blocking the building of railways by European capital, they have not been eminently successful in building up railways for China through native enterprise. Nevertheless, the central Government might have known how to conciliate local sentiment if, on the side of the creditor Powers, it had not been made pretty plain that Japan and Russia were not in hearty coöperation with their partners. Under the circumstances, the Government has apparently decided that a waiting game offered the smaller risk.

KEEPING OUR HEADS.

In a time of political confusion like the present, warning and despondent voices always make themselves heard. They do to-day. A Senator of conceded ability gives a dinner to colleagues in Washington and solemnly addresses them on the coming of a French Revolution in this country. More than one foreign observer thinks he sees the United States approaching the crack of doom. Many Americans, who do not go so far as that, and who certainly cannot be called hysterical alarmists, yet confess to a feeling that their country is, as it were, getting away from them. They do not understand it as they once thought they did. Forces have been let loose which they admit that they cannot measure. As men exceedingly puzzled, if not frightened, they point to the manifest and manifold signs of political and social unrest, and to the exacerbations of passion among great multitudes, and ask whereunto all this tends. Old American optimism is abated, just as the old boastfulness is less clamorous. The least observant and thoughtful perceive that we are in a period of break-up, and are not a little anxious as to what the end may be.

This attitude is not to be condemned out of hand. There is no use in maintaining that it is fine weather when everybody can see that it is raining cats and dogs. It is a movement as wide as the world, in which the United States is sharing, and we have our duties in connection with it. But the duty of keeping our heads is one of the first of these. We are bound to make sure of our facts before allowing the facts to fill us with gloom. Apprehension may be justified, but there is no class of citizens more futile than the "too-quick despairers." On this point, our cheerful and sagacious philosopher, Mr. Dooley, takes up the parable with the ordinary man's common sense, and says:

> It ain't a bad Government, mind ye. I ain't got money enough to despair iv th' Republic ivry time Bill Bryan makes a speech. I've niver despaired iv th' Republic. Th' Republic may despair iv me, but not me iv it. Whin I think iv th' things I have done to th' Republic with me vote, an' th' things th' Republic has done f'r me, I can't honestly say I've got anny right to go ar-round despairing iv it. Annyhow, it won't do anny good.

To turn from one counsellor in a troubled time to another, we may refer to the address which John Morley recently made to the students of Manchester University. It was a cool and philosophic survey of the manifestations of democracy in our own day. It dealt chiefly with the course of things political in England. If we have our troubles, most Englishmen would say that ours are but flea-bites compared with theirs. The impending "last days of the Roman Republic" and the speedy coming of a French Revolution, September massacres and all, are much more a staple of British political prediction than with us. But Lord Morley, bringing old experience and the widest outlook upon the modern world to his task, while minimizing no evil force and pooh-poohing no real danger, made a notable plea for calmness and patience. He is for a careful verifying of our premises. "Before losing heart, let us be sure that our political arithmetic and algebra are right." It is easy to ignore or mistake a crisis, but it is still easier to paint it blacker than it really is. Lord Morley's chief advice was to be cautious. We are to apply the scientific method even to whirling political excitements: not to lift hands in amaze or horror at the ardent spirits of a stirring age, but to endeavor to find out exactly what they signify; not to be too severe on illusions which, however generous, are illusions still, but to study and profit by them; and, in general, to see the situation steadily, and see it whole, as men who are not without sympathies and even strong preferences, yet who, as students of what is going on, insist upon making a cool induction.

It is reassuring to note that Americans are, as a whole, taking a much saner view of their affairs than they seemed to be doing a month ago. Then there was a pretty common feeling that we might be on the edge of a smash. Politics seemed to be wholly out of hand and running wild. But little by little the people have come to see that the disasters befalling a political party do not necessarily affect the peace and safety of the nation. They have begun to take more calmly the excited outcries of an angry and baffled politician, to the effect that the country is facing a more perilous crisis than any which it has confronted since the Civil War. The crisis exists, to be sure, but we can see that it is largely one in this man's political fortunes. There is an undoubted danger, but it is mainly that he will be thwarted and discredited. The nation has had time to look around, and it is visibly growing more composed in its mind. If one party is divided and distracted, it sees that the other is united and marching forward under an inspiring leadership. Government by party will not break down simply because one party has temporarily broken down. And our ancient humor is also coming to the rescue. The country simply cannot take the Colonel so seriously as he takes himself. Ability to laugh at a man who makes himself ridiculous is one sign of recovered coolness, and it is now to be seen on every hand. This will go on. The country is not so mad as some of those who seem to have been striving to infect it with their own mania, and is daily giving new evidence that it proposes to keep its head and go about its business.

THE BRITISH PROTEST.

News that the British Embassy had sent a note to our State Department, asking that the Panama bill be not passed until a formal representation, now on its way, from the British Government could be given attention, greatly stirred the pure minds of Senators in Washington. Here was an offensive meddling by foreigners in a matter of strictly domestic legislation. If Congress desires to make the Panama Canal free to American ships, what concern is that of England's? Cannot we do what we will with our own? If we choose to enact a law that no ship owned by a railway shall navigate the Canal, that is our own affair. If the Canadian Pacific Railroad is hurt by such a provision, that is its misfortune, not our fault. And if the English think that Congress will wait to hear from them before passing such measures as it pleases, they will speedily find that they are mightily mistaken. The bill might not have gone through on its merits, but, by Jingo, if any foreign nation requests us not to hurry it up, we'll pass it in a jiffy just to show that we cannot be bluffed. Thus speaks Buncombe County at Washington.

We may be sure, however, that the Secretary of State and the President and serious-minded Congressmen will not be inclined thus lightly to toss the matter off. A weighty affair of state is involved. Our national good faith in living up to the obligations of a treaty is called in question. It will never do to say that the Panama Canal is our own property and that we can do what we like with it. It is ours, indeed, but it is impressed with a lien, in the shape of a solemn national pledge, which we gave at the time of acquiring the right to an exclusive control of its operation. In the way of that, the Clayton-Bulwer treaty stood as an obstacle. Specifically to "remove any objection which may arise" out of that treaty to "the construction of such canal under the auspices of the Government of the United States," the Hay-Pauncefote treaty was negotiated in 1901, ratified and proclaimed in 1902. It is now printed by our Government in the volume of "treaties in force." Another recognition of its binding nature was made in our treaty with the bogus Republic of Panama, of which Article XVIII provided that the Canal should be opened and operated "in conformity with all the stipulations" of the treaty with Great Britain. Now, those "stipulations" were made for a purpose. England got something for waiving her rights under the Clayton-Bulwer treaty. What did she get? She got a promise of neutralization. She got also this specific pledge:

> The canal shall be free and open to the vessels of commerce and war of all nations observing these Rules, on terms of entire equality, so that there shall be no discrimination against any nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise.

That pledge, in both its spirit and its letter, the pending Panama bill proposes coolly to break. It would do it by allowing American vessels to pass through the Canal free of tolls, while charging them upon all other ships. This is the Congressional idea of "entire equality" and "no discrimination"! The glaring bad faith of this has been repeatedly pointed out, both in and out of Congress. But it has been replied, triumphantly: "There cannot be any force in your argument, otherwise England would have objected. Our treaty is with her, and if, as you say, the Panama bill is in violation of it, why haven't we had a British protest? Are you more careful of English rights than the English Government is?" Of course, the law and morals of the case did not depend upon any action or non-action by England. There stood the plain words of the treaty. On the other hand, there stood the bill, absolutely irreconcilable with them. That was enough for any man jealous for the honor of his nation. But if any were so insensitive on that subject as to need a pricking from the outside, the announced British protest comes to furnish it. Those who thought it so clever to sneak a disguised ship-subsidy into the Panama bill, are now awake to the fact that they are surely bringing on an international complication. They are forcing a reference of the dispute to an impartial tribunal which would be certain to decide as emphatically against this country as the Paris Arbitration Court did against our exclusive claims in Bering Sea.

The terms of the protest which England is to make are as yet made known only in outline. No Government could tamely sit by and see the rights of its subjects impaired by the action of another country, especially when those rights are guaranteed by special treaty, without making a vigorous objection. It is said that England ought to wait till the bill is actually passed; that her protest is of no force against a measure not yet made law. But it is clear that, if she were carefully preparing a case to submit to The Hague, she would make her position stronger by showing that she had taken the earliest occasion to remind the Washington Government of her intention to assert her rights under the treaty. We can only regard the step now taken as timely and wholesome. The evasion proposed by the bill has been passed over too nonchalantly. Now we know that the nation's honor and the nation's duty are touched. We see the danger of trying to drive a subsidy coach-and-four through a precisely worded treaty. If such a thing could be done, American faith would get as bad a name as Punic. No boasting and no protestations of good motives would avail, for we should have placed this country in a situation like that described by John Quincy Adams in his "Diary": "Any effort on our part to reason the world out of a belief that we are ambitious will have no other effect than to convince them that we add to our ambition hypocrisy."

OLD-STYLE CAMPAIGN CONTRIBUTIONS.

The committee of the Senate inquiring into the campaign contributions of 1904 has so far dug up little but ignorance and forgetfulness. Chairman Taggart, for the Democrats, could remember very few details, and last week Mr. Cortelyou, chairman of the Republican National Committee, explained that he knew about the money matters of the campaign only in the most casual way. He was chiefly concerned with other things. When Mr. Taggart calmly stated that the books of the Democratic Committee of 1904 had been burned, there was a joyous flutter among Republican newspapers. Aha, so there was something to cover up! But Mr. Cortelyou informed the Senate Committee that Treasurer Bliss had destroyed all the Republican books and vouchers also. So dishonors are easy. Now, the burning of books may be a sign of repentance, as well as a symptom of fright and a tacit confession that certain transactions will not bear the light of day. It is recorded that, as a consequence of the preaching of the Apostle, "many of them also which used curious arts brought their books together and burned them." But they did this "before all men," not secretly. Whether our practitioners of "curious arts" in politics were stricken with remorse when they burned their books, we cannot say, but it is a satisfaction to know that publicity-laws have made it impossible for them to go back to the old methods, even if they desire to. It is, in a sense, an antiquarian investigation that the Senate is making.

Chairman Cortelyou made a frank enough appearance and told a story that sounds straight. But it was confessedly incomplete. He knew, or thought he knew, the "demnition total" of contributions, but was quite unaware of where many of the largest items came from. For example, he stated that he did not know until later that the big life-insurance companies had been assessed for $50,000 each. This was suspected at the time, but the fact was not established until Mr. Hughes brought it out in the insurance investigation. Other corporations, as Mr. Cortelyou frankly stated, were asked to contribute to the Roosevelt corruption fund. He did not, of course, give it that name, but the "practical" men like Harriman who were then putting up the cash, had no illusions about what was done with the money. They spoke bluntly of the effect of spending $50 in each election district, which Harriman said would be sufficient to "turn" 50,000 votes in New York city alone. And when Mr. Cortelyou testifies that "from $650,000 to $700,-

000" was sent to doubtful States, it is not easy to believe that all of this great sum went to "speakers" and "literature."

In round figures, the National Committee had the handling of $1,900,000 to elect Roosevelt. This, at least, is all that Mr. Cortelyou knows to have been raised. It does not follow that more was not spent. There are many ways of collecting and expending campaign money behind the back of the official treasurer. Separate contributions to State Committees did not appear in the accounts of the National Committee. Individual large givers may not have let their left hand (the Committee) know what their right hand (an expert buyer of votes) did. This is what makes us always a bit suspicious of the published totals. The Republican campaign of 1896, for example, was no doubt the most lavishly financed of any in our political history. It has been stated by one who ought to know that no less than $7,000,000 was raised to defeat Mr. Bryan. Yet Mr. Croly, the biographer of Mark Hanna, who had access to all of that statesman's papers, puts the total at about one-third of that sum. This may be all that the books would show—just as $1,900,000 may be all that was of record in the Roosevelt campaign—yet a great deal more may have been collected and quietly placed where it would do the most good.

In calling the Senate inquiry one into far-off, forgotten, and unhappy things of long ago, we do not mean to imply that it does not serve a useful purpose. It is well to run down rumors of corruption; to discover what is the underlying or attainable evidence for persistent scandal; and to set forth the vices of the old way as a fresh argument for the new. It is not only corrupt-practices acts and laws forbidding corporations to make any political contributions whatever—along with the compulsory publication of subscriptions—that have brought about the change. The great change had first been wrought in public sentiment about all this business. There had come to be a mounting disgust with the ancient system of secret alliances between politicians and rich men and powerful corporations. The thing was felt to be neither fair nor safe. It was seen that it led straight to debauched elections and purchased legislation. Frying the fat out of manufacturers in return for guaranteeing them the right to levy tariff taxes for their own benefit, was all one with the practice of bleeding corporations with the promise of looking after their interests in the Legislature and in Congress. The demand that this plan be ended had become so imperative that both our law-makers and our campaign managers had to give heed to it. We shall see no more of these huge funds gathered in secret and laid out with corrupting effect, if not with a corrupt purpose. Presidential campaigns under the new order will be both cheaper and cleaner. The Senate committee is giving us horrible examples of the thing that was but is no longer to be. Here is a form of real progress that has not been made loathsome by anybody's selfishly annexing it and labelling it as his exclusive brand of "Progressivism."

PROLONGING LIFE.

Professor Metchnikoff has begged the reporters not to speak of him as a Mephistopheles, or of his latest discovery as the elixir of eternal life. Alas, it becomes evident only too soon that the now celebrated glycobacter is not the magic remedy after which the heart of man has lusted. The great scientist has sought for years a weapon against Time, and the hardening of the arteries. He has studied the way of the lactic bacillus. He has gone to the dog and considered his intestines, and the only wisdom he has gained is that the injection of the "sugar bacillus" into the human system will stave off the advance of old age, provided—and there's the rub; there always is a very important, very onerous "provided" to be dealt with.

> If I should suddenly die to-morrow, says Professor Metchnikoff, it would not disprove my theories, because I began late in life. But the man who has barely reached middle life might very properly begin with every hope of arriving at the best results.

At the beginning of middle life to begin preparations for old age! At forty to begin shaping one's conduct so that one may live to be a hundred! No, this is not Cagliostro's elixir, of which a drop sends new fire through shrunken veins and rears upright the collapsing frame. It is simply a restatement in specific terms of the old belief that eternal vigilance is the price of anything really worth preserving, life like everything else.

Under these conditions the secret of long life has never been withheld from the knowledge of man. The author of Proverbs long ago had hit upon numerous ways of postponing the ravages of arterio-sclerosis. The pursuit of wisdom will do it. Fear of the Lord will do it. Submission to reproof will do it. The practice of mercy will do it. This is not putting the case in biological terms; but the highest biology to-day recognizes the existence of the spiritual factor. "The certain element on which the Russian savant has counted," says one writer of Professor Metchnikoff, "must not be overlooked—the suggestion or moral impression which stimulates the organism. Sufferers from old age will receive with the glycobacters some excellent advice on regimen and digestive education, and the aged will find themselves doing excellently." Here is the basis for a real understanding between the wisdom of Pasteur and the wisdom of Proverbs. King Solomon will readily meet Professor Metchnikoff halfway. A diet of sour milk plus the practice of charity; glycobacters reinforced by keeping the mind on high ideals; abstention from excessive use of meat going hand in hand with abstention from evil thoughts—there is every opportunity here for the synthetic production of a really efficacious specific against old age. But always there is presupposed a patient spirit and long practice. The pursuit of wisdom and the cultivation of the lactic bacillus must really begin at the beginning of adult life.

Are men willing to have long life on these terms? That is the difficulty which confronts the Parisian biologist, as it did the wise king of the Jews. In small things, as in great, men will rarely sacrifice the self-indulgence of the moment for their own personal good. Not with the certain guarantee of life indefinitely prolonged will the ordinary man consent to listen unfailingly to the dictates of wisdom or never to omit his daily bottle of fermented milk. It has been so in the past, when, theoretically, everybody admitted that long life is a blessing. It is still more true to-day, when old age seldom presents itself to the mind as an end to be worked for. The pleasure-lover's maxim of a short life and a merry one has, in more philosophic times, become the underlying motive of modern existence. We lay stress now on the intensity of life rather than on its duration. A higher productivity, a higher capacity for enjoyment, a more vivid realization of the self while consciousness endures—that is the essence of the modern outlook upon life. Professor Metchnikoff would please his generation more by isolating the bacillus of energy rather than the bacillus of long life. Most of us would not know what to do with a hundred years' time on our hands. Most of us feel no enthusiasm at the prospect of a world of centenarians. A world in which people were so slow to die would destroy Lloyd George's budgets by heaping up the expenditures on old-age pensions and cutting heavily into the inheritance tax. In times like ours, when the duration of social philosophies and artistic theories is measured by single years and months almost, to live a hundred years would be to follow up forty years of excitement with sixty years of headache.

No, the world to-day is not interested in the prolongation of life. It would not be willing to pay the price if the thing were absolutely to be had. A small, old-fashioned minority there may be to whom a protracted healthy old age will appeal. From them, Professor Metchnikoff's glycobacters and lactic bacillus will receive respectful consideration. But even with them, as we have said, the mere biological specific will not suffice. Before men will attain their centenaries in considerable numbers, some scientist will have to inoculate them with the bacillus of patient labor, of simple ideas, and of placid emotions.

THE SCIENTIFIC ATMOSPHERE.

At the unveiling of the statue to Lord Bacon in front of Gray's Inn on June 27, Mr. Balfour was chosen to make the address. There could not have been a happier selection, especially if Bacon's importance in the history of thought was to be dwelt upon. And that is undoubtedly his true carrying power. Bacon the lawyer, the statesman, even Bacon the writer of great English prose, is not of so much significance to-day as Bacon the philosopher. And of him in that capacity no one is better qualified to utter the just word than Mr. Balfour. Neither a vulgarizer nor a mere panegyrist, he is able to seize upon the essential thing in the Baconian philosophy, and to show what it meant in the seventeenth century and has increasingly meant down to our own day.

Mr. Balfour made rather short work of the theory that Bacon, by the invention of the observational and inductive method, put an instrument in the hands of mankind by which the world was able to press on to one scientific discovery after another. "I do not believe," said Mr. Balfour, "that any man has been taught to reason by studying the syllogisms, and I am quite sure no man has ever been taught to discover by studying the inductive method." Whatever Bacon himself may have fancied about the matter, he did not, in fact, devise a machine for scientific discovery. Yet his philosophic writings did bring about a great change in the world's thinking; but it was more a change of attitude than of method. The fashion had been to neglect or scorn the external world, and to engage in merely verbal disputes. Bacon exemplified and taught the patient and child-like attitude before nature—the humble and prolonged inquiry, the repeated experiment, the docility and yet the eagerness of the learner—which is of the essence of what we have come to call the scientific mind. This, declared Mr. Balfour, was the real glory and distinction of Lord Bacon. "He created the atmosphere in which scientific discovery flourishes." Thus his true rank is that of a seer. He was not a great investigator, but he put thousands of investigators on the right track. The full results were slow in coming. On this point Mr. Balfour said:

> Though dates cannot be fixed, I believe it will be found that it is relatively recently, say within the last three or four generations, that industry has really been the child of scientific discovery. Great scientific discoveries were made by Bacon's contemporaries, by his immediate successors, in every generation which has followed, but the application of scientific principles to the augmentation of man's power over nature is, I believe, relatively speaking, of quite recent growth. You may find examples here and there, but, broadly speaking. I would ask anybody to cast his eye over the history of discovery in such arts as those of medicine, in the general progress of industrial and agricultural discovery, and I believe he will come to the conclusion forced upon my mind, which is that the effect which science has had and is now having, and in increasing measure is predestined to have, upon the course of this world, did not declare itself in unmistakable letters until a century and a half or two centuries had passed since the death of the great man whose name is associated with the philosophy of induction.

However it came to us, and whoever contributed most to the gift, the world is now in possession of the scientific mind. To-day we have the great company of thinkers and investigators round the globe devoting themselves to the refinements of research into nature. Science has been internationalized. What one worker discovers is instantly made known, in a kind of scientific free-masonry, to investigators everywhere. Coöperation in science is increasingly efficient. One discovery prompts another, and each new triumph of man over the forces of nature—each new conquest of disease, each advance in the amelioration of the conditions under which men must live and work—is the signal for another. If this spirit of enthusiastic and banded effort to improve the estate of man can only in part be traced back to the initiative of Lord Bacon it is fame enough for him.

We have heard a good deal in recent years of the "bankruptcy" of science. It is only a "message of despair," we are told, that star-eyed science wafts back to those who are craving answers to the deepest problems of the human soul, of life and of death. There is some truth in the complaint. Science is modest, but men of science are sometimes guilty of overweening vanity. They have occasionally gone upon the assumption that nothing lies deeper than the probe of chemic test, that instruments of scientific precision will enable us to say exactly what man is and what God is. But that is only to rouse hopes certain to be frustrated. The attempt in our own day to "prove" immortality scientifically, is but an instance of what will happen when science forgets to be truly scientific. It gives science a black eye at the same time that it upsets the equilibrium of many weak brains. Science, too, must stick to its last. But within its necessary limits, it is continually attacking and solving problems that lie close to the well-being of humanity. Nor can any one truthfully assert that its ardor and hopefulness have been quenched. Scientific ideals were never so high in the hearts of students as they are to-day, nor did the great tasks still before scientific investigation ever more powerfully appeal to devoted workers for the good of their kind. Only consider, for example, the zeal with which skilled inquirers in all countries are giving the most laborious research to the cause and cure of cancer. Never were there more indefatigable and, withal, more enthusiastic investigators. Give us time, they say, and we will grapple with and overcome this terrible disease. It is not only the desire to benefit humanity that keeps them unflagging in endeavor. They are buoyed up also by their profound conviction that the scientific mind is bound to win. The very air they breathe is filled with the hope that science has yet wonderful improvements to make in the lot of man, and that true scientific method is certain to go on, conquering and to conquer.

PERSONALITY IN PROFESSORS.

The outstanding superiority of the German to the American professor, according to one of our distinguished visitors from Berlin, is in his rich and independent *Persönlichkeit*. The American educator at his best is not without a certain dry intellectual vivacity and specialized efficiency, but he lacks the breadth of beam, the exuberant and contagious enthusiasm, and the spiritual intrepidity that mark his Teutonic colleague. He occupies his chair with something too much of official preciseness; his voice has a hard professional twang; he deals himself out sparingly in social intercourse, like a commodity that may soon be exhausted. This unflattering foreign opinion of the American professorate seems to be seconded, with a difference, by Mr. Charles Warren in his "Plea for Personality in Professors," published in a recent issue of the *Harvard Advocate*. He would agree that our professors are not what they ought to be; but he insists further that they are not what they were—they have fallen from a former state of grace. At Harvard, for example, the great generation of the Childs and Nortons and Shalers is passing away, and the mantle of education has descended to unequal shoulders—to men of good training and some parts, no doubt, yet without the girth and stature of the elder day and the amplitude of personal power.

The proposition is obviously incapable of demonstration, and should be taken with a liberal allowance of salt. We all know that every graduate who returns to his alma mater after an absence of twenty or thirty years—Mr. Warren is of the class of 1889—is struck by the removal of ancient landmarks and the vanishing of the old familiar faces, and is prone to declare that things have degenerated since his day. We all know how the elder alumni stroll through the Yard or campus and exclaim at the growth of luxury among the younger generation: "The old college was a group of teachers; the new college is a group of buildings." "Steam heat in the old dormitory, and bathroom for every suite! We used to split our own kindlings and wash under the pump. I remember how my roommate used to duck his head under the spout in December, and call out, 'Come on, boys, this is what makes character.'" We know, too, the inevitable turn the conversation takes at the reunion banquet. "Well, there's been a great change since our time, and I'm afraid it's not entirely for the better." "Not a bad address the new president gave us, but he is not the man his predecessor was." "No; and with old Wells gone and Smith and Huntington and Jones, and Stone and Walworth retiring, it's not the same place at all." "Not at all. I called on Stone to-day, and he says the outlook is very gloomy; they can't find suitable men to fill the vacancies. These young fellows are cast in another mould; they aren't of the calibre of Wells and Smith." "Old Wells was a *character*, though, wasn't he?" "But he did put us through our paces, and you couldn't get around him." "Old Wells was a war horse, but he meant business, and I don't believe there are many like him in the new brood."

When all deductions are made for the glamour of reminiscence, there is undoubtedly a substantial basis for the discontent of the old graduate and the pointed criticism of Mr. Warren. "Old Wells," though something of a Doctor Busby, was a thoroughgoing teacher, the terror and delight of the classroom. He touched a vital spot in every student who sat under him. He spoke as one clothed with authority, and his *obiter dicta* were passed on by tradition. He furnished his disciples with a constant measure of the difference between a callow adolescent and a formed and purposeful man in a world of men; and he taught them to prize with Montaigne "a strong and manly familiarity and converse, a friendship that flatters itself in the sharpness and vigor of its communications." His great prestige on the faculty and in the community he held in his own right and not as a loan from the institution which employed him. So far as we knew, he had not a drop of German blood in his veins; yet he was a big and permanently impressive personality. Now, "Old Wells" as a type of the undergraduate college teacher is fast passing away. Apparently, he is passing away for the economic reason that there is no demand for him on the part of the administrators. Other virtues than effective teaching and strength of personality seem now to be at a premium; and we agree with Mr. Warren that it is time to be harking back to something that we have lost.

Probably nearly every one will admit that the spot where our educational institutions have suffered most deterioration from loss of vital personalities is at the heart of them—in the colleges of liberal arts. Among the various reasons which may be brought forward to account for this decline, two stand out conspicuously: First, administrators during the past generation have directed a large proportion of their energy and their funds towards advancing the graduate and professional schools. Inevitably, the attraction of pecuniary reward and scholarly distinction has drawn the more ambitious men into professional and graduate work, where successful research rather than teaching-effectiveness is the desideratum. Presidents protest that the exceptional undergraduate teacher is as precious to them as the exceptional researcher; but they open their purse-strings to the investigator; and every one who hears university club gossip is familiar with the contemptuous "He's well enough for an undergraduate teacher." The second reason for the decline is that the attendance at the universities has multiplied faster than the endowments. As a consequence, vast classes of 500 to 1,000 are vaguely lectured at by wholesale, or cut up into small sections and turned over to a battalion of teething assistants and instructors, who are not infrequently far below the level of the average high-school teacher in personality and in general intelligence. Between the graduate school above, with its emphasis upon investigation, and the "slave-labor" below, with its characterless semi-tutorial function, the high calling of the teacher is belittled, and the field tends to be left to somewhat weak-kneed Laodiceans. Drop "Old Wells" among them, and they would retreat like rabbits from the presence of a man. The protest against these conditions is certain to increase; for though the administrative watchword may be "the advancement of science," the rank and file of the alumni continue to demand "the formation of character."

THE BI-CENTENARY OF ROUSSEAU.

GENEVA, June 30.

One still remembers the elaborate celebrations which took place at Geneva in 1909 in honor of Calvin; the celebrations to commemorate Rousseau, which have just come to an end, were, if possible, even more notable. Some, indeed, thought that they were overdone. Following certain reactionary writers in Paris who, under the leadership of Maurice Barrès, protested openly against the proposed festivities at the Panthéon and tried to interrupt the speakers at the memorial ceremony at the Sorbonne, old patrician families in Geneva would like to have been spared the spectacle of their whole city thus idolizing a revolutionary son of the people. The popular impulse, however, proved irresistible. For nearly two years preparations had been making. Books and pamphlets, magazine and newspaper articles on Rousseau came thick and fast. On the eve of the 28th the Catholics issued a statement to the effect that they also would join in honoring the man through whom the irreligious spirit of the eighteenth century was to some extent checked. The Protestants organized a special meeting on Friday, the 28th, with Professor Fulliquet, the fiery theologian, as their spokesman. And it was agreed that on the following Sunday Rousseau should be the subject of the sermon in every church.

On the evening of Wednesday, the 26th, at a meeting of the Institut National Genevois, Rousseau was exalted as a political writer, patriot, botanist, and musician. A poem made for the occasion was read, and several songs composed by Rousseau were sung by artists. Thursday was called the day of the Société Jean-Jacques Rousseau, which does for Rousseau in Geneva a work similar to that of the Shakespeare Society in England. Its official ceremony took place in the Aula of the University, and was attended by many scholars and writers, including several from abroad. The eulogy of Rousseau was pronounced by M. Rosier, the Minister of Public Instruction in Geneva. Addressing a largely academic audience, he emphasized the pedagogical reforms brought about by "Emile." Then came the chief speaker, Prof. Georges Renard of the Collège de France, representing all the French universities. His speech was a masterpiece of academic eloquence, compounded of precise erudition and broad humanitarian aspirations. Professor Schulz-Gora of Strassburg followed, speaking for the German universities. He explained with somewhat more *Gründlichkeit* than eloquence the influence of Rousseau on such thinkers as Kant, Goethe, and Schiller. A gratulatory letter was read by an emissary from the Tolstoy Society of Moscow. Finally, Professor Seippel spoke briefly in the name of the Swiss universities.

For the afternoon the Cercle des lettres et des arts, together with the Société Rousseau, had arranged a representation of two of Rousseau's plays, "Pygmalion" and "Le Devin du village," to be given in the magnificent Parc de l'Ariana. The bright, harmonious costumes, the zest of the players and singers, the graceful dancing of the children made the spectacle perfect. None who was privileged to attend will forget this exquisite artistic treat, on that glorious day of June, near-by the lake of Rousseau and Byron, under the trees so green and so fresh.

Friday, the 28th, was called a day of rest, but the people of Geneva were most active getting ready for the next, the official day, a holiday for business and schools. The decorations were tasteful and very rich, especially so in the picturesque old town; busts of Rousseau were erected on squares and in front of public and private houses. At seven o'clock on Saturday morning all the church bells were ringing and the cannon was fired on the old city fortifications. Unfortunately, the weather was not as beautiful as it had been. At nine o'clock a procession of children, students, and "Old Grenadiers" went to the Grande rue, the narrow, old street where Rousseau's birthplace stands, and a wreath of flowers was hung over the door. While this was going on in the Haute Ville, the official reception of delegates from the French Swiss cantons, and from foreign nations, took place at the foot of the philosopher's statue in the pretty Ile Rousseau, which was decorated in eighteenth-century style. This was a short, simple, and dignified ceremony.

But let me turn to the really original part of the festivities, namely, the open-air public banquets in the various quarters of the city—original this function was, at least for foreigners; Rousseau himself knew the charming custom and described it in one of his best pages of the "Lettre à d'Alembert." Tables are set in the public squares; an orchestra is hired to play patriotic and popular tunes; some people bring their own food, some buy it there. Citizens of all classes, with wives and children, of course, are met together, drink together, dance together. It is all very jolly. Of course, every one of these banquets has more or less its own particular character. Here, in the quarter of Saint Gervais, you have the working people, and especially those working people who are claiming new rights in modern society; at the table of honor, one sees Mr. Sigg, a well-known Swiss Socialist. Elsewhere at the Quarter of the Madeleine Church we have the lower classes; but this time the humble people who enjoy without much thought that day of rest bestowed on them by destiny. They are grateful for the little they get, and although evidently indifferent to Rousseau, they have decorated with a profusion of flags and flowers their old, narrow, winding streets; a good many have found seats at the tables set on the small church square; the others have simply taken out their family tables and put them outside the door on the sidewalk; three poor fellows, with a harp, a guitar, and a violin, play in the middle of the street; the frugal meal has not yet come to an end when the good people want to dance. Only a few steps further the official banquet takes place, under the beautiful trees of the "Treille," back of the antique walls of the capitol. Here, as elsewhere, the democratic note predominates. Members of the most exclusive patrician families of Geneva face at one table the representatives of the radical Government; a clergyman is sitting next to a free-thinker, and they make speeches in which, sincerely, they call one another brothers. There also sits the representative of the Federal Council of Bern. There is a long table of little orphan boys, invited by the organizers of the public meal in remembrance of Rousseau, the friend of children. In the quarter of Saint Antoine, on a high terrace overlooking the city, near the old "Collège" of Calvin, the intellectuels of Geneva have gathered, university professors, writers, artists.

The next number on the programme was the procession of all the school children. The day before every one of them had received a souvenir coin representing the workshop of Rousseau's father, with the father pointing out the city through the window, and telling his son: "Jean-Jacques, love your country!" They were all to march by a gigantic reproduction of Houdon's bust, on the Plaine de Plainpalais, the purpose being to inspire them with the ambition to honor their country as had Rousseau. But just as the long procession reached the podium, a terrific rainstorm forced the children to disperse. After about an hour of waiting, in which an attempt was made to have some of the eighteenth century dances performed, everything was given up. The elaborate preparations (among others a "cantate" written and composed for that day) came to naught.

By eight o'clock, however, the sky was clear again, and while the authorities and official guests were banqueting in the Hôtel Métropole, and taking up again their monotonous occupation of listening to speeches, the people of Geneva were celebrating in their own gay and hearty fashion in the streets. Here the tables of the banquets had been removed and young and old were dancing merrily. There was no disorder, no noise; all was remarkably like Rousseau's description, of nearly two centuries ago. At midnight the people went home. Back of me a good fellow was reflecting aloud: "People like ourselves earn little money, but they always know how to have plenty of fun." It was precisely the same thing that Rousseau had expressed, with a different kind of eloquence, in his "Lettre à d'Alembert."

AMERICAN LIBRARY ASSOCIATION AT OTTAWA, JUNE 26–JULY 2.

CHICAGO, July 10.

The librarians will long remember the hospitality with which they were received at Ottawa, and not less at Toronto and Montreal. The Chicago and Western party had been invited to stop over at Toronto for a day on their way to Ottawa, and were entertained both by the Public Library and the University. And at Montreal those who returned to their homes by way of that city were the guests of McGill University for a day. At Ottawa the visiting librarians received, not the freedom of the city, but the privilege of riding free on the street cars. On Saturday the Canadian Government entertained the Library Association at a garden party at the Experimental Farm outside the city, and in the evening a ball was given in the Parliament House.

At the preliminary session on Wednesday evening the assembled librarians were addressed by representatives of the Canadian Government, in the persons of the acting Premier, George H. Perley, and the Minister of Agriculture, Martin Burrell, as well as by representatives of the city of Ottawa and of the Canadian clubs. The president of the Association, Mrs. H. L. Elmendorf, responded briefly to the addresses of welcome, and called on the Librarian of Congress, Herbert Putnam, to deliver the formal address of the evening. He defined the aim of the library to be "to bring a book to a reader, to lead a reader to a book." All the elaborate organization, all the apparatus and mechanisms invented during the last quarter-century exist only to aid in this. After a rapid survey of the ways in which education had been democratized and of the part the library had played in this work, Mr. Putnam said that the responsibility of the library concerned not merely popular education and the seeker for general culture, but "the scholar, since a benefit to the general reader may end with himself, but a benefit to the scholar becomes amplified and diffused through him." "May we not hope," he continued, "for a recognition—a re-cognition—in our organizations also of that type which gave personality to the libraries of old? I mean the type represented by the Panizzis, the Garnetts, the Winsors, Pooles, Cutters, and Spoffords."

At this conference a definite programme had been outlined, as expressed in the formal address with which Mrs. Elmendorf opened the first general session of the Association. She set forth the ideas that had guided the programme committee, as follows: "The library is the one place where time and space are set at naught. It is the microcosm of the universe. . . . The public for whom the library exists has little conception or comprehension of its power. How shall such publicity as will give this knowledge of it be given? . . . Service, not authority, must be at hand. What shall the tests of fitness for such service be? The staff fit for such service must be of rare material and quality. How conserve their strength, well-being, and joy? Unskilled people cannot render fit service. What are the things that matter in training? How far can training be effective?"

This programme was rather closely adhered to both in the general sessions and the section meetings. Its unity was, however, broken to some extent by the programmes of the many other organizations that meet regularly with the American Library Association. No fewer than three other societies are directly affiliated, namely, the National Association of State Libraries, the American Association of Law Libraries, and the Special Libraries Association; besides, the Bibliographical Society of America, though not affiliated, meets regularly with this group of societies. Then there is the American Library Institute, which is a sort of "academy" superimposed on the larger body and composed of the members of the American Library Association Council and a number of specially elected "academicians." The Institute was founded some years ago to consider important matters not thought suitable for general discussion. The Institute took up this year the rather significant subject of the cost of library administration, which was presented to it in papers by Hiller C. Wellman and Arthur E. Bostwick. A committee was appointed to consider the matter. A similar committee, confined to cataloguing and including not only the cost, but also the methods in use, will be appointed by the Executive Board of the general association at the request of the catalogue section. The various sections of the American Library Association held important meetings; one of them, the professional training section, met jointly with the association at large to discuss several phases of the education of librarians. Among the other sessions of more or less specialized character the one devoted to the interests of the Agricultural libraries attracted the greatest attention. The programme was very full, dealing with the particular functions of the libraries connected with agricultural colleges and experimental stations. There was a symposium on recent reference books and new periodicals of special interest to agricultural libraries. Dr. A. C. Trude, director of the United States Office of Experiment Stations, presented a paper, entitled "Suggestions in Regard to a Policy of Administration of Agricultural College and Experiment Station Libraries," in which he dealt not so much with the details of administration as with the results to be obtained. He paid particular attention to the function of the library in the general extension work of the agricultural college.

The session was also addressed by Martin Burrell, Canadian Minister of Agriculture, and by Prof. James W. Robertson of McGill University, chairman of the Canadian Royal Commission on Industrial Training and Technical Education. Dr. Robertson took a particularly active part in the work of the conference, besides being chairman of the local committee.

On Dominion Day the Association listened to a speech by Sir Wilfrid Laurier, who, on behalf of the Canadian members, presented to the president a gavel of Canadian maple and Canadian silver. The principal address of that session was by Professor Robertson, who spoke on the "Conservation of Character." "Let us conserve life," he said, "for the sake of character." He condemned the modern factory "that makes things of men and women." He spoke of the immigration of the American farmer into the Canadian Northwest. The American is always referred to as "chasing the dollar." Why is this so? "He does it," said Dr. Robertson, "for the sake of a home and to give some boy or girl a better start"; the call of the land lures for the sake of the children. He also spoke of the importance of vocational, of occupational education. Not less remarkable, though in many ways the antithesis of Professor Robertson's speech, was the address delivered on the same occasion by Prof. John McNaughton, also of McGill. He made an impassioned plea for the things of the mind, for spiritual development. He emphasized the importance of thinking, and gave as an example of the power of clear thinking the modern development of Germany, the land, as some one slurringly had said, of "damned professors." It was, he said, just because Germany was the land of "damned professors" that the country had developed as it had in the world of affairs. Her sons believed in the things of the mind, in the world of thought. Professor McNaughton addressed himself all through his speech directly to Professor Robertson, and the listeners had the sensation of being witnesses at a duel between two principles, two schools.

At the evening session of the same day President George E. Vincent of the University of Minnesota delivered an address full of subtle irony and whimsical humor in which he pointed out how librarians could influence men's character through their reading. "Books are dead symbols," he said, "until they become vitalized in the hands of a living man."

Thus came to an end a conference of librarians at which the chief subject of discussion was not technique, but the results aimed at. It was not the first American Library Association conference where this tendency to substitute the essentials for the non-essentials was felt, but it was the first, I think, where a conscious effort in this direction had guided those responsible for the programme.

NEWS FOR BIBLIOPHILES.

New and important letters touching the early life of Edgar Allan Poe have come to light in the Library of Congress. They are among the Ellis-Allan papers, a collection of some 442 portfolios and volumes of office books, and letters of an old Richmond, Va., firm. The dates run from 1795 to 1889. John Allan, Poe's foster-father, was a member of the firm. Poe was also employed there in 1827, but doubtless received his sole pay in board and lodgings from Allan.

A letter from Poe's aunt, Eliza Poe, dated Baltimore, February 8, 1813, about two years after he had been taken into the Allan family, is addressed to Mrs. Allan, asking about the welfare of Edgar. A previous letter had met with no response. It should seem that up to that date there had been no intercourse between the two families. Eliza Poe afterwards married Henry Herring. It was her daughter. and Poe's cousin, Elizabeth Herring, to whom Poe made love and wrote verses about the year 1829.

John Allan wrote a letter to Poe's brother, William Henry Poe, dated November 1, 1824, but did not destroy the copy. At that date Poe was fifteen years old, a member of the Junior Morgan Riflemen, and very likely knew something of the town. In this letter Allan wrote: "I have just seen your letter of the 25th ult. to Edgar, and I am much afflicted that he has not written you. He has had little else to do for me he does nothing & seems quite miserable, sulky & ill-tempered to all the Family—How we have acted to produce this is beyond my conception why I have put up so long with his conduct is little less wonderful. The boy possesses not a spark of affection for us, not a particle of gratitude for all my care and kindness towards him. I have given him a much superior Education than ever I received myself . . . I fear his associates have led him to adopt a line of thinking & acting very contrary to what he possessed when in England."

Allan seems to have been watchful of Poe's actions, and to have read his letters. Surely, the strife between the two which was to end in Poe's leaving his home some years later had now started. Mrs. Allan was suspicious of her husband, and not without cause. Most likely Poe kept her informed of some of Allan's secret movements. When Poe's mother died in Richmond, Allan took charge of the few family trinkets and a packet of letters. Several of these letters were always supposed to have told the story of a skeleton in the Poe family closet. Allan gave these effects to Poe, but as he was addicted to reading letters, he probably knew the contents of the entire packet. Mrs. Clemm, Poe's mother-in-law, and aunt, later on had possession of several of the letters, which she destroyed just before her death. She spoke of a dark Poe family secret, and left the impression that by her work all knowledge of this was now blotted out. Perhaps Allan wished Poe to feel that he held this family secret. In any event, there also appears in his letter to Poe's brother the following: "At least she [Rosalie Poe] is half your sister, and God forbid dear Henry that we should visit upon the living the errors and frailties of the dead." Here the secret is evidently told for the first time. Poe's brother pretended to F. W. Thomas that he did not know what had become of his father, but an attorney of the family stated to Thomas that David Poe deserted his family in New York. It now seems a question whether this charge of Allan's was the cause for Poe's alleged desertion.

Poe's brother also stated to F. W. Thomas that the cause for Edgar's leaving Allan was a quarrel about the pittance of money he was receiving. This is now substantiated. Two letters to Allan from George W. Spotswood from the University of Virginia are in evidence asking for pay for use of his servant—Poe not having, what other students had, a servant to look after his room. There is also a Charlottesville, Va., tailor bill from Samuel Leitch, which never seems to have been paid. An interesting letter to Poe is one from a friend named Edward G. Crump. It is dated March 25, 1827, and shows that Poe was in financial straits. The letter was evidently received by Ellis & Allan after Poe had left Richmond on his sea voyage. It is addressed to Poe, but endorsed on the back, probably by Allan: "To E. A. Poe, alias Henri Le Rennét." This gives for the first time the assumed name of Poe for this period, and may lead to other discoveries.

In a copy of a letter to his sister in Scotland, Allan wrote under date of March 27, 1827: "I am thinking Edgar has gone to sea to seek his fortune." How different this sounds from his letter dated May 6, 1829, to the Secretary of War at Washington, in which he asserted that Poe had left him because he refused to pay his gambling debts! All the circumstances indicate that Allan was aware that Poe was on his way to Europe, or had reached there towards the last of March. The mild sentence to his sister would seem to have been in the nature of a query. He was afraid that Poe might head for Scotland and tell her a tale of Allan's misdoings.

This new correspondence is likely to have an important bearing upon the unpublished letters of Poe held by the Valentine Museum of Richmond.

I was told many years ago by the custodian of personal papers of John Allan, that there existed other documents relating to Poe, which he had never taken the time to examine. He declined to hunt them up, and since his death his relatives have also put off an examination. But some day these papers are likely to see the light, and may bring other surprises.

TERMS NEEDING DEFINITION.

TO THE EDITOR OF THE NATION:

SIR: What does your correspondent, S. R., mean when he says: "Radicals are free traders and revenue-tariff men where free trade is at present impossible. . . ."? This implies that a free trader is not a revenue tariff man. What, then, is a free trader? Is not England a free-trade country? Is it not a revenue-tariff country? Does "free trade" mean the abolition of custom houses? Is not a country a free-trade country that keeps up her customs duties for revenue only? Even Miss Tarbell, in her excellent book, "The Tariff in Our Times," falls into the same error, on p. 179: "They might be free traders, as a few of them are; they might be tariff-for-revenue-only men, as most of them were. . . ." Protectionists constantly misrepresent free trade as meaning the abolition of custom houses. Let us enter upon this campaign with a definite idea of what our words stand for, and, above all, let us avoid the common mistake of protectionists in using the term "free trade" in two different senses.

Both terms "free trade" and 'protection" are unfortunate, for each has a double meaning. "Free trade" is not absolute free trade, and "protection" does not protect in the sense in which the term is used by protectionists, for "free trade" means limited or partial free trade, so much free trade as is consistent with the necessity of raising revenue through customs duties, and "protection" protects only the pocket of the manufacturer, not that of the workman or of the consumer. The first term is used by protectionists to cast discredit on free trade, the second term is used by them to throw a false glamour over protection.

A. M. E.

Providence, July 8.

MOREAU DE SAINT MÉRY'S DIARY.

TO THE EDITOR OF THE NATION:

SIR: Prof. A. W. Goodspeed, in his letter from Philadelphia, which appeared in the *Nation* of May 2, giving an account of the annual meeting of the American Philosophical Society, says: "An analysis of 'The Diary of a Voyage to the United States,' by Moreau de Saint Méry, was presented by S. L. Mims of Yale University, who had the good fortune to discover it in the Colonial Archives of Paris, where it had lain forgotten for three generations."

Mr. Mims, or Professor Goodspeed, as the case may be, is mistaken in giving the impression that this curious manuscript volume has only just been brought to light. Records, which I have seen, in the Colonial Office, show that Mr. Henry Adams must have been acquainted with it in 1879, when engaged on his "History of the United States," and this statement was confirmed by the late Victor Tantet, long librarian of the Colonial Office, when, some ten years ago, he called my attention to the Diary, gave me notes on it, and left it with me for several days so that I was able to examine its pages at leisure in my study. Later, I spent a whole afternoon at the old Colonial Office, then in the Tuileries, turning over the faded leaves of the volume, reading them here and there, and making further notes and extracts. It will be seen, therefore, that at least two Americans other than Mr Mims have known of this manuscript for many years. In fact, I made two attempts, but in vain, to get a New York publisher to reproduce in an English translation the more interesting entries of this diary. But this want is to be largely met by the excellent act of the Carnegie Institution, which is now having a complete copy made of this valuable document.

Moreau de Saint Méry was no ordinary man; quite the contrary. In the National Library, Paris, is an in-12 printed in 1819 and entitled "Notice sur Moreau de St. Méry," which I ran over one afternoon several years ago, and from which I drew the following facts of his life. The author of this pamphlet, Dr. Fournier-Pescary, who is described as "the Secretary of the Military Hygienic Council," spoke at the burial of Moreau, January 30, 1819, and evidently knew him well. One might be led to suppose that he was his medical man. He is also, by the way, the writer of the notice on Moreau de Saint Méry which appears in the "Biographie Michaud."

Dr. Fournier-Pescary states that Moreau's family was one of the most distinguished in the island of Martinique; that the child was left fatherless at a very early age and was sent to Paris at nineteen in order to get the education necessary to enable him to succeed his grandfather in the seneschalship of the island. He had powerful and rich friends at the French capital and immediately began to show remarkable intellectual powers. His industry was indefatigable. In order to have leisure for study, he kept up for some time after his arrival in Paris the habit of sleeping only one night out of three. He began Latin without a teacher, eventually learned to speak it with great facility, and, because of his prodigious memory, could repeat whole passages of the classics. His progress was so rapid in the Law School that in fourteen months he was able to defend a thesis in Latin, received his degree of bachelor of laws, and was admitted to the Paris bar. He then returned to his native island, where he quickly became one of the leading lawyers, and after seven or eight years of active practice was made a member of the Superior Council of Santo Domingo. During the leisure which this post gave him, he took up again a subject of study which had occupied his youth and collected the materials for his important work devoted to the laws and customs of Santo Domingo, on which he was engaged in Paris at the moment the revolution broke out. During one of the many journeys which he made in this connection, he discovered the tomb of Christopher Columbus, and through his care the monument of the great admiral was restored. He became a member of the Constituent Assembly in 1789, where he joined the Moderate party, which brought him into conflict with the mob by whom he was dangerously wounded. He escaped to a small town in Normandy, where he was discovered and arrested, but got free and hid at Havre, whither he was pursued and whence he sailed with his wife and two children for the United States. The description of this long and painful voyage is given in detail in the Diary, and is one of the most stirring portions of the volume. The Terror in France and the civil war in Santo Domingo ruined Moreau financially, so that on reaching America he was only too glad to become a clerk to a New York merchant. Thence he drifted to Philadelphia, where he set up as a bookseller and publisher, and where he spent the greater portion of his five years' sojourn in the United States during Washington's second term and the beginning of Adams's Administration. In 1799, he returned to France and filled several honorable posts, but was reduced to such financial straits through a base political intrigue that he had to sell his silver and linen in order to live. Then it was that he made this proud speech to the Emperor: "I do not ask your Majesty to recompense my probity; I beg only that it be tolerated. Fear nothing, my disease is not contagious!" For six years he lived in abject poverty. But his remarkable intellectual parts were recognized on every hand, for he was a member of nearly all the literary societies of Paris and of several scientific societies. But neither Dr. Fournier-Pescary nor Mr. Balch, who, at the Philadelphia meeting last month, gave a long list of celebrities who had been members of the American Philosophical Society, put Moreau in this galaxy, though, as will be seen in two places in the extracts from the Diary as given below, he was very proud of the fact.

Dr. Fournier-Pescary furthermore tells us that Moreau had friends in all ranks of society, and that "few had so many as he." This was doubtless largely due to the strict observance of this motto which he had engraved on the face of his watch, so that it was frequently under his eyes: "Il est toujours l'heure de faire le bien." And the funeral oration closes with these words: "Posterity will see in Moreau de Saint Méry an eloquent orator, a learned jurisconsult, a distinguished lawyer, an honest judge filled with tenderness, an enlightened administrator devoted to the public interests, a writer remarkable for his finesse, the fecundity of his mind, the extent and variety of his knowledge, and the elegance and clearness of his style."

Some further biographical facts about Moreau may be found in the volume for 1819 of the French Royal Agricultural Society, of which he was a member, in a notice on him by M. Silvestre, the Perpetual Secretary of that body. We are told that when Moreau's grandfather was dying, the lad was informed by him where were 66,000 francs which could be employed for his education. But he would not take advantage of this offer, and told the whole family of the fact. M. Silvestre gives us another instance of Moreau's wonderful intellectual powers. At the outbreak of the Revolution, he was President of the Paris Electoral Committee, and in a single night wrote, dictated, and signed more than three thousand orders. No wonder that when this body dissolved, it voted and struck in his honor a medal. He was the author of a large number of sayings that were current. Here are two preserved by M. Silvestre: "Gratitude is a flower of the tomb," and "Calumny is a money that anybody can coin and few refuse." His death, it appears, was precipitated by an act of kindness to a relative. It is pleasant and not surprising to know that "he had a noble and beautiful face."

In the spring of 1794, Moreau made a stage trip from Philadelphia to New York. It is one of the most valuable portions of his Diary and well illustrates his passion for details, precise data, and out-of-the-way information, which renders these notes so useful and instructive to-day. I give several extracts:

May 24, 1794.

Princeton resembles all the other places already described that we have passed through since we started from Philadelphia, that is to say, it consists almost wholly of houses lining either side of the road, some eighty in number and chiefly made of brick. The town has a Presbyterian church and a college. The last calls for a stop in order to speak of it, just as we made a stop to visit it. The building, which is of stone, is about 70 French feet in length and some 40 deep. It has three stories, if we count as a story the ground floor, which rises from 7 to 8 feet above the ground and thus makes possible cellars. There is a garret at the top, so that the Americans say that the building is four stories high. In the middle, the edifice advances so that there are ten windows on either side of this projection and six more under the pediment. On the whole, this structure is quite striking for America. In front is a large yard, shut off from the street by a brick wall, with pilasters at equal distances supporting wooden urns painted gray. This yard is not well kept and is covered with the dung of the animals that go there to browse on the grass. In the middle is an old iron cannon, a four-pounder, minus its carriage. This cannon and the bad condition of the wall with several of the urns fallen to the ground, give an unkempt appearance to everything, so that you reach the building with a feeling of vexation that the students should have such a bad example before their eyes. You enter this college, which is called Nassau Hall, by three doors, one of which is in the middle of the portion of the edifice which advances and the two others on the sides and parallel to each other. The steps leading up to these doors are in wood and without balustrades. The two upper floors are dormitories, with a corridor running from end to end, which divides each floor into equal parts. There are 42 rooms, each intended to accommodate three students. On the ground floor are a chapel, a dining hall, and a library of some two thousand volumes, where you are shown the justly celebrated planetarium made by Dr. David Rittenhouse, who is now President of the Philosophical Society of Philadelphia, and who was born in Pennsylvania. Facing the central door but at the back of the building is a large class-room furnished with the usual benches. On the right on entering, you notice a picture some eight feet high—a full-length portrait of Washington, holding his sword in his right hand and in the act of commanding, while his left hand, resting on his hip, grasps his hat. Behind him, on the left side of the picture, and somewhat in the background, is General Mercer, lying on the ground, resting on his left shoulder. Back of the General are two aides-de-camp. In the distance, on the right side of the canvas, is represented the battle of Princeton. Though this picture is not without merit, three criticisms of it may be made. In the first place, General Washington is holding his hat in his hand and appears very composed at the moment when he is commanding in battle. Secondly, General Mercer, who died from the wound which he received at this battle of Princeton in January, 1777, does not appear to be suffering, and, thirdly, the aides-de-camp are presented in such an uncertain attitude that they do not seem to be occupied with the dying General.

At the back of the college there is also a yard, which, too, is dirty and the turf allowed to grow wild, so that everything hereabout has a neglected air. Though there is room in the building for 120 students, only about eighty are present, coming chiefly from Virginia and the two Carolinas. I should like to praise the management of this institution, but when one has not been brought up in American fashion, this is difficult. The system which puts no restraint on children is so closely allied with heedlessness on the part of teachers, and so strongly favors the indolent disposition of the Americans, that it can produce only a vicious order of things. Its effects are visible at Princeton College, where, I am told, the attention of the students is more occupied with gaming and licentious tendencies than with their studies. Their board and lodging costs them $100 (550 francs) per year, and washing one gourde a month.

Princeton is a very healthful place. This is proved by the registers of the College, which has lost but five or six students since its foundation. This, perhaps, is one of the reasons why young men from Santo Domingo flock here. There are several inns in the town, the principal one being that of the Sign of Washington, where Gen. Rochambeau put up when he marched from Rhode Island to Virginia. At this moment it is kept by David Hamilton. The houses are bordered along the street by very fine catalpas.

September 21, 1794.

The news has spread of the beheading of Robespierre. It has made a deep impression in the United States, but in several different ways. The Jacobins here were profoundly afflicted by it, as if they had lost their father, their leader, their best friend. But all those who are not Jacobins, all true patriots and sincere friends of liberty see in this event a providential act only too long delayed. As regards the Americans of all classes and all kinds, they show sincere regret for the disappearance of Robespierre, and are greatly moved by his death. Here is the reason for it; Robespierre made it impossible for Frenchmen to remain in France. As soon as a man or a gold piece could get out of the country, they came over here; and, as what are wanted here are men, money, and industry, it is evident how the destruction of such a being will hurt those on this side! I have heard this said a hundred times with a frankness which did not make it any more palatable to me. For a long time the Jacobins declared that there was no truth in the report. But I wagered two gourdes—not a small sum for me—against one that it was true. Oh! how I would have given all I possessed if my dear De Varenne had escaped from the monster whose execrable memory posterity will never treat worse than is deserved. Who does not charge to him the loss of a father, a mother, a son, a daughter, some relative or friend, a compatriot, or a fellow citizen, a being more or less dear?

September 30, 1794.

We had dining with us Dr. Mitchill, the celebrated New York chemist. We went to the horse races at Jamaica, Long Island. In the evening, when I took him back to New York, we had a cold, strong wind, which drove us nearly down to Sandy Hook.

November 19, 1794.

I went to see Washington enter Congress and listen to his opening address. How simple and natural it all was! But it was Washington, and it was the meeting of the representatives of a nation which had conquered its liberty. What vast, grand conceptions in such a simple setting! How these republican forms address themselves to the soul and lift up the heart! What a destiny they predict for this part of the world!

February 28, 1796.

I went and paid my respects to Mr. Adams, who has become Vice-President of the United States.

January 21, 1798.

I went and saw General Kosciuszko, who has just arrived in Philadelphia, where the Americans have received him with great demonstrations of joy. They took the horses from his carriage and drew him from the point where he had landed to the lodgings which had been engaged for him.

July 18, 1798.

The feeling against the French is growing stronger every day. In Philadelphia at present, I am the only person who wears the French cockade. The American Republicans fearing they may come to blows with the Federalists have held a meeting and taken secret measures to protect themselves. I was present at this gathering and was given two keys for two different places of refuge for me and mine in case my own house should be threatened. I have taken passage on the Adraste. A little later I learned that Mr. Adams, President of the United States, has drawn up a list of Frenchmen to be sent out of the country, at the head of which list stand Volney, General Collot, and I. I was curious to know what Mr. Adams had against me. So I asked Mr. Langdon, Senator from New Hampshire, to enquire. The answer was: "Nothing in particular; but he is too French." Now, all the time Mr. Adams was Vice-President, he often came to my house, to my office, and to my shop. We even presented one another with our books. But I never saw him after he became President. Mr. Robert Liston, Minister Plenipotentiary of England, has very kindly provided me with a passport for me, my family, my goods, papers, maps, drawings, etc.

August 22, 1798.

On the occasion of a proposed ball to celebrate Washington's birthday, I asked Mr. John Vaughan, a merchant, my near neighbor, and a fellow member of the Philosophical Society, to get me one of the tickets which were on sale and which gave admittance to the ball. But he answered that as I was a storekeeper I could not claim such an honor. Whereupon, I answered: "Are you not aware of the fact that I was never more your equal than from the moment that I am nothing?" I did not get a ticket, and I did not see the ball.

One day I was talking in my shop with Mr. Swanwick, merchant and member of the House of Representatives, when the publisher, Matthew Carey, a man of intelligence, but an American of the United States, drew me aside and said with a troubled air: "Are you aware that you are speaking with Mr. Swanwick?" "Yes," I answered. "And you do not address him as Excellency, knowing that he belongs to the Lower House?" I replied: "When Mr. Swanwick, who knows that I was a member of the Constituent Assembly, which was at least ten times more important than your Congress, excellencies me, I will do the same, but not before."

A Philadelphia shoemaker for men would consider himself disgraced if he worked for children. The captain of the ship "Columbia" of New York told me that the mate never ate with him, because if they ate together, they would talk, and conversation leads to familiarity. And yet Baron Steuben took a son of John Adams, Vice-President of the United States, and the son of a bankrupt tailor, and gave them the same education. They are both lawyers at New York, and the son of the tailor shows the more sagacity.

To an American, without exception, the surest sign of superiority lies in the possession of a carriage. In this matter, the women especially show a desire that borders on delirium. A woman owning a carriage is perfectly certain that if another woman has no carriage the latter will not be considered her equal. Consequently, private carriages are rather numerous. But they are not very comfortable, because most of them are open in front, like the stages. In Philadelphia there are 600 two-wheeled carriages and 400 four-wheeled, besides 300 carts and wagons for transporting purposes.

There is an organization to bring about the abolition of slavery. But the idea makes very slow progress, as public opinion is more opposed than favorable to it.

August 24, 1798.

A word concerning the ceremonial attending the opening of the sessions of Congress. When the two chambers have attained the number required by the Constitution, the President is informed of the fact, and he then states on what day he will present himself. When that day arrives, both houses meet in the hall of the House of Representatives, the presiding officer of the Senate sitting on the right and the Speaker of the House of Representatives on the left. The Senators come in in a body, and then the hall of the Representatives becomes the Congress. The Senators take seats on the floor of the House. When the Senate appears, the Representatives rise, and the sergeant-at-arms advances from the door to the interior with the mace. It is ordinarily noon when Washington appears, seated alone in a coach drawn by four horses. His three domestics and coachman are in white livery with red cuffs and collars. In front of the coach march seven constables with white rods, preceded by fourteen policemen. When the President enters, everybody rises. He then sits down in the Speaker's chair, but rises in a moment, and goes and sits between the two presiding officers, but on the highest step. Then, having bowed, he delivers his address standing, the whole Congress also standing. The foreign Ministers are seated in chairs on Washington's right, but on the floor of the House. They keep their seats during the address. When finished, Washington hands a copy of his address to each of the presiding officers, quits the hall, and returns to his residence, escorted as he came. Washington is dressed in black, wearing a furbished hat and a sword, and carrying a wig-bag. Neither he nor any of the others put on their hats during the ceremony. He was applauded neither in coming nor in going. The silence which reigned in the public galleries of the Congress is worthy of the greatest praise.

THEODORE STANTON.

Paris, July 1.

TO THE EDITOR OF THE NATION:

SIR: Mr. Theodore Stanton's letter has proved very interesting to me, for I am glad to find some one else who justly appreciates Moreau de Saint-Méry, and who has found delight in reading the unpublished record of his sojourn in America.

The first two paragraphs of the letter require a word of explanation from me. Mr. Stanton very naturally inferred from the short notice in the *Nation* of May 2 regarding my paper read before the American Philosophical Society on April 18, that I was posing as the discoverer of the Diary. He could have made no such inference, however, if he had seen the full report of my paper, which I prepared myself at the request of the American Philosophical Society, and which appeared in the account of the proceedings by Professor Goodspeed in *Science* of May 17, and in the Philadelphia dailies of April 18 and 19. In that report the following words were employed: "Mr. Mims told the story of his good fortune in finding the Diary in the Colonial Archives at Paris, where it had lain covered with dust, all but unnoticed and forgotten, for three generations."

It will be seen that the words "all but unnoticed and forgotten" found no place in the short notice in the *Nation*. They represent, however, an acknowledgment which I made in my paper of the fact that at least three persons had seen the Diary before me, and that two of them had already published extracts from it. The reprints of my paper, which are in press and about ready for distribution, record the fact that Pichot in his "Souvenirs Intimes de Talleyrand," published in 1870, printed a most interesting passage from the Diary concerning the intimate relations between Talleyrand and Moreau at Philadelphia, and that this passage has been quoted by Lollée and Lacombe in their recent biographies of the famous diplomat. Reference is also made to a very interesting article in *La Revue* of 1905, on Moreau's sojourn at Philadelphia, written by Victor Tantet and based on the Diary.

This means of course that I have in no sense posed as the discoverer of the Diary. I was, to be sure, ignorant of the fact that Mr. Henry Adams and Mr. Stanton had seen the manuscript, and I think Mr. Stanton's letter explains, if it does not justify, my ignorance. I shall be very glad to profit from the information contained in the letter, and make due acknowledgment of it in my introduction to the edition of the Diary which I am preparing for publication at the Yale University Press. The copy which the Carnegie Institution has just had made was prepared for me, and at my own initiative. If Mr. Stanton will send me his address I shall be pleased to mail him a copy of the text when it is ready for distribution. I am very glad that my paper has furnished the occasion for the publication of his excellent translation of some most interesting extracts.

STEWART L. MIMS.

Yale University, July 12.

THE PANTHEON IN ROME.

TO THE EDITOR OF THE NATION:

SIR: Will someone kindly tell me if the name of the Pantheon in Rome did not originally mean the "All Divine" rather than "Of All the Gods"? Was it not dedicated by Agrippa to the gods of the gens Julia, rather than to all the Olympians? If so, when, and how, came about the change from the earlier meaning? A. R. W.

New Bedford, Mass., July 15.

Literature

THE DOCTRINE OF THE SOUL.

Body and Mind: A History and a Defence of Animism. By William McDougall, M.B. New York: The Macmillan Co. $2.75 net.

The word animism found in the subtitle of Dr. McDougall's present work is, as he says, "frequently used by contemporary writers to denote what is more properly called primitive animism, or primitive anthropomorphism, namely, the belief that all natural objects which seem to exert any power or influence are moved or animated by 'spirits,' or intelligent purposive beings." But this is not the original application of the word, and our author chooses to revert to its more proper meaning, using it as the best term for the view "that all, or some, of those manifestations of life and mind which distinguish the living man from the corpse, and from inorganic bodies, are due to the operation within him of something which is of a nature different from that of the body, an animating principle generally, but not necessarily or always conceived as an immaterial and individual being or soul." This, the doctrine of the soul, is the real subject of the book.

"I hold," says Dr. McDougall in his Preface, "that men of science ought to make intelligible to the general public the course and issue of scientific discussions upon the wider questions to which their researches are directed." Recent attempts in this direction have not been eminently successful in dealing thus with psychological and philosophical problems, and it is a gratification, therefore, to find that in this case the pressure of this sense of obligation has led to the writing of so worthy a book. This, however, will not surprise those who have followed Dr. McDougall's career; for he has already won laurels, not only as a neurologist, but also more lately as a psychologist; and no English writer is better equipped by temperament or training for the task undertaken. Nevertheless, it is not at all certain that he has succeeded in this effort to present an argument that shall be fully "intelligible to the general public." His opening historical chapters are not easy reading; and the same must be said of his excellent studies of the physiological, psychological, and philosophical objections, which have led, as he acknowledges, to the very widespread rejection of the animistic hypothesis by the modern world. The plain man will thus probably find the first half of the book too difficult to follow, and will be tempted to pass over lightly the critical matter there treated, while accepting gratefully the closing arguments favorable to animism with which he is likely to find himself in sympathy.

Adopting the method of the trained scientist, our author in the first six chapters makes a careful study of the rise and development of the doctrine under consideration: this historical survey being followed by four chapters in which he states with great care the case in opposition to the view which in the end he is to support; presenting the adverse arguments, and developing their strength, with a fairness that is truly admirable when one considers the final drift of his thought. He then proceeds to examine the weaknesses of these adverse arguments, and the difficulties connected with the abandonment of the conception of the soul; and finding these weaknesses and difficulties sufficiently formidable to lead him to refuse to join the mass of his fellow-scientists in rejecting the animistic doctrine, he feels himself warranted in choosing to cling to the traditional view, which appeals to his inner nature, notwithstanding its acknowledged perplexities and obscurities.

Apart from some details to be referred to below, there is no just ground for any substantial disagreement with the author until we reach his final step; but here we must demur. Although he has not hesitated to face the unanswered difficulties connected with the conception of the soul, yet one feels that he tends to overemphasize the cogency of those connected with the opposition. His argument appears at most to warrant a suspension of judgment, rather than the positive advocacy of the animistic hypothesis with which the book closes: for it cannot be granted, even on pragmatic grounds, that he is justified, as he thinks he is, in "willing to believe" in a concept which he acknowledges to be obscure and involved with objections, unless he can present sound reasons for his belief that the rejection of the conception of a soul must necessarily involve the unfortunate moral results he fears. But this he fails to do.

Nor is he justified in asserting that his final interpretation of the meaning of this concept of the soul is fitted to meet the needs of the people, the utter demoralization of whose lives he foresees if belief in this concept is weakened. The soul, he tells us in his closing chapter, "is a being that possesses, or is, the sum of definite capacities for psychical activity, and psycho-physical interaction, of which the most fundamental are (1) the capacity of producing, in response to certain physical stimuli, . . . the whole range of sensation qualities, in their whole range of intensities; (2) the capacity of responding to certain sensation-complexes with the production of meanings; . . . (3) the capacity of responding to these sensations and these meanings with feeling and conation or effort, under the spur of which further meanings may be brought to consciousness in accordance with the laws of similars and of reasoning; (4) the capacity of reacting upon the brain processes to modify their course in a way that we cannot clearly define, but which we may provisionally conceive as a process of guidance by which streams of nervous energy may be concentrated in a way that antagonizes the tendency of all physical energy to dissipation and degradation."

"The popular view," he continues, "has always held that all 'memory,' all mental retention and reproduction, all mental and moral growth, is rooted in the soul; that, in short, the soul is the bearer of all that is essential to the developed personality of each man." But this view, he agrees, "cannot be reconciled with the fact that the makeup of human personality includes many habits that are unquestionably rooted in the structure of the nervous system. It conflicts also with the large mass of evidence which indicates the dependence of all the sensory content of consciousness . . . on the integrity of the brain." He therefore accepts an hypothesis of dual conditions of memory, and under this view holds (p. 372) that, although "all habits belong to the body, the soul does undergo a real development, an enrichment of its capacities"; and if it survives death, "carries with it some large part of that which it has gained by intellectual and moral effort": and that, although it is "impossible to suppose the surviving soul would enjoy the exercise of thought of the kind with which alone we are familiar, yet it is not inconceivable that it might find conditions that would stimulate it to imageless thought, . . . or might find under other conditions (possibly in association with some other bodily organism) a sphere for the application and actualization of the capacities developed in it during its life in the body."

It is not easy to believe that faith in the existence of souls of the nature thus described by our author would carry with it the comfort and moral stimulus which he feels it so important to retain. While in a measure it may meet (p. 371) "the mere personal dislike of the prospect of extinction," it can scarcely give satisfaction to the "promptings of personal affection." It surely points to no way by which "the injustices of this life may be . . . made good" in another world; nor does it obviously strengthen "the hope that those highest products of evolution, the personalities built up by long sustained moral and intellectual effort, shall not wholly pass away at the death of the body." Clearly the nature of the individual personalities which his conception suggests is too diverse from that of the personalities of living men to interest the plain man, whose desires and hopes, as our author acknowledges, will only be satisfied by the survival of a soul that has not only something "of that which distinguishes one personality from another," and "marks of the experiences it has undergone in its embodied life"; but that also "enjoys . . . continuity of personal memory" of a type familiar to us all in every-day life.

The critical tone of these remarks must not give the reader the impression that the writer of this review is unsympathetic with these desires and hopes of the plain man. The best of us are plain men during a large part of our waking hours, and as such must share the feelings and aspirations of our fellows. But we must not lose sight of the fact that we are here dealing, not with desires and hopes, nor even with faith; but with an attempt to gain clarity of thought. The doctrine of the existence of a soul which endures after death has certainly carried with it many great benefits to struggling humanity, and is not to be lightly discarded because of the doubts raised by modern science. But surely even one who believes most fully that the concept of immortality embodies a great truth, will agree that these doubts, which our author's own statements must emphasize, indicate that the truth which is so bound up with these benefits is ill-expressed in the animistic concept. It is true indeed that doubt does not necessarily indicate the total invalidity of the concept it leads us to distrust; it may, and usually does, mean no more than that the doubted concept gives us a distorted image of the truth. But where doubts are so well founded as our author himself shows them to be in this case, their significance cannot be overlooked; and if we believe that the doubted concept embodies a vital truth we must agree that there is call for its re-expression. That such a re-expression of the truth which is ill expressed by the animistic hypothesis will be forthcoming at no very distant day is the firm conviction of the present writer; and he is inclined to feel that a thinker of the ability of our author, instead of clinging to the old concept by an effort of will, should have felt himself bound to look for such re-expression.

Passing from this general view, we note certain details of Dr. McDougall's argument which are not thoroughly convincing. He properly gives weight to the difficulties connected with the hypothesis of "parallelism" as devised and developed by the Associationists, who accepted uncritically the conception of mind as an aggregate of psychic atoms. But this atomistic view is now-a-days defended by few psychologists, being generally displaced by the conception of mind as a psychic system; and our author's objections to the parallelism of the atomists do not appear to apply to the hypothesis of mental and physical correspondences within correlated physical and mental systems, in some of the forms in which it has been presented.

Dr. McDougall quite properly emphasizes the difficulties attending the acceptance of the mechanistic explanation of biological phenomena, especially those relating to the existence of variation; but we surely are not thereby forced to assume, as he implies, that the explanation of these phenomena can only be found in the disturbance of mechanism by a mysterious psychic force, which at best does not appear to be appreciably like consciousness as we know it, and whose mode of application can only be pictured in terms of somewhat wild hypotheses (cf. pp. 211ff).

Dr. McDougall also in the course of his argument (chaps. xxi to xxiv) makes much of the breadth of psychic life that, after all our studies in psycho-physics, remains altogether inexplicable in terms of brain activity. This, however, does not take from the fact that each step in our knowledge of the nervous system gives us new data corroborative of the view that all of our conscious experiences are correlated with special situations or changes in the physical system: rather is it a most welcome acknowledgment that our knowledge of consciousness given in our interpretation of introspection far surpasses in breadth our knowledge of the nature of its physical basis. Such an acknowledgment by one of our foremost neurologists is significant as an indication that we are awakening from the spell under which we have been placed by the psycho-physicists, and are ready again to continue the study of psychology from which for some decades they have diverted our attention. We shall return to this task, however, with glad acknowledgment of the value of the work done by the exponents of the misnamed "New Psychology," so far as it goes; and ready to avail ourselves of what is valuable to our purpose in the rather meagre data they have been able to gather.

These critical observations must not lead the reader to underestimate the value of the book Dr. McDougall has given us. Differing from the author, as we do, in relation to certain technical points in his exposition, and denying, as we must, the legitimacy of his final conclusions, we nevertheless recognize fully the value of his achievement. It is just because of this value that the book is worthy of careful analysis and thorough study: and we cannot close this review without referring again with admiration to the fair-mindedness and intellectual rectitude of its author, nor without repetition of the conviction that he has given us a most enlightening contribution to the very difficult subject he has undertaken to discuss.

CURRENT FICTION.

The Dewpond. By Charles Marriott. New York: John Lane Co.

This is a bewilderingly clever novel. Like the work of one or two of the masters of modern fiction—who shall be nameless so that the reader may discover likenesses for himself—the book deals with seemingly insignificant episodes in a breathless tone of portent which keeps one a-shiver from the first page to the last. Like Gilbert's verses about the naughty boy, the damning catalogue of crime, made up mostly of no crimes, but of harmless states of mind, mounts higher and higher, till, behold! Nemesis is upon us. To make matters more complex, the story is told by a woman observer of the whole matter, and to the progress of un-events are added the ever-womanly apprehensive habit and continual cross-references to past and future and potential tenses.

The hero being a writer of novels, and the narrator a small compiling author, there is a great deal about the art of book-making. At times, indeed, there is temptation to think of the story as a severe lecture to novel-readers. For much satire is lavished on the unfortunate Mr. Saintsbury's crude notions as to "how the creative mind gets its material"; and on the great public which is "extraordinarily stupid about fact in fiction." There is throughout a vein of sub-condemnation for all who do not share the narrator's views on politics, art, literature, morals, and the discretions of life. One reads in a guilty fear of being detected in a "usual" attitude towards anything. The characters are drawn with marvellous subtlety. No types they, but men and women bristling with personality, unexpected themselves, and doing always the unexpected, but as brightly visible as will o' the wisps. The plot deals with the half-unconscious discontent of a wife with her husband, all whose "passions and preferences were intellectual." He "had been young, but he had never had youth"; he acquired facts by reason and observation, but he could not see. When Hilda had become the mother of little Flora, her destiny seemed fulfilled so far as her husband was concerned. The youthful unimportance to which he still relegated her after coming to the conclusion that she "was not quite big enough to play the part of a political hostess" became to her a half-acknowledged grievance. Unluckily, an author whom she had unconsciously inspired happened along at the moment when her "unawakened" condition was beginning to tell upon her. Incidentally, this is where the usual person, in the character of worm, turns. The "unawakened woman" of story grows tiresome. Why awaken her? Let her sleep. Hilda's case was especially difficult because it was "marriage and motherhood" which "had given her at least the knowledge" that she lacked something. Though she hardly knew it, "she was being wasted; kept from her full duties and responsibilities."

Never, however, was the triangular situation developed with more reserve and discretion, and with less of intention. Pictures and politics, not passion, welded the friendship which led to the dénouement. If the time came when the principals "were hardly in their own hands," it came because they were not "let alone." Their most discriminating friend saw that "the friendship mattered, while except for social convenience and Flora, the marriage did not matter in the least." To quarrel with the catastrophe of such a story would be folly, yet a query will persist, Was it inevitable? and is not the narrator's satisfaction in the "awakening" of Hilda rather an anti-climax to her professed dread of it? The scenes by the way are no less subtly presented than the unfolding of the drama. From studio parties to political dinners there is an orgy of brilliancy dimmed only by the tendency of the un-obvious to become obvious. The plain reader flounders when told that Hilda was "Flemish rather than Florentine, with the clear, square drawing that you get in a white tulip." Blinks when she asks, "Yes, but isn't it part of the blessing of knowing what you want that you're not meant to have?" To Mr. Saintsbury this "would have seemed sheer nonsense," but, of course, we others know better.

The White Waterfall. By James Francis Dwyer. New York: Doubleday, Page & Co.

Polynesia is inexhaustible ground for adventure. Each new island may have been hitherto unvisited by the story-writer. Maoris, Kanakas, and Fijians may plausibly assemble, lending a hand, friendly or otherwise, to English and Californian explorers. This is what happens in "The White Waterfall." A San Franciscan scientist, with profound interest in ancient Polynesian skulls, is lured to a voyage of investigation by a wretch whom it were flattery to call a devil. The professor's two daughters accompany him, naturally. The leading scoundrel and a villanous English ship's captain are offset by the owner's gallant nephew and an intrepid mate, while brown and black make up the crew. Thus through storm and stress they come to the Isle of Tears and have amazing adventures among amazing surroundings which are not all invented properties, but are warranted by the author to have analogies in real South Sea Island history. And of the Dance of the Centipede and the Vermilion Pit and the Stone Sacrificial Altar with the movable slab, the reader will not let go till the White Waterfall has been found, the Maori's song fulfilled, and through fearsome scenes a happy ending procured for the deserving few. The story leaps along seductively and, if not in the classic language of Defoe, is told in an agile fashion with no detaining superfluities.

The Blue Wall. By Richard Washburn Child. Boston: Houghton Mifflin Co.

Many readers of "Jim Hands" and "The Man in the Shadow" will be disappointed in Mr. Child's latest book. In the earlier stories the great merit was the sympathetic presentation of attractive characters; in "The Blue Wall" character is sacrificed to story, and the story is not worth the sacrifice. Julianna Colfax, a charming girl, supposedly the daughter of a fine old New England judge, discovers after his death that she is really a sort of changeling, the daughter of a drunkard murderer. The plot turns on the effect which this supposed fact has on her life. Clearly, here is a chance for an interesting study in character. But the author chooses to neglect this opportunity, and to make an artificial mystery out of his heroine. To heighten curiosity, he devises a series of disquieting events; he throws out numerous dark suggestions and misleading clues. Apparently, we are to have a detective story. The doctor, who is the principal narrator, gathers his facts from four subordinate narratives, and the central situation is not disclosed till past the middle of the book. To preserve the mystery, the heroine is kept in the background until almost the end, when, of course, she supplies the solution. Meanwhile, like Chaucer's Custance in the "Man of Law's Tale," she displays a taciturnity explicable only on the ground that without it there would be no story. To balance this unnatural reserve, her husband shows an equally abnormal loquacity; at a time when he is half-distracted with anxiety about his wife's condition, he relates with much dramatic skill the strange course of his courtship and marriage, at a length of more than a hundred pages. Finally, the theory that Julianna is the drunkard's daughter is found to rest solely on the testimony of an untrustworthy old servant, who disappears after declaring that, for reasons of her own, she has fabricated the whole thing. It is a sort of "The Lady or the Tiger?" dilemma; was Julianna daughter to the judge or to the murderer, and was the change in her due to her heredity or to her mistaken belief about it? Mr. Child's very sensible answer to these question is, "Who cares?"

MILITARY FINANCE.

Modern Wars and War Taxes: A Manual of Military Finance. By W. R. Lawson. Edinburgh: William Blackwood & Sons.

Though this book has some very grave defects, it is nevertheless an important contribution to one of the greatest discussions of the day. Mr. Lawson says that Norman Angell's "The Great Illusion" is too refined and obscure an argument to have much weight with the democratic assemblies who will be the chief war-makers of the future. No one will say that of his own argument. The democratic assemblies will not find it too refined, and if it is obscure, they will not discover the fact. He seems to fancy himself at some Donnybrook Fair intent on cracking a head wherever he sees one. Sir Robert Walpole, Adam Smith, Cobden, Gladstone, and Lloyd George all feel the weight of his cudgel. His excursions into economics sometimes land him in very peculiar situations, and his philosophy of history might with some truth exclaim, "I am fearfully and wonderfully made."

Yet he has written a timely, readable, and on the whole instructive book. He does not err in saying that there does not exist in the English language a textbook of military finance, and he deserves more than slight thanks for attempting to supply a great need. In view of the pioneer character of his effort, and of the stress of political emotion amid which it has been accomplished, it is not surprising that this need has not in every particular been successfully met. It is quite obvious that our author is addressing with quickened pulse an audience keyed to a high pitch. Much that he says is fantastic, irrelevant, or even absurd. Nevertheless, there is an irreducible minimum of sound sense and prophetic warning that entitles this book to wide and careful reading.

Andrew Carnegie and Edwin Ginn will probably dissent from the declaration that armaments are not to be put down by pacific crusades. They rest, we are told, on too broad a foundation for that. They should be studied as one of the fundamental problems of modern civilization. Critics who would judge them fairly and intelligently must put themselves in the place of the responsible rulers, who, one and all, regard them as a necessary evil. A moderate amount of historical knowledge, declares Mr. Lawson, will suggest various rational motives for even a peace-loving state to hold it a duty to be well armed "in unsettled times like these."

The legitimate rivalry of nations, for example, was never so keen as at present. Another motive is found in the fact that all states, and European states in particular, are more exposed than ever before to the formation of new combinations which may threaten their security and their international rights. Thirdly, it must be remembered that there is still a large leaven of brute force in the world, which breaks out ever and anon, even in comparatively cultured communities. Nor should we ignore the fact that the principle of nationality is still rampant in many countries, as one can see from the Italian raid on Tripoli. And, lastly, racial questions of supreme gravity are being brought to the front, China, for example, being alive with them. Gentlemen may cry "Peace, peace!" but evidently there is no peace. Mr. Lawson's contention appears to be that the world is confronted with a condition rather than a theory, and, that being the case, it is high time to put armaments on a sound economic foundation.

The parts of his book which undoubtedly are to his mind the most valuable will strike many of his readers as the most negligible. Economics is not his strong point. He should have known better than to declare, in his chapter on Food and Finance, that, "with all respect for Adam Smith and his Socialistic perverters of the present day, labor is not the sole source of wealth. The means of keeping labor in good condition and fit for work—in other words, an adequate stock of food—is as much wealth as labor itself." Statements so ill-considered as this are calculated to weaken his influence when he talks on subjects with which he is more conversant than he is with economics. His comparisons of the financial strength of the chief Powers are a more respectable accomplishment in this particular domain, yet they fall very far short of being satisfactory. They strike one as being about of a piece with most of the statistical compilations got together in Great Britain in times of political agitation.

Mr. Lawson is over-fond of rhetoric. "There are," he says, "two classes of statesmen in England, as in most other countries. One can see very clearly things under his nose, and form very sensible but superficial opinions about them. He will not, however, look half an inch beyond his nose, either right or left, before or behind. This was Mr. Cobden's favorite method of argument." Here we have Mr. Lawson at his mildest. He is a bit more vigorous when he exclaims, "When there was no Chatham or Pitt or Canning or Palmerston or Beaconsfield available, we have had to get on as best we could with Foreign Ministers who were more familiar with catch-words than with concordats or protocols, and more at home with parliamentary platitudes than with diplomatic precedents. On the whole, they have been wonderfully lucky in keeping out of serious scrapes." He is perhaps most picturesque when he declares that "everybody [the Ministry and Parliament] concerned in burking the report of the Royal Commission of 1903 on Food and Raw Material Supply in War runs a risk of summary hanging, should the British navy ever lose command of the sea"; or in his reference to "the craven and corrupt administration of Sir Robert Walpole."

Interspersed, however, with much that will make economists stare and philosophers rub their eyes, there is a great amount of shrewd and pithy comment on the course of nations, particularly the British nation—enough, in fact, to give Mr. Lawson's latest publication a solid *raison d'être*. With all its shortcomings, the book has the great merit of presenting one of the most momentous problems of this or of any age in a manner to excite the thought of both large and small minds.

Japan of the Japanese. By Joseph H. Longford. New York: Charles Scribner's Sons. $1.50 net.

This is a contribution to the Countries and Peoples series by the professor of Japanese at King's College, London. His long residence in the Island Empire and admirable training in the British consular service have prepared him to give the public a thoroughly trustworthy book; and in all essential qualities this compendium is to be highly recommended. The historical chapters dealing with the growth of feudalism and the *samurai* class are especially valuable. For the ethnology, a subject still in the realm of hypothesis, it is doubtful whether the writer is justified in ignoring the supposition put forward in Murdoch's recent "History of Japan," that the ruling element, represented by the Imperial family and the Fujiwaras, ought to be referred to a source other than the continent of Asia, probably to the South Seas, via Kyushu. This origin might explain the fondness of the Satsuma youth for the sea, for "it was at one time said that the navy was the exclusive preserve of the representatives of the Satsuma clan" (p. 234). Particularly interesting is the account of the development of the spy system in the nation, so that to-day "what may be euphemistically termed the secret service of Japan is by a long way the most highly organized in the world. No instrument is too humble for it" (p. 74). The story of the plucky fights of the embryo navy of Japan at Miako and Hakodate, when Admiral Enomoto so distinguished himself, is excellent reading, although the map ought to have shown Miako harbor. The chapters on the Press and Criminal and Civil Law are also valuable. The writer does even justice to the national characteristics. While he allows that merchants find much to complain of in the commercial habits of the Japanese trader, not being himself a merchant, he "learned in Japan to trust all with whom he had business dealings, both Japanese and Europeans, and on his final return to England, he regulated his life on the same principle, with the result that he found more occasion to regret it in ten years' life in England than he did in thirty years in Japan."

There are, however, grave omissions in the book. No light whatever is thrown on the subject of missions, Catholic or Protestant, nor the contributions made by Christianity to education. In fact, the whole subject of education is equally neglected. Not one of the topics, Education, Schools, Universities, appears in the Index. This defect ought surely to be remedied at once, seeing that the writer is now professor in a university. An odd effect is produced upon an American in reading page 150, where the subject is the rapid spread of the English language in Japan. All the credit for the popularity of English is attributed to the influence of Great Britain, "which held, in the thoughts of all Japanese, a position which was immeasurably above that of all other nations of the West." This palpable unfairness crops up again in the account given of early railway construction, at pages 252-3. While the first two railways were built by English engineers, the third was not the Kioto-Otsu extension of the Kobe-Osaka line, but a railway built up in Hokkaido by Gen. U. S. Crawford between Otarunai and Sapporo, after the American fashion; this the writer fails to mention.

The author wields a somewhat clumsy style, revealed early in the Preface, which contains several long and inept sentences. At page 25 is a good Irish "bull," when the "prototype of the (Japanese) coolie" is found "in the Irish jarvey." On page 149 occurs the misstatement that the word "Hanashi is converted for euphony into Banashi when yoked with another word"; he means that where a word like *hanashi* follows another word, so as to bring h between two vowels, the h is changed into b. There is no change, for instance, in such a compound as Hanashi-yama. There are but few typal errors, although "Iyemitsu" appears twice on one page (221) as "Iyemitou." On the same page a chapter on the Mercantile Marine is referred to, and there is no such chapter; evidently the chapter (xiv) on Communications is meant.

Except for these minor defects, the book is one of singular merit. Handy in form, sound in its information, kindly and judicial in its attitude to the Japanese, and full of many vivifying side-lights on the people and their administration, it deserves a hearty welcome.

Reform of Legal Procedure. By Moorfield Storey. New Haven: Yale University Press. $1.35 net.

There is virtual unanimity among those who are most familiar with the subject, that in the administration of the law America lags behind the rest of the civilized world, and that our procedure, both in civil and criminal cases, is inefficient and a reproach to the nation. There is also substantial agreement as to what reforms are necessary to put an end to a state of affairs which, as was said by Professor Vance, the Dean of George Washington University, is "a stench in the nostrils of the nations." It could hardly be expected, therefore, that Mr. Storey, in the series of lectures delivered by him before the Law School of Yale University in 1911, and now published, would throw entirely new light on the subject. His lectures are valuable, however, because they are temperate in tone, free from sensational accusations, and are the work of a man who speaks with authority, owing to his high standing at the bar and his practical experience.

The first remedy he proposes is the reduction of litigation by legislation, especially in regard to tort claims, which now encumber the dockets of our courts. He is in favor of substituting for the present system the payment of a fixed sum in case of injury suffered in the course of the servant's employment, whether caused by negligence or not, and of extending this rule, not only to industrial accidents, but also to injuries suffered by passengers on railways and other public conveyances.

While he believes that the greater part of the expense should be paid by the employers or by mutual insurance companies to be formed by them, he holds that there is no reason why the State should not contribute, if necessary, and also why it should not, by virtue of its police power, stop the business of an employer until he complies with the precautions which the mutual insurance companies may require. If any provision of our Constitution stands in the way, the difficulty must be removed by amendment.

Where the author advocates that cases should be tried on their merits, without regard to technicalities or the restriction of the referee system to its narrowest limits, few will disagree with him, but some of the reforms he proposes in procedure in civil cases would seem not to go to the root of the matter. He recommends giving greater power to the judge in jury cases, allowing him not only to comment on the evidence, but to state his opinion on the merits of the case to the jury; and instead of having the jury give general verdicts, he would let them answer in all cases specific questions of fact. It is doubtful whether the latter practice would not lead to disagreement in cases in which under the present system a verdict is arrived at. In an accident case, for instance, a unanimous verdict for the defendant may be given, although some of the jurors are of the opinion that the defendant was negligent, while at the same time believing, perhaps contrary to the opinion of the majority, that the plaintiff was guilty of contributory negligence. Under the system advocated by the author a disagreement would be the result.

As to his suggestion that the presiding judge should receive greater power, doubtless the absurd restrictions of the power of the judge adopted by various States make a trial by jury a farce. But, on the other hand, in view of the fact that the jury know that the court has the power to set aside a verdict, if it deems it improper, a strong expression of opinion by the judge, not only on a particular piece of evidence or on the credibility of the witness, but on the merits of the case as a whole, might virtually amount to a coercion of the jury.

If the low opinion which the author expresses as to the calibre and intellect of our juries is well founded; if it is true that "what we do in practice, where we let a jury decide without the help of the judge," is to take "twelve men at random from a crowd" who are "entirely without experience in the work which they are asked to do," the obvious remedy is to abolish trial by jury, at least in civil cases, and let the judge decide the facts as is done in admiralty and equity cases. Here the author lacks the courage of his convictions. He is more radical in his proposed reform of criminal procedure, for he advocates the abolition of the time-honored rule that no one is bound to incriminate himself, and is in favor of the adoption, with some modifications, of the continental system. His arguments in support of this proposal seem cogent and convincing.

Notes

Among the novels to be issued by Duffield & Co. this summer or in the autumn are: a translation, by Miss Francis Douglas, of Blasco Ibanez's "Sónnica"; "The Gate of Horn," by Beulah Marie Dix, and "Marriage," by H. G. Wells.

Little, Brown & Co. have in press: "The Court of St. Simon," a novel by Anthony Partridge; "The Gift of Abou Hassan," by Francis Perry Elliott, and "Buddie at Gray Buttes," by Anna Chapin Ray.

"The Wind Before the Dawn," by Dell H. Munger, which Doubleday, Page & Co. will bring out next month, deals with the economic relation of husband and wife in Kansas.

Lemcke & Buechner announce a Teubner text—"Epitome Thesavri Latini adornavit et auxiliantibus complvribvs edidit Fr. Vollmer." The work, which will be issued in four handy volumes, is planned for the use of those students to whom the twelve volumes of the "Thesavrvs Lingvæ Latinæ" are not readily accessible. This latter work is, of course, the basis of the one shortly to appear.

The Methodist Book Concern of Cincinnati promises for next month: "Egypt to Canaan, or Lectures on the Spiritual Meanings of Exodus," by A. H. Tuttle; "The Preacher and the Modern Mind," by George Jackson; "Crises in the Early Church," by John Alfred Faulkner; "The Apostles Creed; An Examination of its History, and an Exposition of its Contents," by Henry Wheeler; "The Christian View of the Old Testament," by Frederick Carl Eiselen, and "Historical Setting of the Early Gospel," by Thomas C. Hall.

The Florence Summer University has issued its programme for the season of 1912, which begins on August 1 and closes September 15. Lectures will be given in the mornings, while the afternoons will usually be given over to visiting the galleries, museums, churches, etc. On Saturdays personally conducted excursions, some of them lasting two days, will be made to the regions outside the city. The lectures will be delivered in Italian in the large hall of the "Circolo filologico," 4, Via Tornabuoni. There will be courses in Italian literature, Florentine history, and Italian art.

"Neighbourhood" (Dutton), by Ticknor Edwardes, is a chronicle of village life in the English Midlands. The sentimental reminiscences of the elders, the enumeration of the birds, the making of dew ponds—such are some of the features. A personal humor and pathos equally restrained give a sort of quality to a book of very familiar type, and excellent of its kind.

There is much of Old World romance in the plain tale of Philipse Manor Hall at

Yonkers, N. Y., as told by Edward Hagaman Hall in a small volume published by the American Scenic and Historic Preservation Society of New York, which is now the legal custodian of the place. On June 12, 1693, a royal charter was granted in the name of William and Mary, erecting the possessions of Frederick Philipse (the surname may be spelled almost as one chooses), "Into a Lordship or Manor of Philipsborough." This act gave the owner and his new wife the titles of Lord and Lady, respectively, and conferred upon the family residence the designation of the Manor House. At this time his lands reached from the Croton River to lower Yonkers, and in about six months were extended by the purchase of what is now Van Cortlandt Park to Spuyten Duyvil Creek, a total distance of twenty-two miles. Life went smoothly, and even gayly, for the first and second Lords of Philipse Manor, and for more than twenty years for the third. No less a personage than Col. George Washington bore testimony to the charm of Mary Philipse, sister of the last-named Lord, although the depth of his attachment to her is uncertain. But evil days came at last, for the third Lord of the Manor threw in his lot with his King, and attainder and confiscation followed. After being the prey of both forces because of its situation in the neutral ground, the vast estate was broken up, and the Manor House was turned into a city hall, from which service it has been rescued to occupy an honored position as one of our historic monuments. Dr. Hall is a cautious, but by no means dull, chronicler of the Manor's interesting past. The value of his book is enhanced by a dozen half-tones, the first being a reproduction of "A View of Phillipp's Manor" in 1784.

If the present Speaker of the House of Representatives and late candidate for the nomination of his party for the Presidency has ever made a mistake, it is not recorded in the pages of W. L. Webb's "Champ Clark" (Neale). There this "really great orator," whom no one can hear without being "entertained and sometimes instructed," marches from glory to glory. He has not only read the Declaration of Independence, the Constitution, and Washington's Farewell Address, but he has also assimilated them. Once he even committed them to memory. "Now he no longer recalls their phraseology, because he has made it his own, and thinks and speaks it. Occasionally, just by way of variety, he speaks the language of Patrick Henry, but even that he does unconsciously." It is decidedly agreeable to learn that theoretically "our Congress is composed of the ablest men in the nation, and practically the House is not far below the theoretical standard," although this leaves one in painful doubt over the Senate. The book is apparently a serious one, but it would be unkind to treat it so.

The Class of 1907 of Bryn Mawr has put into a small volume the addresses delivered at the meeting at Greenwich House, October 30, 1911, in memory of Carola Woerishoffer, together with resolutions of various bodies and newspaper editorials. Ida M. Tarbell contributes an introduction which is really a sketch of Miss Woerishoffer's life. The charm and value of the book is its concreteness. In its pages one becomes acquainted with the personality and achievement of a very unusual spirit. It is frankly panegyric, but every word of it was deserved. One can hardly grow tired of reading, for instance, how this youthful philanthropist, appearing in court to give bail for arrested shirtwaist strikers, for thirteen weeks kept the attention of the reporters turned from herself to the strike, by giving them a stream of "stories" about it, which she threatened to stop if they printed her name.

In tone, Warrington Dawson's "Le Nègre aux Etats-Unis" (Paris: Librairie Oriental & Américaine) is strongly Southern, which is not surprising from a native of Charleston, S. C. Sometimes his partisanship leads him into absurdities, as when he explains that the Southern States were called slave States "through hatred and scorn." Especially interesting are two chapters on the increasing gravity of the crimes committed by the negro as he detaches himself more and more from the whites. Mr. Dawson distinguishes between theft and the petty "taking" of food, which is a direct legacy from the day when the negro looked to "Massa" for everything. The more serious crimes, particularly those which provoke lynching, the author attributes in large part to the growing use of alcohol and drugs. The cure for mob law he finds in the strengthening and rigorous enforcement of laws concerning those who practice it, and their victims as well. He sees no "solution" of the general problem beyond a maintenance of the status quo, in which the two races remain neighbors and yet strangers, and he puts the responsibility for such maintenance upon the negroes. The preface is by Paul Adam.

J. Howard B. Masterman's "History of the British Constitution" (Macmillan), a brief sketch for readers who already know something of English history, has been prepared, apparently, with special reference to the needs of the tutorial classes of the Workers' Educational League. Unlike most handbooks of this sort, the narrative has been carefully brought down to date.

Truman O. Douglass's "Pilgrims of Iowa" (Pilgrim Press) is a history of Congregationalism in a Western State. Mr. Douglass himself is in a position to know the subject, for he began his own ministry in 1868, only thirty years after the earliest Congregational missionary work in the State of Iowa; and he met personally most of the "patriarchs," as he calls them. Since that date he has been closely connected with the interests of Congregationalism and has long been secretary of the Local Home Missionary Society. The book itself, which is a glorification of the work of the church, is lacking in scientific spirit. The sources of information are, besides the author's memory, a few well-known books and the files of the *Home Missionary*. The story is told in a rather interesting fashion, and the first part, particularly, contains an excellent picture of the hardships of the frontier preachers. The author states that he has written with the "accuracy of a historian," but has "avoided scholastic forms and methods," which is another way of saying that he is not a trained historian.

"The Record of a City" (Macmillan), by George F. Kenngott, is an account of present social and industrial conditions in Lowell, Mass., and of the manner in which they have grown out of the simpler mill-town ways of three generations ago. Its maps and photographs and its straightforward recital of facts indicate the physical aspect of the city, and in particular reveal with no little vividness the sorts of habitation in which the operatives are housed. Nearly three hundred family budgets, in interesting detail, furnish evidence of the wage-earner's standard of living. A chapter on Health suffers from inexpert handling of statistical material; a chapter on Industrial Conditions, though not uninforming, fails to illuminate the study as it might have done had more attention been given to the manufacturers' problems and point of view. Social institutions, such as churches, clubs, and philanthropic organizations, and the prevailing recreations of the populace are inventoried in an attempt to give the book the comprehensive character of a "social survey." In so large an undertaking Dr. Kenngott's painstaking zeal achieves but uneven success. Yet he leaves with his reader a telling picture of the way in which economic pressure and the incoming of alien workers have changed the New England community life of the old Lowell. At first the manufacturing companies made paternal provisions for lodging their operatives decently, even primly, in corporation boarding houses. But gradually the ownership of the mills passed into the hands of absentees; the employees' natural desire for independence was sharpened by race-antipathies which more and more disturbed the congeniality of the former way of living; the boarding-houses were converted into tenements, owned by aggressive private landlords. Shifting for themselves, and under necessity of paying competitive rents, the New England workers yielded to the Irish, with their less exacting economic standards; the Irish gave way to the French Canadians; the French Canadians are losing ground to the Greeks. For relief from its present-day problems of crowding and poverty the city looks to the awakening of a new community spirit fitted to the needs of a changed industrial situation.

In two beautifully printed volumes "Concerning the Genesis of the Versions of the New Testament" (Quaritch), H. C. Hoskier supplements his edition of the purple and gold codex in Mr. Morgan's library by remarks suggested by the study of that gospel codex and of the allied questions. Of the remarks in Volume I the most striking are (1) that r^2 (Codex Usserianus II) is equivalent to *k* (Codex Bobiensis); and (2) that before the time of Tatian's Diatessaron there was in existence a triglot Graeco-Syriac-Latin text of the Gospels. Volume II is devoted to collations of *h*, the Book of Dimma, and the Book of Moling. The volumes are intended for experts in the textual criticism of the New Testament, but the lay reader may enjoy the racy style, and if he is sound in the faith, the sermonic tone of some of the criticisms.

In his "Social Evolution and Political Theory" (Columbia University Press; Lemcke & Buechner), containing the substance of eight lectures given on the Beer Foundation in Columbia University during April, 1911, Prof. Leonard T. Hobhouse addresses himself principally to the question, "What is progress?" His answer is interesting, since it gives a clearer exposition than can perhaps be found elsewhere of what may be termed a social theory of progress. According to Professor Hobhouse's view, progress does not consist essentially or even chiefly in the improvement of the racial stock, but in procuring harmony in the manifold developments of life. This harmony is chiefly the reflection of the growth of the social mind. The concluding chapters apply this conception of progress to the development of the state. Even the reader who is not interested in the philosophic question as to the nature of progress will find the book interesting. The chapter on The Value and Limitations of Eugenics is an acute and well-informed criticism of a programme which is ordinarily too vaguely conceived, and the chapter on Social Philosophy and Modern Problems is an exceedingly happy summary of recent English social legislation.

A comprehensive survey of England's dominions in the Caribbean is given by Algernon E. Aspinall, secretary of the West India Committee, in "The British West Indies" (Little, Brown). Mr. Aspinall touches on the historical side and discusses government administration, labor, tariffs, laws, and taxation. He describes the general aspect of the islands, their flora, fauna, and natural characteristics, but his chief interest lies in the industrial conditions and the efforts now being made to develop the remarkable and varied agricultural resources. It is obvious from his account that the islands are no longer in distress; in fact, are in process of regeneration. Mr. Aspinall writes hopefully about their future, believing that the opening of the Panama Canal will add materially to their wealth and importance. In discussing the possibility of federation of the West Indies, he says:

> There is no blinking at the fact that there are still many insular prejudices and petty jealousies to be overcome before the federation of the West Indies can be brought about, even if it be practicable. There must be, to begin with, a far better understanding among the residents in the various colonies. . . . Greater uniformity would add to the strength, prosperity, and influence of the West Indies. There is at present a lamentable lack of it . . . and this could be righted gradually without any political upheaval, and the meeting of an intercolonial conference at Barbadoes periodically, to consider how uniformity could be brought about in various directions, would prove of immense value.

The book is illustrated, and has a map.

One of the earliest socialistic attempts to realize communistic ideals by revolution was made by "Gracchus" Babeuf in Paris in the spring of 1796. The story of Babeuf's early privations, arrests, and imprisonments, of his deep-laid plot to overthrow the undemocratic plutocracy of the Directory, and of his tragic trial and death is now interestingly told in English by E. Belfort Bax ("The Last Episode of the French Revolution"; Small, Maynard & Co.). As in his volumes on the Peasant Revolt in Germany at the time of Luther, Mr. Bax writes rather as an interpreter for English readers of facts already well established than as a scholar throwing new light by original researches of his own. Here he relies mainly on the works of Advielle, Buonarroti, and Fleury, and on some of the newspapers of the period; the eleven volumes of pamphlets and papers in the British Museum relating to the Babeuf conspiracy, which might have afforded him, an Englishman, an excellent opportunity to add something really original to the history of this attempt at a socialistic revolution, he wholly ignores or neglects. Students of Socialism and the French Revolution will welcome, however, his translation of full extracts from Babeuf's programmes of reform, and from his correspondence with his friends. Mr. Bax's sympathy, of course, is strongly on the side of this martyr of communism, but his concluding judgment we think just: "Of the absolute sincerity, earnestness, and courage of the protagonist of the Equals there can be no sort of doubt. Of his grasp of the situation and of his intellectual capacity as the leader of a party of wide reaching revolutionary aims, as much cannot be said."

At the instance of friends, Mrs. Russell Barrington has published her diaries and sketches of a flying trip "Through Greece and Dalmatia" (Macmillan). On the whole, one must regret her compliance. Her party did Greece and Dalmatia in a lunar month. Under these conditions, only genius could have anything worth saying. And, indeed, if the liberal excerpts from Symonds and T. G. Jackson were eliminated, most value would disappear from the present work. The author's foible is that once ridiculed by Ruskin of illustrating a major impression by a minor analogy. The Parthenon, for example, reminds her, or she reminds it—the case is not quite clear—that she was the friend of Watts and Leighton. In short, a background of the best British society ever insists on advancing to the picture plane. It is hardly surprising that this background fails to tone with a foreground that is by turns Greek and mediæval.

There is no English Baedeker on the Russian Empire. Ruth Kedzie Wood has attempted to supply the want in "The Tourist's Russia" (Dodd, Mead). If the reader will consent to overlook an occasional rhapsody on Nature and her works, as well as certain other naïve generalizations regarding Russian character and social habits, he will find this a useful little manual. St. Petersburg is treated scantily, but Moscow and the Volga are very satisfactorily done.

"A Resident's Wife in Nigeria" (Dutton), by Constance Larymore, has attained, as it amply deserved, a second edition. It is a model of good taste, good temper, and sound sense. Mrs. Larymore spent four years in India, and did some camping in Kashmir before going to Nigeria, and she is thus equipped, as few travellers are, to give practical advice to those about to set out for distant lands. Nowhere else can be found more valuable hints for the comfort of man and beast in the tropics.

"The Story of Korea" (Scribner), by Joseph H. Longford, formerly a British Consul at Nagasaki, presents the main incidents in the history of that distracted country in a readable form that will commend the volume as a desirable addition to the reference shelf of every public library. Professor Longford's knowledge of Japanese adds to the reader's confidence in his understanding of the subject and use of materials, though it does not appear from the bibliography of works consulted that he has employed Japanese sources for anything but recent governmental acts. The chief authorities for his outline of Korean history are the well-known works of Dallet, Courant, Ross, and Hulbert, which he has condensed into a fairly clear narrative without imposing too many uncouth names upon the Western reader. He is severe upon the American naval expedition which tried in 1871 to terminate the Korean policy of isolation by forcing its purblind court to answer for the destruction of an American ship and the murder of all her crew. The attempt should have been made, if at all, in coöperation with other Western Powers, and some convenient harbor occupied until the Koreans understood the meaning of their demands; but such concerted action was impossible in the year of the Paris Commune and the Alabama Claims Commission. In the difficult matter of Japan's rôle in Korea and the resulting annexation the author maintains an attitude of entire fairness. He concedes that Koreans suffered from repeated acts of spoliation by Japanese officials as well as adventurers, but as the stronger race redeemed their initial errors of a similar kind in the early military occupation of Formosa, he believes that a similar success will be achieved presently in Korea, "followed by the heart-whole conciliation of the people."

The Rev. Dr. Thomas Hume, who died at Chapel Hill, N. C., on Monday, aged seventy-six, had long been identified with Southern institutions of learning, among them Roanoke Female College and the University of North Carolina. He was also the author of several treatises on English writers.

Science

A Cyclopedia of American Medical Biography: Comprising the Lives of Eminent Deceased Physicians and Surgeons from 1610 to 1910. By Howard A. Kelly, M.D. Illustrated with portraits. 2 vols. Philadelphia: W. B. Saunders Co. $10 net.

Several years ago, while writing the life of a medical worthy, Dr. Kelly found himself hampered by the inadequacy of the existing books of biography of the medical men of this country. This defect he undertook to correct, and with the aid of a large body of collaborators, apparently more than two hundred in number, has measurably succeeded. The outcome fills two rather large but handsome volumes, and contains incidentally some forty portraits. The term "eminent physicians and surgeons" is taken liberally enough to open the door for Agassiz, Asa Gray, William James, and some others whose connection with medicine was not very close. There are very interesting but somewhat uneven prefatory sketches of the development of certain but by no means all medical specialties in this country.

The biographies are valuable, although sometimes unduly extended. Even a casual reader will not fail to be impressed by the sturdy independence and resourcefulness of the American practitioners, particularly of those of earlier times when training in theory and practice was much less developed and general than now. There certainly were giants in those days, and a standard was set up which the present generation, with all its opportunities, will find it hard to maintain.

It is almost ungracious to speak ill of a book that brings so much welcome material, but the hope that a new edition will soon be called for leads us to make the following comments. One cannot read far without perceiving that there is much unevenness in these biographies and that the pruning knife might be used to advantage. It is, of course, most difficult to fix upon a rule which shall determine admission to a work of this kind, and if Dr. Kelly had some good standard in mind, as his preface seems to indicate, his contributors have had no clear understanding of it, either as to quantity or quality.

In the matter of omissions we have checked off the book against a short list of names gathered from the catalogues of a certain college and from some other sources that happened to be at hand. Of names at least as eminent as many of those recorded by Dr. Kelly, we failed to find: John Bacon, J. P. Bancroft, Henry J. Bigelow, Amos Binney, H. I. Bowditch, S. E. Chaillé, Samuel Clossy, Dickson (of the Jefferson Medical College), R. M. Hodges, Charles Harrington, the younger Holyoke, J. B. S. Jackson, Edward Jarvis, J. S. Lombard, George Parkman, A. M. Shew, N. B. Shurtleff, D. H. Storer, G. G. Tarbell, Robert Thaxter, Samuel Webber, J. W. Webster, Rufus Wyman, not to mention a score of others. Some of these were very distinguished persons, and the absence of their names is remarkable, particularly because many of them are incidentally mentioned in other biographies or in the historical introduction as important in the development of medicine in the United States. Of the others it may be said that they are at least as much entitled to a record as the young man on page 101, whose sole claim on posterity seems to be that he was of much promise and died at thirty, as was the custom of his family. As to errors and misprints, it may be noted that Agassiz lectured on anatomy in Charleston (as recorded on p. 7), *not* Charlestown (p. xxi); that the noted teacher of the blind was Samuel G. Howe; and, finally, that O. W. Holmes was born at Cambridge (not Boston), and the name of his father was Abiel (not Abial).

Science books in the list of Longmans, Green, & Co. include: "Researches in Color Vision, and the Trichromatic Theory," by Sir William De W. Abney; "Preventable Cancer: A Statistical Research," by Rollo Russell, and "Soil Conditions and Plant Growth," by E. J. Russell.

The account by Geo. Shiras, 3d, of his trip to Alaska last summer, mainly "to stalk, study, and photograph" the giant moose, will be a revelation to most readers of the *National Geographic Magazine* for May. Few will have realized that any part of the Arctic territory could have been so rich in big game, sheep, and birds as the Kenai Peninsula. The 59 reproductions of photographs give a vivid impression not only of the animal and bird life, but also of the beautiful scenery. The salmon, America's most valuable fish, is described, with numerous illustrations, by H. M. Smith. He dwells particularly upon the five distinct species on the Pacific Coast, directing attention to the remarkable fact that "every individual of every species dies shortly after spawning." The illustrated description of the California seed-farms by A. J. Wells will be another revelation. Not many will have known that "seed-growing has become an established branch of California horticulture . . . and seeds now go in car lots even to France and to Holland." There is a field of lettuce two miles long, and there are tracts of sweet peas from 100 to 500 acres in extent. A large picture of the Matterhorn is given as a supplement to the richly illustrated number.

Morocco and its future is the subject of an instructive article by A. G. Ogilvie in the *Geographical Journal* for June. He confidently maintains that the agricultural possibilities of the country are very great and that "the forests offer immense possibilities of development. . . . Further, nearly all parts of Morocco which are unsuited for agriculture or forestry can be utilized for stock rearing; fisheries, too, will afford a good return for well-directed encouragement, and there is the possibility of the existence of mineral wealth." Among the greatest needs of the place are peaceful and sure government and efficient communications by roads and strategic railways. D. Carruthers gives an account of explorations in northwestern Mongolia; Sir C. R. Markham reviews the results of Antarctic work during the past twenty years, and R. N. Hall describes some very remarkable Bushman paintings in caves in southern Rhodesia.

Drama and Music

Forthcoming books in the list of Ginn & Co. include: "The Dramatic Method of Teaching," by Harriet Finlay-Johnson; "Quaint Old Stories to Read and Act," by Marion Florence Lansing.

George Calderon publishes a translation, with introduction and notes, of "The Seagull" and "The Cherry Orchard" (Mitchell Kennerley) as representative of the earlier and latest work of the Russian dramatist Tchekhoff, in whom he discerns great and original genius. It is possible, of course, that the original works possess literary and other merits which are but dimly reflected in the English version, but certainly in their present shape they do not suggest any great dramatic instinct or fertility of invention. Clever they undoubtedly are in various ways, especially in their distinctness of characterization, their naturalness in minor details, their frequent touches of humor or pathos, and their effective play of satire, but they are invertebrate and episodical in form, deal with common types, and are often conventional when they are not extravagant in action. Mr. Calderon, who, with all his enthusiasm, seems to have an uneasy consciousness of the inherent weaknesses of the plays, hints that their true significance is to be sought, not so much in the fate of the puppets presented as in the effect upon them of the external conditions of life to which they are subject and before which they are helpless. They are to be regarded less as individuals than as samples of the mass. In this there is nothing new. Interrelationship of circumstance and character is the root of all drama, and all personages may be taken as symbolical of classes. The distinguishing traits of most of the characters in these two pieces are selfish individualism and reckless and pessimistic fatalism, and they are not attractive.

In the play called "The Seagull" Tchekhoff himself shows the result of external influence, although he is no mere copyist. It is a queer mixture of modern realism, symbolism, romanticism, and conventional melodrama. The unhappy, undisciplined, idealistic Trepoff is sketched with some comprehension. Trigorin, the novelist, is a capital study of the capable, methodical, adroit creator of "best sellers," with his finger ever upon the popular pulse. Arcadina is an admirably realistic embodiment of the selfishness, the shallowness, and the vanity of one type of actress. There are undeniable truth and pathos in the fate of the romantic, misguided, and ultimately half-crazed Nina. The representation of certain phases of Russian society carries a conviction of photographic verity, but the actors in it are trivial and sordid, and the dramatic and human interest rare. As for the symbolism beneath it all, it is too vague to be important. In "The Cherry Orchard" there is the same facile, and doubtless, in the main, truthful, portrayal of middle-class Russian society. The student Trophimoff, who is presumably the spokesman of Tchekhoff's own philosophy, complains that the great majority of his countrymen are "gross, stupid, and profoundly unhappy." He says that the one thing needful is work, coupled with a disposition to help the few who are seeking for the truth. The majority of the educated classes, he adds, ask for nothing and do nothing. They only talk about science and understand little or nothing about art. It is sufficient, perhaps, to say that the characters accord with the definition. In the theatre they would be neither entertaining nor profitable, even if they were wholly credible. But the old servitor, Firs, who has outlived his own generation and has nothing in common with the new, is a really striking creation. Unfortunately, one small character does not make a drama. The plays have a certain value as impressionistic Russian sketches by a native artist, but are in no sense masterpieces.

Following the example of some foreign composers—notably Italians—whom two or three, or a dozen failures do not discourage, Frederick S. Converse is said to be busy at work on another opera, the libretto of which has been provided by Percy MacKaye. The tentative title is "Beauty and the Beast;" yet it is not to be a fairy opera, but a "fantastic" opera, bringing in Sindbad the Sailor, the Forty Thieves, besides Beauty and a Stately Lady and a Peacock Lady.

Pope Pius IX was a great admirer and intimate friend of Liszt, whose visits he sometimes returned. Once he went to see him in the cloister church on the Monte Mario, which Liszt had chosen as a residence, and where he composed his sublime oratorio "Christus." On the second day of last month, a memorial tablet was placed on this church commemorating these happenings. Among those who witnessed the ceremony were representatives of the Italian Government and the city of Rome, and the Ambassador of Austria-Hungary.

Scarcely a week passes without the gaping world being informed of some new operatic project by Mascagni. The latest is that he has been commissioned by the publisher, Sonzogno, to set to music a libretto of which Cleopatra is the heroine.

Puccini, it is said, is about to visit Spain to gather local color for his next opera. Bizet managed to get it for his "Carmen" without visiting Spain. Nor did Puccini deem it necessary to visit California before composing his "Girl of the Golden West." Possibly the severity with which he was criticised for this has had something to do with his intention to go to Spain. "Anima Allegra" ("The Cheerful Soul") is given as the title of the Spanish opera; and we are informed that it is to be a comic opera, Puccini having decided to return to the lighter vein of his earlier works, notably "La Bohême."

Cosima Wagner has given up all activity in connection with the Bayreuth festivals, wherefore Siegfried Wagner is the ruling spirit this summer. The rehearsals began, as always, on June 15, and will end on July 19, two days before the opening of the festival. What with these rehearsals and performances, those concerned will be in Bayreuth nearly three months. Tickets for the performances are no longer to be had; they were all sold several months ago. Dr. Muck will conduct "Parsifal" before departing for America. His engagement as permanent conductor of the Boston Symphony Orchestra has greatly distressed the Berliners. Since Richard Strauss is very uncertain, they now have to rely mainly on Emil Paur, who, it will be remembered, used to be active in Boston, then in New York, and finally in Pittsburgh, before returning to Europe. Hans Richter will conduct the "Meistersinger" performance at Bayreuth, while the four Nibelung operas will be presided over by Balling and Siegfried Wagner.

The city of Berlin granted the local Philharmonic Orchestra an annual subscription of $15,000 on the condition that it give, during the summer, thirty-five popular concerts for an admission price of only seven cents (thirty pfennigs). They are to take place in different parts of the city. The first was given the other evening in the large hall of a brewery, which seats 4,000. The audience, it was observed, did not differ noticeably from the assemblages which hear the regular and more expensive concerts of the Philharmonic Society. As for the players, they are better provided for than formerly. For thirteen summers in succession, they had played at a seaside resort (Scheveningen) to make both ends meet.

The Scandinavian composer, Prof. Christian Sinding, who was much admired by Grieg and Seidl, has completed an opera with the title of "The Saved Mountain." The libretto is by Dora Dunker.

The Prussian Prince Joachim Albrecht is the composer of two orchestral works, "Raskolnikoff" and "Die Ahnengruft," which have won applause at Carlsbad.

Art

ANTHROPOMORPHIC ÆSTHETICS.

Beauty and Ugliness, and Other Studies in Psychological Æsthetics. By Vernon Lee and C. Anstruther-Thomson. John Lane Co. $1.75 net.

To those who know "Vernon Lee" only as a critic at large, this highly technical volume may seem as repellent as surprising. As a matter of fact, it is often written with a crabbedness exceeding the demands of its difficult matter. It is nevertheless a valuable book, bringing to sharp focus the main issues and solutions of modern psychological æsthetics.

The book grows out of an essay, "Beauty and Ugliness," published by the authors fifteen years ago. It was the moment when psychology was over-driving all manner of motor hypotheses. The Lange-James theory had seemed to prove that what were called motor reactions or effects of the emotions were, on the contrary, causes, or, more accurately, the very substance of the emotions. Bernhard Berenson had just asserted that the chief æsthetic value of painting is that it should communicate tactile sensations. And while in his more careful passages he insisted that such tactile values are purely mental, he constantly wrote as if they were accompanied by outward motor reactions. This notion had already been carried a step further in Karl Groos's hypothesis of "inner imitation." He imagined an expressive mimicry of objects of æsthetic enjoyment, conducted chiefly by the head, eyes, and organs of respiration. Theodor Lipps, just a year before "Beauty and Ugliness" was published, had framed his now famous theory of *Einfühlung*. This means that we enjoy any object æsthetically, though projecting a part of our experience into it, enduing it with our powers, conceiving it in our own image.

The two gentlewomen who in 1897 launched their own motor hypothesis of æsthetics were thus unwittingly in excellent company. They were, however, with the exception of James's psychology, unversed in the newer literature. Their essay arose quite independently. Its real origin was the discovery of an extraordinary introspective gift in C. Anstruther-Thomson. She was able to observe and describe whole series of slight motor accompaniments of her enjoyment of art. These, unconsciously amplifying the hint of Karl Groos, she located chiefly in the organs of vision and respiration, and interpreted as mimetic of the contemplated object. "Vernon Lee" contributed the psychological commentary to her collaborator's observations, and, as a true devotee of the Lange-James theory, regarded these motor phenomena as of the æsthetic essence. Such participation in the imagined life of an object of course ranged the authors as unconscious disciples of Lipps's anthropomorphic æsthetics. He proceeded, however, to renounce them in various articles, insisting that all motor accompaniments of an impression of beauty are either negligible or actually destructive, the æsthetic imputation of our own life to an enjoyed object being purely mental.

Through defence, interpretation, and illustration of the original essay, "Beauty and Ugliness," the present book has grown, and it betrays in occasional redundancies its episodic origins. Still, by way of excerpt and discussion it contains a very full exposition of the æsthetics of Groos and Lipps, and presents a reasonable programme for the scientific investigation of these most evasive phenomena. The initial error of identifying Anstruther-Thomson's motor type of æsthesis with that of the human race is handsomely avowed. Likewise, the infelicity of declaring that such motions when present are necessarily mimetic. Such reservations bring the authors very close to the purely mental *Einfühlung* of Lipps. And, in fact, what separates them is merely the conviction on "Vernon Lee's" part that these motor accompaniments of impressions of beauty are inherently worthy of study. Here, we feel, nobody will gainsay her. Professor Lipps's denial of all value to the outer symptoms of inner æsthesis is on the face of it highly arbitrary.

Æsthetic empathy is "Vernon Lee's" equivalent for *Einfühlung*. Both terms she clearly perceives are open to the serious objection of suggesting an actual transfer of our life to an outer object. Professor Lipps knows that such a transfer is unthinkable and purely illusory, but he constantly writes, in fairly mystical tone, as if there were a real emanation from the observer to the object. In short, any term which suggests that we think ourselves into any external thing, is objectionable. The proper statement is that we think it into ourselves, assimilate it in terms of our experience, articulate it imaginatively with appropriate memory impressions. An exact term for a process really quite simple is not easy to find, but the phrase æsthetic assimilation perhaps fairly suggests the facts, and has no misleading connotation.

This book closes with a long chapter

of what may be called field notes—"Vernon Lee's" memoranda before famous pictures and statues, chiefly at Florence. She has the habit of mentally repeating strains of music, and a considerable and rather inconclusive part of the notes is devoted to the compatibility of these musical memories with impressions of graphic and plastic art. The notes are valuable because they show the great variety and complete relativity of æsthetic experience in a highly trained person. It appears that, short of that absorption in the contemplated object which Schopenhauer regarded as the ideal, there are many grades of æsthesis. It does not seem hopeless to believe that an analysis of such notes, aided by carefully framed *questionnaires*, might give us a real classification of æsthetic states as more or less typical and complete. "Vernon Lee" is actively engaged along these lines. That she may carry into these severer studies the grace and lucidity of her literary criticism and dialogues is the hope of her admirers. Meanwhile, we may say that the anthropomorphic æsthetics have at least brought us down to the real problem, and probably contain, if in a manner as yet not quite clear, the truth of the matter. It is surely a gain to set æsthetics firmly in the psychologic field—to realize that beauty is not an attribute of things, but an expression of a complex individual experience concentrated upon a selective and receptive act.

That the Madonnas of the Florentine painters reflect precisely the contemporary womanhood of the city, is the central theme of M. Ferrigni's "Madonne Fiorentine" (imported by Stechert). The book is a fair example of the readiness with which modern cultivated Italians turn their hands to belle-lettristic themes. But Signor Ferrigni's plea is, at best, merely specious. Unquestionably, the correlation he asserts exists in certain artists, for instance, Fra Filippo, but in general, Florentine Madonnas are remarkable for their typical quality. There seldom is any approach to portraiture. The Divine mother is kept in an ideal realm where racial and local qualities are suspended. To us the book seems merely ingenious. It is rather handsomely made, in a small folio, with many good photographic reproductions, which are apparently its *raison d'être*.

Finance

LIQUIDATION IN THE STOCK MARKET.

The stock market was interesting last week mainly on account of the liquidation which took place. There was no sensational break in prices, and at times there were periods of real strength. But the movement as a whole was different from that of the fortnight before, because of heavy selling. This movement was coincident with the efforts of certain banks to build up their reserve item, which owing to the continued outflow of cash could be strengthened only through a drastic curtailment of loans. In spite of the various explanations to account for the selling, it may be said that the liquidation was natural under the circumstances and could not well be avoided.

The market, however, stood the test fairly well; what is known as the technical position was unquestionably strengthened by it. Nothing occurred to make real holders of stocks sell out, and since the public was not speculating to any great extent, the losses incident to the decline of the week were borne chiefly by professional operators. But the firmness in money rates, as reflected by the higher price charged for call loans and time accommodation, showed that the inquiry was broadening and that the banks were no longer inclined to tie up large sums in term loans or in fixed forms of investment, as they did a year ago, when business was less active and merchants were borrowing meagre amounts. The situation, therefore, has changed to the extent that discounts are hardening here just as they are hardening abroad, where the markets are still fearful that the New York banks may make heavy demands upon Europe's gold supply.

The chief problem everywhere, however, is how to provide for the immense volume of new securities which must soon be marketed. Within the last few days there has been further selling of British consols at London by the banks which were forced to dispose of these securities in order to pay the instalments due on the underwritings of bonds which the syndicates have not been able to sell. This problem has given serious trouble to the London banks, and it looks now as if there would be a great deal of forced liquidation before the account is adjusted and the undigested securities are lodged permanently with investors. The serious liquidation at Paris has arisen partly from the same cause. For not a few months the great French investment banks have been heavily committed to various bond operations which have not worked out satisfactorily.

Ordinarily it has been possible for these institutions to make a market for virtually any of the bonds that they cared to bring out. But conditions have changed in France, as they have in most other countries where the new security issues have been excessive. In Germany the situation has been slightly different, as the market there has had an additional upset through the abuses which have resulted from the reckless speculation of last year. This trouble became so acute as to make it necessary for the Reichsbank to adopt drastic measures. But in Germany, as in the other great markets, are large loans which must be provided for in the near future. Under these conditions, with all the foreign markets under strain from largely the same causes, it is natural that European financiers should have shown concern over the disclosures of the poor bank return of July 6.

Europe's interest in the question has mainly to do with the possibility of our getting gold from abroad. It is recognized that with our international trade balance as favorable as it is, with Germany still heavily in our debt through temporary loans obtained in this market, and with large outstanding balances to the credit of our banks at other European centres, it would be easy for New York to attract gold from abroad, should money rates advance sharply here. It is true that no such movement is in sight, and that money market conditions here do not suggest a violent rise in rates in the near future. But London financiers have been mindful for some time of the extraordinary circumstances which govern the situation this year. It is recognized, also, on the other side, that the real test will come when the railways begin to borrow heavily and when the great mass of industrial securities appear upon the market. Then the banks will be forced to make the advances that are usually called for when great bond operations have to be financed. The fact that we are within a month of the period when the Western banks ordinarily call upon their Eastern correspondents for large shipments of harvesting money makes the problem of the money market all the more interesting. The Government crop figures of last week, while not up to expectations in some particulars, showed that the total production of all crops would probably be sufficiently in excess of last year's harvest to call for much larger shipments of crop-moving money from the Eastern reserve centres.

BOOKS OF THE WEEK.

Addison, Julia de W. The Spell of England. Boston: Page & Co. $2.50 net.
Aynard, Joseph. Londres (Les Villes d'Art célèbres). Paris: Librairie Renouard.
Bacon-Foster, Mrs. Corra. The Potomac Route to the West. Washington: Columbia Historical Society.
Bates, E. W. Pageants and Pageantry. Boston: Ginn. $1.25.
Bonney, T. G. The Building of the Alps. Scribner.
Burdett's Hospitals and Charities, 1912. London: Scientific Press.

READY THIS WEEK

Salisbury, Barrows, and Tower's ELEMENTS OF GEOGRAPHY

By ROLLIN D. SALISBURY, Professor; HARLAN HARLAND BARROWS, Associate Professor, and WALTER SHELDON TOWER, Assistant Professor, in the University of Chicago. ix+616 pp. 12mo. $1.50 *net.*

Professor Salisbury's text-books in physiography are recognized as the last word in this field for schools and colleges. This new course in geography treats briefly physiographic processes and features, but develops at greater length the relations of earth, air, and water to life and especially to human affairs. The authors believe that the chief object in geography teaching should be preparation for citizenship. They have accordingly emphasized certain points that are now, or are soon likely to be, of national importance, as for example the need for conserving the natural resources of the country. The illustrations are a vital part of the book.

HENRY HOLT AND COMPANY NEW YORK & CHICAGO

Columbia University Studies in History, Economics, and Public Law

Vol. XLIX, No. 1. **British Radicalism, 1791-1797.** By Walter Phelps Hall, Sometime Fellow in History, Columbia University.
8vo. *Paper covers.* $2.00.

Vol. XLIX, No. 2. **A Comparative Study of the Law of Corporations,** with Particular Reference to the Protection of Creditors and Shareholders. By A. K. Kuhn, Ph.D., LL.B.
8vo. *Paper covers.* $1.50.

Vol. XLIX, No. 3. **The Negro at Work in New York City.** A Study in Economic Progress. By George Edmund Haynes, Ph.D., Sometime Fellow of the Bureau of Social Research, New York School of Philanthropy; Professor of Social Science in Fisk University.
8vo. *Paper covers.* $1.25. *Cloth,* $1.75.

Vol. L, No. 1. **The Spirit of Chinese Philanthropy.** A Study in Mutual Aid. By Yu-Yue Tsu, Ph.D.
8vo. *Paper covers.* $1.00.

Vol. LII, No. 1. **Provincial and Local Taxation in Canada.** By Solomon Vineberg, Ph.D., Sometime Garth Fellow in Economics, Columbia University.
8vo. *Paper covers.* $1.50. *Cloth,* $2.00.

The GENETIC PHILOSOPHY OF EDUCATION

By G. E. PARTRIDGE, Ph.D.

Author of "The Nervous Life," and "An Outline of Individual Study."

WITH AN INTRODUCTION BY G. STANLEY HALL, PH.D., LL.D.

(12*mo.* $1.50 *net; postpaid* $1.63)

The importance of this book—the first comprehensive and orderly résumé of the educational philosophy of Pres. G. Stanley Hall—will be at once recognized. The work summarizes the dominant and progressive educational movement, and the ideas it assembles constitute the most important contribution of all time to education. Incomparable for study and reference, for a normal school text or for libraries.

Messrs. **LYON-CAEN, RENAULT, A. LEROY-BEAULIEU, ESMEIN, CH. BENOIST, P. BEAUREGARD, DE FOVILLE, COLSON, RENE STOURM, VIDAL DE LA BLACHE, J. FLACH, A. LIESSE,** of the Institute of France; **E. BOURGEOIS, LEVY-BRUHL,** Professors at the Faculty of Letters; **ROMIEU,** Councillor of State; **TARDIEU, TEISSIER,** Hon. Masters of Petitions at the Council of State; **ARNAUNE,** Councillor at the Court of Accounts; **R.-G. LEVY; G. PAULET,** Director at the Ministry of Labor; **PIERRE LEROY-BEAULIEU,** Deputy; **CHR. SCHEFER, D. ZOLLA, CH. DUPUIS, M. CAUDEL, RENE HENRY, P. DE ROUSIERS; D. BELLET,** Perpetual Secretary of the Society of Political Economy; **YOT,** Chief of the General Bookkeeping Department at the Bank of France; **E. HALEVY, G. BLONDEL, A. SIEGFRIED,** Doctors of Letters, etc.

SYNOPSIS OF COURSES:

Political Economy.—Social Economy.
Public Finances.—Banking.—Foreign Finances.
Money, Credit and Exchange.—International Circulation.
Commercial and Statistical Geography.
Foreign Trade and Customs Legislation.
Commercial Legislation Compared.—Colonization Compared.
Political Economy of the principal Powers.
Great modern Industries.—Labor Legislation.
Industrial Technics.—Methods and Processes in matters of Statistics.
Agricultural Questions from a point of view of Economics.—Movable Property.
Critical Study of Accounts and Balance Sheets.—Insurance.
Political life and Administrative Organization in France and Abroad.
Diplomatic History.—General Geography.
Conventional International Law.—Law of Nations.
Contemporaneous Europe and European Interests outside Europe.
History of Home Politics of the principal Countries.
Parliamentary and Legislative History of France.
Constitutional History of Europe and America.
History of Political Ideas and Public Spirit in the XIXth Century.
Ethnography of Central and Oriental Europe.
Military Organization Compared.—Military Navy.
Contemporaneous America and the New Anglo-Saxon societies.
Political questions and Economy in Eastern Asia.
Algerian matters.—Tunisian matters.

GENERAL INFORMATION.

The instruction given at the School of Political Sciences is the natural crowning accomplishment of every liberal education. In each of its several branches, the pupil acquires the requisite competency for holding high State Offices (Diplomacy, Administration, Finance), and is also trained for Public Life and Great Financial Enterprises, both in France and abroad.

The pupils are admitted without examination, with the approbation of the Director and School Board; no University degrees are necessary.

A special conference is reserved to foreign pupils with a view to facilitating their studies.

Tuition usually comprises a three years' course, which, however, may be reduced to two years. On completing his studies, every pupil who has successfully passed his examination receives his diploma.

SCHOLAR YEAR 1912-1913.—The scholar year commences on 11th November, 1912, and closes on 7th June, 1913. Applications are received at the Secretary's Office from 4th November, 1912. Application for the whole course gives right to all the regular and complimentary Courses and Conferences, and also access to the Library (about 25,000 volumes and 160 French and foreign reviews and newspapers).—Per annum $70

A Special Pamphlet *giving detailed information on the organization of the School and respecting the profession for which the pupil receives special training, can be had by addressing*
Secrétaire Général de l'Ecole, **27, Rue Saint-Guillaume, Paris (France).**

The Nation

NEW YORK, THURSDAY, JULY 25, 1912.

The Week

In time of trouble, stick to the old, reliable issues. Thirty years ago it was the opinion of some Republican leaders that there was still one more President in the Bloody Shirt. Mr. Taft, to-day, seems to believe that there is still one more President in the protective tariff. Forecasts from Washington indicate that the tariff is to be probably the most important feature of Mr. Taft's campaign platform. It is not to be called protection, mind you; it 's Republican tariff revision as opposed to Democratic free trade. But there is an extraordinary resemblance between the blessings that will flow from tariff revision and those that have always emanated from high protection. There is an equally striking resemblance between the dangers that will follow the rejection of tariff revision and those that would have followed the abandonment of high protection, say, fifteen years ago. Business depression will come, of course, and long periods of uncertainty for the manufacturer and "loss of employment to thousands of workingmen." How the fond memories of Harrison's and McKinley's days rise at the familiar words! Only many things have happened during these years. Among other things thousands of business men have learned that the protective tariff is not incompatible with five years of almost continuous business depression, and incidents like the Lawrence strike have revealed to tens of thousands of workingmen the beneficent effect of the tariff on their wages and their standard of living.

Regarding the bills amendatory of the Anti-Trust act which the Stanley investigating committee is soon to introduce in the House, it is to be said that they are obviously meant as a future programme, and not for present enactment. There is no likelihood that they will be even reported this session. They will stand over as unfinished business that may never be finished. In the form in which they are published, apparently by authority, they offer the usual mixture of good and bad, the useful and the fantastic. Some of the ideas which they contain have already met with general approval. If a plan can be devised to prevent the mischiefs of interlocking directorates, whereby production and transportation are brought harmfully under a single control, the country will not fail to applaud it. And the readier access to the courts of those who have been individually injured by monopopies, or combinations in restraint of trade—without waiting, as now, for the Department of Justice to begin proceedings—is something to which there can be no strong objection. More doubt will be felt concerning the attempt to define "reasonable" by statute. And the fixing of 30 per cent. of the total production of any commodity as the point beyond which any corporation cannot go without being held, *ipso facto*, a monopoly, is merely to embark upon a sea of uncertainties. It is a marked drop from Mr. Bryan's famous 51 per cent. Either one would simply be an effort to treat as fixed what is always and necessarily fluctuating. It would be like the old New England deed which ran the north line to that precise point—a cow in Deacon Smith's pasture.

If Congress adjourns, as now planned, by August 10, it will have carried its long session somewhat beyond the average of Presidential years since the Civil War. The earliest adjournment in the series was in 1904, on April 28; the latest was in 1888, on October 20. In years when there has been uncertainty about the result of the election, Congress appears to have held on with a view to making capital on one side, or preventing it on the other, by belated legislation; whereas in years when everything in the field of national politics seemed pretty well settled, it has taken a rather early recess. In the Grant-Greeley, the Garfield-Hancock, and the two McKinley-Bryan years, it closed its work in June; in 1864, when the revolt against Lincoln was at its height, as in 1868, when the Republicans picked up the Democratic Grant and the Democrats ignored the Republican Chase, and in 1884, when the Mugwump movement was afoot, it delayed till July. In 1876, when Tilden ran against Hayes, and in 1892, when Harrison, with a dissatisfied party, was facing Cleveland, with a group of traitors in his retinue, adjournment came in August. Finally, in 1908, when Roosevelt had the Republican party securely "cinched" to Taft, and Bryan had tied the Democrats to himself, Congress shut up shop on the 30th of May.

Two of the country's greatest moralists had five hours of high debate at Oyster Bay last Monday. The Colonel and Boss Flinn discussed earnestly the moral questions involved in a joint electoral ticket in Pennsylvania. It was the Angelic Doctor against the Irrefragable Doctor. Needless to say, the Irrefragable Flinn came out triumphant. The Angelic Doctor did not, indeed, confess defeat. He merely said that the final decision was put off. Everything is to be left to the Ecumenical Council soon to meet in Chicago. As a loyal son of the Third Party, the Colonel will submit to its decisions. He has repeatedly declared, to be sure, that the plan to have Taft and Roosevelt electors on the same ticket in Pennsylvania, or anywhere else, is morally repugnant, and that he would "never" consent to compromise on that subject. But that was before he had risen to the height of Flinn's great argument. That eminent reasoner on righteousness and judgment to come left Oyster Bay in a highly complacent mood. He quietly told the reporters that he found Mr. Roosevelt to have "no fixed idea" on the matter they had been discussing. It was simply another demonstration that, in the bright lexicon of Oyster Bay, "under no circumstances" means "as soon as convenient."

The spirit of self-effacement now incarnate at Oyster Bay will meditate with a great deal of sympathy the third-party call to the people of Wisconsin, issued at Milwaukee on Monday. Never was meek sorrow more judiciously blended with mild anger:

> Associated with this movement are all the Progressives of the country—outside of Wisconsin. In spite of an agreement on principles, a clash of personality has cut Wisconsin off from an onward and upward movement which was born on her soil and nurtured by her legislation. To give to the voters of Wisconsin equal suffrage with the voters of other States

> it is essential that the parent State of the progressive movement should be represented in the National Progressive Convention.

That the personal ambitions of one La Follette should hold him back from the Great Cause is something the Colonel cannot understand. Why should there *ever* be a clash of personality? The Colonel knits his brows, and looks out upon the wide waters, and ponders and searches, and still cannot understand.

Representative McCall's announcement that he will not seek reëlection from his Massachusetts district this year is interesting in more ways than one. It is coupled with an intimation that he is to stand for another office—either that of Governor or United States Senator. That Mr. McCall is eminently fit for either, and that particularly in the Senate he would both find scope for his powers and heighten the prestige of his State, is nowhere seriously questioned. A student, a forcible speaker, and, more than all, a man of independent judgment and the courage of his convictions, Samuel W. McCall would be a successor to Senator Crane who could not rival that gentleman in the traits that have given him his fame, but would, far better than he, live up to the old Massachusetts tradition of intellectual force, readiness and weight in debate, and statesmanlike quality. As a Representative, Mr. McCall has been singularly fortunate in the loyalty of his constituents. They have been well pleased to elect a man, term after term, who would, in Burke's phrase, represent their real interests, not merely their passing opinions. The more bitterly he was attacked, the more faithfully have they stood by him. Two or three times the attempt was made to defeat him on the ground that he had dared to criticise Roosevelt, but his majorities were larger than ever. The Cambridge district did not take kindly to the doctrine of *lèse majesté*. Even in the general Republican slump of 1910, when Gov. Foss carried the district, the confidence of the voters in Mr. McCall was unshaken.

One fine thing about the launching of the anti-Murphy Empire State Democracy last week is the very fact that it was done. We mean, done just now. So many times these impulses against the boss have evaporated in the July heat. The customary way has been, after such a disgusting exhibition as Murphy made at Baltimore, to exclaim for a few days and to indulge in verbal protests, and then let the whole thing die out in muttered complaints, while the people who ought to be stirring go away for two months. Often has the message come to independent Democrats: "With you heart and soul, but just sailing for Europe." Or: "There ought to be a vigorous movement and a strong organization. When I get back from my salmon-fishing trip, I hope to find the good work well along." But this year the men have stuck to it and started the fight. Senator Roosevelt and Mr. Osborne, with other well-known Democrats from the interior of the State, met with representatives of the Democrats of New York city who cannot longer endure the stupid and corrupt domination of the party by Murphy, and pledged themselves to do everything within their power to help the New York Democracy to free itself from "the leadership and control of Mr. Charles F. Murphy and the men whose instrument he is."

The criticisms levelled at New York's Police Department by foreign opinion in connection with the Rosenthal murder need to be largely discounted. It is part of the international game of turnabout. The world laughed at the London police at the time of the siege of Sidney Street, and more recently deplored the inefficiency of the Paris police in dealing with the so-called motor-car bandits. But when all is said and done, there remains a very solid element of truth in the charges flung at us from across the sea. The police organizations in the European capitals may be at times stupid and inefficient, but they have never been accused of actual coöperation with outlaws and criminals. The mere fact that it should be found necessary to call in the services of a private detective agency in dealing with a crime that has stirred public opinion as nothing else has done for years, is a sufficient indication of what the public distrust in the Police Department's attitude towards this particular crime.

The resignation of Judge C. H. Hanford of Seattle is clearly a gain for the honor of the Federal bench. In the manner of Hanford's going there is ground both for serious reflection and for cheerful confidence. It is not encouraging to think that, but for a purely external cause, this judge, who has retired under the gravest suspicions of personal and official malfeasance, might have remained in undisturbed possession of his office. Hanford's refusal to admit a foreign-born resident to United States citizenship on the ground that the applicant was connected with the Socialist party evoked the storm that led to his undoing. But it was not on this specific issue that he found himself facing impeachment. It was shown that he was a man of notoriously unworthy private life, and of doubtful conduct on the bench. It is a pity that it should have needed a dramatic episode like the cancellation of Leonard Oleson's naturalization papers to stir the public conscience of the people of Seattle. The mere undramatic fact that a man was an unjust judge was apparently not enough. On the other hand, the fact that Hanford has been ousted by the fear of impeachment proceedings, shows that the present Constitutional machinery is not altogether designed for the protection of the official evil-doer, as we are told so often. It is the spirit behind the machine that counts.

Andrew Lang deserved in his lifetime to rank with William James as a vivid proof that personality is more than learning. A man of solid attainments in several branches of knowledge, he was always superior to his material, and, whether he was deep in early Scottish history, or meeting all comers in disputes about the origins of human society, or correcting Anatole France's use of the sources relating to Joan of Arc, he allowed his intellect to play freely and lightly, and could by no possibility be thought of as a pedant. And in the broad sweep of his verse and criticism and essay-writing and multifarious discussion, it was always the man of genial humor and wit that left no sting who impressed himself upon the imagination of his readers. In a large way, his extraordinary versatility and his prolific pen were doubtless a detriment to his enduring fame. It would not be fair to say of him that knowledge was his forte and omniscience his foible, but the witticism about him, that Andrew Lang was not a man but a syndicate, is hardly one that a great scholar would gladly hear of himself.

Roam broadly as an acquisitive mind may to-day, the specialization of the whole field of knowledge compels a certain *Beschrankung* on the part of those who would display real mastery. Harnack's opinion is that in 1700 the most encyclopædic mind was that of Leibnitz, and that in 1800 it was Goethe's. For 1600, we might say that it was Bacon's, but whom should we dare put forward for 1900? Possibly, Lord Acton, though there were vast ranges of knowledge—especially scientific—where he seldom browsed. The encyclopædic mind has necessarily gone out, by comparison. Mr. Lang really made no pretensions to possessing it. But he lighted up history and speculation and life at many points, and led thousands to feel that he was a man whom it would be delightful to know.

After years of public agitation, the French Chamber has passed, by a large majority, a bill prescribing the system of proportional representation for elections to the lower house of Parliament. The ultimate success of the bill is not yet assured. In the French Senate there is a formidable element, headed by M. Clémenceau, which is opposed to *la R. P.*, as the political slang describes it. Should the bill be enacted into law, France will thereby take her place with Japan, Belgium, Switzerland, Denmark, Finland, and Tasmania. To the theoretical argument for proportional representation little exception can be taken. It is based on the inequities of the older system under which the majority party in a representative chámber as a rule obtains a voting strength in that body quite out of proportion to its popular strength. And inasmuch as party policies and personnel are fashioned by a majority within the party, we may have government by an actual minority of the entire electorate. Early advocates of proportional representation in England calculated that no less than two-fifths of the voters were wholly unrepresented in Parliament. The same proportion was obtained for the United States in the Fortieth, Forty-first, and Forty-second Congresses.

In France, under the new bill, the constituencies are the Departments, of which there are 87, with a population ranging from more than four million in the Department of the Seine to 105,000 for Hautes-Alpes. The French Chamber is now composed of 597 Deputies, so that electors in the different Departments under the proposed law would be voting, roughly, for anywhere from two to sixty Deputies on a single ticket. The debates in the French Chamber and the provisions of the bill in its final form have brought out the mechanical difficulties attending the practical working of the electoral "quotient." There are a great number of systems designed to bring about the closest mathematical fairness in the redistribution of representatives. Seven are described in the Encyclopædia of Social Reform. These difficulties naturally increase in those countries, and that applies to every Continental nation, where the two-party system does not prevail. In France, with its numerous groups and sub-groups, provision had to be made for party alliances and *blocs*, with the result that the mathematics of the bill have reached a point of complexity which, according to the opponents of the measure, is quite beyond the comprehension of the ordinary voter. But probably the ordinary voter will take his mathematics from his leader as he does his opinions under the present system, and no harm will be done.

The organ of German newspaper publishers, *Der Zeitungsverlag*, records with a good deal of satisfaction that in the year 1910 to 1911 the trade in *Schundliteratur* (rubbishy literature) throughout Germany received a setback. Whereas in the year 1908 to 1909 the sales of worthless books of all kinds amounted to sixty million marks, in the following year the figures fell to fifty millions. Wherever a firm stand was taken, either by enlightened public opinion or by the authorities, the sales were materially cut down. A considerable number of booksellers have refused either to publish or sell the trash that has so long disgraced the German book trade. What is particularly gratifying, says the *Zeitungsverlag*, is that trashy novels no longer reach fabulous editions. There is, however, still room for improvement. The average demand for fiction of this class was 10,000 copies. Only one novel attained a larger edition, and that dealt with the timely topic of the tragedy of an aviator. It is to be regretted that the *Zeitungsverlag* does not more clearly define the meaning of *Schundliteratur*. If merely trashy, without moral delinquency, covers the case, we dread the effect on some of our own "best sellers."

Even Switzerland has her military troubles. There have recently been heated debates between the Bundesrat and the Ständerat on the question of changing the military organization of 1907, for the purpose of creating independent commands in the army corps—independent, that is to say, of administrative positions. It seems that there have long been favored officers in Switzerland who have been active in both civil and military life, drawing pay in both capacities; and, as happens in other countries, there is a growing popular dislike of "the colonel in politics." The old law, which made such a dual rôle possible, has been called variously democratic and undemocratic, and the Ständerat as well as the Bundesrat, in considering the advisability of a change, did not seem to be clear as to the limits of its constitutional functions. The chairman of the committee of the Ständerat, Col. Scherrer, pleaded for the preservation of the rights of the "parliamentary" colonels, but the motion in the Bundesrat to limit henceforth division and corps commanders to strictly military duties finally prevailed.

Another Turkish Cabinet has fallen, and once more the dispatches report the progress of a formidable movement to rescue public affairs from the grip of the Committee of Union and Progress. Many times this grip has been reported broken, for the last time just before the recent Parliamentary elections, in which the Committee obtained an overwhelming victory. Quite opposed to the theory of constitutional government though this secret Committee may be, the fact is that there is little secrecy in the Committee's membership or policies. Nor has it been proved that the Committee uses its powers for selfish purposes. The fact remains that it was the Committee which carried through the revolution against Abdul Hamid, and it still constitutes the only effective organ of resistance to the perils that beset the new Turkey. Its action is frequently arbitrary, but the example of Persia shows the need of a strong hand at the helm, if the new régime is to hold its own against reaction on the one hand and the ravening ambitions of the Powers on the other.

LOBBYISTS BY WHOLESALE.

In connection with the bill to pay the militia of the States out of the Federal Treasury, under certain conditions, the charge was freely made that great pressure was put upon Congressmen by the militia of their districts. That such organized lobbying on a great scale is active in connection with every pension bill, is notorious. A few days ago the matter was pointedly referred to in the House. An effort was made to pass a bill to pension "widows and minor children of Spanish and Philippine insurrection soldiers"—to quote its bungling title. But objection, with an urgent request for information, was made by Representative Slayden of Texas. He called the attention of the House to the fact that all such cases were or should be covered by the general pension laws, and that the proposed bill was really one to validate four or five thousand claims that had been rejected. This is an old story; but Mr. Slayden proceeded to refer to the fact that there were "organizations of voters" behind the measure.

This was at first challenged. The Representative in charge of the bill denied that any "organization" had sought to control or even influence him in this matter. Mr. Rucker of Colorado thought that Representative Slayden's statement was not well founded, whereupon that gentleman explained that he had himself received "communications from camps of Spanish War veterans in Colorado urging this legislation." After that, of course, there was nothing for Mr. Rucker to say except: "I am not surprised at that at all, because we are very much interested in the legislation." The colloquy went on somewhat desultorily, but finally led to this question and answer:

> Mr. Kinkaid of Nebraska: "I wish to know if the gentleman thinks it is a tenable objection to the merits of a bill that some organization, though it be composed of soldiers of the Civil or Spanish-American War, or any other war, have asked for the enactment of the bill."
>
> Mr. Richardson: "As for myself, I think the soldiers of the Spanish-American War or their widows have the right to apply in behalf of their interests to me or any other member of the Pension Committee. All other interests are tolerated in the same way. I voted for the Sherwood bill and for the Sulloway bill, and I am proud that it was in conformity to the recommendations of my constituency. Whom do we represent upon the floor of the American Congress but the people, and who are these soldiers but the people?" [Applause.]

This brings up a larger question than that of the bill itself. There has been a great outcry in Legislatures and in Congress against lobbyists. In Washington, as in State capitals, they are regarded as sinister figures, to be suspected and avoided. But once let lobbying be organized in an unconcealed and extensive way throughout large sections of the country, and then, as we see, it becomes erected into an inherent right of the people to give a mandate to their representatives in the law-making body. How does it come about that the individual lobbyist is despised and shunned—at least in theory—while wholesale lobbying, of the kind Congressman Slayden referred to, is held up as something admirable and almost sacred?

Obviously, we cannot condemn out of hand all such banding together of citizens to make their desires or their demands known to a Legislature or to Congress. Because we see the instrument used selfishly or even corruptly, it does not follow that it never should be used in any way. Behind the right of petition itself lies the conviction that rulers ought to receive and give heed to proper representations from those who are governed. We condemn a united movement for pensions, but we should not think of condemning a similar movement in favor of governmental economy or the reduction of taxes or the removal of a part of the tariff burden. What is the difference? Is there any clear distinction that can be drawn between the organization of voters for pensions and the organization of voters to obtain, say, a national Health Bureau?

There is such a distinction, and it is implied in the very statement of the case. In the one instance, the end sought is distinctly personal, selfish, the interest of a class. The aim is to get money voted out of the Treasury direct into the individual pocket. The empty pockets combine simply to make their appeal, or their threat, appear the stronger. But the case is quite otherwise when it is plainly and purely a large national interest which voters are joining forces in order to procure. The whole question turns on motive and purpose. If a general national benefit is sought and can be clearly demonstrated, then we cannot arraign as greedy those seeking to attain it, even if they will get their share of it. Their share is merely the share of every other citizen. It is a common good equably diffused which is here in question. But favors for a particular and limited class, whether we call them pensions or tariff rates or needless local appropriations of any kind, these are things which high-minded citizens should be ashamed to work together to obtain, because they mean a gain to the few at the expense of the many. The great difficulty is, of course, to make the people nationally-minded. For legislators, the highest duty is to stand not merely for the interest of persons or localities, but for the general interest of the State or nation. On this Gov. Wilson dwelt in his brief but suggestive address to the Democratic Congressmen on Saturday. Their aim and labor must be, he said, to develop out of the contact of many local minds a national mind. That once attained, the self-seeking organization of voters, for the sake of exerting pressure upon their representatives, would cease to be effective and would, therefore, soon cease to be called into existence at all.

ANGLO-GERMAN RELATIONS.

Although Winston Churchill's speech on Monday, introducing in the House supplementary naval estimates, will temporarily increase the military tension between Germany and England, the forces making for friendlier relations between those countries should not be overlooked. The appointment of Baron Marschall von Bieberstein to the London Embassy, in the interest of a better understanding between England and Germany, has already had one good result. Sensible men in both countries are beginning to ask whether it is not time to put a stop to the output of inflammatory pamphlets and heated rejoinders that has done so much to disturb British and German statesmen sincerely desirous of preserving amicable relations. So long as "Lookout" in Berlin writes a diatribe against "England's Weltherrschaft," and "Politicus" answers in the same spirit in the London *Fortnightly Review*, progress towards mutual enlightenment and good-feeling is difficult; but a great deal may be hoped for from patient study and the slow maturing of judgment. Meanwhile, it is felt, those ought to speak who know the facts and are anxious to spread the truth concerning past and present Anglo-German relations. There have never been wanting in Germany eloquent spokesmen, like the late Friedrich Paulsen, who admired England, nor in England far-sighted statesmen, like Lord Haldane, who admired Germany. And, fortunately, there are always at work, in both countries, quiet scholars whose mission it is to propagate the lessons taught by the history of the two great nations.

One of the most striking efforts in this direction has been made under the auspices of the University of Manchester, where, during the Lent term of 1911, public lectures on Germany were delivered. The course was one of a series on modern history and literature, and was arranged by the University primarily for the benefit of journalists in southeast Lancashire. The promoters of the plan avowedly felt that "the diffusion of a better understanding of the history of the German people during the last century may almost be called a matter of practical urgency." The lecturers were scholars of the highest standing, such as Dr. J. Holland Rose, Prof. C. H. Herford, Prof. E. C. K. Gonner, and Dr. M. E. Sadler. Their success in impressing not only the audiences for whom the lectures were chiefly intended, but the general public as well, has fully justified the republication of these addresses, by the University, under the title of "Germany in the Nineteenth Century." In his introductory note to the volume Lord Haldane expresses the hope that some German professors may in return give a corresponding estimate of the work of Great Britain, particularly in overcoming the difficulties of colonial settlement. His own conception of the essence of German civilization is: "The spirit of the Germany of to-day is highly concrete and practical. But it is based on foundations of abstract knowledge, and that is why it is well-ordered." "Want of real knowledge of each other," he justly says, "renders the great nations suspicious."

The lectures all served well the practical purpose for which they were intended. If the audience was told that, at the end of the eighteenth century, Germany was in mathematical and mechanical studies inferior to France and England, the lecturer simultaneously laid stress on the fact that it was the organic class of phenomena that powerfully attracted the German intellect; that Johannes Müller, "the father of physiology," furnished the premises from which the modern school of physiologists drew its conclusions; and that biology, in the words of Huxley, is a German science. The audience was admonished not to believe that Germany is less free than England. "German freedom," says Professor Herford, "is a positive and complex ideal, achieved by the individual in and through the organized state in which he plays his due part, and only fully enjoyed, as Goethe so finely said, when it is daily won." Germany is thus held up to British audiences as the greatest example of the scientifically administered state, and if the nineteenth century is "strewn with the wreckage of her sublime philosophies, if the race for wealth and luxury and power seems to absorb her more and more, it is still to Germany that we turn for an assurance that the thought which wanders through eternity and wrestles, however vainly, with the enigmas of the universe, is a permanent factor of civilization."

And, similarly, the practical lessons of applied knowledge in German life are pointed out to the audiences of the English lecturers. "The construction of the modern school system of Germany," says Dr. Sadler, "will stand out in history as a classic example of the power of organized knowledge in furthering the material prosperity of a nation." In other countries besides Germany there has been a revolt against the older forms of educational discipline, but nowhere else has there been such strengthening of the universities by the munificence of the state; nowhere else is technical education based upon similar preparatory training. The inter-action of educational ideas has of late resulted in a wholesome strengthening of relations between British and German teachers and administrators. "German and British education," says Dr. Sadler, "have much to gain from a closer understanding. But both are deeply rooted in history, and some of the finest qualities of the one cannot be superadded to the finest qualities of the other."

In the same spirit, Lord Haldane speaks of the assistance which has been rendered to the world by English public schools and universities, "defective in many respects, but strong in the training of men of affairs and in the development of capacity for leadership." "To France," he remarks, "the world owes much of a different kind, and it owes much of yet another kind to America." Such sane and honest efforts at international enlightenment ought to put to the blush the anonymous pamphleteers who find pleasure and profit in distorting the teachings of history and daily experience, and in playing upon the prejudices of the ignorant and unthinking.

WRIGGLING.

Last week's issue of the *Outlook* is a moral curiosity. Its own readers have begun to put it to its defence. One of them asks it bluntly why it refuses to aid in "the regeneration of one of the old parties" which "offers us for the Presidency a Progressive, a man of strength, of insight, and, above all, of uprightness and independence." This writer puts the question: "Will Theodore Roosevelt now justify the taunt from which we have so often defended him—that his personal relation to a movement blinds him to the general good?" Another subscriber asserts that "hundreds" of the friends of the *Outlook* are surprised and disappointed at its present course in setting up as the "organ of a person."

To these complaints and protests the *Outlook* replies in five columns of editorial wriggling. The Contributing Editor has only twenty columns for his share, but he, too, wriggles in trying to escape from the same hook. Seeking to flop clear, he boldly sets up the contention that Wilson was nominated by the bosses. "Dr. Wilson's victory," writes Theodore Roosevelt, "would not mean the dethronement of these men [Sullivan, Taggart, Murphy]; it would mean their perpetuation in power." It is not necessary to stop over this assertion by a man who has a thousand times shown that he can persuade himself that black is white, when it is to his personal advantage to do so. The fact that everybody knows that what he says is not true, does not for a moment deter him from affirming it. But we had fondly hoped that it was otherwise with the editors and proprietors of the *Outlook*. Yet they accept and adopt this monstrous perversion as their own. They say that the Baltimore Convention, "while it nominated a Progressive man for the Presidency, strengthened rather than weakened the hold of the Democratic bosses in their several States." Only the week before, however, when it was "rejoicing" in the nomination of Wilson as indicating "the growing resolve of the people to end the partnership between political machines and special interests," it stated that the bosses fought him at Baltimore, and explicitly set it down that "Gov. Wilson has also identified himself in an effectual way with opposition to machine rule . . . and has thus become the centre about which has gathered a large number of high-minded Democrats, who are *opposed to boss rule*"!

There could hardly be more complete self-stultification, after that, than to write unblushingly that the nomination of Woodrow Wilson meant the triumph of the bosses. If any intelligent reader of the *Outlook* believes that, he will believe anything. These things were not done in a corner at Baltimore. The whole drama was played in public. Every spectator, near by or far away, could see exactly what the bosses were doing and hoping. Nor does any man in his senses doubt what Mr. Roosevelt and the *Outlook* would have said if Speaker Clark had been nominated instead of Wilson. They would have shed tears over the lost opportunity to select a candidate whose name was anathema to the bosses. But "Pop's" prayers for Clark not having been answered, the prepared attack was made just the same, though all the world can see how ludicrously it is misdirected. The gun was loaded, and had to be fired, whether the game was there or not.

But this *Outlook* cry about Wilson and the bosses cannot possibly be sincere. If it is not a deliberate attempt to deceive, it is a discreditable effort to shuffle away from the plain facts. These facts are visible to all. Wilson's anti-boss record is much clearer and stronger than Roosevelt's. Consider Smith barred from the Senate by Wilson's attack, and then consider Platt and Quay elected without a murmur of opposition from Theodore Roosevelt—indeed, with his apparent approval and delight. Moreover, in the preparations for his campaign, Gov. Wilson has given every proof of his intention to keep it out of the hands of the bosses. Let the *Outlook* scan the list of the names of the committee of fourteen selected by Wilson to conduct his campaign. Is there a boss taint on any one of them? Do they not all show that the greatest care has been taken to include no one who could by any stretch be called a tool of a boss or the creature of a machine? Gov. Wilson may be fairly open to many criticisms, but the attack which Mr. Roosevelt and the *Outlook* make upon him is so notoriously unfounded that it falls to the ground of itself, damaging nobody but those who have cooked it up.

Of all people in the world, the editors and proprietors of the *Outlook* ought to be jealously on their guard against bringing a railing accusation against Wilson, or twisting an argument in favor of Roosevelt. This is not simply because they are moralists who profess the highest standards. It is not only because they carry the fervor of religion into political discussions. They are in a peculiarly delicate position. They have a distinct money stake in Mr. Roosevelt's fortunes. They pay him a large salary. His political success means financial success to them. Now, we do not even intimate that they are swayed by such considerations. We only point out the special obligation to be scrupulously fair which rests upon them. They know what will be said of every sign of bias or prejudice they display. They know what they themselves would say of any other paper so perilously situated as theirs. It is a fearful exposure to misunderstanding and to the attribution of unworthy motives which they are incurring. And their friends may well implore them, as they value their reputation and hope for influence, not again to fall into so gross and palpable a falsification of the facts as their assertion that the nomination of Wilson meant a victory for the bosses. Such an excess of fighting foul they had better leave to the Contributing Editor.

THE MYSTERIOUS ART OF POLITICS

The fact that the management of the Democratic and Republican national campaigns is to be in the hands of two men who are comparatively young in years and positively young in political experience, has impressed itself on the popular imagination as a sign of the times. It no doubt has its contemporary significance, though it is possible to exaggerate the present importance of the young man in politics. There have always been young men who came to the front with a rush and showed themselves the equal of old practitioners at the game. Only to-day the tradition is more continuous. On the Republican side we have had since 1904 three young men in the persons of George B. Cortelyou, Frank Hitchcock, and C. D. Hilles. On the Democratic side this year marks the beginning, but there was compensation in the fact that the habitual Democratic candidate from 1896 to 1908 was himself a young man. It may be argued that the situation as we have described it is more apparent than real. Behind youthful Mr. McCombs there is to be a body of expert directors, and Mr. Hilles, it is understood, will have at his disposal the counsel and aid of that seasoned veteran, William Barnes, jr., of Albany. But this only emphasizes the strength of the new tradition.

This new spirit may be described as being, in general, one that works for greater publicity. The most successful fighting is now being done in the open. Young men at the head of political campaigns are in favor because their youth is a guarantee of freedom not only from the taint of old political connections, but also from the tortuousness of old political methods. While secret manipulation still remains an important feature of political strategy, as in all human probability it always will remain to a considerable degree, the main emphasis has changed from privacy to publicity. A notable feature of recent campaigns has been the large number of newspaper men who have been drafted for temporary or permanent service. The press bureau has risen in influence as the back-room conference has declined. The era is one that favors a direct appeal to the people. The history of this year's pre-convention campaigns shows it. Gov. Wilson's direct methods proved superior to the old-fashioned tactics of his opponents. The scheme by which the Clark, Harmon, and Underwood candidacies were combined against Wilson turned out too subtle a bit of business. It only resulted in the killing off of Harmon and Underwood before the Convention met, and of Clark on the floor of the Convention. The nomination of Mr. Taft at Chicago, which has been described as an extraordinary feat in political manipulation, was in reality something more than that. Not a hundred times the adroitness Mr. Barnes possesses could have held the anti-Roosevelt forces together if there had not been behind them some direct unifying force, and that force was fear and hatred of Roosevelt. When we think of the Taft delegates, with no enthusiasm for their own candidate, with every prospect of going down to defeat under his leadership, holding out like a stone wall against the furious Roosevelt assaults, we find that here, too, a principle, or at least a state of mind, came actively into play. It was open fighting.

Concerning the difficulties and complexities of the old-fashioned art of politics, there has always been a great deal of exaggeration. Boss politics, like quack science, is surrounded by a world of mummery. It surely would not require genius in a young man to master an art which has one of its most notable exponents in the person of such an intellectual giant as Charles F. Murphy. If young men do not come forward easily under the old machine system, it is because the old-style politics does not demand consummate ability on the part of its practitioners, but only unscrupulousness on the part of the leaders and obedience on the part of the rank and file. The basis of successful machines is "loyalty" of a certain kind. The small man takes orders because he has been taught that when in the course of time he comes to be the dispenser of fortune, his orders will be unquestioningly obeyed in turn. The political machine is an army which is held together by discipline, and in which promotion is almost always by seniority. It is a system driven forward by an unholy principle, and so can dispense largely with personal ability. A man is not educated for boss leadership; there is little to be educated in. He is simply hardened for the place. Under a system where enthusiasm, courage, initiative, all qualities of youth, count for so little, and "experience" counts for so much, it is not very strange that youth held a minor place.

The wonder of the success of the "schoolmaster in politics" is no such marvel after all. Any fresh intelligence brought to bear on problems that the machines have hitherto approached in their own stupid, routine fashion, will be equal to the task, if intelligence is reinforced by courage and that fighting ability without which success in a democracy is inconceivable. Youth, intelligence, and courage have before this challenged successfully the domination of the practical men of politics. The early career of William Travers Jerome in New York showed how those qualities, when brought into play against the machine, render futile the old politician's entire bag of tricks. If that was the case ten years ago when the old politics was still intrenched in power, it is all the more true to-day when it is rapidly approaching its eclipse. To-day the art of politics is no longer a specialized art. The same qualities that will win a young man's way in business and the professions will equip him for a successful career in politics without that preliminary "practical" education which was once thought indispensable.

EUGENICS AND HAPPINESS.

The first International Eugenics Congress is about to assemble in London. A bewildering multiplicity of problems awaits discussion by the physicians, sociologists, and philanthropic men and women who, under the auspices of the British Eugenics Education Society, are engaged in an attempt to improve the human race. Nothing, on the surface, can be more strictly impersonal and scientific than the official programme of that society. But the subject of "the study of agencies under social control that may improve or impair the racial qualities of future generations, either physically or mentally," has rapidly broadened out into an endeavor to heighten the dignity of parenthood and civic responsibility in general, even if at the cost of checking growth in population.

Needless to say, no scheme for social reform calling for so much wisdom and such delicacy in the handling has ever been contemplated. The name of Darwin has been invoked as the originator of the idea of selection, both scientific and natural, for parenthood; Galton, by his researches in heredity, is regarded as having initiated the modern study of race improvement; philosophers, like Herbert Spencer, and scientists, like Ray Lankester, have been quoted as sponsors for the principles of the new science, and its expounders have told us that eugenics is "both a science and a religion," and that, in the language of one of its most enthusiastic advocates, "it is the final and only judge of all proposals and principles, however labelled, new or old, orthodox or heterodox." Now, so much zeal must make the judicious hesitate. Any science, and particularly an entirely new one, is to be judged, not by its professions, but by its performances, and, in the long run, by the calibre of its professors. It is well to inquire into the character of the measures that have so far either been proposed or carried out in the name of eugenics.

It has been urged to check the transmission of criminal tendencies, stop immorality, and stamp out degeneracy by preventing the reproduction of the unfit, and forbidding marriages of the mentally deficient. On the other hand, it has been proposed in England to assist poor but deserving families by a Government bonus during the trials of maternity, by the remission of taxes, and by the grant of scholarships where the children are numerous and healthy. It has been suggested that all teaching in the public schools be subordinated to the requirements of race improvement. "English and arithmetic, French and the piano," says Mrs. Tweedie, in the *Fortnightly Review*, "are all very well, but a little of the hygiene of domestic life, and some knowledge of the newest of all sciences, eugenics, could advisedly be laid before the children in a simple, careful, and well-thought-out way. It is so easy to interest little people in the mysteries of botany, and with that foundation everything can be kept pretty, poetic, and charming, yet true to nature, while the children's minds are led along the lines that will finally result in their acceptance of the great truths of heredity and eugenics." The city of Manchester, it seems, has actually made a beginning in this direction and voted a fund for the study of eugenics in the municipal schools. We are furthermore told that "idiosyncrasies of transmission" and the pedigrees of peculiar families are solicited by the Eugenics Society, and that these will be codified for reference—a procedure which will doubtless result in bringing to light a mass of statistics similar to that with which the Society for Psychical Research annually attempts to cope. School teachers are particularly asked to aid in this work, by drawing up charts concerning the antecedents of their scholars and noting physical and mental defects.

There has been so far no consensus of opinion, among various civilized countries, as to the all-important question of the requirement of a medical certificate precedent to marriage. No subject that will be brought before the Congress is so fraught with possibilities of good for future generations, none requires greater knowledge, judgment, and tact in discussion. The jurist and social philosopher will have to coöperate with the wise physician in framing measures for the protection of the individual, no less than of society, if future races are to reap the benefit of so far-reaching an innovation. Hasty legislation, such as has been introduced and partly enacted, in one or two States of this country, is not likely to be countenanced by the weightier members of the Congress. In England there is now a "Feeble-Minded Control Bill" before Parliament, whose object is to enforce the segregation of those congenitally inferior in intellect. It is believed—though there are as yet scarcely enough convincing data at hand—that the physically and mentally weak in England are the most prolific of all classes, and contribute an extraordinary quota to race deterioration.

In order to appreciate the difficulty of dealing with the problems of eugenics in a sane and humane way, with due regard not only to future generations, but also to the present, it is only necessary to call attention to the attempts made everywhere to improve the lot of the feeble-minded, and to the success in teaching children less gifted than the average. The progress of the human race is bound up in the perpetuation and the strengthening of the philanthropic spirit as much as in the rigorous and systematic effort at eliminating the feeble and incorrigible. And, above all, experience has shown that the world does not grow wiser and happier by leaps and bounds, nor by decree of law.

Another aspect of the question of eugenics is worth pointing out. The attitude of some of the radical advocates of social and hygienic reform resembles that of the political innovators with whose panaceas we are all familiar. Both classes of reformers assume that society is all wrong, and that we must at once be made well and happy by entirely new methods, no matter at what cost to our feelings and traditions. Sometimes, indeed, the scientist and the politician seize the same subject, though they view it from different angles. "Happy is the country," says the eugenist, "with a low birth-rate, provided the few children born are sound in limb and mind"; "blessed is the land," says the politician, "with a high birth-rate—it is numbers that count." Between them there is the skeptical student of history, who remembers that the Greeks, with very indifferent health laws, produced a race that for physical excellence and mental achievement has never had a superior. And there are to-day everywhere thousands of individuals perversely and hopelessly happy, despite utter ignorance of eugenics.

THE REVIVAL OF VEDIC EDUCATION IN INDIA.

London, July 18.

With the Himalayas rearing their heads above the skies at its back, and the beautiful banks of "Mother *Ganga*" bordering it in front, the Gurukula Academy, founded in 1902 at Kangri, near Hardwar, in the Punjab, is ideally situated. The site was given by a generous friend of the cause, and Mahatma Munshi Ram, the chief exponent of the idea and the leader of a section of the Arya Samaj—a Protestant Hindu faith founded about a quarter of a century ago by Swami Dyanand Sarasvati—immediately set out to have the jungle cleared while he canvassed the country for funds to build and conduct the academy. With really wonderful rapidity this two-fold labor was performed, and the school opened with four classes and a membership of fifty-four pupils.

The permanent structures, which will cost from $175,000 to $200,000, and which are to include a museum and observatory, have not yet been erected, although plans have been prepared and part of the necessary money is at hand. The present buildings consist of thirty-four classrooms and dormitories, a science room, a library, a reading room, a storeroom, two kitchens, one pantry, one dining-room, five rooms for hospital and dispensary purposes, two rooms for the governor's office, a place for the "fire worship," and four other small rooms for devotions; besides, there are a guest-house for male visitors and another for the accommodation of gentlemen who visit the Gurukula accompanied by their families. The extensive grounds are laid out as flower and vegetable gardens, orchards, and playgrounds. To-day there are fourteen students in the college department and 260 in the school. The limitations of space and lack of funds have kept the number of admissions far below what is desired. As a rule, one class is added each year. At present there are thirteen classes, ten in the school and three in the college.

The course of study in the Gurukula Academy extends over sixteen years, and the boys who are admitted are obliged to take a vow to remain absolutely celibate until they are twenty-five years of age, while their parents or guardians are required to give assurance that they neither will betroth nor marry the lads until they reach that age. The teachers must be ascetics, and must subscribe to the fifty-one articles of faith in the Vedic *Dharma* as settled by the founder of the Arya Samaj. The present faculty consists of nine members.

Swami Dyanand's idea of what constitutes education would appear to be somewhat appalling to a Westerner. It is, to a certain extent, based upon the reply of Narada to Sanat Kumar, reported in the "Chhandogya Upanishad" (VII, 122): "Lord! I know the Rig Veda, the Yagur Veda, the Sama Veda, the Atharvan Veda, history, grammar, anthropology, mathematics, natural philosophy, the science of chronological sequence, logic, ethics, etymology, prosody, physical science, military science, astronomy, and the science treating of venomous reptiles"; and upon the teachings of Manu, which declare that a student must learn theology, logic, ethics, and physical science, that a king must learn jurisprudence, codes of law, the theory of agriculture, political economy, and other practical arts, and a vaisya, in addition to the Vedas and sciences, must master the principles of political economy, the science and art of agriculture, and foreign languages. There can be no doubt that all these subjects were taught in the ancient universities. It is known, for example, that at the Taxilla University eighteen branches of learning were taught in separate colleges, each one of which was presided over by a separate professor. Sculpture, painting, image-making, and a number of crafts were included in the curriculum. Many handicrafts also were taught at Nalanda, which had the names of thousands of students on its rolls. The University at Vikram Shala had one hundred and eight professors, and, among many branches, provided technical instruction in pyrotechnics. It will thus be seen that the learned Swami had a very good foundation upon which to base his theories of education, as the ancient systems were of a general enough character to embrace all phases of life.

The Gurukula studies include the Vedas, Shastras, modern Sanskrit literature, Arya Samaj literature, English language and literature, modern sciences and philosophy, elementary and higher mathematics, the principles of trade, the science of medicine as taught in the Vedas, the science of agriculture, the science and art of pedagogy, physical science, logic, psychology, ethics, metaphysics, political science, object lessons, history, economics, political and physical geography, drawing, and practical kindergarten, through the medium of Sanskrit and English. The study of the Vedas, the ancient Hindu scriptures, and regular physical exercise, are compulsory, while the other branches, including professional and technical education, are optional.

The students are educated and maintained absolutely free of charge, and are supplied with food, clothing, furniture, school requisites in the way of books and other necessary articles, and medical attendance, although boys coming from wealthy families are permitted to pay for their education and maintenance at the rate of from $3.30 to $5 a month. Youths are admitted between the ages of six and eight years, and no one who is above or under the required age is permitted to enter the Gurukula.

The control over the pupils is of the strictest description. The whole ideal is to keep them absolutely unspotted by contact with or knowledge of the world, and in order to accomplish this end they are kept sequestered from all intercourse, even with their own relatives. They are not permitted to visit a town or village except in unusual circumstances, such as the serious illness or death of some one near and dear to them, and no one is allowed to visit them except the guardian or a close kinsman, and such visits are permitted only once a month, and under the direction of the governor. They may correspond with their parents or guardians not oftener than once a month, and all communications received or sent may be opened and read by the head of the institution, if he desires to do so. Even the holidays are spent at the Academy, or at most the *Brahmacharies*, as the students are called, are taken out to visit places of historical or archæological interest. Otherwise they pass their vacation-time holding debates, chanting texts from the Vedas, gardening, or drawing. The regular course of teaching is closed from August 16 to October 15. During this period, the members of the staff are allowed a month's leave, provided at least one-half of the faculty remains in the Gurukula during the whole vacation.

The day's routine begins at four o'clock in the morning in summer, and half-past four in the winter, this difference of half an hour being observed throughout the day's programme. The students and professors rise, fold up their bedding, and hurry to the Ganges, where they strip and jump into the water of the sacred stream, engaging in swimming competitions and other aquatic sports. If the weather is too severe to permit bathing in the river, this matutinal duty is performed in the school bathroom, with water drawn from a well near by. Physical exercise or drill begins at five (in summer), under the direction of the superintendents, and at six they commence their spiritual devotions, which consist of prayer and meditation, and the *Agni Hotri* ceremony—or worship of the fire. This finished, milk is served. The students assemble in the classrooms at seven, and teaching is carried on until ten o'clock, when breakfast is served. This meal consists of a plentiful portion of bread, pulse, and vegetables, with sometimes fresh fruit, or rice pudding, or some other sweet dish. The diet is strictly vegetarian. After breakfast the boys rest and read until one, when the classes reassemble, to continue work until four, with a recess of fifteen minutes after three o'clock, when every one receives a glass of milk. If the heat is extremely intense, the period of study is reduced by an hour or two. After school the students play games until sunset, when once again they engage in devotional exercises, the same as in the morning. In summer, they bathe and swim in the river before the evening prayers. After the devotions are over the evening meal is served, and, immediately after this, the *Brahmacharies* go to their dormitories, revise the lessons of the day, and, at nine o'clock, retire. The smaller boys go to bed a little earlier than the seniors. The latter assist in the serving of food, chanting a Vedic *Mantram* by way of grace before eating, both morning and evening. The work of the Gurukula is so planned that a maximum and minimum period is allotted for work, recreation, and rest. The boys may sleep not less than six nor more than eight hours; they must spend at least two, and not exceeding four, hours at play, exercise, and sports; three to four hours are set aside for bathing and religious worship; one to two hours for meals; six to twelve hours for reading, class work, and study tasks, and at least two and not more than four meals must be eaten in the course of twenty-four hours.

Particular attention is paid to the moral training of the students. Their tutors regulate their studies and direct their choice of books. The teachers are absolutely responsible for the boys in every respect, not only for their study and recitations, but for their moral training and physical development. The theory at the Academy is that if a teacher comes in direct contact with his pupils for only six hours a day, as is the case with nearly all scholastic institutions in India, it is impossible for him to mould the characters of his wards. He is unable to watch the unfolding of their faculties or detect the manifestation of hereditary traits or other influences, and hence is powerless to guide intelligently their evolution. Thus the Gurukula places the teacher actually *in loco parentis*. Any boy who is found guilty of grave misconduct which makes him unfit to associate with the other Gurukula students, is summarily dismissed, and may be made to refund the money that has been expended upon him previous to his expulsion; and a lad who demonstrates, during the first year, that he is incapable of making satisfactory progress in his education, is sent home.

Weekly, quarterly, and annual examinations are conducted by the teachers, and the pupils are promoted according to the results of these tests. It must be explained in this connection that it is the rule in India that all schools and colleges send their pupils up to the university to be examined, the universities of the land being strictly examining and not teaching bodies. The library connected with the school contains 5,500 books, mostly works of classical Sanskrit authors and histories and biographies. Besides these, there is a selection of high-class periodicals and magazines. The Sanskrit and English Clubs of the Academy hold meetings once a week, the students of the higher classes delivering lectures in Sanskrit.

On the anniversary of the founding of the Gurukula, thousands of people from all over the Punjab gather at Hardwar to celebrate the event. A lengthy programme is carried out, the work of the pupils is exhibited, the ceremony of admitting new *Brahmacharies* is performed, and, most important of all, a collection is taken up, which usually amounts to more than $18,000—a handsome sum for a poor country like India.

Up to the present time, no Gurukula has been established for the education of girls along the same lines as the Hardwar institution. It is intended, however, that as soon as possible the Arya Samaj shall extend the work in this direction. But in the meantime, the Gurukula idea is spreading. Several such schools have been established, and many schemes are on foot to establish, in other parts of the country, seminaries similar to the one in the Kangra valley.

SAINT NIHAL SINGH.

NEWS FOR BIBLIOPHILES.

Thomson's fondness for tinkering with the text of "The Seasons" might well bring careful editors to despair, but hardly to neglect of existing texts. Nevertheless, the statement is still current—echoed, in fact, without investigation by Dr. Zippel and Mr. Robertson—that the third, fourth, and fifth editions of "Winter" were reprints or reissues of the second.

As a matter of fact, the fifth edition of "Winter," which appeared in 1728, was printed from new forms after the poet had revised his text from beginning to end. In this edition the preface and contributed poems are omitted; there are alterations in spelling, in punctuation, and in diction; and fifteen new lines are added. Most of these changes are retained in the edition of 1730, and have consequently been recorded by modern editors. Some lines, however, were revised yet again for the sixth edition, so that a few variants are still buried, fortunately or unfortunately, in the neglected pages of the fifth edition.

For example, the line which is numbered 159 in Robertson's edition now reads:

> Through the black night which sits immense around,

the octavo of 1730 had,

> Thro' the loud Night, that bids the Waves arise;

while the fifth edition read:

> Thro' the loud Night, which harrows up the Waves.

Thirteen lines of this passage appeared for the first time in 1728, as did also the two lines now numbered 427-8.

The fourth edition contained no such striking changes. Even a cursory examination, however, reveals at least one alteration. In the line now the 426th, the first edition read:

> The ceaseless winds blow keen:

in the second "keen" was changed to "lee"; in the fourth "keen" reappears; and in the fifth and following editions "lee" prevailed.

Of the third edition I cannot speak, for the Yale library has no copy. Yet even if this were a literal reprint of the second, the facts already presented sufficiently dispose of the assertion that the editions intermediate between the second and the sixth were merely unsold sheets furnished with new title-pages. The sale of "Winter" was evidently more rapid than bibliographers have commonly supposed.

Another fact which seems to have escaped the notice of students is that there were two issues of the second edition, the earlier having the title-page printed in black; the later, in black and red. The double issue seems to have been caused by the desire to cancel some words of the preface, for there is a clause which does not appear in the later impression and which has never been reprinted. At the end of the sentence acknowledging the poet's gratitude to "those gentlemen who have given my performance so favorable a reception," originally stood, "particularly, that honorable Person under whose auspicious name I have met with an Encouragement more answerable to his Generosity, than my Merit." This was, I take it, an ironical reference to Sir Spencer Compton, and was suppressed for the same reason which made Thomson wish to alter the verses of Mallet and Hill—the present of twenty guineas.

ULSTER AND HOME RULE.

TO THE EDITOR OF THE NATION:

SIR: In your issue of June 27 (page 629), you say, "The Unionists are in a quandary over one aspect of the Home Rule bill"; namely, the amendment brought forward in committee by a Liberal member excluding Ulster from the provisions of the bill. But the debates in the House of Commons, as reported in newspapers recently received, do not indicate anything of the kind; the Unionists did not "suddenly discover" that to split up Ireland would work injury to both sections of the country, for they have been saying so all the time; while the concluding sentence in the paragraph referred to, "So the burden of it all is that Home Rule must go by the board, and Ulster's domination over the rest of Ireland be preserved," is gratuitously misleading. Do you think this kind of comment is quite fair or legitimate? If it is intended to convey that Ulster has some kind of ascendency (and it cannot bear any other interpretation, I think) you must know that such is not the case; but even should the language by ingenious misconstruction be held to refer to the possible adoption of the amendment, and consequent wrecking of the bill, this would not have been "Ulster domination" at all, but the "tyranny" of the British House of Commons.

The position of Ulster Unionists is plain. They object to Home Rule because they believe it to be against the best interests of their country, and they oppose it in every shape and form; but if, as they are so often told by the present coalition Government, Home Rule is inevitable, then they prefer to be excluded from the provisions of the bill, and to remain as they are now, citizens of the United Kingdom; so they unhesitatingly voted along with all other Unionists for the amendment which was defeated by only sixty-nine votes, although the second reading of the bill had been carried by 101 votes a few weeks before.

It was the members of the Labor party who were really in a quandary, on the amendment that the new Irish Parliament should have a single chamber only, and although they declared that on principle they were single-chamber men, they all voted (amid cries of "Toe the line") for a *nominated*—not elected—Second Chamber for Ireland! But this is another story.

J. H. DAVISON.

Augusta, Ga., July 15.

[We think that Sir Edward Carson's speech, for the amendment but against the bill even if amended, was warrant enough for our comment.—ED. NATION.]

A NATIONAL HEALTH SERVICE.

TO THE EDITOR OF THE NATION:

SIR: We still have echoes of the Wiley fight last summer. The forces which opposed him in his efforts to enforce the Pure Food law, and to procure the establishment of a national department of health, have been making for some years strenuous exertions to discredit not only Dr. Wiley, but the whole health movement which he represents. The food adulterators, the patent-medicine manufacturers, and the numerous medical quacks and charlatans have banded together to obstruct the passage of the Owen bill creating a national health service. Senator Works of California used the opportunity to advertise Christian Science in speeches in the United States Senate and to denounce the regular medical profession, but the absurdity of this opposition became more and more apparent, and they have met defeat at every turn. Some of the Senators who at first hesitated to endorse a health service to which such objection was made listened to Senator Works's lengthy speeches and then wrote inquiring friends of the health movement that out of Senator Works's own mouth the cause which he represented was condemned.

Senator Works journeyed all the way from Washington to Chicago in the hope of preventing the Convention from reaffirming its advocacy of public health legislation. On arrival, he sought his California delegation, only to find, with the exception of a few fellow Christian Scientists, that all of the delegation were solidly in favor of inserting a health plank, and had as their leader on the resolutions committee Mr. Rowell, who is an enthusiast for health legislation. Senator Works was particularly disappointed because he had in his pocket a plank which he wisely decided not to present, and which, it is understood, was to have attacked the "doctors' trust" and to advocate the "medical freedom" of the Christian Scientists, which he professes to think would be imperilled by the passage of the Owen bill. He met defeat, and the Republican Convention at Chicago adopted a health plank even stronger than that of four years ago, and placed the preservation of health, not only in the Union, but in the States, at the forefront of the list of social legislation which is recommended.

The defeat of the health obstructionists was even more complete at Baltimore. There, as in Chicago, the delegates had diligently buttonholed and circularized the delegates in advance of the Convention and warned them against the enormities which had been perpetrated and were about to be perpetrated by the awful "doctors' trust." The champion of "medical freedom" against these aggressions appeared in the person of an Iowa Democrat, C. W. Miller. He was given a patient hearing, but made no headway. Mr. Bryan remarked with a twinkle in his eye, "The only thing I have against this health movement is that its enemies tell me it has been endorsed by the undertakers' association." The subcommittee which wrote the platform was unanimously in favor of reaffirming its plank of four years ago to stand behind Senator Owen in his fight to have his bill enacted into a law. The whole committee on resolutions and the Convention, therefore, adopted an extremely strong health plank.

In spite of the determined effort of the health obstructionists at the annual meeting in June in Pittsburgh, the American Institute of Homœopathy, the chief representative of the homœopaths in America, voted to endorse the principles of the Owen bill with only one dissenting voice. This, following on a similar action by the State Homœopathic Association of California, leaves the health obstructionists virtually without any support, except the support of the commercial interests, the food adulterators, and the patent-medicine manufacturers on the one hand, and the hysterical and fanatical Christian Scientists on the other. Even the Christian Scientists, to their credit be it said, are in some cases on the other side.

Another defeat by the health obstructionists was suffered in the General Federation of Women's Clubs in its recent meeting in San Francisco. The Federation went on record as continuing its loyal and enthusiastic support of the health movement.

The rise and fall of this attempt to obstruct health legislation in America forms a curious and interesting chapter in our political history.

IRVING FISHER.

New Haven, July 11.

ANCIENT LANDMARKS

TO THE EDITOR OF THE NATION:

SIR: The theories recently advanced by those who call themselves Progressives have thrown into utter confusion the principles of older political parties. Mr. Roosevelt and Mr. Bryan alike are indifferent to the distinctions on which the Republican and Democratic parties were founded, and both profess to be eager for extension of power to the "plain people," as contrasted with that vested in representatives duly elected, and sworn to support the Constitution.

The so frequently quoted phrase, "Government of the people, by the people, for the people," used by Mr. Lincoln, but not original with him, is interpreted in a manner which he would never have justified. Political smashers are at work, and their dupes are constantly multiplying, while there seems to be no corresponding activity in those who foresee and dread the revolution which now threatens us. To upset the system of our Government is the aim of these agitators, and to deprive our people of the benefit of the wisest and best Constitution ever framed. Our country has had for more than 120 years the safest and most workable form of democratic government. The public powers are carefully defined, and the mode in which they are to be exercised is fixed. The amplest securities are taken that none of these important arrangements should be altered without every guarantee of caution and every opportunity for deliberation. It is true that the difference of opinion as to the powers granted by the Constitution led to our Civil War, but peace having been reëstablished, the supremacy of the written law, including the new amendments to the Constitution, has been virtually acknowledged over the length and breadth of the land.

It is now proposed, by many of the so-called Progressives, that all questions of policy or law, even such as may be contrary to the original articles of the Constitution, should be submitted to popular vote. Questions, or a series of questions, are to be simplified as much as possible, and the entire enfranchised community invited to decide them by voting yea or nay. Thus is the "will of the people" to find expression, but is it not rather the will of some adroit leader or leaders, who can manipulate voters and obtain a majority? It may be a majority of the uninformed and ignorant, when the more intelligent minority have no opportunity for debate or discussion, as they would have were the question to be decided by regularly elected representatives.

It was Chief Justice Marshall who first decided the power of the Federal courts to declare an act of Congress unconstitutional, and that any legislation of a State in conflict with the Constitution of the United States was null and void. The new so-called Progressives would deprive the judiciary of this power and degrade their high office to one dependent upon the vote of a temporary majority of the people. There can be no greater delusion than that the establishment of referendum, initiative, and recall of judges is a sign of progress towards better things. Radical such a system is in uprooting the solid foundation of our Government, but progressive only in leading us to the verge of a precipice. May the danger be seen and avoided by a combination of those who revere the wisdom of the framers of our Constitution.

LAUDATOR TEMPORIS ACTI.

Philadelphia, July 12.

THE BIBLE AND ENGLISH LITERATURE.

TO THE EDITOR OF THE NATION:

SIR: An editorial in a recent number of the *Nation* notes the fact that "one trait of contemporary public oratory and political eloquence is the rediscovery of the Bible as a treasure-house of argument and invective." The illustrative citations of the editorial are apt and interesting; and it may not be out of place to supplement these with another piece of evidence.

At the beginning of the 1911-12 session of the University of Alberta, the faculty received, from a donor who prefers to remain anonymous (a "globe-trotting" Englishman with no marked religious, or, at least, denominational sympathies), the following letter:

> I wish to do something—however small—to encourage the study of the Bible from the point of view of its influence on English literature and speech—an influence which I believe to have been in the past extraordinarily deep and strong. My desire to give some encouragement of this kind is intensified by what I believe to be the fact that for various reasons the Bible is not read as much nor studied as closely in these days as was formerly the case, so that the influence which it has exerted in the past runs the risk of being seriously weakened in the future. It has, therefore, occurred to me to offer a prize of $100 for proficiency in the study of the influence of the English Bible on English literature and speech, to be competed for by students of the senior college in the department of English in the University of Alberta. As to the nature of the examination, I beg to make the following suggestions:
>
> (1.) The tests should be of two kinds, special and general.
>
> (a) The special test should be designed to test the competitor's knowledge of the influence of the Bible upon a particular author. The author should be selected and announced early in the session so that a special study of his writings may be made from this point of view.
>
> (b) The general test should deal with the general influence of the Bible as shown by Biblical allusions in poetry and prose, in newspapers and public speeches, and by words, phrases, and quotations in use among educated men of our race.
>
> (2.) An equal number of marks should be given for each of the two papers, but the prize should not necessarily be given to the competitor who has done the best special paper, if his knowledge of the subject, as shown by his general paper, should be manifestly unsatisfactory.

In compliance with this suggestion, "The Influence of the English Bible upon the Poetry of Matthew Arnold" was announced as the topic for the special test, and the students who submitted essays on this subject were required to write on an examination planned according to the wishes of the donor. The results of the special essays were of inconsiderable value to scholarship, the consideration of the tangible influence of the English Bible upon Arnold's style in his poetry being generally confused with the philosophical and ethical questions common in Arnold's poetry, but not readily assignable to specific and direct Biblical influence. The *study* of the English Bible as a piece of literature, incident to the preparation of the essay, and the minute examination of a notable body of poetry in this connection were, however, particularly fruitful.

How fruitful was made evident in the comprehensive and intelligent answers to the questions in the general examination, which asked the student (1) to enumerate, with proper evidence for his list, the various types of literature, or "literary species," of which the Bible is composed; and (2) to explain and identify the Biblical allusion in passages which had been selected more or less at random from sources as diverse as Gibbon, Borrow, Meredith, Hardy, Hewlitt, Kipling, Roosevelt, and Chesterton.

PERSIA AND THE POWERS.

The Strangling of Persia. By W. Morgan Shuster. New York: The Century Co. $2.50 net.

Only a few months ago, the essentials of Mr. Shuster's narrative were being retailed in daily cable dispatches from Teheran. The present volume simply rehearses and amplifies the story of one of the most dramatic episodes in recent international politics. Mr. Shuster's personality, as revealed in the language and manner of the book and in occasional bits of self-analysis, is precisely what one imagined it to be when the newspapers were recording the single-handed contest waged by a young American official against two of the leading European Powers. There is no pretence here to literary excellence; there is no attempt to simulate a state of judicious calm; there is plenty of evidence that the writer is a young man, with a young man's intolerance of roundabout ways when a short cut is at hand, and a young American with characteristic impatience of the easy-going habits of traditional European diplomacy.

When Mr. Shuster arrived in Teheran to assume the post of Treasurer-General of Persia, his task was much severer than the one that usually confronts the foreign administrator in Eastern lands. He had not only to impose Western ideals of efficiency on a people unused to self-government, but the work had to be done in the face of the opposition of Russia and Great Britain. The two Powers had concluded between themselves a treaty which, though not quite taking the form of a partition of Persia, nevertheless presupposed the relegation of that country to a state of permanent tutelage. The Persian constitutional movement aroused displeasure in Russia; a rejuvenated Persia would seriously compromise Russian ambitions. And as financial reorganization was one of the conditions necessary to insure the permanent success of the constitutional movement, the advent of Mr. Shuster was received from the very beginning with a suspicious aloofness that soon changed to open hostility.

How the break came is familiar to most people. Mr. Shuster, in the administration of the finances in northern Persia, desired to avail himself of the services of Major Stokes, an officer in the Indian army, possessing an intimate knowledge of Persian conditions. But northern Persia, by treaty, was within the Russian sphere of influence, and the Czar's Government protested against Stokes's appointment. The British Foreign Office, which at first had intimated that there would be no difficulty in giving Major Stokes the necessary leave of absence, suddenly changed its attitude. From that time on Russia assumed the aggressive. Another official nominated by Mr. Shuster was also rejected. Then followed the ex-Shah's invasion of Persia, in which Russia's complicity has been made apparent; the open defiance of Mr. Shuster's authority by the Russian Minister at Teheran, who took under his protection the property of various members of the royal family who had been outlawed for high treason; and Mr. Shuster's letter to the London *Times* in which he charged the Russian Government with plotting against the welfare of Persia. The letter made Mr. Shuster's position impossible. Sir Edward Grey, entirely absorbed by the Morocco crisis which was then at its height, and anxious to retain the friendship of Russia, threw his support to that Power; and the Government at Teheran, after rejecting one Russian ultimatum, was compelled to bow down to a second one, with a Russian army advancing upon the capital. Mr. Shuster resigned and left the country.

Mr. Shuster's own account now and then makes one conjecture what would have happened if the American Treasurer-General were an older man, with greater skill in the ways of diplomacy. He might have held his place, and, by bending before the wind, he might have succeeded in snatching some advantage for the Government that employed him. But it is a great perhaps. On the whole, we are inclined to agree with Mr. Shuster that there was for him no alternative between acting as he did and sinking to the parasitic level of the typical European administrator in Persia, whose functions would seem to consist chiefly in drawing a fat pension and doing nothing.

Quite as interesting, to the present reviewer at least, as Mr. Shuster's indictment against Anglo-Russian policy, is the picture he gives us of the Persian constitutional movement against a background of the national psychology. For a people with no experience in self-government and laboring under the supposed handicap of Oriental incapacity for freedom, the Shah's subjects have carried on the struggle with remarkable courage, ability, and persistence. Undoubtedly, the sudden imposition of Western political formulas on the native character had certain amusing results; they did not escape Mr. Shuster's sense of humor. But on the whole, we find the Nationalist movement in Teheran proceeding on lines familiar the world over; we find a nucleus of brave and enlightened men animated by unselfish motives, backed by the best sentiment of the country. Coöperating with these were men of more doubtful, or, rather, more mixed attributes, men who did good service for the constitutional cause without quite forgetting their personal interests. Such a man was the Sipahdar, whom Mr. Shuster treats at length, a man who was tainted with the vices of the old, corrupt Persian officialdom, but who nevertheless, in a moment of crisis, had led an army from Tabriz to Teheran and saved the liberal cause in the capital. Such men were the chieftains of the Bakhtiari tribe, who were never loath to dip their hands into the Government treasury, but who fought bravely against the armies of the ex-Shah and drove him from the country. Mr. Shuster introduces us to a very human world of mixed issues and complex motives.

CURRENT FICTION.

Sister Carrie. By Theodore Dreiser. New York: Harper & Bros.

The unusual success of "Jennie Gerhardt" has naturally led to the reprinting of Mr. Dreiser's earlier novel. "Sister Carrie" was published in 1901, and while it did not reach a large public, it was hailed with enthusiasm by various critics not easy to please. Realism was then still a camp; and warriors like Frank Norris and Hamlin Garland cheered a reinforcement. English authorities approved the new writer's unabashed Americanism; and the rawness of his style, by a paradox which has become familiar, served to attract rather than repel the exacting *Spectator* and the fastidious *Athenæum*. The English of "Sister Carrie" is for the most part almost ludicrously crude and journalesque. But say what we may about our high level of workmanship, the fact remains that workmanship is not the fundamental virtue in fiction any more than in other forms of art. In "Jennie Gerhardt" Mr. Dreiser has largely outgrown his grosser faults of style; but its real merit, like that of the earlier novel, is in its substance, its "punch," as the dramatic critics say. Carrie herself is a cruder Jennie—cruder and less noble; a commoner and, in a way, more pathetic type. Like Jennie, she comes up from town to city, to make her way in a treacherous world, unprotected from without or from within. But her charm is that of sheer youth and eagerness for life—life as it is embodied in the pleasures and ambitions of the crowd. She is susceptible not so much to love as to what love may bring. Her irregular connections therefore have a touch of sordidness absent from those of the great-hearted Jennie. Squalor is her retributory portion, and the means by which she cuts herself loose from that squalor, and from the poor love she has known, entail no greater hope of happiness than the attainment of the luxuries she has craved. With or without them, she is a failure, and must remain a failure, from any high point of view. If she is "ruined" or "fallen," it is by fault of her own pleasure-loving nature rather than by the incidents of her piteous career. Under Mr. Dreiser's slow, keen, sympathetic and yet by no means sentimental scrutiny she appears before the reader as she is—a Carrie speaking, alas, for a million hapless Carries.

Paul, the Minstrel. By A. C. Benson. New York: G. P. Putnam's Sons.

The Child of the Dawn. The same.

The tales which make up the first of these two volumes are reprinted from two earlier books, "The Hill of Trouble" and "The Isles of Sunset." They are all akin in feeling, and were written while Mr. Benson was a house-master at Eton. That, he says, was a very happy time of his life. In more than one of his books he has recorded the trials and perplexities of school-mastering, but it is clear that he has always been one of those rare men (for they are rare) who find permanent delight in contact with the growing boyish mind and character. One of his pleasures at Eton was to tell stories to his boys on Sunday evenings, and these are some of the stories that he told. The didactic bent of this writer is always strong, and he consciously set himself to edify as well as amuse that particular audience. But, as he says, "it is very hard to make the simple choices of life assume a noble or inspiring form," and he instinctively gave his tales a romantic and semi-mediæval atmosphere. With the aid of that glamour he strove to make palatable to the boyish taste a stern doctrine of moral choice. No one could have had better hope of succeeding in this than Mr. Benson, master of a flowing, graceful style hardly approached since Ruskin. To boys in the first flush of adolescence, at that brief moment before the worship of commonplace becomes the schoolboy cult, these stories must have appealed strongly. Each of them approaches, almost imperceptibly and from a peculiar point of view, this same problem of moral choice, and the charm of the story-teller's manner never fails.

"The Child of the Dawn" is new, but it is related to these earlier stories, and would even seem to have sprung from them, if, as we suppose, these are the "short tales of an allegorical type" alluded to by Mr. Benson in his Introduction to the longer story. They were written without effort, he says: "One by one they took wings and flew; and when I had finished, though I was anxious to write more tales, I could not discover any more, though I beat the covert patiently to dislodge them." This story also came to him unbidden: "I was never conscious of creating any of its incidents. It seemed to be all there from the beginning; and I felt throughout like a man making his way along a road, and describing what he sees as he goes." In short, it is a product of a sort of inspiration. The reader will not expect a flight of creative imagination from Mr. Benson, so much as a play of active and graceful fancy. A less facile method might have made a book of great power out of these materials. The general theory is an old one—the adventures of a human soul after the death of the body—but the treatment is fresh. It is based, to be sure, on the old doctrine of reincarnation. A soul, torn from the body by pain, finds itself floating in a great peace, then furnished with a companion, of human experience like its own, and finally given to associate with various groups of souls for the moment out of the body. Each of them is undergoing a transitional experience, active, not passive, preparing for a return to the world of the body under some new and higher form. The narrative ends with the reëntry of the narrator-soul into the body of a baby at the moment of birth.

This kind of excursion of the fancy is beset with pitfalls—the peril of unctuousness on the one hand, and of flippancy on the other. Mr. Benson avoids them both, for the most part. His real feat, a feat for which much praise is due, is his success in divesting the idea of the hereafter of the cant which religion has connected with it. He wishes to destroy the popular image of the soul after death, "as a thing so altered as to be practically unrecognizable—as a meek and pious emanation, without qualities or aims or passions or traits—as a sort of amiable and weak-kneed sacristan in the temple of God"—and to substitute an image more robust and more sensible. His souls are cheerful, often humorous, and they are not condemned to sing hymns, as it were, for a living.

The Price She Paid. By David Graham Phillips. New York: D. Appleton & Co.

This is the third or fourth novel by the late David Graham Phillips to be issued posthumously, and we sincerely hope it is the last. There have been an unusual number of instances recently of affronting some well-meaning author's memory by the publication after his death of inferior or unfinished material. Of course, the temptation for the publisher is great. Here is the man's name, which can be counted on to sell anything while warmth remains in the funeral-baked meats. And doesn't every product of the artist, even his crudest sketches, belong to the world?

David Graham Phillips and Theodore Dreiser were recently proclaimed by Arnold Bennett the only American authors worth reading. That high approval of Mr. Phillips cannot have been based upon such work as this. It has his crudity without the force which often atoned for it. The family group presented in the opening chapters is sordid and disgusting to the point of caricature. The heroine who emerges from that group, and whose career in love and art is the theme of the story proper, has little reality and less charm. One figure, the old singing teacher, Moldini, under whose rule the heroine finally makes herself famous, is clear and strong, and even noble in its way. The rest of the people in the book are a shabby lot—if they can be called people at all. Whether or not Phillips was a great novelist, he deserves a better monument than this.

THE ENGLISH CONSTITUTION.

The Origin of the English Constitution. By George Burton Adams. New Haven: Yale University Press. $2 net.

English and foreign students have collected so large an amount of trustworthy data upon the origin of the English Constitution that an attempt at a brief restatement and consideration of the subject, without critical, bibliographical, or disputatious material clogging the text, ought to be very welcome. While many of Professor Adams's ideas have been briefly enunciated in the historical reviews, he now sets them forth in consecutive form.

The germ of the English Constitution he believes to be "the idea that there existed a body of understood, more or less definitely formulated rights, which the King was bound to observe and which those who at any point of time formed the operative force of the nation had the right to force him to observe if he showed himself disposed not to do so" (p. 157). This idea was "derived directly from feudalism" as introduced by the Norman Conquest, and "it was the work of the Great Charter of 1215 to transfer it from that system then falling into decline to the newer governmental system just beginning to be formed, and in so doing to give it its first institutional expression" (p. 167). He denies all pre-Norman influence upon the English Constitution; Henry II he believes has been overrated as a constructive statesman; nor were the jury, local institutions, and Parliament indispensable formative influences. Clause 61 of Magna Carta contained the germ of the later limited monarchy, and was itself the direct result of feudalism. Only about the time of Richard II did the stream of parliamentary development unite with that of "the general Constitution," and only then did Parliament become its guardian.

In assigning such importance to Magna Carta, Professor Adams is not so much stating a new proposition as championing the older view with which the younger generation of scholars have taken distinct issue. Their evidence and conclusions Professor Adams has great difficulty in harmonizing with his views. Indeed, we are inclined to feel that by accepting so much of them as he does he tends to contradict himself and destroy much of the force of his own conclusions. He states categorically that it was the work of the Great Charter to "transfer" the feudal germ of the Constitution "to the newer government just beginning to be formed," and announces this as the thesis of his book. Yet a couple of pages later he informs his reader, in a footnote, "it was not Magna Carta, but the circumstances of the future which gave to the fact that there was a body of law above the King creative power in English history. Magna Carta emphasized the fact . . . but this was all it did" (p. 169). "The Charter itself, as has been said, determined nothing." He is willing to go further, and admits (p. 249) that "in spirit, in method, and in principle, from the narrower point of view of 1215, it was reaction. If we regard the political necessities of the time . . . we must admit that the King was right and the barons wrong." "It is easy enough for us to see that John was at work in the way of the future. The changes which he was striving to make were inevitable and necessary" (p. 173). The prompt omission of Clause 61, which he insists contained the germ of the Constitution, from the Charter, when later confirmed, and its subsequent neglect were, he declares, of little significance because the principle was so inherent in feudal law that the King would not have denied its binding force before or after 1215. Indeed, the omission of that clause was "inevitable"! "The fate of this principle . . . depended not upon the words of the Charter, but upon the character of the following age" (p. 278). If, then, the germ of the Constitution was nothing more nor less than feudal law, already recognized as binding, and if it was omitted from the reissue of the Charter by contemporaries as something either unessential or undesirable, how can Professor Adams support his claim that its presence in the document is of such portentous importance as to justify him in calling Magna Carta the beginning of the English Constitution?

He also tells us that this feudal germ of the Constitution is not "peculiar to England." Will it not then be necessary to look to the influences which caused it to have so different a development in England? We have here a distinctly important and subtle question of cause and effect, which is itself the very gist of Professor Adams's inquiry. He is attempting to show how and when this germ became operative. At one moment he sees Magna Carta as the agent transferring the principle to the Constitution; at the next, he sees the germ placed in the Constitution, not by Magna Carta, but by the political and constitutional difficulties of the thirteenth century. If one of these views is right, the other can hardly be maintained.

Other inconsistencies may be noted. In the face of such statements as "differentiation of the functions of the state, like the legislative and judicial, had not yet begun" and "the Norman state was simple and undifferentiated," we are told that "we seem to have the right to say that the legislative, judicial, conciliar, and military functions of the state in their ordinary operation were thoroughly feudalized and the administrative system partially so" (p. 32; see also 23, 75, 109, 123, 127, 134, 144). In such a book, too, the consistent and exact use of the term "Constitution" will be of its very substance. Yet we find it employed in several senses, and are perplexed by the apparent existence in 1215 of several "Constitutions," the "old," the "newer," the "royal," the "feudal," the "final," as well as the "general Constitution of John"—all of which is not a little puzzling when we are searching for a Constitution not yet born. The word "government" is equally indefinite: "no interest of the government (king?) or of the ruling class"; "supervising all government" (administration?); "general machinery of the ordinary or normal Anglo-Norman government" (state?). Not less confusing are the following: "The connecting link between the regular action and the prerogative action of the Anglo-Norman state," "the *king's* prerogative action"; "the operating machinery of the state"; "the official administrative machinery proper." If the functions of state are not distinguished, why describe them thus? If this language is correct, why speak of Norman government as simple? The meaning of words is the essence of constitutional history. It has been often and truly said that if we only knew the exact significance of twenty terms employed by the early law writers, we should understand all constitutional development.

The lack of a careful and discriminating use of terms in the book before us, the citation of authorities for comparatively few of the points we are inclined to challenge, the author's disagreement with leading authorities on important points (as with Maitland and Vinogradoff upon the character of English feudalism before and since the Conquest), cause us to hesitate before accepting his central thesis. Professor Adams's repute as a scholar gives even his unsupported opinion a certain weight, but we regret that he has in this case stated his views in such indefinite and inconsistent language as to deprive them *prima facie* of much of the force they might otherwise have possessed.

Histoire de la Langue Française des origines à 1900. By Ferdinand Brunot. Tome III. La Formation de la Langue classique (1600-1660)—*2e partie*. Paris: Armand Colin. 7.50 francs.

It is two years and more since the *Nation* reviewed the previous instalment of this monumental history of the French language by a professor in the University of Paris. The work follows an even course as it began. In 1897, after an earlier effort, Gaston Paris said: "M. Brunot will have the honor of being the first to realize a design which more than one doubtless has formed, but which none before him dared to execute." Meyer-Lübke adds, now that the work is far under way: "Good science, sound criticism, pleasant exposition, a sure work to the students' hand, and of lasting value." It is hard to imagine additional praise in the science of language.

This latest instalment (the fourth in order of publication) is devoted entirely to syntax. There is an excellent analytical table of contents; and, with the conscience of the scholar, a few errata are noted in Tome II which dealt with the sixteenth century. A general note on the bibliography of the study of French syntax for the seventeenth century is given at the beginning; and there are constant references and examples in footnotes, in addition to those which make up the greater part of the text. An index proper could not be expected, for the whole text of the work is one subject-index of words and authors.

One of the chief uses and keenest pleasures of such a work is to be found in these examples, classified and explained. Everywhere crops out the life, not alone of the schools which taught the parts of speech, but of the men and women who used them. At the beginning of the seventeenth century, Du Val was already singular in thinking the article an impediment and "knot in discourse"; he ostentatiously cited Plutarch to show that great Homer seldom prefixed articles to his nouns like "handles to vases" or *panaches sur des morions*. Even Professor Brunot shows a touch of feeling when the notorious Père Garasse, "who has the pretension of dealing with higher things, declares that he is not 'of these over-nice minds and reformers of the French language,' and that he does not raise 'questions, to wit, whether we should say *des superbes Palais*, or *de superbes Palais*, as Messieurs our Court Translators do.'" Alas! the most knowing of us foreigners has hardly got beyond that age when "the mistake *des superbes palais*, and —particularly—*du bon vin*, is so common that there is no use in giving examples."

Teachers will be delighted to see here in full process the slow but sure declaration of independence of French from Latin. The printed part taken in this by Port Royal and the Petites Ecoles of the Jansenists is indicated by M. Brunot; but he does not seem familiar with the similar oral teaching and exercises of translation into the vernacular used in the professedly Latin classes of their rivals. The resulting French may be seen in work already published by Bossuet, as M. Brunot notes (p. 714). In the chapter on the Sentence (p. 685) there is an enlightening analysis to show why "the greatest writers of the sixteenth century, Rabelais, Calvin, Amyot, Montaigne, still transfer into French the forms of the Latin sentence. . . . The deliverance from the Latin obsession could begin only when French should be emancipated enough to put a stop to the imposition of foreign forms, or when Latin should be decadent enough for men of letters to stop thinking in Latin."

Such studies as these rise to higher and more general historical conclusions:

> The language which henceforth is to reign throughout the country under the name of French issued from the speech of Paris, without being confounded with it. The epoch I have just studied is that of their divorce. It lasted long, it was never complete, it could not be so; and later I shall have occasion to seek when and how the common speech once more began penetrating the classic language. However, the generation whose work I have shown neither could nor would foresee their drawing nearer to each other. It was persuaded that good use ought not only to lead, but ought to destroy bad use, and that without undergoing any reaction in itself. The language of the King, in its thought, had to reign sovereignly, sharing nothing and yielding nothing· and the events of the Fronde and the importance taken for a moment by the Parliaments did not trouble this opinion in the least. At bottom, it was a form of the faith in monarchy and the next age was to mark its absolute triumph. Such hopes were founded in part, but the work had still to be done; nearly all France had still to be conquered (p.721).

With the historical fact from which this conclusion is derived, we come on the essential philosophy of the history of the Old Régime in its gradual and inevitable centralization, which the Revolution could only complete:

> How many were those cultivated people whom questions of language stirred to passion or even interested? Because political or literary history is full of their names, we always forget to look round about them; and, while from other points of view their

number matters little, for the linguist (why not for the historian?) it is of capital interest to know the proportion of this minority to the whole of the population. The Province, the dialect land, began at Vaugirard and Montmartre. The City, the vulgar land, touched the Louvre on every side The masses did not read, could have found nothing to read if they had wished, were taught nothing, underwent none of the great forces which, little by little, everywhere impose the literary language—and they kept their ordinary speech.

Buhen. Publications of the Egyptian Department of the University of Pennsylvania. Vols. VII and VIII, by D. Randall-MacIver and C. Leonard Woolley. Philadelphia.

The town of Buhen was situated on the west bank of the Nile, almost exactly opposite the modern town of Halfa, the northern terminus of the Sudan Government Railway. Of the town itself but scant traces remain above ground, but from the careful and exhaustive excavations of the Philadelphia Expedition we can now reconstruct its entire history. Buhen was essentially an Egyptian and not a native Nubian settlement. In the prehistoric period the populations of Egypt and Nubia were racially identical; but whereas in Egypt the discovery of metal on the one side, and the greater productive power of the soil on the other, tended to foster a rapid growth, Nubia in her barren backwater of civilization lagged behind in the neolithic stage of development. Hence negro invaders from the south found no difficulty in overrunning the upper country, and were only prevented from colonizing the whole of the Nile Valley by the newly consolidated Egyptian power. In all the early pages of Egyptian history we find reference to the incessant struggle that was maintained to keep these inhabitants of "wretched Kush," as it was called, in check; and in about the year 1950 B. C. we find our first mention of Buhen, when, at the close of a successful campaign under the leadership of a certain Mentuhotep, in the reign of the twelfth dynasty king, Sesostris I, the town was built to serve as the southernmost fortress of the Egyptian Kingdom.

A reminder of the dangers undergone by the earliest settlers in Buhen is given by the fact that the twelfth dynasty cemetery was situated within the city fortifications. In the two hundred years of anarchy that followed the close of the twelfth dynasty it is probable that this, the southernmost fort, was abandoned; but in the eighteenth dynasty the frontier was set still further south, at the fourth cataract, and Buhen was reëstablished on a securer basis, temples, parts of which still stand, being erected by Hatshepsut and Amenhotep II over the ruins of the twelfth dynasty structures. Through the eighteenth, nineteenth, and twentieth dynasties Nubia was governed with a firm hand by a succession of Egyptian viceroys; but thereafter, growing stronger as Egypt weakened, the Nubians first reasserted their independence, and then, invading in their turn, they overran Egypt, and won for their king the throne of Pharaoh himself. From that time onward Buhen the frontier town drops out of history, and with the exception of a handful of settlers of the Roman period, and a community of Coptic monks, the district for centuries remained unoccupied. In the nineteenth century of our era, by a strange coincidence, it was again selected as the frontier post of Egypt, a garrison being placed there to keep the Dervishes in check; and it was from this base that in 1897 Lord Kitchener began his victorious advance on Khartum.

The excavation of the site was carried out in the seasons of 1909 and 1910, and the results are admirably set forth by Dr. Randall-MacIver and Mr. Woolley in the two volumes before us. In the opening chapters a full descriptive and photographic record is given of the temples, which were already known, but from which only isolated inscriptions had hitherto been published. Then, turning to the results of actual excavations, the authors describe in detail the town buildings, the fortifications, with moat and elaborately buttressed walls, the later settlements, and finally the cemeteries. From an historical point of view the most interesting of the temple inscriptions are the ex votos of Egyptian officials, carved on the temple walls—among them that of Thure, the first of the long line of Viceroys in Nubia; while for the Museum a considerable amount of valuable material was procured, notably the magnificent gold and amethyst necklace which forms the frontispiece of the first volume.

The present volumes are the seventh and eighth published by the University Museum on the five years' work of its Egyptian Expedition, and we note with regret that they are to be the last. That they have been able, within six years of the inception of the work, to complete this series of eight volumes, is a *tour de force* of which the authors and the Museum may well be proud.

Social France at the Time of Philip Augustus. By Achille Luchaire. Translated by E. B. Krehbiel, Ph.D. New York: Henry Holt & Co. $3 net.

Probably no modern scholar knew more of French history in the age of Philip Augustus and Richard the Lion-Hearted than the late Achille Luchaire. In fact, he planned to write a *magnum opus* on Philip Augustus, and for five years gave lectures at the Sorbonne on his reign. But in 1901 he abandoned his project, probably because a German, Cartellieri, was beginning to bring out a great work on the same subject. As the social history of the time, however, lay outside the scope of Cartellieri's work, Luchaire found a gap in which he had a particular interest and on which he left, at his death, fully prepared manuscript lectures. Parts of these lectures Luchaire had already published in periodicals or in the volume which he contributed to Lavisse's "Histoire de France." After his death they were published in full by M. Halphen, and are now rendered into English by one of his American friends.

Society in the Middle Ages was universally recognized as being sharply divided by the Divine Will into three estates of man: the clergy who served the nation by praying, the nobility who served it by fighting, and the Third Estate, who served it by toiling and paying dues for its support. Jacques de Vitry was only expressing what every one unquestioningly accepted, when he compared the body politic to the human body: the priests were the head and eyes, because they were the spiritual guides of humanity; the nobles were the hands and arms, charged with protecting the others; the people of the country and towns formed the legs and feet—that is to say, the base on which all the rest stood. Luchaire was apparently more interested in the eyes and hands than in the feet. After his introductory chapter on earthquakes, floods, fires, comets, miracles, and other acts of God and Satan which made up the material and spiritual background of social life, he devotes the rest of the volume, with the exception of the final chapter, to the nobility and clergy, the two social classes which, even when taken together, probably did not equal in numbers one-tenth of the common people in country and town. And even in this final chapter, devoted to the toiling nine-tenths, he describes chiefly how the upper classes treated the lower classes rather than how the burghers and peasants were actually living and what they were thinking about. Did they wear shoes and nightshirts? Did they ordinarily have meat to eat and wine to drink? Did they have large families and die young? M. Luchaire does not tell us. Yet these are the things which readers of to-day, absorbed in the welfare of the masses and in the problems of poverty and health, would be interested to know. At first sight we are therefore inclined to criticise M. Luchaire's sense of proportion. But in reality he deserves praise for historical-mindedness; he is giving to the Third Estate only that comparatively scant consideration which it actually received in the age he is describing. The social question did not exist in France seven centuries ago; the toilers were contemned with impunity by their lords; if they had thoughts, they were not articulate; they had no spokesman and no opportunity for concerted action; the whole tendency of the age was opposed to innovation. Though the peasant and burgher may have formed more than nine-tenths of the total population, he counted for very little in the social life as then conceived.

The author has carefully grouped by chapters an enormous amount of material, and enlivened it with pertinent passages from the sermons, *chansons de gestes*, *fabliaux*, and other picturesque literature in which the age of Philip Augustus is fairly rich. Especially excellent is the chapter on student life in the twelfth century and the strong papal influence in the growth of the University of Paris. Mr. Krehbiel's work as translator and index maker is excellent.

Notes

"Aspects of the Irish Question" is the title of a forthcoming book by Sydney Brooks (Maunsel & Co.).

The scene of F. Hopkinson Smith's new novel, "The Armchair at the Inn," which the Scribners will bring out in August, is laid in Normandy.

Mr. Smith's son, F. Berkeley Smith, has also written a story of life in Normandy—"Madame Mésange." It and "The Street of the Two Friends," stories of the Latin Quarter, will be issued by Doubleday, Page & Co. in the autumn.

Maurice Hewlett's new novel, promised by the Century Co., is "Mrs. Lancelot," a story of a woman of the London social world and her three lovers.

The Century Co.'s autumn list includes also Jack London's tale of the Klondike, entitled "Smoke Bellew," and "Personal Traits of Abraham Lincoln," by Helen Nicolay.

Charles Edward Jerningham is preparing a volume of reminiscences of Henry Labouchere, which will be brought out in the autumn by Messrs. Bell.

J. B. Lippincott Co. will publish in the autumn: "Chiero's Memoirs," being recollections by this palmist of many celebrated persons, and "A Dixie Rose in Bloom," a story by Augusta Kortrecht.

Allen H. Eaton's "The Oregon System: The Story of Direct Legislation in Oregon," is announced for immediate publication by McClurg.

The Appletons will shortly have ready "Railway Finance," by Dr. Frederick A. Cleveland.

"The Boys' Parkman" is the title of a new book of selections from the works of Francis Parkman compiled by Louise S. Hasbrouck, and promised shortly by Little, Brown.

The same house has in hand a Western story called "Good Indian," by B. M. Bower.

We have received from Gius. Laterza & Figli, of Bari, Italy, another volume of the Scrittori d'Italia series—Vol. II of the Italian works of Teofilo Folengo, edited by Umberto Renda.

It has been the fate of Volume I of the Second Supplement to the Dictionary of National Biography to enjoy a *succès de scandale* of which the most frivolous volume edited by, let us say, Francis Gribble, might have been proud. At this late hour there is no need to take up Sir Sidney Lee's much-discussed article on Edward VII. Other well-known names in the record are Lord Acton, Alexander Bain, Walter Besant, Professor Butcher, Campbell-Bannerman, and Sir Charles Dilke.

A new group of volumes in the Home University Library reveals the usually wide range of topics, from Buddhism to English sects and from American history since the Civil War to the Principles of Physiology. Mrs. Rhys Davids's "Study of the Buddhist Norm" is very difficult reading, but profitable. It is certainly not a book for the beginner in its highly condensed and allusive style, but it carries out faithfully a well conceived plan. Principal Selbie's account of the rise and progress of English Nonconformity is a model of popular exposition; it has a great deal of human interest. Excellently planned and written is Logan Pearsall Smith's history of the English language; it is a subject which can be made fascinating by a writer of knowledge and imagination, and Mr. Smith is such a man. His is the most attractive volume in the present group. Professor Ker of London University has dealt in detail with English mediæval literature; his study of the romances and the songs and ballads of the period supplies a satisfactory introduction to a specialized investigation of the subject. In "Reconstruction and Union, 1865-1912," Paul Leland Haworth has omitted few facts of importance. On contemporary matters Dr. Haworth is not as dispassionate as one might wish. His apparent sympathy with the new progressive forces in our national life leads him into unguarded eulogy and altogether too swift condemnation. W. M. Geldart is the writer of the volume on the "Elements of English Law," a straightforward and useful compendium. Professor Geldart of Glasgow has done the volume on Physiology.

Miss Josephine Goldmark, the author of "Fatigue and Efficiency: A Study in Industry" (New York: Charities Publication Committee), is to be congratulated on an excellent piece of work. It is seldom that one reads a volume designed for a particular and practical purpose with so much satisfaction. Setting out to demonstrate the need of legislation to guard the health of women workers, she lays broad foundations in a study of fatigue. The latest medical and laboratory investigations are passed in review, and the penalty in impaired energy and shattered nerves which the overworked women in modern industrial occupations have to pay, is set forth in convincing fashion. Then follow detailed exhibitions of the "new strain" which forms of work like that in telephone exchanges impose upon the women who are tending to monopolize them. There are also specific studies of overstrain, with an account of the economic aspects of the regulation of the hours and conditions of woman's labor, and the way in which they fit into the new ideas of management. Next we have an outline of the history of labor laws, with the obstacles, judicial and other, placed in the way of their upholding and enforcement. Part II gives a survey of world-experience in legislation undertaking to limit the hours of labor for woman; and the volume closes with reprints of the most important court decisions on the subject in the United States, showing their growing enlightenment, including the opinion of the Supreme Court in the epoch-making case of Muller vs. State of Oregon. The whole work seems to us one of exceptional value, owing to its massing of material and restraint and good judgment in presenting it. Not merely as aiding in a timely propaganda, but as a work of reference, it deserves a place in libraries and newspaper offices. No more useful publication has come from the Russell Sage Foundation.

Despite the temporary abeyance of public discussion of the initiative, referendum, and recall, books on those topics continue to come from the press. Misleading is the title, "The Referendum Among the English" (Macmillan), by Samuel R. Honey. His little volume is confessedly a tract *for* the English, being an account, drawn up avowedly for their behoof, of the use of the referendum in America. And even this is here confined to the submission to popular vote of changes in State Constitutions. How much more than that we have come to mean by the referendum, may be seen in "The Initiative, Referendum, and Recall," edited for the Appletons by Prof. William B. Munro. His introduction is marked by a cautious weighing of the advantages and disadvantages of the new method, and he gives a salutary warning that we are as yet in too early and experimental a stage of the innovation to have a positive opinion how it will work. The bulk of this volume is made up of contributed and selected matter from a dozen pens, on various phases of the subject. Explanation rather than advocacy is the note of "Direct Elections and Law-Making by Popular Vote," by Edwin M. Bacon and Morrill Wyman, which the Houghton Mifflin Company publishes. A four-page bibliography shows to what proportions this discussion is growing. Finally, we note "Government by All the People" (Macmillan), by Delos F. Wilcox. He goes over the familiar ground, but with a more confident tread, resting his case mainly upon the breakdown of the present system, but frankly stating his belief that by the use of the new "implements of democracy," we may look for "a great forward movement toward stability, justice, and public spirit in American political institutions."

Nathaniel P. Langford's "Vigilante Days and Ways" (McClurg) contains an excellent picture of the forces which entered into our pioneer life. In the first part of the volume is set forth at length the life history of the desperadoes whose activities made early Montana and Idaho the scenes of so many desperate fights and murders. This is followed by a careful account of the rise of the vigilante committees and of their final success. The book is a very human document, and holds the attention like a novel. The author, who participated in the events described, makes out a strong brief in favor of the vigilantes.

The romantic side of Californian history has always been a lodestone for the writer of books, whose industry has furnished work for the printer and the bookstore without adding much to the knowledge of the subject. John S. McGroarty's "California, its History and Romance" (Los Angeles: Grafton Publishing Company), does not differ from its many predecessors, either in character or manner. On the whole, the story is told in an interesting way, but is marred too frequently by the attempt at fine writing.

A very spirited book is Walter Wood's "North Sea Fishers and Fighters" (Dutton, illustrated). Glancing at the fishers and fighters of olden times, when successively the Danes and the French threatened England from the sea, the author passes rapidly to the sailing smacks of yesterday and the steam trawlers of to-day. John Paul Jones's capture of the Serapis off Flamborough is not forgotten, nor is the disgraceful panic of Admiral Rojestvensky's squadron among the Dogger Bank fishermen. The book ends in the fear of Germany with the recommendation of a special naval reserve for North Sea service. Of especial interest is the account, sufficiently statistical, of the way in which the vast catches are marketed, of the growth of scientific and corporate methods in the fisheries, and of mission and hospital work among the fleet. There is a thrilling account by a survivor of the storm of 1883, in which some three hundred and fifty fishermen were lost. Mr. Wood evidently knows his subject intimately, and often tells his story in the language of the fishermen. The following anecdote is none the worse for recalling classical variants. The boy of a Scotch lugger was once sent ashore with a sovereign and instructions to lay it out in food and drink to the best advantage. "In due season the youth returned, bearing half a dozen bottles of whiskey and a penny loaf. For a moment the master gazed admiringly, then exclaimed despairingly, 'Heaven forgive you, boy! whatever shall we do wi' all this bread?'" Sketches, many in color, and cuts after the author's photographs add to the attractiveness of this book.

The revision of G. R. Porter's "The Progress of the Nation" (Methuen), by F. W. Hirst, editor of the London *Economist*, makes it a new work. The seven sections into which the original was divided have been rearranged into thirty-eight chapters, filling 700 pages. Porter's own volume has received from the Dictionary of National Biography the high praise of being characterized as "an invaluable record of the first half of the nineteenth century." The aim of the present edition is to perform the same function for the whole of that century and the first decade of the twentieth. The scope of the book may be judged from the statement that the first nine chapters deal with the growth of population, trades and occupations, wages and employment, pauperism, housing, crime, intemperance and lunacy, education, local government, and the standard of comfort. This is followed by a general and particular survey of the leading trades of Great Britain and Ireland. Chapter ix, entitled, The Rising Standard of Comfort, quotes this sentence from the memorandum prepared for the Poor-Law Commissioners by the Board of Trade in 1909: "The rise of nominal wages has been accompanied by such a fall in wholesale and retail prices as implies a rise of 'real' wages, or wages as measured in commodities, considerably greater than the rise of money wages." However true this may be for the entire century, it hardly meets the situation in 1912. The name of the editor is sufficient guarantee of the accuracy of the statistics and other information in the volume. There is an excellent index.

The modern library movement has been criticised for two defects, both, it is admitted, being the defects of its own virtues: lack of proper feeling for books as literature and lack of historical perspective. Whatever merit this criticism may have, there is evidence in recent library publications that it is rapidly losing point and force. Numerous addresses, periodical articles, monographs and learned treatises lately issued, could be cited to show that the librarian is now claiming and taking his natural place in the world of books. The most notable of such publications is E. A. Savage's "Old English Libraries" (McClurg), a handsome, well-illustrated volume of 300 pages, devoted to the history of books and libraries in Great Britain from the time of their earliest mention in historic records down to the invention of printing. The aim of the author is to present in a comprehensive way "the making, use, and circulation of books considered as a means of literary culture; to throw a useful sidelight on literary history and to introduce some human interest into the study of bibliography." For the accomplishment of his purpose he combines the results of careful and original research into a wide range of sources, an evident and engaging interest in his subject, real historic feeling, an eye for the significant, and a fair degree of literary style. Topics receiving special attention are: The use of books in the early Irish monasteries; noted monks of early England and their books; growth and dispersal of the libraries of the great abbeys; libraries of the cathedrals and great churches; early history and description of the academic and university libraries; library economy in the Middle Ages; the book trade in the manuscript period. The value of the work for reference and for further study of the subject is greatly increased by a minute index, and four appendices in tabular form, giving prices of books and materials for bookmaking at recorded sales from 1334 to 1496, titles of classic authors found in catalogues of some noted mediæval libraries, a list of the principal collections of which there is specific historical record, and a list of the main authorities consulted. The book will probably take its place immediately as a part of the required course of reading or study in the leading library schools, and will do much to put the modern library movement into proper relation with the past.

The story of the creation of the great English family of North during the Reformation has been pleasantly and capably told by Lady Frances Bushby in "Three Men of the Tudor Time" (London: Nutt). Edward, the first Lord North, lawyer and judge, member of the Privy Council, and executor of Henry VIII's will; Roger, his eldest son, diplomatist and soldier, related by marriage to Sir Philip Sidney; and Thomas North, the younger son, the translator of Plutarch, were a trio of singularly interesting men. Lady Bushby has succeeded in drawing well-balanced portraits and has not crowded the narrative with insignificant personal details nor with familiar general history. The work is scholarly and evinces a careful use of family and public archives, though the scanty and indefinite footnotes are likely to cause the reader to underestimate both the care and the extent of the research. While no new fact of importance is brought to light, numerous unpublished personal and household papers enabled the author to fill out the skeleton of the lives treated into as well-rounded a conception as we are likely to get. It is interesting to note that Roger North often lost money to Queen Elizabeth at cards (p. 105), and that he employed a "running footman" whose sole duty was to carry news and letters to and from London (p. 91).

We have received from the George H. Doran Co. the second edition of the autobiography of Charles Rowley, "Fifty Years of Work Without Wages." Born of modest craftsmen folk and without conventional advantages of education, Mr. Rowley has made himself a power in the æsthetic and material advancement of his native city of Manchester. His friendships include Holman Hunt, Rossetti, Ford Madox Brown, William Morris, Walter Crane. These and others appear in rather shadowy guise, for Mr. Rowley has no vivid gift of portraiture. In fact, for all the interest of the matter, it is a pretty bungling book, ranging in form from almost indiscreet intimacy to the stately editorial we. The Ancoats Brotherhood was Mr. Rowley's most remarkable achievement. It started as a recreation guild largely managed by factory folk, and developed along lines of club conferences and educational excursions. The essence of the thing was that it should not be a charity and should seek the best. So the Brotherhood audaciously and successfully brought to Manchester the best lecturers and the best music. Even the printed circulars were models, many being designed by Walter Crane. A reverberation of the movement was the summer session for working folk at Oxford. An encouraging feature of the educational work was the response made by the laborers to the initiative of their distinguished teachers. One student, fired by the lectures of Milnes Marshall, and lacking money for books, actually traced and copied out from Gray's Botany hundreds of pages of text with the illustrations. In all this remarkable movement, Mr. Rowley's shrewd friendliness played an indispensable part, which his book modestly minimizes. The volume is charmingly illustrated by works of the artists mentioned, portraits of other noted friends, Ancoats programmes, and caricatures of the author, whose roguish, vivid face has always proved irresistible to his painter comrades.

The fifth volume of the results of the Eckley B. Coxe Junior Expedition to Nubia, called "Karanòg The Town," is contributed by C. Leonard Woolley. It continues the report on Karanòg, of which volumes three and four presented the cemetery. The ruined castle of Kanarog, as excavated and studied by the expedition, is fully described and typical houses of the town which it defended are also taken up. The whole forms a very interesting contribution on the civilization of the Blemmyes, the scourge of the Roman frontier in Egypt. Mr. Woolley is to be congratulated on the picturesque chapter in which he endeavors to reconstruct and picture for us the life and scenes which greeted the Greek historian Olympiodorus when early in the fifth century A. D. he visited this remote Blemmyan stronghold. The ruins date from about this period.

Those who think of Oriental literature as something more than a curiosity will be glad to know that Prof. Basil Hall Chamberlain has republished in "Japanese Poetry" (Murray, 6s.) the greater part of his well-known "Classical Poetry of the Japanese," now become excessively rare. Since its first appearance more than thirty years ago this has remained the one collection of translations into English from Japanese verse that could be commended by Japanese scholars, though an anthology of M. Revon quite surpasses it in French. The new edition omits a long introduction and several appendices which contained translations of some dramas in lighter vein, but adequate compensation for these is made by including in this volume the author's paper on "Basho and the Japanese Epigram," reprinted from the Transactions of the Japan Asiatic Society. This is an exhaustive essay on the famous *hokku*, or verse in seventeen syllables, upon which the acutest minds in Japan have spent their skill. The meaning condensed in these wonderful little gems of poetry usually requires a commentary, while the sonant beauty of their originals of course disappears in an attempt to render them in another tongue; but no appreciation of Japanese native culture is complete without some knowledge of this literary *bijouterie*.

The death is reported from Atlanta, Ga., of William Lindsay Scruggs, lawyer, writer, and former Minister of the United States to Colombia and Venezuela. Mr. Scruggs was in his seventy-sixth year. Among his works are: "British Aggressions in Venezuela, or the Monroe Doctrine on Trial," "Lord Salisbury's Mistakes," "Evolution of American Citizenship," and "Evolution of the XIVth and XVth Amendments."

Andrew Lang, of whom mention is made in another column, died suddenly of heart disease late Saturday night at Banchory, Scotland. He was born at Selkirk in 1844, and was educated at the Edinburgh Academy, at St. Andrew's, and at Balliol College, Oxford. Oxford honored him with the degree of doctor of letters, and he was a Fellow of the Royal British Academy. He had contributed from time to time to the *Nation*. To sketch his literary career briefly is almost impossible, owing to the variety of his interests. Poet, critic, historian, even novelist jointly with Rider Haggard, translator of Homer and other works, Grecian, antiquarian—all these he was and more. Even the mere list of his published works is too long to be given here. We select a few which may reflect his many intellectual activities: "Ballads and Lyrics of Old France," "Ballads in Blue China," "Helen of Troy," "Custom and Myth," "Rhymes à la Mode," "Letters to Dead Authors," "Myth, Ritual, and Religion," "Gold of Fairnilee," "Blue Fairy Tale Book," "Angling Sketches," "Homer and the Epic," "My Own Fairy Book," "Life of John Gibson Lockhart," translation of the "Odyssey" (with Butcher), translation of the "Iliad" (with Myers and Leaf), "The World's Desire" (with Rider Haggard), "A History of Scotland, from the Roman Occupation," and "A Defence of Sir Walter Scott and the Border Minstrelsy."

THE INTERNATIONAL RADIOTELEGRAPHIC CONFERENCE.

LONDON, July 5.

The International Radiotelegraphic Conference of London has just adjourned after a session of nearly five weeks, beginning June 4. It was just fifteen years ago last January that the cable brought the news of the first experiments, carried out on Salisbury Plain by a young Anglo-Italian, in communication by means of the electric waves discovered in 1888 by Heinrich Hertz. The fact that a conference of thirty-eight nations and their colonies has now been necessary to settle in the most formal manner the world's procedure regarding wireless, speaks eloquently of the rapid progress of this application of physics to human activity.

The Conference was held in the fine hall of the Institution of Electrical Engineers on the Victoria Embankment, where everything was done for the comfort and convenience of the delegates that the admirable administration of the British Post Office could devise. All mail matter was delivered free, and each delegate was furnished with a pass entitling him to send all telegrams and cables (even with reply paid) to his own country *free*. In the hall, somewhat larger than the United States Senate chamber, the desks of the 150 delegates were arranged in semicircular order. All proceedings were carried on in French, with great parliamentary formality, each speaker being mentioned only as "l'honorable délégué de ——"

The Conference was opened by the Postmaster-General, Herbert L. Samuel, who welcomed the delegates, outlined the work of the Conference, and proposed as chairman Sir Henry Babington Smith. Sir Henry, formerly chief secretary of the British Post Office and now president of the Ottoman Bank of Constantinople, had in large measure the qualities necessary for such a delicate office—a perfect knowledge of French and of parliamentary tactics and much charm of manner.

The greater part of the detailed work was done in two large committees, on regulations and tariff, respectively, while the matters most difficult of agreement were threshed out in plenary session. In all twenty-eight meetings were held. The first business of importance was the determination of standard wavelengths. It should be explained that waves of a given length, or frequency of oscillation, will be received only by apparatus suitably tuned, all other apparatus being virtually deaf to them. As an interesting example, may be mentioned the case of two ships that failed to hear the Titanic's distress call, because they were tuned for the reception of press dispatches. Obviously, this must be prevented in future. Now, while interference with various messages can be prevented by using special wave-lengths, the Conference decided to authorize only two wave-lengths for general use, those of 300 and 600 metres. A range from 600 to 1,600 is thus left free for the armies and navies of the world; and after a good deal of discussion a length of 1,800 metres was authorized for long-distance work. Here many delicate points were touched upon. International rivalries proved very strong, particularly in crowded waters like the English Channel or the Adriatic, where there is often a "babel of voices." Certain small nations have powerful stations that overreach other countries and take business away from them. This was obviated by requiring ships to communicate in general with the *nearest* coast station. Obnoxiously powerful stations will be made to tone down their emissions, unless removed from other stations by a certain distance, the proper distance being earnestly discussed and occasioning one of the few roll-calls of the nations.

Most interesting to the general public was the provision for greater safety at sea. Ships are to be divided into three classes, according to the number of persons carried and the service performed. On ships of the first class, *two* competent operators must be employed, and there must be a permanent watch for distress signals. On the second-class ships listening must be carried on for ten minutes in every hour of the day. Rules were prescribed for the licensing of operators. Further, shore stations will be required to stop transmission four times an hour, so as not to interfere with distress calls. Ships will also carry a spare set of radio-apparatus, with power independent of the ship's engines. Priority was given to the transmission of meteorological reports, so that weather maps might be expeditiously constructed. The American delegation, the largest of all, was composed of thirteen members, representing the Departments of the Treasury, Army, Navy, Agriculture, and Commerce and Labor.

The labors of the delegates were broken by the most prodigal hospitality on the part of the British Government, in-

dividuals, and the Marconi and Siemens companies. All the delegates were taken by special train to Poldhu, in Cornwall, 292 miles from London, for the purpose of inspecting the great Marconi transatlantic station. Dinners, opera, and theatre performances crowded one upon another, while King George showed his interest by receiving the members of the Conference at Buckingham Palace. The invitation of the United States to hold the next Congress at Washington in 1917 was accepted amid applause. In the opinion of the writer, it will be a task of no mean difficulty to equal the arrangements of the Conference of London.
A. G. W.

"We and Our Children" (Doubleday, Page), by Woods Hutchinson, has all the earmarks of the productions of this popular writer. It is fresh and breezy, stimulating, informing, although often inexact, not a little repetitious of fact or phrase, and sometimes a little cloying in its smartness, but it makes many good points and often makes them well. Dr. Hutchinson touches numerous problems, and gives solutions of some of them with almost too much facility. About half the book treats the nurture and rearing of the child, incidentally urging many good ideas as to letting the young thing judiciously alone, and as to respecting its claims to be allowed to grow up in its own way. Much of the rest deals with questions bearing more or less directly on parental fitness and duties. Many of the chapters have already served as articles in magazines, and show that origin. Those on Eyes and Ears and on The Teeth, called "our ivory keepers of the gate," might be used in any popular book dealing with personal hygiene. They are excellent and helpful, despite the futile advice to strive at least four times a day to keep the mouth "aseptically clean," whatever that may mean, and also despite the assertion that "Mog Megone" (*sic!*) was written by Longfellow. There are also some curious misconceptions about inosit (p. 55) and "glycocol" (p. 58) and a few other matters, but these do not detract seriously from the merit of a very suggestive book. What is said concerning mothers as wards of the state, and concerning delicate children, overworked children, and the importance of schools for service, rather than for superiority, well deserves to be pondered.

The part which flying machines are about to play in the development of the French possessions in the Sahara and West Africa is described by Dr. H. Moeser, largely from personal observations, in the military section of the *Petermann's Mitteilungen* for May. Several "centres d'aviation" have been established in Algeria and Senegal, in one of which there is an officer's flying school. The aim is neither sport nor science, but to better the condition and organization of the outlying posts by bringing them into closer contact with the home government. The success of the undertaking is shown by the fact that the three days' journey from Biskra, the headquarters of the flying corps, to the important oasis Tuggurt has been reduced by actual flight to three and a half hours. At each of the military posts there will be shelters for the machines with stores of provisions, benzine, and oil. Regular flights will be made to each by two or more machines, never by one alone. Among the other subjects treated are the elevation phenomena of some Japanese volcanoes, and the great progress made in the geographical and geological survey of Chili. A map of a district is reproduced, showing the various altitudes and the location and character of the different gold, silver, and iron mines.

Jules-Henri Poincaré, a distinguished mathematician and cousin of the French Premier, died suddenly on Wednesday of last week, aged fifty-eight. He was a professor of science at the University of Paris and member of the Institute, of the French Academy, Inspector-General of Mines, and a corresponding member of many foreign societies. Among his numerous writings may be mentioned especially his "Cours de physique mathématique," in ten volumes.

Music and Drama

Annals of the Irish Harpers. By Charlotte Milligan Fox. New York: E. P. Dutton & Co. $2.50 net.

Mrs. Charlotte Milligan Fox, who is already well known for numerous contributions to the history of Irish music, has produced, in the present volume, a piece of work which concerns also the literary and social history of the Irish people. It was through an odd series of circumstances, which she relates in her preface, that she came into possession of most of the materials now published. Commissioned by a friend to select a harp at a London warehouse, she happened to ask the salesman whether any old wandering harpers ever came in to buy strings. He replied that there were no such customers; but added that a gentleman had recently bought a harp, declaring, as he gave the order: "It is only right that I should have a harp in my house; for it was my grandfather who preserved the music of the ancient Irish harpers." Mrs. Fox found that the purchaser in question was Dr. Louis MacRory, a grandson of Edward Bunting, the collector and editor of Irish music; and by making the acquaintance of Dr. MacRory and other members of the Bunting family she obtained access to a large body of Bunting manuscripts. To this fortunate accident, and to Mrs. Fox's enterprise in following up her clue, the public is indebted for a book which affords much information and entertainment.

The central figure of the work is Edward Bunting (1773?-1843), whose career and literary relations have hitherto received insufficient notice. Out of his papers, together with various published sources of information, Mrs. Fox has pieced together a detailed account of the man himself and of the Irish society in which he lived. As a result of Bunting's personal associations, the literary and theatrical world of his time receives considerable incidental treatment. Lady Morgan (Sidney Owenson), the once famous author of "The Wild Irish Girl," now almost forgotten, is a striking figure in the circle described. Bunting's relations with Thomas Moore and Thomas Campbell, and his efforts to induce the latter to write translations of Gaelic songs which should drive Moore's "Irish Melodies" out of the market, make an episode of interest to readers of English poetry; and philologists will find frequent mention, among Bunting's friends, of the founders of modern Irish scholarship—Charles O'Conor of Belanagare, Theophilus O'Flanagan, and, a little later, John O'Donovan and Eugene O'Curry. Among these early devotees of Irish learning it is a satisfaction to meet the honored name of Whitley Stokes, then borne by the grandfather of the great Celticist of recent years.

In addition to the account of Bunting himself, Mrs. Fox has compiled, chiefly from the papers belonging to his family, sketches of the principal harpers whom he knew and from whom he obtained old tunes. She has printed in full, with explanatory comments, the autobiographical memoir of Arthur O'Neill, one of the most famous of the harpers, and the journals of Patrick Flynn, Bunting's assistant in the collection of folk-songs. Both documents are well worth publication, and the former especially gives vivid descriptions of the life of the Irish country gentry and their itinerant entertainers a century ago.

Mrs. Fox's part as compiler or editor of these various materials is well discharged. Without attempting to write elaborate or systematic biography, she has produced sketches of historical value and much general interest. No small labor was involved in the examination of all her papers, and she has shown good judgment in the selection of her matter and skill in its presentation. The use of the book for consultation is facilitated by a good index, and in general the work of both author and publishers has been carefully and accurately done. We have observed only a few misprints, mostly unimportant; whether the Right Honorable The O'Conor Don would deem unimportant the spelling of his name as "O'Connor," we do not feel sure.

In Germany Edward MacDowell is known and admired as the "American Grieg." Naturally, his songs and piano pieces are getting the most attention; but B. Schott's Söhne in Mainz announce the issue of an arrangement for violin and piano of the charming piece "Claire de Lune," by Hartmann, who had previously made for the same instruments two versions of the exquisite "To a Wild Rose," which is the first piece in the best collection of short pieces by MacDowell, the "Woodland Sketches," or "Amerikanische Wald-Idyllen," as the Germans call it. The fourth piano sonata, the "Keltic," is justly looked on in Germany as the culminating point of the genius of MacDowell, "one of the greatest nature-poets among the romanticists."

The Italian sculptor Monteverde has been commissioned to chisel the monument to Verdi which is to be placed on the Monte Pincio in Rome. The greatest of all Monte Pincio monuments, however, is Grieg's thrilling song of that name. That song, by the way, has never been sung in public in New York. It requires not only a fine voice to do it justice, but intelligence, taste, and powers of emotional expression which very few concert singers have at their command.

A musical invasion of Germany by Swedish music and musicians was made at Dortmund last month. The composers and their works were selected by the Royal Academy in Stockholm, and as academies usually favor academic composers above those who are unconventional, it is possible that some of the best products of Swedish art were not represented. Most of the compositions were, however, well received, and much merit was found in some of them, though August Spanuth expresses his surprise, in the *Signale*, that most of the modern Swedes are so unmodern musically. Some, indeed, seem not to have got beyond Hummel and Mendelssohn. Among those who appeared to belong to the present day were Hugo Alfvén and Peterson-Berger. Tor Aulin was so fortunate as to have his violin concerto in C minor played by Henri Marteau, which helped to make it a climax of the festival.

On leaving Berlin, Dr. Muck, whom Charles Ellis has been so wise as to engage as permanent conductor of Boston's permanent orchestra, made public a list of the operatic performances he had conducted during the years (nearly a score of them) that he had been connected with the Royal Opera. Altogether, there were 1,701 of these performances. Mascagni is in the lead with 112, followed by "Lohengrin," with 103. "Tannhäuser" had 75, "Walküre" 66, "Götterdämmerung" 61, "Evangelimann" 60, "Magic Flute" and "Siegried" each 59, "Freischütz" 53, "Rheingold" 51, "Fidelio" 49, "Carmen" 48, "Rosenkavalier" 43, "Flying Dutchman" 42.

The city of Athens now boasts a conservatory with more than 700 students, most of them girls, it is needless to say, for girls are in a vast majority at all music schools. The director of the Athens Conservatory is Georges Nazos, an idealist, a hard worker, and a patriot. His ambition is to restore to Athens the musical importance it possessed in the days of Pericles. He has founded an orchestra and placed it under a French conductor, Armand Massick. Last season, with its aid, Mr. Nazos gave two festivals, one devoted to Beethoven, the other to Wagner.

The second part of the second half of Dr. Hugo Riemann's "Handbuch der Musikgeschichte" has just been issued by Breitkopf & Härtel. Unlike most histories of music, which are mere compilations repeating hundreds of inaccuracies and errors, Riemann's work is based from beginning to end on careful study of the original documents. Perhaps no scholar, even in scholarly Germany, has ever penetrated so deeply into the dark jungle of mediæval musical research. The first volume of his work was devoted to the ancient nations and mediæval tonal art up to the year 1450. The second considers in part i the Renaissance; in part ii the period of thorough-bass and the origin of Italian opera are treated. The final volume will deal with the period in which Italy lost the first place in music to Germany. Dr. Riemann's work is a monument of erudition, a safe guide through a much-disputed labyrinthian subject.

In his speech before the curtain at His Majesty's Theatre in London at the close of the season (a speech which contained also a reference to the conclusion of his twenty-fifth year of management) Sir Herbert Tree announced his autumn production, a spectacular pageant-play by Louis N. Parker on the subject of Sir Francis Drake. The part of Drake will be taken by Lyn Harding, and Sir Herbert Tree will not appear. The date of production will be Tuesday, September 3.

To the Tudor Shakespeare (Macmillan), which is under the general editorship of Profs. William Allan Neilson and Ashley Horace Thorndike, five volumes have recently been added to the six or eight which had previously appeared. They are: "The Life and Death of King John," edited by Henry M. Belden; "Much Ado About Nothing," edited by William W. Lawrence; "The Tragedy of King Lear," edited by Virginia C. Gildersleeve; "The Comedy of Errors," edited by Frederick Morgan Padelford; "The Tragedy of Richard the Third," edited by George B. Churchill. The same care is evident here that marked the editing of the earlier issues, and it is also clear that those in charge have distributed the plays, so far as possible, among scholars having recognized qualifications for the work assigned to them. Thus, Professor Churchill's preoccupation with "Richard the Third" dates from student days in Germany. We must continue to regret, however, that the plan of the series requires the utmost brevity in the general comment.

"The Influence of Ben Jonson on English Comedy, 1598-1642," is the title of a monograph by Mina Kerr, which was written under the direction of Professor Schelling as a doctoral dissertation (The University of Pennsylvania; D. Appleton). Though consisting of little more than notes loosely strung together, the work collects in useful form the evidence of the most striking side of Jonson's literary influence. In a preliminary chapter Miss Kerr finds the main features of Jonsonian comedy to be: an insistence upon the theory of "humors"; an "underlying ethical intent"; excellence of construction; and a background of classical learning. With such tests she has little difficulty in demonstrating that nearly every maker of comedy, from the time of the appearance of "Every Man in His Humor" to that of the closing of the theatres, tried his hand at Jonson's method. What resulted was a long list of characters typically labelled after the manner of "Lady Politick-Would-Be," "Sir Amorous La-Foole," etc. Shakespeare himself, as everybody knows, fell in with the vogue when he created Shallow and Slender and Nym—the last with his recurrent "that's the humor of it." Miss Kerr does not get below the surface of her subject, and, besides, confines her attention very largely to the first of the four tests. We should have been glad, to mention but one point, for a citation of characters in the case of which authors had succeeded, as Jonson succeeded occasionally, in arriving at eminently human creations, in spite of his severe editing and exaggeration. But for the working out of that broader question Miss Kerr has at least prepared the way.

Art

J. B. Lippincott Co. will issue immediately "Joseph Pennell's Pictures of the Panama Canal." Mr. Pennell has but recently returned from the Isthmus.

In "Art and Environment" (Holt), Lisle March Phillipps applies Taine's doctrine of the *idée maitresse* to Western art, beginning with Egypt and ending with France in the eighteenth century. It is a learned book and weighty in the good sense. An extract may well illustrate both the fundamental point of view and the style:

> Art has in it something of the nature of a solution of life's problem. So far as the particular race which creates it is concerned, it is an answer to the question how to live. And for this very reason a great creative epoch in art can never occur where society is uncertain of itself and distracted in its aims. Art being the expression of a solution, it follows that the solution must be reached in life before it can be expressed in art. . . . In each case the power and sincerity of the movement in art is determined by the extent to which the idea inspiring it has already possessed itself of life and penetrated life. An idea that has collected a great deal of life will inspire a robust art. An idea that has collected but a little life will inspire a feeble art.

Architecture is always the chief concern, and this makes at once for unity and one-sidedness. On the whole felicities preponderate. It is well observed that Santa Sophia is the last assertion of the Hellenic spirit, and that Italian architecture may broadly be regarded as an unfavorable criticism of the true Gothic style. Naturally the work is not free from the defects of all sweeping generalizations. In the attempt to limit the Egyptian genius by its ruling superstitions, the author ignores much fine realistic sculpture. Since the Moslems are by definition flighty creatures of impulse, no sufficient recognition is made of the continuity and consistency of their fancy in the field of pure ornament. In short, this very stimulating book will be most useful to those who can control its generalizations from personal knowledge of the matter in hand.

"Aspects of Death and Their Effects on the Living as Illustrated by Minor Works of Art, Especially Medals, Engraved Gems, Jewels, &c.," is the old-fashioned title which F. Parkes Weber chooses for a delightful bit of antiquarianism. Tokens of death may remind us that it is inevitable, that as the end of life's woe it is desirable, that it is the gate to immortality, that it is preferable to dishonor. Or such insignia of mortality may admonish us to gather our rosebuds while we may. Emblems of death may commemorate a pest, mourn a friend, or express contemplative scorn of the world. Such attitudes toward death have from early times found expression in ornaments, utensils, and medals. Through all this material Dr. Weber proceeds in leisurely mood. He is never too hurried for a classical citation or a pertinent foot-note. Indeed, the whole study is in a fine eighteenth-century tradition, and very refreshing to one accustomed to the business-like dispatch of modern literary scholarship. The theme is followed chiefly in the field of numismatics, which is the author's chosen recreation, but painting and sculpture are incidentally brought in. The latest authorities are often neglected, but it cannot be said that the book suffers seriously thereby. Under the famous subject of The Three Living and the Three Dead such spirited versions as exist in the "Très riches Heures" and in the sketch-books of Jacopo Bellini might well have been mentioned, and Lotto's portrait of a man crushing a bouquet in which is an ivory skull might have been included. There are many illustrations, and the book is published at Chicago by the Open Court Publishing Company. It will not fail to interest readers who have kept the good habit of dipping occasionally into their Horace.

We can only mention in passing Curt H. Weigelt's elaborate monograph "Duccio di Buoninsegna, Studien zur Geschichte der Frühsienischen Tafelmalerei" (Leipzig: Hiersemann). The work betrays the heavy-handedness and diffuseness of its class, but is a very complete collection of material. Its seventy collotype illustrations are a most useful feature. Dr. Weigelt, with most modern critics, regards the Rucellai Madonna, traditionally ascribed to Cimabue, as an early Duccio. Perhaps the most interesting portion of the study is an iconographical analysis of the Passion scenes on the back of the great Siena altarpiece. The upshot of this investigation is that Duccio is somewhat less Byzantine than has been supposed. This conclusion rests on a rather shaky distinction between Byzantine and Italo-Byzantine types, and a quite untenable assumption that there could in the late thirteenth century be no direct influence of the East in Italy. The Worcester Museum, the New York Historical Society, the Jarves Collection, New Haven, Conn., the Platt Collection, Englewood, N. J., and the Johnson Collection, Philadelphia, contain pictures related to Duccio which have escaped Dr. Weigelt's notice.

"The World's Leading Painters" (Holt), by George B. Rose, takes up in a strictly biographical sense Leonardo da Vinci, Raphael, Titian, Rubens, Velasquez, and Rembrandt. The works of these masters are mentioned very briefly without attempt at analysis or comprehensive criticism. Since the record of facts is virtually complete, we have really essays of the encyclopædic sort. Portraits are the only illustrations. Naturally the artists respond very unequally to this reduction to bare biography. The method works well in the case of a many-sided life like Leonardo's; admirably in that of the intimate and tragic experience of Rembrandt. Rubens is still very readable. Titian and Raphael begin to be dull. Velasquez is saved from dulness only by an elaborate historical setting. These inequalities suggest that the way of straight biography is seldom the true high road in art criticism. The material varies so greatly that an opportunistic course seems best. At times the man will seem wholly engrossing, again he pales before his creation. Concretely, all that is worth saying about the personality of a Raphael or a Titian could probably be said in half a dozen pages, but an equal space might profitably be given to any one of their greater works. Given Mr. Rose's rather narrowly biographical point of view, his essays are conducted with competent vigor and taste. A few slips may here be noted. For an organized Leonardesque Academy at Milan there is no sound evidence. Since Ginevra De' Benci died in 1473, Leonardo cannot have painted her in the early sixteenth century. A "birthday feast," p. 65, must be nearly an unknown institution in Italy, where of course the saint's day is celebrated. That Jacopo Bellini learned his art in Florence is most questionable. The original of Raphael's Inghirami is not in the Pitti, but in Fenway Court. Wykoff and Bonifaccio are obvious misprints that need correction. Likewise "Santi Pietro e Paolo," p. 156, unhappily travesties one of the best-known Venetian churches, while Santi in this case is not Italian. These are venial blemishes in a work essentially judicious. Deeper misgivings are aroused by the author's amazement that Rembrandt could paint *con amore* the carcass of a slaughtered ox. There is a realm of abstract beauty of color and light that is apparently closed to our author. Which may merely prove his acumen in remaining the biographer and eschewing the more tenuous critical issues.

Finance

FINANCING THE CROPS.

The recent sharp advance in the rate charged for mercantile loans at Chicago, together with the arrangements made in this city by various Western banks for large loans to carry them over the crop-moving period, has directed financial attention to the probable demands of the interior markets during the period when the great crop movement operations are to be financed. The movement last week attracted more attention than usual because of the unexpected bank deficit of $7,750,000 reported on July 6, and owing to the rumors in London that powerful banking interests of Wall Street were arranging for large advances from that market through the sale of finance bills. These loans have been procured with the distinct understanding that they shall be repaid in the autumn when the grain-export movement is at its height. They have already reached a large total, and the indications are that considerably larger credits will be applied for by our banks in the near future.

Although the direct movement of currency has not turned against this market yet, banks here have been called upon to pay over heavy amounts of cash to the Sub-Treasury for the account of banks in Chicago, St. Louis, and other cities where the preliminary drain of currency to the towns and villages of the wheat and corn belt has become pronounced. To that extent, therefore, it may be said that the New York banks have already remitted funds to the crop section. In eight of the last twelve years the currency movement turned sharply against New York about the middle of August. Last year the movement excited less interest than usual because of the relatively small demand for money from mercantile borrowers; the falling off in the inquiry from this source was due to prevailing business depression and to the stagnation of the bond market.

Unlike last year, however, there have been large borrowings by merchants at this season, so that, taking the market as a whole, it may be said that the demand from this source is now several times as large as it was then. As a measure of the extent to which bank accommodations have been pushed, the report of the Controller of the Currency on the country's national bank returns, in answer to his call of June 14, is very illuminating. Compared with April 18, the date of the preceding call, loans of the 7,370 institutions in the United States were shown to have expanded $71,737,000, at an average of $1,500,000 a day; while carrying the comparison back to the corresponding statement of a year ago, shows the increase to have been $343,065,000. In the twelve months preceding June, 1911, the increase of loans amounted to little more than half that figure—$180,679,000, while the daily average of the loan expansion during the spring of last year was less than $1,000,000. Two years ago there was an actual decline in loans between April and June.

Not until the detailed statement is available will the sections which have contributed chiefly to this large expansion be known; but because of the fact that the Western banks were themselves pretty well loaned up, those institutions have been forced of late to sell large blocks of short-term notes which they had been carrying for several months. This has enlarged their reserves, but since the proceeds of these sales have generally been added to their deposit balances in New York, the movement will, in the end, lead to larger shipments of currency by the banks here. In general it may be said, however, that the New York balance of the average interior bank stands to-day at or above the figure normally reported at this season of the year. The time is near at hand when it will be heavily drawn against in order to provide interior banks with the funds that will be required for the crop-moving operations.

Although the New York banks have within the last fortnight materially strengthened their reserve account, it is still much below the total that has been often reported at the time when the transfer of currency to the crop-moving centres started in. Ordinarily, between $50,000,000 and $75,000,000 in currency is shipped each year by New York banks to the crop centres of the West and South during the crop-moving period. The demand always is for bank reserve money, generally in the form of one and two-dollar notes. When the movement is at its height there is some call for $5 notes, and at these times it is possible for the interior banks to use a moderate amount of national bank notes. But the experience of years has been that the interior banks almost invariably ask their New York correspondents to remit the kind of money which they can carry as reserve. In cases where these instructions have not been followed and where the New York banks have sent out their own notes instead, the bank-notes have been quickly forwarded to the Treasury at Washington for redemption.

BOOKS OF THE WEEK.

The first reviews praise the first volumes of

The World's Leaders

Edited by W. P. TRENT. It is designed not so much to recount history as to portray those who, in their respective departments, have made history. Per volume, with portraits, large 12mo, $1.75 net.

POETS. Homer, Virgil, Dante, Shakespeare, Milton, Goethe. B. H. W. BOYNTON, in one volume.

The Outlook: "His volume has historical as well as literary value. It throws light on many an obscure point of interest. Minute touches show the thoroughness of his exploration of the field. Insight, sympathy, and just appreciation generally characterize his estimates, and the whole is presented in a clear and felicitous style."

PAINTERS. Leonardo da Vinci, Raphael, Titian, Rubens, Velasquez, Rembrandt. By G. B. ROSE, in one volume.

Brooklyn Eagle: "Here are, for the first time in English, satisfactory biographies of these men. . . . Mr. Rose has not been content, either, to take what has been already written about his painters at its face value, he has had the wisdom to investigate and make all doubtful points sure. . . . Valuable. . . . The result of ripe scholarship."

The GENETIC PHILOSOPHY OF EDUCATION
By G. E. PARTRIDGE, Ph.D.
Author of "The Nervous Life," and "An Outline of Individual Study."
WITH AN INTRODUCTION BY
G. STANLEY HALL, PH.D., LL.D.

(12*mo.* $1.50 *net; postpaid* $1.63)

The importance of this book—the first comprehensive and orderly résumé of the educational philosophy of Pres. G. Stanley Hall—will be at once recognized. The work summarizes the dominant and progressive educational movement, and the ideas it assembles constitute the most important contribution of all time to education. Incomparable for study and reference, for a normal school text or for libraries.

STURGIS & WALTON CO.
31-33 East 27th Street, New York

Learn Latin to *Speak*

Palæstra is the common-sense in Latin; some 30 pamphlets for class or self-instruction by figures, cuts, texts on subjects of daily life, supported by Roman authors; vast vocabulary, no translations; reading, writing, speaking exercises; half published; $2.50 will bring all issued; complete $5.00; no samples. ARCADIVS AVELLANVS, Williamstown, Mass.

O. Henry Material Wanted

I am collecting all biographical data, letters, literary remains, etc., of O. Henry, and should like to hear from anybody who has anything of the kind. His autographed letters are valuable. Please address, H. P. STEGER,

A Two Years' Course in English Composition

By CHARLES LANE HANSON

90 cents

A reader of the manuscript says of Hanson's *Two Years' Course in Composition*: "Teachers should jump for it, for the wealth of material is just what we need and what we now have to supply at the cost of much labor."

The book contains more drill work than any other composition manual of its size. It provides an abundance of material for the first and second year of any high school. Every chapter will be found stimulating and practical.

GINN & COMPANY, Publishers
29 BEACON STREET, BOSTON

Memoirs of Henry Villard

Journalist and Financier

1835-1900

Two volumes, with Portraits and Maps, $5.00 *net*. Postage, 35 cents.

An autobiographical record of the varied and romantic career of the war journalist who subsequently became a power in the financial world, and carried the Northern Pacific Railroad to completion. Full of incident and valuable for its reminiscences of Lincoln and other prominent men of the time, as well as for its descriptions of important battles of the Civil War.

"A book of extraordinary interest. It is written with great ability, in a clear and flowing style; it details with perfect candor the incidents of a great career; it is an admirable report of great events, all of which the writer saw, and a large part of which (after 1870) he was; it exhibits the rise and growth of a rich and powerful personality and a character at once remarkable for its simplicity and its variety."—JOHN WHITE CHADWICK, in the *New York Times* Saturday Review.

NEW YORK, THURSDAY, AUGUST 1, 1912.

The Week

If President Taft could only bring Ohio into a condition in which it would be safe for him to take his eyes off of it for a moment now and then, surely his troubles elsewhere would be less formidable. The refusal of Judge Dillon to head the ticket there differs only in degree of seriousness from a long list of difficulties that have bothered Mr. Taft in his own State from the moment of his first nomination. It was Chairman Brown who gave force to the disquieting rumors of a possible Roosevelt candidacy by announcing his support of the former President, and Brown seems to be at the centre of the new crisis. He is evidently using his position to embarrass the campaign of the regular nominee of his party, while not going so far as to incur the punishment of being thrown over the breastworks. In taking this attitude, he is showing himself to be a man after the Colonel's own heart. It may not be a straightforward course. It may be a line of conduct of which any but a hardened politician would be ashamed. Yet if it leads to success, is it not justified by the ethical code of the party that cares nothing for electoral votes, but everything for principle? With the State Committee for Taft, even by a narrow majority, and with the State Convention twice having pronounced for him, it looks as if a Taft supporter must be nominated for Governor. The Third Party adherents, however, can make the procedure difficult, and thus further damage the Taft cause, preparatory to bolting and naming a ticket of their own. No wonder the Democrats are hopeful of breaking the long line of Republican victories in the modern Mother of Presidents.

Sober-minded citizens must be asking themselves whether a candidate who has to run away to sea in order to procure the necessary leisure for composing a speech of acceptance has in him the stuff that Presidents are made of. Gov. Wilson has been a Presidential candidate for less than a month, and already he finds himself hampered in the composition of public documents by little things like a couple of hundred Congressmen and political leaders dropping in for lunch. Can the people be persuaded to accept a mollycoddle of the Wilson type, when they may have, even without asking, a man whose intellectual processes function with equal ease in the solitudes of the African jungle and in the surroundings of a boiler factory? To shake several thousand hands, to read half a dozen popular novels, to walk ten miles and play a dozen sets of tennis, to dictate a ten-thousand-word speech and an *Outlook* editorial, and to talk an hour or two into the long-distance telephone—what is this but an ordinary day's work at Oyster Bay?

In the face of all the manifest and manifestly organized efforts to induce the House to recede from its determination to authorize no additional battleships this year, what is the Peace Society doing? How many letters and telegrams are being sent to Congressmen by those who believe that the waste on armaments is inexcusable, and that it will never be checked unless a beginning is made? It is time for those who are not big-navy boomers, nor interested in shipbuilding concerns, to bestir themselves. All the pressure should not be left for one side to exert. In particular should a demand be made for specifications. Just why must we authorize one or two battleships in this year's naval bill, or else despair of the republic? Who is there to demonstrate that our present naval strength is not adequate? If it is a question of keeping up with the English or German programme, everybody can see that two battleships are merely a flea-bite; it would be just as black treason to authorize only two as to vote for none. There should be at least a dozen at once. One argument freely circulated in order to break down Democratic resistance to the policy of naval extravagance, has been that Gov. Wilson was "disgusted" with the attitude of the House. But this seems to be put at rest by the statement said to have come from him that he is not meddling in any way, and is content to leave it to his party in the House to do what it thinks right. He certainly could not be expected to give any aid to the Roosevelt-Hearst alliance, in this matter of battleships.

The vote in the Senate last week makes it pretty certain that Congress will again send to the President a bill reducing the wool duties, either to sign or to veto. Apparently, it will be a bill very like the one which he refused to approve last year. But this one he could sign without any glaring inconsistency, for it will be remembered that he based last year's veto mainly on the fact that the Tariff Board had not made its report on the wool-manufacturing industry. That report, however, has since been made. It clearly justified large reductions in existing rates, supporting in many particulars the position taken by President Taft himself, that the present duties in Schedule K are indefensible. Even the regular Republicans in the Senate are convinced that some reductions ought to be made, for after defeating the House bill by the narrowest of majorities, they made haste in the committee of the whole to adopt a bill suddenly reported from the Finance Committee by Senator Penrose. But later this was set aside in the full Senate, and the La Follette bill was adopted by a combined vote of Democrats and insurgent Republicans. The measure now goes to conference, and out of it a bill should come, doubtless not as thoroughgoing as it ought to be, but one which represents at least a beginning in doing away with an iniquitous form of protection.

A Republican Senate is now passing bill after bill sent to it by a Democratic House. The latest item is the so-called "excise tax"—really a clumsily disguised income tax—which the Senate voted on Friday. It was, indeed, loaded down with two or three non-germane amendments, which will make it necessary to send the matter to conference; and possibly the bill may be hung up for this session. No one can doubt, however, that we are now in for an income tax in this country, and shall see it enacted soon in one form or another. Both parties are for it—or, at least, unwilling longer to oppose it—President Taft is supposed to be for it, Gov. Wilson has strongly urged it, and it is one of the cardinal doctrines of the third party. Whether we like it or not, therefore, and think it wise or foolish, we must prepare our minds for its coming.

"If the tariff is really to be made a tariff for revenue only, then every species of protection must be removed from the American farmer and the American laboring man." Furthermore, if the Democratic platform is not repudiated, then the party under Wilson will "bring every industry in the country to a crash, which would make all the panics in our past history seem like child's play in comparison." What Bourbon standpatter is it who utters these cries of alarm? We give our readers three guesses. Is it the Protective Tariff League? Is it Penrose? Is it Aldrich? No, it is Theodore Roosevelt. The great (if somewhat late) Progressive, the man who has moaned and even shrieked about the faithlessness of President Taft in not cutting down tariff duties, the candidate who is going to "look into" the tariff and see if it is not responsible for the high cost of living, which he is determined to reduce—he is the one who now emits these wails about the calamity of giving the Democrats a chance to remove the burdens of tariff taxation! No wonder that Mr. Bryan calls the Colonel the prince of reactionaries. On the tariff, which he was always afraid to touch with the tip of one of his fingers while he was President and had the power to do something to relieve the people, he writes in a spirit of bigoted ignorance that Payne could not surpass and Penrose or Smoot could not hope to rival. Mr. Roosevelt's ringing of the old tariff alarm bells goes well with his assertion that if the Democratic plan to make competition effective, and to punish Trust criminals, were carried out, "all business everywhere throughout the United States would stop." To this Perkins will say amen.

The recommendation which the Public Service Commission makes as a result of its investigation of the accident to the Twentieth Century Limited in March, is much farther reaching than the usual finding in such cases. It holds that the broken rail was a consequence of the derailment rather than its cause, which is concluded to have been a low spot in the track, this being due in turn to the continual pounding of trains upon a place inadequately drained. Accordingly, the Commission emphasizes the need of adequate drainage along railway tracks. But it does not feel that this is precaution enough, and proceeds to suggest a reduction of speed in long-distance runs during the winter months, when "instead of the elastic roadbed of summer, the structure becomes almost as solid as rock." In other words, we have gone beyond the margin of safety in our eighteen-hour trains because we have not been able to build a proper roadbed for them. In making its recommendation to reduce speed during bad weather conditions, the Commission has been careful not to propose action which would put one road at a disadvantage. The question, it says, has been discussed with officers of the Pennsylvania as well as the New York Central, and has been favorably received by them. The latter company, in commenting upon the report, while not committing itself to a lengthening of the time schedule, agrees that all tracks become slightly irregular in surface, particularly in severe weather.

Woodrow Wilson, it has been discovered by a few editors of foreign birth, is the foe of the laboring man. "He has shown himself to possess no sympathy for the toiling classes." This is a serious charge. It must be admitted that, beyond an employers' liability and compensation act, legislation prohibiting the employment of children during school hours and at night and providing for a fifty-eight-hour week, the appointment of commissioners to study old-age pensions and insurance, provision for the protection of workers against draughts, fumes, and noxious gases, an increase in the number of factory inspectors and the raising of their standard of efficiency, the establishment of an eight-hour day for State, county, and municipal work, the providing of a semi-monthly pay-day for railway employees, the elimination of contract labor in penal institutions, the setting of a sanitary standard for bakeshops, the regulation of employment agencies, and a few others of the sort, New Jersey, under the leadership of Gov. Wilson, has done almost as little for the toiling classes in the last two years as she had done in the preceding seventeen. Doubtless, we have here the real explanation of the Governor's unpopularity with "labor" in his own State. Chairman McCombs's first duty is to devise some way of preventing this tell-tale record from reaching the readers of the foreign-language newspapers in this country.

Lieut. Becker's indictment for the murder of Rosenthal at once lets in a flood of light upon the crime, and is a terrible blow to the Mayor, the Police Commissioner, and the whole police administration of New York city. The police with all their detective resources were unable or unwilling to run down the criminals concerned in this astounding assassination, and left it to the District Attorney to unearth the truth. Mr. Whitman deserves all thanks for his vigor and persistence. To have finally broken into the criminal circle, and to have forced confessions implicating Becker, is a great achievement, and will make the members of the "System" ask: "Who of us is safe?" We do not, of course, assume the guilt of the indicted officer; suspicion is one thing, proof another. The testimony against Becker looks very damning, yet it may be broken down at the trial. But the community is now absolutely convinced of one thing, and this is that unholy alliances for mutual gain do exist between certain members of the police force and desperate criminals, and that we shall have neither peace nor safety until these are broken up and made impossible for the future.

Senator Curtis of Kansas maintains that, while he believes in Republican regularity, he is as progressive as any man; but the terms in which he assails William Allen White reveal an old-fashioned outlook upon things. It is decidedly old-fashioned to ask one's political rival if it is true that he is in the habit of being frequently horsewhipped and caned in public; that he has stolen money from the poor; that he has been detected in the act of putting arsenic in the village horse-trough, and has been connected, in public rumor, with the unexplained burning down of two churches and an orphan asylum. This smacks of the campaign style of thirty years ago. The violence of the assault is all right. Progressives are nothing if not violent in fighting the battles of the Lord. But to-day people no longer assail the private character of their opponents. Opprobrium is measured out in terms of special value. One's enemy is a brigand, but a political brigand; a pickpocket, but a political pickpocket; a second-story man, a horse-thief, an inmate of Bedlam, a crook, a liar—but always in a political sense. This is attested by the fact that as soon as a man changes sides he automatically ceases to be a brigand, a pickpocket, a second-story man, a horse-thief, a crook, and a liar.

Whenever a Government majority in the House of Commons is brought to the danger point, or is wiped out on a snap vote, the Opposition never fails to shout "Resign! Resign!" though the lack of significance of such a vote is apparent. This is what happened on Friday when the Liberal majority, in a very thin house, fell to three. It is true that when Lord Rosebery's Ministry was beaten in the famous snap vote on the army cordite supply, the Premier accepted the verdict of the House and resigned; but that was because the Ministry was then in its last agony, and the end was not far off in any case. On the other hand, when Mr. Balfour was outvoted as the result of an Irish coup, a few months before he went out of office in 1905, all the subtleties of the Balfourian logic were called into play to prove that the defeat signified nothing, and for days British Parliamentary history was ransacked for precedents on both sides. But while Friday's slim majority was only an accident, it is nevertheless becoming apparent that the Liberal coalition is having its internal difficulties. The Labor members are indulging in more or less covert threats, and from the Radical wing of the Liberal party comes bitter criticism of the Government's big-navy policy.

Before the prorogation of the French Chamber Premier Poincaré spoke of the bright future opening up to France in Morocco, as the result of the treaty with the Sultan. Gen. Lyautey, the French Resident-General in Fez, whose powers are almost unrestricted, is to carry out a programme which has already worked successfully in Madagascar and Algeria. The Chamber of Deputies, in adopting the treaty with Morocco, by an overwhelming majority—in spite of the opposition of Jaurès, the Socialist leader—has thus fully sanctioned the German-French agreement of last November. Meanwhile, the Conservative papers in Germany continue their protest against this agreement, which they aver is fraught with danger to the Empire. The *Kreuz-Zeitung*, especially, can see no prospect of carrying out a successful colonial policy in Morocco. What that policy ought to be is set forth elaborately in an article pointing to the possessions of Portugal in Africa, India, and China as fruitful fields for German colonization schemes. Dr. Karl Peters even advocates in the *Tag* arranging with Great Britain to give Germany a free hand, regardless of the interests of Portugal. Needless to say, the Liberal press of Germany refuses to see in the agreement between France and Germany on the Moroccan question a pretext for colonial expansion on a vast scale.

Recent developments in Alsace-Lorraine emphasize the difficulty experienced by the German Government in trying to weld into one patriotic whole the conflicting elements of the Reichsland. The action of the Diet in limiting the allowances for the Imperial Governor, and in opposing the personal wishes of the Emperor, has offended many in Germany. In Metz the Liberals of Lorraine, who see in the opposition of Clericals and French sympathizers a growing menace to their country as well as to the Empire, have united in forming a Party of Progressists, which attempted to show its conciliatory spirit by holding its deliberations in both German and French. The party has made a special appeal to laboring men. In Alsace the path of the supporters of the German Government is even more thorny. The Strassburg correspondent of the *Frankfurter Zeitung* speaks of the unaltered hostility of the old Alsatian burghers, rooted in the traditions of the French *bourgeoisie*, who worship the memory of Kléber and Louis Philippe and allow their sons to expatriate themselves and serve in the French army. And, most of all, a new pseudo-nobility has sprung up, which speaks French by preference and studiously acquires Parisian ways. Even those inhabitants of Alsace-Lorraine who acquiesce in the new order of things, and call themselves Germans, are concerned only in home affairs and still look upon the *Altdeutschen* as strangers and intruders.

The Mediterranean phase of the European naval situation is beset with even more uncertainty and idle speculation than the British-German rivalry in the North Sea. It is asserted that Italy and Austria are about to enter upon an elaborate shipbuilding programme, which will give the Triple Alliance command of the Mediterranean. What may happen in the distant future is rather beside the question. For the present it is sufficient that the French fleet alone is fairly equal to the combined strength of Austria and Italy. By the end of 1914 these two Powers will have ten Dreadnoughts, as against seven for France; but in other battleships France holds her own, and she has a strong superiority in armored cruisers. Counting in the British fleet in the Mediterranean, it is apparent that the Mediterranean is in no danger of being closed to Great Britain. The important thing, however, is that all considerations which treat the Italian and Austrian fleets as a unit are fallacious. There is no friendship lost between these two nations, and in both countries there is little concealment of the fact that Austria and Italy are building ships against each other rather than against an outsider.

The announcement last week from Constantinople that liberal concessions will be made to Albania, marks a new policy. The Albanian National Assembly, which met some weeks ago at Yunik, was the most representative body of that people which ever submitted grievances to the Turkish Government. It consisted of eighty-six popular leaders, Christians as well as Mohammedans, and was presided over by Tabir Beka, a well-known Mohammedan landed proprietor from the vilayet of Kossovo. The demands of the Assembly were for the establishment of public schools, with instruction in the Albanian language, for the safeguarding of the rights of all religions and religious institutions, for administrative autonomy, economic reforms, and the restriction of the privileges of the Sultan's representative. Before the fall of the Cabinet, the Turkish Minister of War, Shefket Pasha, while deprecating the action of the Albanian mutineers in the Turkish army, spoke highly of the patriotism of the Albanian people in general. He also declared that, in his opinion, there was a direct connection between the rising in Albania and the attempts to force Turkey into a peace with Italy.

THE EVIDENCE.

The publication on Monday of a full review of all the contests at the Chicago Convention, ought to set some men to thinking. The third party is built upon the rock of gross fraud by the National Committee in the interest of Taft, but is there any proof that delegates were "stolen," except wild vociferation? Even among Mr. Roosevelt's followers there must be many who would really wish to know what the facts are. There are some lawyers supporting him, even one or two professors in law schools, one college president, here and there a clergyman, with many good people who are fond of the Commandment "Thou shalt not steal," but who believe that the Commandment "Thou shalt not bear false witness" is equally binding. Such men are bound now to turn from the Colonel's shrill cries about thievery to a study of the record which will show whether there was any theft or not. The ample material is at last made accessible. Each contest is gone into in detail, with the arguments and affidavits on either side, the hearings, the roll-calls, and the final decisions. We have had six weeks of loud outcry: now we have the evidence.

That Mr. Roosevelt himself will pay any attention to this, there is no reason to believe. What he has published on the subject has been purely and confessedly *ex-parte*, probably taken over bodily from the allegations of his hired contest-maker, Ormsby McHarg. No one supposes that the Colonel has, or desires to have, any minute and accurate knowledge of the facts. He has no head nor patience for that sort of thing. When Sir James Stephen went to India to help revise the criminal code, he encountered an old Indian official who said to him: "What is the use of laying down careful rules about evidence when, by rubbing pepper under a man's eyelids, you can get him to testify to anything you want?" The Colonel would sympathize with this attitude. He has scoffed in advance at the promise to supply all the evidence concerning the Chicago contests. Get him to read the 40,000 words? Not much. It need not take ten minutes, he has declared, to enable any honest man to make up his mind that the National Committee were a set of crooks and robbers. He has loudly shouted a hundred times that they were, and that is evidence enough.

Still, there will be a few slow coaches, who have not his lightning way of leaping to the desired conclusion, and who will be anxious to see what the proof is that President Taft is a pickpocket, as Roosevelt has called him, before pronouncing him guilty. The task of going through all the evidence is, of course, long and tedious. It will be necessary to sift conflicting statements, and to weigh the arguments both from fact and party rules. Hence it will take a good deal of time for the publication of the official record to have its due effect. The lie has got a big start, and it will be a slow process for the truth to catch up with it. But any one who wishes to make a beginning in trying to arrive at the rights of the business, cannot do better than compare some of the calm recitals of the published statement with the vehement assertions, relating to the same matter, to which Mr. Roosevelt put his name in an article in the *Outlook* purporting to review the contests. We will limit ourselves at present to a single case. It was supposed to be the strongest case that Roosevelt had, involving the delegation from the State of Washington. About no other "robbery" has he been more violent. Now, let us put side by side the account of what occurred, as he gave it (rather, as it was given to him: of course, he knows nothing whatever about the facts), and as it appears in the publication made on Monday:

> The principal contest turned on King County, in which Seattle is situated. The 121 Roosevelt delegates to the State Convention from this county were elected at a primary regularly called by a majority of the full county committee, by a vote of some 6,400 to 500. The 121 Taft delegates were appointed by twelve members of a defunct campaign executive committee of the previous year which had since been removed from office by the vote of the full committee. It really seems impossible to imagine a more barefaced fraud.

> In King County a committee consisted of 250 men, the majority of whom were for Taft, and that majority, acting through its executive committee, selected the Taft delegates to the State Convention. The chairman of the county committee was a Roosevelt man. He had been given authority by general resolution to fill vacancies occurring in the committee. A general meeting of the committee had been held after the City Council had directed the redistricting of the city, in which it was resolved, the chairman not dissenting, that representatives could not be selected to fill the 331 new precincts until an election was held in September, 1912. Thereafter, and in spite of this conclusion, the chairman assumed the right by his appointment to add to the existing committee 131 precinct committeemen, and with these voting in the committee it is claimed that a primary was ordered.
>
> However, the fact is that the Taft men protested against any action by a committee so constituted, on the ground that the chairman had no authority to appoint the 131 new committeemen. They refused to take part in the primary, and so did the La Follette men.

It is not to be expected that such a showing, or any of the others made from the records of the Chicago contests, will lead the Colonel to modify in the least the fury of his denunciation. But though he may scorn the idea of sitting down to pore over the musty documents, can he be sure that all his friends will exhibit a like disdain for the facts? He may have noted that Senator La Follette is on his trail in this matter, too. In *La Follette's Weekly*, Mr. Gilbert E. Roe, the Senator's former law-partner, has begun an examination of the contests for delegates at Chicago. He limits himself to a scrutiny of the official record and a compilation of the facts; and, so far as he has gone, his conclusions are highly adverse to the Roosevelt contentions. He dismisses all but sixty-five Roosevelt contests as absolute frauds, the vote against them in the Committee being either unanimous or *viva voce* without a demand for a roll-call, so ashamed were even the Roosevelt members of the impudent pretences set up against the lawfulness of the Taft delegates. This is the kind of study of the facts which is sure to go on and to be seriously damaging to Mr. Roosevelt. Long before the Convention he began to charge trickery and cheating, made just as sweeping assertions of fraud in New York and Indiana as he did in Texas and Arizona, and acted like a man carefully preparing in advance to bolt on the claim that he had been robbed of the nomination. But hereafter he will be confronted with the record. To the law and to the testimony, from now on. We shall probably hear less in the future about the Chicago pickpockets. Even the Colonel's followers are getting tired of this, or are beginning to doubt their ability to prove their charges. Mr. George L. Record took the ground in New Jersey, last week, that it really didn't matter whether the nomination had been stolen from Roosevelt or not, for the time had come to have a third party anyhow, and they were going to have it, fraud or no fraud.

JAPAN AND THE POWERS.

The death of the Mikado will evoke no change in Japan's domestic policies or her foreign relations. Mutsuhito's reign of forty-four years was an era of extraordinary national development, but the Emperor's personal share in the notable historic process was probably not a very important one. An absolute monarch in theory, the Mikado exerted less direct influence upon public affairs than most constitutional rulers of Europe. He did not so much rule through other men as he was used by them. The established native tradition looks upon the Emperor as the source of a spiritual authority which is translated into action by professional statesmen and warriors. He cannot be called a shadow-Emperor, because this spiritual authority has been a very real force in the life of the nation. The sentiment that gathers about the Mikado is the Occidental feeling for flag and country fused with an element of religious worship. The imperial power is impersonal, and a change of rulers is no change at all. The personal influences that have guided Japanese policy—the Cabinet, the Parliament, and the survivors of the elder generation of statesmen—will continue to shape affairs, now that Mutsuhito's son reigns in his stead.

It will be, therefore, simply coincidence if, with the beginning of a new reign, Japan should take up the reconstruction of her foreign policy. Of that there has recently been a great deal of talk. The treaty of alliance with Great Britain expires in 1915, and, if it is to be discontinued, must be denounced a year in advance. That the alliance will not be renewed is a possibility that has been brought forward repeatedly, and speculation has been busy finding a substitute for Great Britain. Prince Katsura's trip abroad is supposed to have been undertaken for the purpose of preliminary exploration. Only two Powers have been mentioned as possible future allies of Japan. These are Russia and Germany, and no other Powers have been mentioned because no others are available. Russia has been longer in the field than Germany. It was not long after the conclusion of the war in Manchuria that the probability of an alliance between the two antagonists was suggested. The idea had its principal basis in the dramatic instinct of man. What could be more impressive than an alliance between two countries that had just emerged from a life-and-death struggle? So those political forecasters who did not predict a second war between Russia and Japan within ten years, began to predict a Russo-Japanese alliance within ten years. The argument for an alliance was that both nations needed peace for a long time to come, and that both nations were occupants of Chinese territory, and so had really common interests in regard to the shaping of affairs at Peking.

The German alliance has not been discussed at such great length. The suggestion has been brought forward recently, and it, too, appeals to the dramatic sense of newspaper writers and readers. If Japan's alliance with Great Britain is to be broken, why not join hands with the Power that England hates and fears most? But that is about the only argument that can be adduced in favor of a German-Japanese alliance. Real basis for such an arrangement there is none. The present agreement with Great Britain rests upon the very sound basis of a mutual guarantee of protection for the Asiatic possessions of the two Powers. If England's interests in India are in peril, Japan is bound to come to her aid. An agreement between Russia and Japan would have a similar justification in fact, since Russia is an Asiatic Power. But Germany has no territorial interests in the Far East, other than the diminutive Kiau-chau concession. More important still, Germany's usefulness to Japan as an ally cannot easily be imagined. In case of war between Japan and Russia, it is plain, of course, that Germany could decide the outcome by attacking Russia from the west. But the absurdity of such action, entailing as it would a general European war, is apparent. As for the German fleet, under no conceivable circumstances can it be visualized as sailing forth to the help of its Japanese allies, leaving the North Sea in undisputed British control. Such reasoning, of course, leaves out the miraculous capacities which the Japanese and the Germans have in common. A nation that can do the supernatural things which Capt. Hobson is always expecting the Japanese fleet to do, by right belongs in partnership with a nation that can do the supernatural things which the German fleet and army are always doing, in the minds of so many nervous Englishmen.

An alliance with Russia, though more reasonable than one with Germany, is not really among the probabilities. Coöperation between Japan and Russia for temporary diplomatic purposes in Asia is one thing. Military coöperation is another. Russia's fleet, at present hardly in being, will long be cooped up in the Baltic and the Black Sea, at the mercy of the other Powers. And of Russian assistance on land Japan is in no need. Her own army is sufficient for all conceivable purposes. In addition, those people who talk glibly of Russia's readiness to forget what happened in Manchuria only seven years ago, are a bit too Machiavellian. Alliances, to be sure, do not presuppose friendship between the partners. There is no love lost between Austria and Italy, for example. And yet national sentiment cannot be overlooked. In the face of dire necessity, Russia might join hands with Japan. But short of such an emergency, the memory of Mukden and Tsu-shima must remain and continue to rankle. In general, it may be recalled that the forming of alliances is not the kaleidoscopic game it is generally supposed to be. The Triple Alliance holds out, in spite of many divergent forces. The Franco-Russian alliance is now twenty years old, and shows no signs of breaking. International partnerships are not the outcome of momentary whims, but of long-continued processes whose workings may not always be apparent.

A final argument against the possibility of a Japanese-German or a Japanese-Russian alliance is the simple fact that there is no real ground for believing that the Anglo-Japanese alliance is about to be dissolved. Of the European Powers with whom Japan cannot conceivably come into conflict, England is still the one who can best serve Japan's interests in Asia.

TRIFLING WITH GOOD FAITH.

A marked copy of Washington's Farewell Address should be sent to certain Senators, to some writers on international law, and to a great many newspapers. The passage especially to be underscored is the one enjoining us to "observe good faith" towards all nations. The pending bill to make the Panama Canal free of tolls to American vessels, with some of the speeches made concerning the proposal, and the articles written about it, shows a tendency to play fast and loose with the plighted word of the nation. This is the more reprehensible in that, aside from the formal agreements of the Hay-Pauncefote treaty, there was a separate and especial assertion that Great Britain might depend upon the absolute good faith of the United States.

This comes out clearly in the full account of the negotiations which Secretary Hay sent to the Senate of the Sixty-first Congress. He detailed the steps taken in connection with the original treaty and its subsequent modifications. The correspondence showed the British Government to be desirous for a time of incorporating certain amendments, but, after a free interchange of views, Lord Lansdowne decided not to press them. The main reason for waiving such British contentions, and finally consenting to the form preferred by our Department of State, was succinctly given by Secretary Hay as follows:

> The President, however, could not consent to this amendment, because he apprehended that it might be construed as making the other Powers parties to the contract and as giving them contract rights in the canal, and that it would thus practically restore to the treaty the substance of the provision which the Senate had struck out as article 3 of the former treaty. He believed also that there was a strong national feeling against giving to the other Powers anything in the nature of a contract right in an affair so peculiarly American as the canal; that no other Powers had now any right in the premises or anything to give up or part with as consideration for acquiring such a contract right; that they are to rely on *the good faith of the United States* in its declaration to Great Britain in this treaty; and that it adopts the rules and principles of neutralization there set forth. These rules are adopted in the treaty with Great Britain as a consideration for getting rid of the Clayton-Bulwer treaty.

It is this good faith of the nation, both tacitly and explicitly pledged, with which some in Washington and elsewhere are disposed to trifle. The attempt to get away from our promises takes many forms. The language of the treaty is tortured in order to make it mean what it plainly was never intended to mean. If that will not work, we are told that the thing for us to do is to regard the treaty as so much waste paper. Standing in the way of what some of our people want to do, why not "denounce" it at once, and so get rid of it? This is the brute-force argument. Precedents can, of course, be cited. It is pointed out by one publicist that Russia announced in 1870 that she would be no longer bound by the international agreement excluding her from the Black Sea, so why should we not be free openly to repudiate the Hay-Pauncefote treaty? The illustration is not fortunate. Everybody remembers how this act of Russia's was involved in a great war; how Bismarck had agreed beforehand to give Russia a free hand in that matter, provided she would be neutral in the struggle with France, and enable Prussia to leave her Russian frontier unguarded. A later instance would be Austria's annexation of Bosnia and Herzegovina in disregard of the Treaty of Berlin. Such things can be done. Treaties fall when nations go to war, and treaties can be violated if a country is strong enough and cynical enough to do it. But such a course would be peculiarly shameless in connection with the Hay-Pauncefote treaty, because, as Senator Root pointed out, it is of the nature of an executed contract. England had something which we wished her to give up—namely, her right of joint control of the canal under the Clayton-Bulwer treaty—and to induce her to surrender it we offered a guarantee of neutrality and entire equality. Having got what we wanted, the proposal now is that we take back what we gave in order to get it. Turpitude could hardly be more glaring.

One of the ingenious little shifts of the treaty-evaders is to assert that the situation has completely changed since the agreement was made. The treaty was ratified in 1901. But it was not till 1903 that Roosevelt "took" Panama. That act of robbery, it is alleged, is now our warrant for an act of bad faith, since the "Zone" has become American soil. The canal is therefore a part of our "coast line," and whatever rules or regulations we may choose to make for the use of the canal are "purely matters of domestic legislation," with which no foreign country has a shadow of a right to interfere. To this we know of only two objections. One is that it is immoral. The second is that it is illegal. This last could hardly be doubted by any one who will take the trouble to read the treaty itself—which few of these rough-and-ready upsetters of it have apparently done—for it distinctly provided for this change in the situation which is alleged to be so vital. Article IV reads:

> It is agreed that *no change of territorial sovereignty* or of the international relations of the country or countries traversed by the before-mentioned canal shall affect the general principle of neutralization or the obligation of the high contracting parties under the present treaty.

It is gratifying to note that none of these discreditable efforts to get away from a binding treaty seems to find any general favor. Certain interested persons are making a great ado about the matter, and as usual covering private greed with the cloak of patriotism, but the public, and even Congress, are not showing much concern. The probability seems to be that the Panama bill will be passed, if at all this session, without the controverted clauses affecting canal tolls. There is certainly no hurry about those, in case of a canal that will not be opened for three years yet. We are under no necessity of rushing into legislation which would be both a danger and a national disgrace.

THE NAVAJO RESERVATION.

The progressive spirit of New Mexico is manifesting itself in a demand for the opening of the Navajo Indian reservation to white settlement. This was to be expected, sooner or later. Its advent so early in the career of the infant State shows that the New Mexicans, in spite of numbering among them so many persons of Spanish antecedents and habit, are full of the Western idea that no time should be lost in reaching out for anything they want. And what they particularly want just now is a big area of public land to attract immigrants from the East.

It is truly a splendid domain upon which they have fixed their eyes—measured by the surveyor's instruments. On the map it would cover all the State of Connecticut east of the Connecticut River. It would completely blot out Delaware, or hide Rhode Island with a considerable fringe to spare. But not even the keen-eyed spies Moses sent into Canaan could find, in a forty days' search through this huge reservation, enough arable land to take care of a hundred white families with the traditions of their race. A few have already tried it, settling down as missionaries, teachers, or traders on the oases most available for home-building; and they would bear witness to the unsuitableness of the country to the general needs of a white farming population. Vast stretches of arid sand and clay, dotted only with sagebrush; few streams, and those wholly uncertain in volume and season of flowing; widely separated tracts of timber; forbidding bluffs of bare rock; gray plateaus gashed with cañons whose walls have been carved by immemorial erosion into grotesque, half-finished architectural forms—these are the impressions the wayfarer gains of the Navajo desert. Picturesque, but not livable, is the universal verdict of those who are most familiar with it; and no one who knows the country is astonished to learn that it was originally selected for the Navajos in order to keep them forever out of contact with the whites, on the assumption that no white man could subsist in such a chameleon's paradise.

Yet this native people, in many respects the finest group of Indians in the United States, have not only subsisted but flourished there, numbering now between twenty-five and thirty thousand souls. The chief complaint of their white neighbors is that they pay no taxes towards the support of schools and roads and courts, though swarming over all the northwest corner of New Mexico, the northeast corner of Arizona, and a considerable notch on the southern border of Utah. But most of the little that has been done towards improving the land they have done themselves. With their crude tools and rough engineering, they have struggled bravely with the few, refractory rivers, and harnessed parts of them so as to irrigate small patches of soil. They have developed tiny wells and rain-cisterns for watering their sheep, their main dependence for support. If they had not been herdsmen by instinct, they would have starved to death long ago; and had they not enough of the nomad adaptability to be willing to move their homes, with their flocks, many miles from summer pasture to winter shelter and back again, they would have had no sheep to herd. They have asked no aid of the Government, and, beyond a few scattered schools, receive none. They are a proud people, independent of spirit, hardy, temperate, industrious, ingenious, capable. Crimes of violence among them are rare. As a tribe, they have kept faith with the Government since they entered into a compact of peace more than forty years ago.

Of course, the tendency of the age being to banish all incongruities from the established social order, it is only a question of time when these people must be modernized, conventionalized, and brought into general conformity with the rest of the body politic. Meanwhile, the white invader will enter the Navajo country and possess it, as he has already entered and possessed the domains of scores of other tribes. But it behooves Congress to go slowly with its legalizing of this process. No ordinary allotment scheme will answer. The problem presented by the Navajos is complex beyond that offered by any body of Indians who are agriculturists by inheritance or natural bent, or who inhabit a farming region, or who, having lived long on Government bounty, have to be thrown outright upon their own resources as the last hope for their salvation. It is too large for solution by any of the established agencies of Indian administration. Before any law on the subject is passed, it ought to be referred to a commission of wise, high-minded, unselfish men, who are willing to devote the necessary time and thought and undergo the discomforts of several months' sojourn in an inhospitable desert, for the formulation of a plan which will meet equally the tests of philanthropy and practical common sense.

THE CULT OF SUPER-GOLF.

The historic and shifting contest between the makers of armor and the makers of guns, to see which can get the better of the other, has its likeness in what has for some time been going on in the game of golf. Players and the architects of the links are continually pitting their wits against each other. Every improvement in clubs or balls is but a signal for making the courses harder. The average skill of golfers is all the time increasing; but greens committees display a fiendish ingenuity in seeing to it that the average score does not improve. You will see malignant officials on the watch for a poor shot that luckily escapes a severe penalty, and then darkly muttering to themselves that such a thing shall not happen again. Sure enough, the next time a ball is sliced to the same spot, it finds a new-made grave awaiting it—one of the places rightly named "pits," full as they are of lost souls and wailing and gnashing of teeth.

There is growing complaint, in England as well as in this country, that the authorities of the links are in pursuit of a kind of super-golf. No one demands that the courses be made as easy as once was the custom. There is no objection to difficulties and hazards, as such. The protest is against applying higher mathematics to the game. It is becoming the fashion to lay out links on the basis of the most precise multiples of the most precise shots. Opportunity to "recover" from an imperfect stroke is scoffed at. The wages of golfing sin—or even peccadillo—is death. Your drive must be exactly 198 yards, 2 feet, and 3 inches; and the ball must come to rest within an area no bigger than Sir Walter Raleigh's cloak. If you hit further, you are in trouble; if you fall shorter, you cannot possibly carry the bunker guarding the green. Ten feet to the right puts you where you can't see the hole; while a couple of yards to the left will send you down a slope into the rough. So it goes hole after hole. Every stroke must be perfect on pain of certain punishment. The player has to study the wind as carefully as a marksman at a rifle-range; and in the hands of professionals and experts golf is tending towards a combination of ballistics and the integral calculus.

It is maintained, to be sure, that these refinements and niceties of golf not only test the player's skill, but are for his mental discipline and moral good. He is thus compelled to concentrate, knowing that a single moment of relaxed attention means his undoing. And we suppose that, when he finds himself in a cunningly placed trap, he is expected to meditate piously on the wonderful intellect of the man who spread that snare for his feet. Anyhow, it is said, his coolness and reserves of spiritual strength will be developed under his misfortunes. But this recalls what the statesman said about the blessings of adversity for his party. "Yes," he remarked, "but adversity mustn't last too long." It must not on the links, lost tempers, instead of being braced by difficulty, become permanently soured by the sense of diabolically contrived punishments. Every golf club that persists in adding hazard to hazard, and calculating distances with transit and chain, recruits a growing corps of grumbling members. They like to play golf, but protest that they do not wish to spend half their time hewing their way out of the sand, or striving to be as accurate on the links as they have to be on a billiard-table.

Another offence laid at the doors of the engineers of transcendental golf links is that they will not let nature alone. Natural hazards have the best reason for existence of any. A ravine to pitch over, a fringe of swamp to carry, a bit of wood to skirt, a river or pond to drive across—such hazards no one objects to; they occur in the order of nature, and excite little of the wrath, malice, and all uncharitableness which the artificial difficulties of man's creating so often provoke. About the former, the player's only thought is that they happen to be in his way and must somehow be got over or around. But the devotees of super-golf have small patience with what Nature has done. It is for them to improve on her. They must sweep everything clear to begin with, so that they may proceed to lay out their links like a chessboard, plotting each hole with the utmost care and the nicest balancing of difficulties, and penalizing every stroke that does not drop the ball within a yard of the spot which they indicate.

We would not be understood as making a plea for duffers' golf. The rigors of the game are rightly insisted upon. There is no real defence for those courses which "any gentleman" can negotiate in comparatively low figures, no matter how he plays. But there are growing numbers of golfers, and we confess that we sometimes sympathize with them, who take a certain delight, even if it is a trifle shame-faced, in stealing away occasionally from the fearfully and wonderfully concatenated traps and hazards that make up the orthodox links, and spending an afternoon of "low dissipation" on a course of another kind. There it is refreshing to find that there is more than one way of making a given shot, that there is hope for the vilest sinner while yet the lamp holds out to burn on the putting green, and that brook and terrace and bog have been left as Nature designed them. After a day of such unmanly self-indulgence, one can go back dutifully to wrestle with the intricacies of super-golf, determined to suffer and be strong.

NEWS FOR BIBLIOPHILES.

One of the provisions in the will of Alfred Henry Huth, who died in October, 1910, was that, before his library was sold, his executors should give to the British Museum "such 50 volumes as the Trustees of the British Museum shall in their uncontrolled discretion select from the Huth Library, provided that such Trustees shall not select any duplicate or more perfect copy of any volume which may be then already in the British Museum Library except by way of exchange of such duplicate with the Huth Library." Another stipulation was that a separate catalogue of these books, which were to be designated as the "Huth Bequest," must be printed by the Museum. That catalogue is now published. It is a large quarto, printed at the Oxford University Press in the best manner. There are eighteen full-page plates, including a frontispiece portrait of the late Mr. Huth, besides a number of facsimile reproductions of title pages, etc., printed with the text. There is a short Preface by F. G. Kenyon, the recently appointed head of the British Museum Library, and there is a longer Introduction by Alfred W. Pollard, that most wise and generous Assistant Keeper of the Printed Books, the friend and helper of every bibliographer, student, and book-collector. In the Introduction are included outline sketches of the lives of Henry Huth, the founder of the Huth Library, and of his son Alfred Henry Huth, the donor of the Huth Bequest, which, Mr. Kenyon says, is "beyond doubt the most important gift that has been made to the library of the British Museum since the bequest of the Grenville Library in 1846."

Of the fifty items selected, thirteen are manuscripts, including a remarkable Latin Bible of French execution, a Flemish Book of Hours called "the most generally attractive volume in the Huth Library," and a Psalter, ascribed to the last quarter of the thirteenth century and of English execution. The sixteen plates devoted to the manuscripts contain upwards of fifty reproductions.

As might well be supposed, Nos. XIV to XLIX of the catalogue, the thirty-six printed books selected as desirable additions to the world's greatest treasure-house of books, deserve separate mention. Perhaps altogether the most notable are three first quartos of Shakespeare: "The Tragedie of King Richard the Second" (1597), "The Tragedy of King Richard the Third" (1597), and "A most pleasaunt and excellent conceited Comedie of Syr John Falstaffe, and the merrie Wives of Windsor" (1602). These three give the Museum a complete series of first editions of all the quartos up to 1623, save only "Titus Andronicus" (1594), the only known copy of which is in Mr. Folger's library. Of collections of sonnets put forth in England in the sixteenth century, three not before in the Museum, but now added, are William Smith's "Chloris, or the complaint of the passionate despised Shepheard" (1596); Bartholomew Griffin's "Fidessa, more chaste than kinde" (1596), and Giles Fletcher's "Licia, or Poemes of Love" (1593). The Bodleian Library possesses all three, but the only other copy located by Mr. Pollard is a copy of "Fidessa" at Britwell Court. Among other English books are "The castell of laboure" (Pynson, 1505), "The floure of the Commaundements of god" (Wynken de Worde, 1510), and "The dictes or sayengis of the philosophres" (Caxton, 1477), the first dated book printed in England. This last book was an exchange, and for it the Museum gave one of their two inferior copies.

The fiftieth book of the selection is actually a collection of seventy-four separately printed single-sheet ballads, mostly of early date, bound together in one volume. This volume cost Mr. Huth £750 in the Daniel sale in 1864.

An edition of the "Ars Memorandi" block-book and eight French incunabula are among the fourteen books in foreign languages in the Huth Bequest. L. S. L.

Correspondence

DEFINING OUR TERMS.

To the Editor of The Nation:

Sir: Your correspondent from Providence, "A. M. E.," may be interested in an experience of my own in the campaign of 1896, when I spoke in one or two places for McKinley, though myself an economic free-trader. I discovered how we in this country are hampered by the etymological meaning of a term and the tendency to distribute the term, in logical parlance, when discussing the problem. It was all due to American ignorance of the principles of economics and taxation. I told the people with whom I talked in private that I was a free-trader, having in mind the economic significance of the term, and was met with the reply that we could not pay Federal expenses, if that policy were applied. I saw at once what was the matter, and ever after that I abandoned the words "free trade" and deliberately resorted to the more cumbersome phrases "taxation on imports that we do not produce" and removal of "taxation on what we do produce." I never failed to convert a farmer or other person to my point of view when it was presented in that way, and he did not know he was accepting economic free trade.

The situation is one which illustrates how social and political policies affect the meaning of terms. When the phrase "free trade" was adopted in England by the followers of Adam Smith, her system of taxation for Government expenses was *direct*, and taxation on imports was not necessary and was applied in favor of monopolies. Hence it was literally and etymologically "free trade" that the removal of them implied. But its economic meaning was not necessarily convertible with that, and no political difficulties arose in campaigning among the ignorant.

It is quite otherwise in this country. Our Constitution requires the payment of Federal expenses by import taxes, and direct taxation is not permitted, except with a qualification, that is, in proportion to population. In this situation we should either have to change our system of actual taxation or we could not pay Federal expenses by the entire removal of import duties, which is what the public understands by "free trade," its etymological interpretation.

It is the wholly iniquitous character of our system of taxation that is responsible for this confusion. You can inflict all sorts of commercial injustice under the name of "import" taxes, and the public would not find it out until long after. "Protection" conforms in its meaning to "import" taxes, so far as appearances go, and the public, knowing nothing about the incidence of indirect taxation, will go on and patiently endure all sorts of burdens until its bread begins to disappear. What is needed is some short, crisp term which will indicate the situation and define for us a system of taxation that can be seen at a glance. Whether this is possible is not my contention. The economist might work at that problem. But as long as we must have import taxes to pay Federal expenses the protectionist will have a clear opportunity to throw dust in the eyes of a people who will not inform itself on the principles of taxation. JAMES H. HYSLOP.

Tamworth, N. H., July 23.

RAIDING THE TREASURY.

TO THE EDITOR OF THE NATION:

SIR: One of the policies of the Emperor Augustus took the form of making grants of money to impoverished Senators, to enable them to maintain their position by not falling below the Senatorial census of one million sesterces (some forty-five or fifty thousand dollars' worth of property). He once gave this sum to Hortalus, a grandson of the famous orator Hortensius, that thus Hortalus might marry, rear a family, and live in accordance with his rank. This naturally tasted very sweet to Hortalus, and in the next reign he wanted the dose repeated. So he had his four sons present at the door of the Senate House, and, while giving his opinion on another matter, he injected his request as a "rider" to his speech on the matter in hand. The four boys were the great-grandsons of the great Hortensius, and the precedent had been set by *divus* Augustus. What more natural, then, than that the Senators should be favorably inclined towards passing this piece of special legislation. But Tiberius interposed, in a speech sound to the core, and so replete with wisdom that I believe it will be welcomed by your readers in these days when our own national treasury is being increasingly depleted for the benefit of individuals. The speech is recorded by Tacitus in the thirty-eighth chapter of the second book of the "Annals," and is commended to the notice of our next President:

> If all the poor people begin to come here and seek money for their children, the different individuals will never be entirely satisfied, and the treasury will soon show a deficit (*deficiet*). Of course, when our forefathers granted Senators the privilege of occasionally digressing from the particular topic up for discussion, and of expressing their views on matters conducive to the common good, it was never intended that we should here promote our private business and add to the resources of our families. Such a course brings odium upon the Senate and the Emperor, no matter whether they grant the largess or refuse it. Nor can we call this procedure a request. It is rather an imperious demand, made utterly out of season, and sprung as a surprise upon a Senate convened for other matters, if a Senator rises in his place, and by the number and age of his children takes unfair advantage of the Senate in this indelicate manner. By so doing he acts in the same violent mode against me, and breaks his way, as it were, into the treasury, which will have to be replenished by wrong means if we exhaust it in our desire to gratify individuals. The late lamented (*divus*) Augustus gave you the money, Hortalus; but not because you made a personal appeal to him, and certainly with no expectation that it should be given every time you might choose to ask for it. Otherwise, personal exertion will relax, and idleness will be promoted. People must be taught that only by self-reliance can they ward off the poverty they fear or attain the success they hope for. Adopt any other principle than this, and the large majority of people (*omnes*) will become careless and will wait for other people to help them, being slothful themselves and a burden to us.

That great Democrat, Grover Cleveland, condensed this in his notable declaration (I quote from memory): It is the business of the people to support the Government, and not the business of the Government to support the people. ADDISON HOGUE.

Washington and Lee University, Lexington, Va., July 15.

CONGRESS OF THE HISTORY OF ART.

TO THE EDITOR OF THE NATION:

SIR: The ninth International Congress of the History of Art, which met at Munich in September, 1909, voted that Rome should be the meeting place of the next Congress, which will accordingly be held in this city in the halls of the Royal Accademia de' Lincei in the Palazzo Corsini. The proceedings of this Congress will be of the greatest interest and importance, not merely for their scientific and historical value as contributions to the history of art, but also because special attention will be given to the teaching of this subject in universities and in schools of every description in which it can rightfully claim a place. It will also be one of the chief objects of the Congress to consider the history of art in its international relations, and more especially the history of the artistic relations between Italy and other countries.

The papers and subjects for discussion will be grouped under the following four sections: (1) The History of Early Christian and Mediæval Art Down to the End of the Fourteenth Century. (2) The Fifteenth Century. (3) The History of Art from the Sixteenth Century to the Present Time. (4) Historico-artistic Methodology; Care of Works of Art; Historical Researches in Technical Methods; General Organization of the Work of the Congresses. The use of the Italian, French, German, English, and Spanish languages is allowed, but it is noticeable that no subjects have as yet been announced in the Spanish or English language, although persons of both these nationalities have published the titles of papers they will read. For example, Dr. Thomas Ashby, director of the British School of Rome, will read a contribution in Italian, and Mrs. Strong, librarian of the same institution, in French. Among the names of many other well-known persons on the programme are those of Mgr. Wilpert, E. Wrangel, Henry Thode, Émile Bertaux, Carl Gebhardt, J. A. F. Orbaan, Osvald Sirèn, Hermann Egger, Federico Hermanin, Ugo Ojetti, and Adolfo Venturi. The meeting will be held under the honorary presidency of the King of Italy, and the inaugural discourse will be pronounced by Prof. Adolfo Venturi of the University of Rome, author of the celebrated "Storia dell' Arte Italiana."

In connection with the Congress the following expositions will be held: (1) Of photographic reproductions in one or more colors for the illustration of works on art history. (2) Of Italian periodicals, whether in course of publication or not, on the history of art. (3) Of publications not on the market, such as catalogues of private collections and sale catalogues. (4) Of kinds of paper adapted for use in histories of art, such as insure, that is, durability and neatness of photographic reproductions. To the exhibitors of the best shows under the first and last of these headings the Italian Ministry of Agriculture, Industry, and Commerce will award gold medals, while the Congress itself will give diplomas to the winners in the other two expositions.

The executive committee at Rome announces that, as it reserves the right of adding to the programme until shortly before the date of meeting, those who expect to attend the Congress, and who wish to read papers, are invited to make known their intention to the general secretary, Signor Roberto Papini, Via Fabio Massimo 60, Rome. Signor Papini is also ready to receive the subscriptions of those who wish to become members of the Congress. This subscription is twenty-five francs; for ladies belonging to the family of a member, ten francs. This membership, besides participation in the meetings and social functions to be held in connection with the Congress, includes the right to reductions on railways in Italy and other European countries, to free entrance to all Government and municipal museums and galleries for the entire month of October, entrance to private galleries and collections in Rome which are not usually open to the public, and to a copy of the proceedings of the Congress. H. E.

Rome, July 16.

THE ROMAN PANTHEON.

TO THE EDITOR OF THE NATION:

SIR: The inquiry in your issue of July 18 regarding "The Pantheon in Rome" may perhaps be best answered in the words of Cassius Dio (Book 53, chap. 27): τό τε Πάνθειον ὠνομασμένον ἐξετέλεσε προσαγορεύεται δὲ οὕτω, τάχα μὲν ὅτι πολλῶν θεῶν εἰκόνας ἐν τοῖς ἀγάλμασι, τῷ τε τοῦ Ἄρεως καὶ τῷ τῆς Ἀφροδίτης, ἔλαβεν· ὡς δὲ ἐγὼ νομίζω. ὅτι θολοειδὲς ὂν τῷ οὐρανῷ προσέοικεν. ἠβουλήθη μὲν οὖν ὁ Ἀγρίππας καὶ τὸν Αὔγουστον ἐνταῦθα ἱδρύσαι τήν τε τοῦ ἔργου ἐπίκλησιν αὐτῷ δοῦναι· μὴ δεξαμένου δὲ αὐτοῦ μηδέτερον ἐκεῖ μὲν τοῦ προτέρου Καίσαρος ἐν δὲ τῷ προνάῳ τοῦ τε Αὐγούστου καὶ ἑαυτοῦ ἀνδριάντας ἔστησε. "He completed also the so-called Pantheion. It has this name, perhaps because along with its dedicated statues—that of Mars and that of Venus—it received images of many gods; but as I think, because, being of rotunda form, it looks like the sky. Agrippa wished, to be sure, to set up there the statue of Augustus as well, and to ascribe the name of the structure to him (*i. e.*, to name it after him); but, as he would accept neither honor, he placed in the temple a statue of the former Cæsar (*divus Julius*), and in the vestibule (*pronaos*) statues of Augustus and of himself."

The statement of the Græco-Roman historian, who was writing for the Emperor Septimius Severus, restorer of the Pantheon, gives no satisfactory answer, to be sure, but it is the starting-point of all discussions of this much-discussed question, the earliest and only real authority upon the subject. It shows that the common interpretation of the name ("shrine of all saints and temple of all gods") was current two centuries after the name was given. It does not show that Dio thought the meaning "belonging to all gods" an impossible one, for he may have applied the adjective in that sense to the dome of heaven. However, there seems to be no clear case of such use for the adjective *pantheios* or *pantheus* (in spite of Liddell and Scott), and the interpretation as "all-divine, sacrosanct" is undoubtedly correct.

It is perhaps fair to add that Georg Wissowa, the great authority on Roman religion, prefers the popular interpretation, citing as proof an inscription upon an altar found recently at Pergamon, τῷ πανθείῳ sacred (he thinks) to all gods and goddesses. "Religion und Kultus der Römer," 2d ed. Munich, 1912, p. 77.) There seems no reason, however, why this should not be taken as an ascription "to the all-divine one," in view of such altar inscriptions as those given in the *Corpus Inscriptionum Latinarum* (Vol. 3, No. 1139, and Vol. 6, No. 695), where *pantheo* is the epithet of a single deity.

THE TOWERS OF ARAGON.

TO THE EDITOR OF THE NATION:

SIR: All your readers have heard of, and many have seen, the famous towers of San Gimignano—and the belfry of Bruges has had its poet—and Freiburg and Ulm are well known; but I have never yet heard sung the praises of the red octagonal towers of Aragon. A kind fate recently compelled me to go to Valencia from Calatayud, via Teruel, famed for its lovers, on the "mixto" that leaves Calatayud at 3:20 in the afternoon. The road goes through one of the most picturesque landscapes—save some of Greece—that the world can offer, I believe, a marvellously colored landscape alternately white and red. And it is in this landscape that I first noticed a particular and most attractive style of architecture.

One gets a glimpse of it in Saragossa, but one sees it at its best only in the smaller towns of Aragon. I describe as a spectator, not as an architect. On a quadrangular basis some thirty to forty feet in height, rise two successive stories, one hexagonal, the second octagonal, crowned by a cupola often roofed with brilliantly colored *azuelos* (colored tiles). The material is usually the red sandstone of the region. Rising from the dull red houses of unburnt brick of the villages, they produce a striking effect; and in my memory, San Gimignano itself pales before them. As day draws to its close, and a blood-red sunset smashes itself (I can use no other term for sunsets in Spain) against the purple mountains to the east, these towers stand out with most original vividness.

CHARLES ST. CLAIR WADE.

Teruel, Spain, July 10.

Literature

THE GREAT STATE.

Socialism and the Great State: Essays in Construction. By H. G. Wells, Frances Evelyn Warwick, L. G. Chiozza Money, E. Ray Lankester, C. J. Bond, E. S. P. Haynes, Cecil Chesterton, Cicely Hamilton, Roger Fry, G. R. S. Taylor, Conrad Noel, Herbert Trench, Hugh P. Vowles. New York: Harper & Bros. $2 net.

One closes this book with Portia's sage ejaculation, that if to do were as easy as to know what were good to do, chapels had been churches, and poor men's cottages princes' palaces. Mr. Wells and his associates have a fairly definite notion of what they want, but they do not appear to know how to go about to get it. Mr. Wells himself says that their conception of the Great State is still altogether unsubstantial. It is a project as dreamlike to-day as electric lighting, electric traction, or aviation would have been in the year 1850. A similar plaint is encountered throughout the book.

Yet it is a stimulating publication, a positive enrichment, in fact, of the socialistic discussion. The reader, whatever may have been his previous condition of economic or political servitude, finds himself for the moment at least breathing a freer air and entertaining the hope of a larger and more captivating social life. So long as hope continues to spring eternal in the human breast, such pictures as Mr. Wells, the Countess of Warwick, Mr. Money, and the other contributors to this work have painted will be objects of delightful contemplation. Inevitably, however, the question arises, Is this too good ever to be true? Here and there throughout these pages we encounter phrases which seem to savor of doubt, but on the whole the tone is one of abundant cheerfulness. "The permutations of life's possibilities," to quote the final passage, "are beyond our telling. But this at least we steadfastly believe: there is no insuperable barrier between mankind and the goal of our desire."

A fairly logical order is followed in the presentation of this subject. H. G. Wells (who, with Lady Warwick and G. R. Stirling Taylor, has had editorial charge of the publication) discusses "The Past and the Present of the Great State." Next in order comes a treatment of "The Great State and the Countryside," by the Countess of Warwick. L. G. Chiozza Money's outline of "Work in the Great State" properly occupies the third place. Then we find a discussion of the making of new knowledge, of health and healing, of law, of democracy, of women, and of the artist, by writers of such repute as Sir Ray Lankester, C. J. Bond, E. S. P. Haynes, Cecil Chesterton, Cicely Hamilton, and Roger Fry. This is succeeded by "The Present Development of the Great State" from the pen of G. R. Stirling Taylor. The Rev. Conrad Noel presents a "Picture of the Church in the Great State"; Herbert Trench traces "The Growth of the Great State," and Hugh P. Vowles closes with a chapter on "The Tradition of the Great State." We look in vain for what some would consider a most essential chapter—"Financing the Change to the Great State."

The book, as might be expected of a work produced under such editorship, has a literary quality too often lacking in discussions of this subject. The imagination is given a large place, but it is obvious that every effort has been made to keep it within the guidance of the reasoning faculty. The reader, nevertheless, is not always able to tell where imagination ends and reason begins: a borderland between the two is not indiscernible, and one is sometimes impelled to cry out, "Tell me where is fancy bred, or in the heart or in the head?" Still, we have here a serious attempt at a synthesis of life, a theoretic reconstruction of human society along lines which for the most part run parallel with the best instincts of intelligent minds.

H. G. Wells declares that this volume is essentially an exercise in restatement, and to him has been committed the task of providing a nomenclature. Throughout this volume there is a "common conception of a constructive purpose," and what that common conception is Mr. Wells starts out to elucidate. In the effort he coins two expressions, which are employed by himself and his associates with a certain defined intention. They are "The Normal Social Life" and "The Great State." Each writer invariably employs capitals in using these terms. The Normal Social Life is a type of human association and employment, of extreme prevalence and antiquity, which appears to have been the lot of the enormous majority of human beings as far back as history or tradition or the vestiges of material that supply our conceptions of the neolithic period can carry us. It has never been the lot of all humanity at any time; to-day it is perhaps less predominant than it has ever been, yet even to-day it is probably the lot of the greater moiety of mankind. Those persons who regard the Normal Social Life as the only proper and desirable life for the great mass of humanity are by Mr. Wells designated Conservators. It is interesting, at this juncture, to learn that "the rural conservative, the liberal of the allotments and small-holding type, Mr. Roosevelt—in his Western-farmer philoprogenitive phase as distinguished from the phase of his more imperialist moments—all present themselves as essentially Conservators, as seekers after and preservers of the Normal Social Life." So, too, do Socialists of the William Morris type; and so also do G. K. Chesterton and Hilaire Belloc.

Opposed to the Conservators are two other classes. The first is composed of the Individualists, who appear to regard the extensive disintegrations of the Normal Social Life that are going on to-day with extreme hopefulness. They voice the doctrine of the survival of the fittest, believing that the future welfare of man may be trusted to the spontaneous and planless activities of people of good-will, and that nothing but state interference can effectively impede its attainment. Curiously, close to this extreme optimistic school, in its moral quality and logical consequences, though contrasting widely in the sinister gloom of its spirit, is the socialism of Karl Marx. The Individualists and Marx converge in practice upon *laissez faire.* Planless Progressives is the name Mr. Wells has invented for them.

On the other hand is the class which the writers of this volume of essays represent, which believes that the forces that have been assailing and disintegrating the Normal Social Life are forces of wide and indefinite possibility that need to be controlled by a collective effort implying a collective design, deflected from merely injurious consequences and organized for a new human welfare upon new lines. To this class the name of Constructors is given. This greater social life is put forward as the only real alternative to the Normal Social Life from which man is continually escaping. It represents, in fact, the Great State.

Mr. Wells, in short, has set a complicated pattern for Lady Warwick, Mr. Money, and the rest to fill in. If in presenting their work for public inspection, they have left interstices, it is because they have refused to employ makeshift arguments and to invent a psychology more compatible with some of their theories of the Great State than the psychology which has dominated the race hitherto. They have taken human nature as they found it, and, believing it to be capable of a more rational development than it has ever had in the past, have pictured for it a millennial future, but they have not altogether forgotten the fact that they are dealing with the most intractable of all elements, human nature. Yet to some it will seem that this volume of essays is but a call to spirits to emerge from the vasty deep. Necessarily, the Great State implies a great advance in conscious rectitude on the part of the race. For thousands of years the prophets have been telling us that righteousness exalts a nation, and yet their message is still being vehemently preached, the only difference being that we now make a larger use of economic terms, of language which more directly connotes the purely material needs of mankind.

It is almost wholly in the light of these that we must consider the appeal presented in this volume. Mr. Wells and those associated with him do not neglect the æsthetic side of life, but, after all, they strive to promote it chiefly as a mere creature comfort—it is not without a certain bovine aspect. Mr. Wells, for example, sees the agricultural population in the form of a fully developed civilization employing machines in the hands of highly skilled men, who will minimize toil to the very utmost, and declares that, "given short hours, good pay, and all the jolly amusement in the evening camp that a free, happy, and intelligent people will develop for themselves, and there will be little difficulty about this particular class of work to differentiate it from any other sort of necessary labor."

It will be gathered from this that the agricultural laborers are no longer to spend their lives in grinding toil in isolated regions, remote from the comforts and pleasures of town life. They are to live in the cities and go out into the country to perform their few hours of daily toil. On the other hand, factory operatives are not going to be compelled to live in cities. Large cities, with their squalor, their yellow fog, and all their other disgusting and debilitating features, are to be obliterated. Lady Warwick says that the normal town of the Great State will probably have between fifty and sixty thousand inhabitants. How this would affect agriculture in such a country as Great Britain, it would perhaps be rash to assert. This much can be said, however: if all the cities of England, Scotland, and Wales of more than one hundred thousand population were to be reduced to fifty thousand, the displaced inhabitants would undoubtedly be sufficient in number to create at least three hundred new cities. That, of course, is an economic consideration of no small importance.

The reader may not altogether share L. G. Chiozza Money's hopefulness regarding Work in the Great State, but will certainly admit the force of many of his denunciations of present economic conditions. Many persons will perhaps share Mr. Money's astonishment that in a nation of 44,000,000 souls, about 20,000,000 of whom figure in the census as "engaged in occupations," only 9,000,000, or less than one-half of those working for gain, are engaged in either agriculture or industrial production; or, to put it somewhat differently, that only 45 per cent. of males over eighteen years of age are direct producers of material commodities. Many will also agree with him that there is a prodigious waste of producers' work by reason of work which is involved in industrial processes that are but the servants of unnecessary competition.

The conception of the Great State is that the whole of the adult population will be organized to produce a minimum standard of life, expressed by the output and distribution of the material products and services necessary to its environment. This work is what Mr. Money terms the professional life of the individual. Because it is universal and compulsory, and because the waste of effort will be reduced to an insignificance, the professional or compulsory work of the individual will occupy but a few hours of his day. If education ever becomes universal and scientific, less than a five hours' day of labor will produce a bulk of commodities many times as great as that which can be produced at present. Beyond his professional work, the citizen will owe no duty to the state, and will be free to do anything that is not to the injury of his fellows. That is, for the greater part of his time he may be a poet or painter, writer or philosopher, singer or musician, actor or dramatist, carver or sculptor, even sportsman or idler. Thus every individual will have a professional and an amateur life, and art will be a product of the latter.

Here we have the Great State in its broadest outlines. It is a splendid refutation of the charge that faith has perished from off the face of the earth. Yet it could be wished that the authors of this volume of essays were more explicit regarding the means of converting faith into works. It is a little disconcerting to find Sir Ray Lankester writing as follows with reference to the Making of New Knowledge: "I confess that, after spending the best part of my energies during nearly fifty years in endeavoring to increase the number of my fellow-citizens who have arrived at a just estimate of the value of new knowledge and of the consequent need for organization of its pursuit by the expenditure of public funds, I am disappointed with the result." And it is somewhat discouraging to encounter this in Mr. Haynes's essay on Law and the Great State: "It is difficult to anticipate any particular developments of the law governing the status of women, either as dependent or independent of men, when the whole institution of monogamy, so-called, that now exists may be fundamentally altered; and the difficulty is even more formidable in regard to children and succession of property. Such matters I will leave to my colleagues with a certain relief." His colleagues, it should be said, display no alacrity in accepting the task.

It looks very much as if the Great State would find woman a difficult problem. Cicely Hamilton, who writes on that aspect, says: "If I refrain from prophecy concerning the particular direction in which the influence of women who have attained to complete recognition of citizens and individuals will make itself felt in the state of the future, it is, honestly, because I find such prophecy not merely difficult, but impossible." There is, however, nothing indecisive in her declaration that "what it has not the right to demand of her—either directly or indirectly, by bribe or by indirect pressure—is that she, in return for its protection, shall consider herself under any obligation to produce its future citizens."

Perhaps it is too much to ask a constructor to be a critic. Yet it could be wished that Mr. Wells and his friends, in framing up the Great State, had recalled what Lowell once said: "A wise skepticism is the first attribute of a good critic. He must not believe that the insurance offices will raise their rates of premium on Charles River, because the new volume of poems is printing at Riverside or the University Press."

CURRENT FICTION.

The Children of Alsace ("Les Oberlé"). By René Bazin. New York: John Lane Co.

The Penitent ("Donatienne"). The same. Philadelphia: J. B. Lippincott Co.

Davidée Birot. The same. New York: Charles Scribner's Sons.

M. Bazin, whose recent visit to this country in connection with the unveiling of the Champlain monument is probably responsible for the simultaneous appearance of three of his novels, of which only one is new, from as many different publishing houses, has been for a long time the principal exponent in French fiction of the provincial, patriotic, and Roman Catholic tradition as opposed to the literature of disenchantment and unbelief which centres in Paris. In none of the three books we are considering is there a direct attempt to play the polemist; but in all of them the writer's sympathy with the simple pieties of home, altar, and fatherland is manifest. Now and then we come in touch with a specific issue. In "Les Oberlé," which created a sensation when it was first published ten years ago, the problem comes out clearest. The subject is the obstinate struggle of the people of Alsace against absorption by the Germanic conqueror. "Davidée Birot," the latest story of the three, is the history of a little school-teacher in a remote corner of Brittany. Here we touch, though slightly, upon the conflict between church and state over the control of public education, with a hint, naturally, at the bigotry of the present political régime. In "The Penitent" the tragic story is founded upon the custom which takes so many peasant women away from their homes to play the foster-mother to children of wealthy Parisians. But with a fine and sure art, M. Bazin never fails to keep his personages and their fortunes clear of the general problem. Even in "Les Oberlé," which is openly and fervidly a piece of patriotic pleading, the characters are very real, after their own simple fashion. Sentiment there is in plenty in every one of his stories, but M. Bazin has not found it necessary to plunge too deeply into sentimentality in his revolt against the "Parisian" spirit. "Davidée Birot," as a convincing embodiment of the antique womanly virtues of sacrifice and charity, will bear comparison with the "Liza" of Turgenieff, of whose highly concentrated and highly restrained style M. Bazin reminds one. The simplicity of plot which is characteristic of all his stories shows best in "The Penitent," a story of poignant realism in the finest traditions of classic fiction. M. Bazin's books are certainly much better suited to the inherent taste of American readers than the great mass of the better-known literature of Paris.

The Charioteers. By Mary Tappan Wright. New York: D. Appleton & Co.

If a fable writer chose to make his animals change spots at every paragraph so that the leopard of the outset became successively a mongoose and a woodchuck, there would be neither limit nor criticism for the antics in which his creatures might be involved. On only some such theory of disorderly evolution may one follow the characters in "The Charioteers." Professor Manson of Great Dulwich College, Grecian and archæologist, husband of a dissolute wife and father of two growing boys, begins with a reasonable thoughtfulness for the reputation of the woman whom he would like to marry. After he falls ill in Greece and she has nursed him into health, passing as his wife, he still is the prudent, practical planner for appearances and the conventions. On their return to America, when a divorce has made marriage possible, he is insistent on festivity and a wedding journey—in even exaggerated ways showing himself a stickler for conformity. Can this be the same man who, having obtained his wish and found no flaw in the woman, should suddenly at fifty go utterly to pieces? Octavia, on her part, having once flung herself into the situation, is too lofty-minded to conceal anything and regards her "rehabilitation" by marriage as almost insulting. Yet it is she who will not go to him, desperately ill in the South, partly because she suspects that another woman is taking care of him, but also because she is "not sure she has the right," since doubts have been cast upon the validity of the divorce. And it is she who, finding him faithless to her, can say, "But you, my poor Ned, can be a true husband to no woman. If you had stood by Nellie" (the drunken wife), "I should not be here to suffer." The horrid limit of inconsistency for a supposed gentleman is reached when wife number two finds wife number one gayly taking tea with the dying husband who says, hospitably, "Come in; this is truly delightful; Nellie and I have been having the most charming talk." "I don't believe," he adds after the intruder has departed, "there's another woman in the world that could have played up to my game as she did. It has been most amusing—but tremendously exhausting."

Even granting the characters, a literary chaos confuses the main issue. The irregular connection between hero and heroine is a failure, yet neither seems to regret it. The climax is not its rueful ending, which might have lent tragic import to the story. But we are called upon to follow Octavia's subsequent heart adventures. These were, Item: one thwarted love for a youth eleven years her junior; one friendly acceptance of an elderly suitor. The secondary characters are as incoherent as the principals. Billy, the soul of chivalry, does not await the answer to his proposal of marriage before engaging himself to another woman. Calvert, who enters the scene like a satyr—a man who, "with but two exceptions, always makes the good women uncomfortable"—is he who emerges the good genius of unselfishness. Beyond illustrating the tendency of the large Bent family to "drift" in matters of the affections, no focal motive is discoverable in this novel. All else is a pathless jungle. The flora is minutely pictured; the fauna is often found in pungent conversation; but the scene is a quagmire of no bottom and of none too sweet an odor.

A Captain Unafraid: The Strange Adventures of Dynamite Jimmy O'Brien. As set down by Horace Smith. New York: Harper & Bros.

The faith and practice of filibustering are here set forth with candor and enthusiasm. Capt. Jimmy O'Brien, who is supposed to tell the story, believes frankly in the inalienable right of any man to supply arms and munitions of war to any other man or group of men, at any time. It is quite clear, however, that if that right had been legal as well as moral, Capt. Jimmy would have lost his opportunity in life. For he was fitted by nature to be a smuggler and buccaneer of the heroic type. He delights to pit his wits against those of an eager adversary. He recounts with the gusto of the successful gamester the long series of expeditions, carrying men or supplies, or both, for the Cuban cause, which under his generalship succeeded in setting out under the very noses of the American detectives and Spanish spies who were working together to prevent his operations. Some of his feats in this kind seem to have been done in sheer bravado—feats such as the landing of an expedition almost under the walls of Morro Castle, by way of retort courteous to bloodthirsty threats on the part of the discomfited Gen. Weyler.

And our doughty captain is by no means averse to a "scrap." The landing of his expeditions involves the burning of some powder, though the amount of blood shed in these pages is surprisingly small. One thing is plain—Dynamite Jimmy makes it plain: if it hadn't been for him, the course of history would have been altogether different. But for his supplies, the Cubans would have succumbed to Spanish power, as they had so many times before. There would have been no Cuban freedom, and there would have been no Spanish War to inflate the breast of the patriot—and the pensioner.

BOLIVAR AND THE SPANISH COLONIES.

Bolivar et l'émancipation des Colonies Espagnoles des origines à 1815. By Jules Mancini. Paris: Perrin et Cie. 7.50 francs.

In its perspective and documentation, this should be the most important work yet published on the transition of Spanish America from the colonial rule of three centuries to an untried independence. The diplomatic services of the author and his present post at the French Foreign Office have opened the various national archives to him after making him skilful in their use; and he has been industrious in the study of contemporary printed matter and memoirs. As a European trained to the traditions of Government affairs, he has a wider field of vision than native American historians or students whose knowledge is limited to the documents in their hands. He has also an intimate acquaintance with the social as well as the political facts of the time and place—knowledge which is unusual in English-speaking historians. With all this, the work is neither complete nor final, for reasons obvious when we have seen what it really does for us.

In a first book, the author traces the beginnings of revolution from the Spanish Conquest in the sixteenth century and the organization of the colonial régime; the signs of a predisposition to independence on the part of inhabitants of the New World and the Comuneros of the eighteenth century; the liberal reforms attempted by King Charles III; the disastrous expulsion of the Jesuit missionaries resulting in the destruction of their immense work and a moral abasement of the popular classes; and then, one after the other, the stimulus of example from the independence of the United States and from the French Revolution, with the underhand encouragement of England, resulting in premature attempts like that of 1794, for which Antonio Nariño was condemned to transportation to Africa as being a "partisan of an independent republic like that of Philadelphia"! This brings us to the youth of Bolivar among disciples of Rousseau (the literary embargo was such that the text of the Rights of Man was received in New Grenada only in 1794, through the Viceroy); his journeys to Spain and France; the influence of Humboldt and Napoleon, and particularly of Freemasonry.

The second book is very justly devoted to Miranda the "Precursor" and to the loyalism in the colonies which withstood tne attempted Revolution of 1810 and the First Republic of Venezuela. In the third book, from 1812 Bolivar takes control of the irrepressible movement in New Grenada and Venezuela, with its Second Republic; and the volume ends with the restoration of Ferdinand VII in Spain and the state of revolution in his American territories at the end of 1814—from La Plata to Mexico.

In his preface, the author reads to us the meaning of this upheaval of the New World as he understands it:

> By its effect on the political and social life of peoples, the Emancipation of the Spanish colonies is an event of as considerable importance as the discovery of the continent where they were established. The struggle engaged by the creoles against Spain on the morrow of the French Revolution, and pursued for more than a quarter of a century with equal rage on either side, was the prolongation on a new scene of the age-long conflict between two ideas whose alternate success and defeat dominate History—Traditionalism and Liberty. In truth, it was owing to the results of South American Independence that the great movement of 1789, ready to yield to the thrust of Restoration in 1815, was revived in Europe and triumphed in 1830. The peoples awaked to national life and consciousness. The modern world evolved toward the Republican ideal.
>
> Of this ideal, Bolivar is for America the immortal symbol. If ever a man summed up in himself the tendencies of an epoch and personified an idea, it was very truly he whom his compatriots hailed with the signal title of Liberator. The life of Bolivar serves to frame the Revolution in which he took the chief part.

In the framework, as we have it here, certain connections are wanting—probably without fault of the author. In the preparation of the Revolution among the people of the colonies, he insists rightly on the influence of former Jesuits after the violent suppression of their order and the expulsion of its members by Spain; but he is too content—sympathetic even—with the label, to inquire what it covered precisely. He does not see clearly that these were sons of the country driven from home and the life-career which they had chosen, mainly to the Roman states, to lead lives of want without place or work, and, with the passing of their youth, slowly drifting back to their native New World, where their education up to the date of Europe made them an uneasy ferment. In North America also, where the Jesuits of Maryland had been able to keep together, they followed their leader, the future Bishop John Carroll, and sided with the cause of Independence like their families and friends. Cerutti, the *alter ego* of Mirabeau in the early French Revolution, is another example, though he had by that time drifted far from the religious principles of his youth in the little-understood Company. This particular influence among the various Spanish colonies was individual, irregular, spontaneous, scarcely ecclesiastical, and without organization.

M. Mancini, in general, has no connected view of the revolutionary attitude of the organized and powerful religious communities. Niles, a Connecticut Senator of the time (whose intensely prejudiced testimony is worthless except as a contemporary report of what was commonly said, attributes the introduction of Rousseau's "Contrat Social" to the friars, perhaps to younger and native brothers. Without this clerical favor, such as it was, it is doubtful if the Spanish-American revolutions could have been accomplished.

As to the real leaders—very few in number, as is the case in all popular revolutions according to Dr. Gustave Le Bon—there is no doubt where they had drunk their inspiration. Among themselves and with their European confidants, they were sufficiently explicit concerning expediency as their sole reason for admitting the religious element into their patriotic oaths. This is noted by our author, along with the general influence of French philosophy and the organization of Freemason lodges. But here, too, he has no precise acquaintance with the organized influence of Freemasonry. In fact, it is only now being studied dispassionately in the history of the French Revolution. It is curious that here in South America we see a shadowy intervention of Franklin. The introduction of Freemasonry into Mexico by the American Poinsett will at once recur to those conversant with the history, as distinct from the controversy, of the subject.

Humboldt's testimony would rather be in favor of the results of Spanish rule, perhaps because he found scientific institutions more highly developed under it than in the English United States, of which he had apparently no great opinion at that time from his short visit. Among the Revolutionary leaders moral questions arise oftener than among our own heroes, particularly in the use of cruelty. No defence is given of certain acts of Miranda, which need explanation, while Bolivar's case is exposed without comment. They may have been of a piece with their time and country; but the suspicion arises that the real people had revolution thrust upon them. M. Mancini is not conclusive here, because he has evidently not worked out the complete facts nor his own facts completely. For the scientific student of history, there is a material defect in his book which should not be forgiven. Here is a work of research of prime importance, given to the world without bibliography or index of proper names! To use the real treasures which the book contains, the student is left to himself.

Since M. Mancini's book was published, the French translation has appeared of a most valuable work by Luis Alberto de Herrera, on the French Revolution and South America—a study of the working influence of French doctrines among Spanish Americans in connection with their revolution. The translation is made by Prof. Sebastian G. Etchebarne of the University of Montevideo. It attempts a criticism of the evil as well as of the good results of the transplantation of European revolutionary ideas into colonies which were already working steadily towards an evolution of their own.

Intellectual and Political Currents in the Far East. By Paul S. Reinsch. Boston: Houghton Mifflin Co. $2 net.

There are those who may find it hard to read Professor Reinsch's long essays on the East. The essays are old-fashioned in their thoroughness, are couched in the language of philosophy, and yield few gleanings to the reader who tries them with no higher aim than to take his place with distinction at a dinner table. But the book is altogether admirable, both for its quality and for the spirit in which it is written. When it is said that these eight chapters embrace subjects that are, perhaps, too large for their limits, and that they lack the pleasant discursive quality which all good essays should have, there is nothing more to which exception can be taken. Among the pitfalls that beset the unwary writer on Asia to-day is the hackneyed and misleading series of contrasts offered between West and East. Professor Reinsch, in a discussion upon "Asiatic Unity," which possesses a really literary flavor, dismisses fears born of the illusion that there is an irrepressible conflict between Orient and Occident on the valid ground that Asiatics are, after all, as human as we are, and while marked differences exist in customs, traditions, and social policies, we can find in them "no strident conflict with our ideals." That this conclusion does not meet with acceptance among most commonplace people only renders more necessary the emphasis which should be put upon it.

The verdict is a sound one, though unpalatable to the vulgar. So, too, is his treatment of the vexed question of Oriental truthfulness. Because the Asiatic lacks accuracy, he is put down as a liar. Truth, like beauty, is largely a matter of conventional standards. "Veracity," we are told in a luminous sentence, "is a social and commercial commodity in England and America, in many cases scarcely involving any moral valuations at all."

> But we shall find [he continues] that most fundamental honesty which requires that our actions should correspond to our profession and our belief, in as high regard among the Oriental peoples as with those of the West. The ideals of their beliefs may be less elevated than our own, but at any rate there is also less variance between actions and belief among Confucianists, Shintoists, and Buddhists than among the majority of good Christian people. Moreover, a more honest attitude toward the problems of life than that which characterizes the thought of Buddhists and Confucianists can hardly be imagined; the relations of life are clearly seen, social duties are faithfully met, and no facile optimism is allowed to gloss over our life's tragedies.

It will be a shock to some supporters of the Christian propaganda to learn that it is not Western culture as such, or the tenets of our religion, that set up barriers between East and West, but the profound discrepancy between Christian profession and practice. Antagonism between races is not so much a matter of standards as of friction. It promises eventually to sink in China and Japan to relatively unimportant dimensions, while these nations develop their own destinies with the aid of Western machinery. For these peoples will retain their autonomy. In India, however, the author believes that "in measure as the social consciousness of victor and conquered have reached clearness of expression, this antagonism will be more pronounced." The outlook is a gloomy one, and the conclusion rather unflattering after a century of pretty honest effort on the part of the British. Yet he is not a severe critic of British rule. The deduction is interesting as revealing an inherently impossible task in which they are involved. Beyond his reprobation for the illiberal policy of the Government in scientific equipment for India, and the lack of training allowed natives in the responsible conduct of public affairs, he seems to think highly of the English administration. One point may be noted in which he fails to do them full justice. His statement that out of 1,307 places in the higher civil service only 97 were held by natives would have been materially modified if he had consulted more recent returns. In 1910 the Indian proportion of these better appointments was above 26 per cent., and the discrepancy continuously lessens.

It must not be inferred from the length of this critique on his earlier chapters that Professor Reinsch devotes the most of his volume to India. China and Japan come in for attentive and impartial consideration. A chapter on each of the three countries is given to a survey of the literature and leaders that have influenced their intellectual life. This portion of the book is a contribution of permanent value to those who are desirous of determining some of the causes of the present unrest in the Far East and who realize that the Oriental mind is being called to action quite as much by impulses of its own as by its fear of aggressive Occidentalism. It may afford the dispassionate inquirer a new sensation to learn that a Chinese general of the Ming dynasty propounded a philosophy like that of Hobbes which embodied the highest truths in action. This apostle of energism has recently received an intellectual throne and become the inspiration of modern China. "It is certainly," observes the author, "a remarkable instance of common impulses moving the entire civilized world, when such theories of the actualization of thought are acclaimed in the Orient at the same time when the philosophical and ethical thinkers of the West are being attracted by Pragmatism."

The Religion of the Ancient Celts. By J. A. MacCulloch. New York: Charles Scribner's Sons. $4 net.

Two general features may be said to characterize Dr. MacCulloch's treatise on Celtic religion, if we compare it with the rather numerous books on the subject written in recent years. In the first place, it deals with the Celtic world as a whole, and is not restricted to a single period or region. It includes within the range of its inquiry the testimony of ancient classical historians and that derived from neo-Celtic literature or modern popular tradition; and it brings out, perhaps better than any of its predecessors, the relations among these different classes of evidence. Secondly, the author is not addicted to any particular theory of mythology or religion. Bertrand's "La Religion des Gaulois," one of the most influential recent works in the same field, was dominated, and its conclusions were to some extent vitiated, by a dubious classification of the races of Gaul; and Sir John Rhys's learned and brilliant "Hibbert Lectures" made venturesome use, as the author would be one of the first to admit, of the method of extracting divine myths from heroic sagas. But no special formula or process is to the same extent a controlling principle with Dr. MacCulloch. If anything, he verges towards the opposite extreme of eclecticism in the theories he sets forth; and his work lacks the coherence and continuity, as well as the originality, of the others we have mentioned. By way of compensation, however, the reader will find that Dr. MacCulloch presents his material more objectively than most mythologists; that he frequently offers a choice of doctrines or opinions; and that, while he is not averse to occasional speculation (as in his discussion of the bull-god, at page 140, or of the civilization of the bronze age, at page 148), the element of conjecture is not unduly prominent in his pages.

Whatever the merits and defects of the author's method, the resulting treatise is an excellent survey of the whole field of Celtic religion. No important phase of the subject is overlooked, and there are very few phases on which the reader cannot obtain satisfactory guidance in respect to facts and opinions. To say that many topics are treated inadequately is only to recognize the imperfect knowledge which scholars yet possess of the whole field of Celtic antiquities. Institutions and practices like the taboo (Irish *geis*), fasting against an enemy, or working destruction by satirical verse, are often dismissed by Dr. MacCulloch in a few sentences, though each topic would afford material for a monograph. But the evidence on many such subjects still remains to be collected from the voluminous literature of the Celts, and an author could hardly canvass it all single-handed. The sources of information are only half-accessible, and progress in investigation is necessarily slow.

Apart from the general plan and method of the work, many other features deserve praise. Dr. MacCulloch shows, on the whole, a full knowledge of the vast and widely scattered literature of his subject, and he can consequently be trusted to indicate very well the present state of opinion about the various questions he discusses. His preliminary observations, for example, on the racial mixture in the Celtic peoples and on the resulting complexity in their religion are sound and important. The breadth of his outlook is also to be commended. He makes constant comparison between the beliefs and customs of the Celts and those of other peoples, thus putting both in a clearer light. In insisting that cults and practices of a primitive or barbarous character are not always to be branded as non-Aryan, he corrects a frequent, though ill-grounded, assumption. When dealing, furthermore, with various matters of controversy, where his conclusions are not necessarily decisive, his discussions are usually cogent and profitable. Cases in point are his arguments on the existence of a general Celtic pantheon (pp. 124 ff.), on the supposed non-Celtic origin of the druids (pp. 296 ff.), and on the eschatological intepretation of the Celtic paradise (pp. 362 ff.).

In a treatise which is so largely concerned with recondite and disputed questions it would be easy, of course, to find points of disagreement with the author. But a collection of detailed criticisms is hardly worth while here. Speaking in a general way, we should say that Dr. MacCulloch might well have made a clearer statement than he did of the successive stages, as he conceives them, in the development of Celtic religion. The topical arrangement of the book rather obscures the general lines of such a development, and the author's view nowhere clearly appears. In the separate chapters, too, more attention might here and there have been paid to chronology in the arrangement of the materials. The reader is not always sure, as things stand, how much evidence for a given institution is ancient and how much is modern. Both the foregoing considerations concern rather the clearness of Dr. MacCulloch's presentation than the correctness of his teaching. His actual errors, or questionable statements of fact, so far as we have observed, are few, and they occur chiefly where linguistic information is involved. The general history of the Celtic languages Dr. MacCulloch seems to have mastered, though his exposition of it (at pp. 15 ff.) is a little huddled and obscure. But in relation to the whole philological side of his subject, we note the lack of references to the more recent authorities, such as the grammars of Thurneysen and Pedersen, or the "Thesaurus Palæohibernicus" of Stokes and Strachan; and in the handling of linguistic details the author is not quite free from inaccuracy. The older form of the Irish word for "druid" is *drui* and not *drai*, as given on p. 293. The discussion of Lochlarn, on p. 147, ignores the earliest form, *Lothlann*, and the etymological implications that it carries. And such spellings as *Kulhwych* and *Matholwych*, occurring repeatedly for *Kulhwch* and *Matholwch*, or "Transactions of the Society of Cymmrodor" for "Cymmrodorion," even if they are misprints, seem to betray a lack of acquaintance with Welsh. Finally, we should like to know why the St. Gall Incantation mentioned on p. 76 and p. 325 (in the former place with a wrong reference to *Irische Texte*, I, p. 56,) is described as a spell for making butter. The purpose of reciting the formula is clearly to remove a thorn, and the butter is used quite incidentally in the working of the charm.

White Mountain Trails. By Winthrop Packard. Boston: Small, Maynard & Co. $3 net.

Arrayed in what Lowell used to call an "edition de looks"—though the fifty somewhat murky illustrations are hardly in keeping—has appeared a book of White Mountain essays that will win a not altogether undeserved popularity. The essays are not travel papers, but are "nature essays" similar to those of Mr. Packard's earlier books. He has wandered from mid-May Chocorua to late-September Mt. Washington, that "highest altar of the Appalachian gods," noting with infinite gusto the trees and birds and butterflies and even the frogs and lichens; and he now reports his observations, in his customary sprightly vein, for the delectation of the "nature-lover." His eye is as acute as Mr. Burroughs's, and his style, though it has the taint of journalism, is quite as engaging. Seldom have our writers on nature displayed their knowledge so easily, almost unconsciously.

Indeed, Mr. Packard's close acquaintance with his subject leads him to a characteristic defect—his knowledge of nature lore is inclined to run away with him. To all appearances, it is impossible for a writer in this age to bestow his attention on the landscape without acquiring an unliterary interest in the facts of nature. "The cool, shadowy depths here," writes our author, "will always be marked in my mind as the place of great gray toads"—as if the cool depths were not more estimable than the toads therein! Elsewhere he remarks with wicked bravado, "All beetles look alike to me," which is hardly so ill as he implies; but before long, as he encounters "a score of varieties of diptera and hymenoptera," he utters the pious wish that he had at his service "a convocation of the Cambridge Entomological Society to name and describe them for me." And throughout the book he forces into the gasping mouth of the reader such strange morsels as *veratrum viride*, *grapta interrogationis*, and *eupatorium urticæfolium*, even when an agreeable English name is at hand. In scientific manuals, where accuracy is everything, these things are proper; in literary essays, where reality supersedes actuality, they are distinctly out of place. Homo, the only animal, after all, in which we are perennially interested, appears but rarely in Mr. Packard's book. It is by no means clear that the old-fashioned artists were absurd in placing a human figure in their landscapes. Whatever may be the case in painting, Bradford Torrey, in his "Footing It in Franconia," gained much by including human beings in his White-Mountain essays; and it is significant that Mr. Packard writes most effectively when he writes about himself, which he does only too sparingly.

So much of the book is devoted to little things—to butterflies and frail plants—that the reader is seldom brought to the mountains themselves. At intervals, to be sure, the author reaches a mountain top, whence he may see lake and forest and other crests; but his mode of description is too often a matter of names, as if he were a Cook's guide pointing out the various celebrated peaks. Once, indeed, he resists the climbing instinct, preferring to allow Moat Mountain to remain "a soft haze of half-reality," and somehow one feels closer to this mountain than if one had been conveyed to the top of it. Mr. Packard is himself aware of the comparative futility of mountain climbing; "It is the unclimbed peaks," he confesses after he has climbed most of them, "which are eternal." Sensations of giddiness and "uplift" we may enjoy at the crests, but we have lost the sense of calm that Nature demands if we would read her aright.

But if these White-Mountain papers are hardly successful as literary essays, they are nevertheless useful. They abound in information, and the information is, in general, so agreeably imparted that whoso fears the rigidity of handbooks will be enabled to know something of the birds and flowers and insects of the White Mountains without exertion. The book contains a serviceable index.

The Sisters of Lady Jane Grey. By Richard Davey. New York: E. P. Dutton & Co. $3 net.

The late Major Martin A. S. Hume has left a considerable group of disciples, who bid fair to perpetuate the sort of historical and biographical work which made their master so widely known. Mr. Davey is prominent among them, and the present volume, really a sequel to his "Nine Days Queen," which appeared three years ago, displays all the merits and defects characteristic of the "Romantic Biographies." It tells the story of the life of Charles Brandon, Duke of Suffolk, who married the sister of Henry VIII and became the grandfather of Lady Jane Grey, and then describes the unhappy careers of Lady Jane Grey's two sisters, Katherine and Mary, their marriages without Queen Elizabeth's consent, the intrigues that surrounded them, and their ruthless persecution by the sovereign who dreaded them as possible claimants to the Tudor throne. There is plenty of romance and adventure in these three lives, and when dull places occur Mr. Davey is perfectly willing to leave the path that has been marked out for him, and ramble off into irrelevant, though doubtless entertaining, accounts of royal marriages and Continental pageants. His book is intended for amusement rather than for instruction; it is neither good history nor biography; but it will doubtless serve to give a slight taste of Tudor courts and Tudor times to the increasingly large proportion of readers whose stomachs are too weak to digest standard works.

The book teems with careless errors and misprints, most of which occur in the earlier part, for Mr. Davey knows his Henry VIII far less well than his Elizabeth. It would be useless to enumerate all his divagations, but the following may be cited as examples: "Caistairs" for "Carstairs" (p. 10); "Reginald de la Pole" for "Edmund de la Pole" (p. 18, n. 1); "Louis XI" for "Louis XII" (p. 19); "epithalium" for "epithalamium" (p. 116). Neither "Thomas" nor "William" Cavendish wrote a life of Wolsey (p. 88); the biographer's name was "George." We would respectfully suggest that an obvious explanation of the "mysterious" favor shown by Wolsey to Brandon (pp. 56-7) is the Cardinal's desire to use him to counterbalance the influence of the Howards in the Council. And, finally, we think that Mr. Davey would do well if he refrained from attempting to advertise his own accuracy by dilating on the errors of Froude. That that great historian made (and atoned for) numerous minor slips, every student of Tudor history knows; in fact, it takes no very remarkable degree of acumen to discover them. But what renders Mr. Davey's arraignment of him peculiarly superfluous is the fact that the particular mistake (in regard to the date of Lady Mary Grey's marriage) which he goes out of his way to expatiate upon (p. 255) was perceived and corrected by Froude himself in a subsequent volume ("History of England," Vol. VIII, p. 204, n. 3; New York, 1868). *Non tali auxilio* does the true historian vindicate his learning.

Notes

Prof. C. E. Vaughan is editing, for the Cambridge University Press (Putnam), a collection of "The Political Writings of Rousseau."

Karl Gjellerup's romance, "The Pilgrim Kamanita," is soon to appear in an English translation (Dutton).

The same house has in press a new novel by Maarten Maartens—"Eve: The Story of Paradise Regained."

Williams & Norgate will publish in the autumn Vol. I of a catalogue of works on peace and international law in the Nobel Institute of Christiania.

Sir Rider Haggard's "Marie," announced for August by Longmans, Green, recounts the story of a boyhood love affair in Africa.

Letters from the late Justin McCarthy to Mrs. Campbell Praed will be issued in the autumn by Chatto & Windus. They are said to contain graphic pictures of interesting political situations, especially in the periods of the first and second Home Rule bills.

Theodore Dreiser has chosen a male character for the principal figure of his new novel, which will soon be published by Harpers.

Smith & Elder are bringing out a political novel by G. A. Birmingham—"The Red Hand of Ulster"—which attempts to say in advance what Ulster will do when the Home Rule bill is passed.

"The Moon Endureth: Tales and Fancies," is the title of a volume by the English author, John Buchan, which Sturgis & Walton publish next month.

In "Prophetical, Educational, and Playing Cards," Mrs. John King Van Rensselaer attempts to give a comprehensive history of cards; the book is announced by George W. Jacobs Co.

The Century Company's announcements include Dr. Maurice Francis Egan's "Everybody's St. Francis," with twenty illustrations by the French artist, Boutet de Monvel.

We have received from the American Library Association, Chicago, the "A. L. A. Catalog, 1904-1911." It contains 3,000 titles, compiled for a popular library, with notes and indexes, edited by Elva L. Bascom.

Four volumes have lately been added to Everyman's Library (Dutton). A reissue of Bolton King's "Life of Mazzini," which first appeared in 1902, has allowed the author to square his statements with the many letters of Mazzini which this interval of ten years has brought to light. Writings by William Canton fill another volume—"The Invisible Playmate," "W. V., Her Book," and "In Memory of W. V." They celebrate the life of a girl who died young, and picture a child's world with rare understanding. From the field of mediæval romance, the editors have now selected the chronicles of Wace and Layamon, both being rendered into modern English prose. As is well known, Layamon, shortly after 1200, freely adapted the Norman Wace's "Roman de Brut," which in turn handed down much of the lore of that great fountain-head of mediæval romance—Geoffrey of Monmouth. In their present convenient form, laymen may search them with profit for the rough beginnings of the chivalrous knights who sat at the Table Round. A fourth volume contains another mediæval work, "Piers Plowman." So far as we have examined it, Arthur Burrell's attempt to reproduce the original metre in modern English is as successful as was to be expected.

What is the significance of the recent output of novels and dramas concerned with the life of Christ and other figures of the New Testament? W. E. Mosher believes that it points towards a "pronounced religious trend in the cultural development of the immediate future." In his book called "The Promise of the Christ-Age in Recent Literature" (Putnam) he presents in support of this contention a somewhat extended account of the following works: Frenssen's "Hilligenlei," Lagerlöf's "Anti-Christ," Sudermann's "John," Rostand's "The Samaritan Woman," Widmann's "The Saint and the Animals," Andreyeff's "Judas Iscariot and the Others," Kennedy's "The Servant in the House," Fogazzaro's "The Saint," Pontopiddan's "The Promised Land," and Hauptmann's "The Fool in Christ." Here is a cloud of witnesses worthy of a more critical examination than they have undergone at the hands of Mr. Mosher. It should be obvious at a glance that the testimony of this various company cannot be unanimous. Fogazzaro's "Saint" points in one direction, and Sudermann's "John" in another. One reflects a religious movement; the other has no religious importance whatever. Mr. Mosher hints a doubt here and there as to whether the phenomenon under consideration is due to a socialistic or to a religious impulse, but he seems to overlook the æsthetic considerations altogether. If we are not mistaken, works like "John" and "The Samaritan Woman" and "The Fool in Christ" are attributable rather to the decay than to the reflorescence of religious faith. They indicate not that the New Testament is gaining new veneration as to the source of religious doctrines but that it has become attractive as the source of literary material, like the story of the Volsungs and the Nibelungenlied, with the additional advantage that it has not been exhausted by a William Morris or a Richard Wagner. Extend the inquiry a little and ask after the religious significance of Flaubert's "Temptation of Saint Antony" or Anatole France's "Thaïs." What does the pleasure of the music hall at the dance in "Salome" foretoken? In the sensuous imagination that curiously conjures up the "sweetheart of Jesus" and luxuriates in the sins of Magdalen we find but a dubious augury of a spiritual renaissance.

Francis Gribble, author of "George Sand and Her Lovers," "Rousseau and the Women He Loved," "The Romantic Life of Shelley," and other romances in history and biography, now comes forward with a characteristic tome entitled, "The Comedy of Catherine the Great" (Putnam). Mr. Gribble has now been so long before the public that it is unnecessary to dwell upon the literary virtues of a work which departs in no way from his familiar method. We find here the same brisk, journalistic presentation, the same smartness of interpretation, the alacrity in the invention of a speech or dialogue when documents are lacking, the same cynical clubman's wisdom, and the same tendency to lubricity that all lovers of Gribble have learned to look for. It may be said, however, that this book is rather less obnoxious to one's sensibilities than his various meddlings with the lives of the romantic men and women of letters. Unlike Rousseau and Shelley, for example, Catherine of Russia cannot be much hurt by the rehandling of a writer of scandalous memoirs. She is a representative of that moral world in which the author is thoroughly at home. In her personal habits and relations and in the smaller intrigues of the palace she offers no problem beyond the range of his sympathies and understanding. To the reader who finds history too heavy and biography too prolix, Mr. Gribble presents a tertium quid, which goes swiftly through the council-chamber and lingeringly down the back stairs.

> "Vous savez le latin, sans doute?"—
> "Oui, mais faites comme si je ne le savais pas."

This seductive legend from "Le Bourgeois Gentilhomme" is inscribed upon the title-page of a book which will commend itself to every lay linguist and amateur philologer—Prof. Ernest Weekley's "The Romance of Words" (Dutton). Here is a fairly rich collection—properly indexed—of the curiosities and surprises of English speech, so arranged as to illuminate such permanently fascinating topics as folk-etymology, phonetic accidents, popular coinage, family names, semantics, etc. Professor Weekley thinks that the special feature of his work is that "it deals essentially with the origin of words, and makes no attempt to enforce a moral." We should say rather that it is distinguished by containing a maximum of information with a minimum of talk, and, further, that its author, an etymological contributor to the "Oxford English Dictionary," has been able to draw more largely upon that great treasure-house than most of his predecessors. His book is, however, as he justly points out, by no means a mere compilation; he has brought new light to bear upon a score or so of words, and his illustrative quotations are almost entirely the fruit of his own reading. As a specimen of the browsing opened here to the curious gentle reader, we submit the following observation in the interesting chapter on Semantics: "In the United States refined society has succeeded in banning as improper the word 'leg,' which must now be replaced by *limb*, even when the possessor is a boiled fowl, and this refinement is not unknown in England." We hasten to assure the Professor that in the best society in the United States the host usually grins a little—in a refined way—when he offers his guest "a limb." Possibly that is also true even in England. We base our hope on the footnote to the passage just cited: "The colored ladies of Barbados appear to have been equally sensitive. 'Fate had placed me opposite to a fine turkey. I asked my partner if I should have the pleasure of helping her to a piece of the breast. She looked at me indignantly, and said: "Curse your impudence, sar; I wonder where you larn manners. Sar, I take a lilly turkey *bosom*, if you please."' (*Peter Simple*.)"

Gilbert E. Roe's little book, "Our Judicial Oligarchy" (Huebsch), despite Senator La Follette's commendatory introduction, makes a rather painful impression. There is no question of the writer's sincerity. But he wears the air of an advocate. He seems to have set out to make a case—from a too meagre array of facts, too partially studied, to indict a whole system. His main contention is that judges have "usurped" the power to declare laws unconstitutional, and therefore null and void. Next comes, according to Mr. Roe, the disallowing of statutes simply because the judges "disapprove the policy of such legislation." They also read their own views into enactments which come before them, and so set themselves up as lawmakers. Likewise, they "think in the terms of the rich and powerful." Hence the growing distrust of the courts, hence the movement for the recall of judges. To this the author gives his assent, though from another idea, "supported by some men of prominence"—that is, the recall of judicial decisions—he dissents emphatically, as being "absolutely destructive of the Constitution." The whole is more a political tract than a reasoned discussion. Certainly the sweeping assertions of the author require a much larger body of supporting evidence, much more carefully analyzed than Mr. Roe here gives us, before they can be accepted by prudent men. To his chief argument, a needed corrective comes in Prof. Charles A. Beard's volume, "The Supreme Court and the Constitution" (Macmillan). This is an expansion of an article of his in the *Political Science Quarterly*, and is a sifting of the contemporary documents, and the sayings and known opinions of the men most influential in framing the Constitution, all going to show that the power of the courts to declare laws invalid which conflicted with the supreme law of the land was distinctly contemplated from the first—indeed, was regarded as an essential part of the new frame of government. Professor Beard effectively throws to the ground the notion of "usurpation," and with it, of course, falls the larger part of Mr. Roe's book.

"Burdett's Hospitals and Charities" for 1912 marks the twenty-third year of issue of this compendium of philanthropy in the British Isles. More than 700 of its 950 pages are taken up with a directory of institutions, impressive by its very mass. More readable is the series of thirteen chapters preceding these lists, and dealing with The Volume of Charity, The National Insurance Act and the Voluntary Hospitals, Hospital Finance, etc. It is calculated that the income of charitable institutions in Great Britain and Ireland, from all sources, is above $60,000,000, or about the size of the Swedish national budget. This is an increase in sixteen years of 50 per cent. in ordinary income and in legacies, while gifts for special purposes have grown fourfold. The chapter on The United States, Canada, Australasia, and India notes that "the better managed hospitals of the United States are gradually waking up to the necessity for some uniform system of keeping their accounts," but that in general our hospital accounts "are at present in a somewhat chaotic condition." There is small room for gratification over the remark in the preface: "We are experiencing increasing difficulties in getting accurate returns from the United States of America." The conditions suggested by these comments ought to be remedied without delay. They do little credit to that spirit of philanthropy which is one of our proudest boasts. The year-book is up to its usual standard of completeness and accuracy. The index covers seventy pages.

For the second edition of Prof. L. Oppenheim's work on "International Law" (Longmans, Green), the text of the first edition has been thoroughly revised, and a number of new topics have been added. While the book is primarily intended as a textbook, it is thorough in the discussion of even the most complicated subjects. One of its great merits is the clearness with which the problems are stated, and the avoidance of mere scholastic controversies. One exception to this rule may be noted where the author brings up the question whether international law is law in the strict sense of the word. He answers it in the affirmative, and criticises the draft convention prepared by the second Hague Peace Conference, in that it proposes the establishment of a Judicial Arbitration Court, which could give awards *ex æquo et bono*, instead of an International Court of Justice, which should decide all questions submitted to it by strictly judicial decision of the legal questions involved. But one of the essential elements of the definition of law proposed by the author is that it can be enforced by external power. He also admits that "the States have to take the law into their own hands." Self-help and intervention are the means to be employed. It may be urged against this that taking the law into one's own hands, without any previous adjudication by an impartial tribunal as to the merits of the case, is an absolute negation of legal procedure, and that a rule which can be enforced only in that way is "law" merely in the sense that we speak of the unwritten law or of lynch law. But, apart from this, there can be no question that by far the greater number of the disputes which arise between nations cannot be decided according to any legal principle. Intervention in the internal affairs of other States on the ground of humanity, or to preserve the balance of power, is not strictly a matter of right, according to Professor Oppenheim, but is excusable and not contrary to the law of nations. Like our own Monroe Doctrine it is purely a question of policy. Treaties, although by their nature unnotifiable, may be disregarded if they conflict with the development or growth of a nation. If, however, all disputes arising out of the exercises of these rights are to be excluded from arbitration merely because they cannot be decided according to strictly legal principles, the future for the peaceful solution of international differences will be dark, indeed.

It is hard to see what prospect of honor or profit could have induced an American publisher to produce an English translation of Baroness von Hedemann's "My Friendship with Prince Hohenlohe" (Putnam). The Prince was a leading Bavarian statesman who played a useful part in the work of German unification. But, although he is said to have drawn much strength and inspiration from the author of this book, there is nothing in it which throws the least light upon his public career. Nor, to tell the truth, does it aid us much as students of the psychology of such inspirational processes. Like many another cold and reasoning German with a practical grasp of affairs, Prince Hohenlohe evidently had his sentimental side and a turn for mystical revery and emotional expression. To indulge this expansive part of his temperament, he wished a companion, and, although married, he found one in the Baroness von Hedemann, the daughter of a Cossack nobleman, and the divorced wife of a banker, living in seclusion in Munich. There was never any secrecy about the relationship, though at one time the Prince's political opponents threatened to make a troublesome scandal out of it, and the lady was transferred for a time to a neighboring city. She remained his confidant till the end of his life, and she was doubtless closely in touch with public affairs. She even, on one occasion, she says, performed a delicate diplomatic mission for Bismarck. But one will search this book in vain for a single indication of the qualities of mind from which two such statesmen might be expected to derive moral and intellectual support, or that could have attracted a brilliant circle of men of letters to her entourage. She prints with perfect composure letters and speeches full of flattering allusions to her personal charms, and introduces the reader with the utmost intimacy into every phase of her private life with the Prince. All is retailed with an amazing want of taste or discretion, and without even the poor palliation of literary art or acute analysis of emotion; for, judging, at least, by the English translation, the style is as banal and the method as thin and ineffective as the matter is insipid and insignificant.

George Coffey's "New Grange and Other Incised Tumuli in Ireland" (Dublin: Hodges, Figgis & Co.) is substantially a reprint of articles contributed by Mr. Coffey several years ago to the Proceedings of the Royal Irish Academy and the Journal of the Royal Society of Antiquaries of Ireland. But the text is considerably modified, and new illustrations have been added to those which accompanied the original articles. The material, moreover, is of such unusual interest that historians and archæologists will be glad to have it conveniently accessible in a separate publication. The book, as now issued, is a complete and substantial work of more than a hundred pages. It contains careful descriptions, with admirable plans and photographs of the burial mounds at New Grange (*Brugh na Boinne*) and several other ancient Irish sites; a discussion of the *testimonia* concerning these cemeteries in early Irish literature; and, in particular, a comparison of the Irish rock-decorations with those found in other parts of Europe. Several conclusions of general interest are drawn concerning the meaning of the decorative types and the history of their transmission. The similarity of the Irish rock-carvings to many preserved in Crete or at Mycenæ is a matter of common knowledge. But the interpretation of their meaning is quite uncertain, and opinions differ even on the fundamental question whether the figures are purely geometrical or are the conventionalized outgrowths of representative drawings. Mr. Coffey would associate most of them with solar worship, though he does not press his theory. The most characteristic designs on the New Grange stones are spirals, which Mr. Coffey, in keeping with the usual opinion, holds to be the forerunners of the concentric circles and semicircles found on many monuments. But a different theory of the relation of the two groups of figures has been recently set forth by the eminent French archæologist, M. Déchelette, and his article (in *L'Anthropologie* for Jan.-Feb., 1912) is in several respects an important continuation of Mr. Coffey's investigations. In dealing with the route of transmission of the spiral design, where Mr. Coffey takes issue completely with the traditional view, he seems to be in the right. He holds that the form in question came to Ireland from Scandinavia rather than from France or England, and that the examples found at Gavr-Inis, in Brittany, follow rather than precede in date those on Irish soil. The distribution of the monuments strongly favors this theory, and it is likely to prevail.

"Egyptian Æsthetics" (Open Court) is an appreciation of what the traveller in Egypt may see if he have eyes, and feel if he have apprehension. In it one does not look for a Baedeker-like accuracy as to details, nor for the precise information which belongs to a history. It is rather an interpretation, a recording of impressions, a stimulus to the sightseer to use his powers of vision, and a reproach to the negligent that he failed to perceive all that was there. The descriptive powers of the author, Rene Francis, are quite remarkable.

In "The China Year Book" (Dutton), two Anglo-Chinese journalists, H. T. Montague Bell and H. G. W. Woodhead, have brought together a mass of figures dealing with natural resources, trade, and finance. There is a detailed account of the system of public justice that is taken up entirely with procedure, and is of doubtful utility. Unfortunately, the very complete account of proposed Imperial reforms which the authors have been at pains to draw up, has been rendered obsolete by the late revolution and the establishment of the Chinese Republic.

The death is reported from Denver of Bishop Henry White Warren of the Methodist Episcopal Church, at the age of eighty-one. Bishop Warren published several books, among them "Sights and Insights," "The Lesser Hymnal," "The Bible in the World's Education," "Among the Forces," and two popular treatises on astronomy.

Science

In the early autumn the Yale University Press will publish: "Stellar Motions," by William Wallace Campbell, director of the Lick Observatory; "The Problems of Genetics," by William Bateson, director of the John Innes Horticultural Institution, Surrey, England, and "The Doctrine of Irritability," by Prof. Max Verworn of the University of Bonn.

Simon B. Elliott, for many years a practical student of reasonable forestry, has given in his "Important Timber Trees of the United States" (Houghton Mifflin) a useful handbook which is well adapted to those whom he calls on his title-page "laymen in forestry." The book is hardly suited to class-work, because it is not sufficiently formal in its construction or treatment, but it is thoroughly readable and appears to be trustworthy in its advice. It is to be regretted that the author has not availed himself a little more freely of the stores of information in Professor Sargent's works and in Hough's handbook. The photographic representations are well selected and are of a high order.

No partiality for Bergson need be implied in the judgment that Hugh S. R. Elliot's "Modern Science and the Illusions of Professor Bergson" (Longmans) is a stupid performance, the character of which is not relieved by the preface in which Sir E. Ray Lankester tells us gravely that, of course, everybody knows that metaphysics is nonsense. Mr. Elliot is the editor of "The Letters of John Stuart Mill," and his reflections upon the theory of science seem to have ceased at the point marked by Mill's Logic. His point of view is a perfect illustration of scientific dogmatism. His favorite mode of refuting Bergson is to roar out: "I fail to see it: produce your facts"—as if it were a question of fact rather than of the interpretation of fact. But only three of the seven chapters have any close relevance to Bergson. The other four are essays on the province and progress of philosophy, the learning for which was acquired from Lewes's "History of Philosophy" and Lange's "History of Materialism." The real "illusion" is that the book should be conceived to be the proper reply of science to Bergson.

For a book of its size, W. H. Jordan's "Principles of Human Nutrition" (Macmillan) is exceedingly good. The author, the director of the New York Agricultural Experiment Station at Geneva, makes no pretence of authority or originality, but has drawn liberally and wisely from many good sources, and, quite unlike some writers on these topics, has used his material with excellent judgment. Wherever we have looked at the disputed questions, for example, the problem of the purin bodies and of vegetarianism, we have found the discussions illuminating, as well as full of judicious discrimination concerning what we know and what we guess at. The book is elementary in character, and is written for students who have not specialized in organic or biological chemistry. For such and for the general reader it may be highly recommended as a thoroughly good outline of practical dietetics. In the very rational chapter on milk, the point is well made that, while the public sale of milk is much safeguarded as between the milkman and the purchaser, the individual as the actual, in fact, the ultimate, consumer in the hotel or restaurant or boarding-house has little or no protection

We recently called attention in these columns to the appearance of an English translation of selected essays on insect life by the French philosopher-naturalist, J. H. Fabre. There is now at hand another volume of twenty-one essays by this remarkable observer, translated by Bernard Miall, under the title "Social Life in the Insect World" (Century). The selections treat the life-histories and habits of the cicada, the curious praying mantis, the golden scarabæus, crickets, the Sisyphus beetle, the bee-hunting Philanthus, the emperor and the banded moths, and various species of weevils. Especially detailed and valuable are the extended experiments on the alluring powers of females of certain moths. A single specimen of the giant peacock moth, kept under wire-gauze cover for eight nights, attracted a total of one hundred and fifty males, a stupendous number when the comparative rarity of the species in Fabre's neighborhood is considered. The odor emitted by the nubile female must be of extreme subtlety. Though it is imperceptible to our own olfactory sense-organs, a series of observations showed that when the wind had been blowing for a week from the north, the males hastening to the prisoner all entered the garden from that direction. In other words, "a powerful current of air, sweeping away all particles that might inform the sense of smell, does not prevent the moths arriving from a direction opposite to that taken by the effluvial stream, as we understand such matters." Like all of Fabre's writings, those here chosen abound in original observations, presented in a most vivacious manner. The translation, on the whole, is excellent, though one is struck by the use of *cigale* instead of the good English word "cicada," and the frequent use of the word "butterfly," in referring to the moths described, might better have been avoided. The legend of plate three has been confused, and "lob-worm" of plate seven and of the text, page 112, is not a lob-worm, but, as the original has it, "le ver de terre," the common earthworm. The plates are excellent, and the binding and whole make-up of the book are attractive. It should be welcomed by all lovers of nature, for in Fabre's writings we have combined keenness of observation and interpretation, a genial philosophy, and a polished and fascinating style.

D. C. Heath & Co. publish a "Text Book" and a "Laboratory Manual of Physics" for preparatory schools, by C. E. Linebarger of the Lake View High School, Chicago. Both of these books can be recommended. The textbook is unusually broad in treatment and accurate in statement. The discussion of abstract mechanics has been displaced, from its customary position at the beginning, by the experimental properties of matter. This is evidently done to arouse the interest of the student from the start, and to lead him gradually to the more thorny theory of mechanics. The laboratory manual has its pages perforated and punched so that they may be detached and filed in a loose-leaf note book. The exercises are well chosen and developed. Adverse criticism will probably be made, not on separate parts of these books, but rather on the treatment as a whole. It is a question whether preparatory textbooks should try to cover so large a subject as the whole range of physics. Certainly, the intellectual training would be attained better by putting emphasis on selected topics. But in this country, the secondary schools are engaged in teaching, for the most part, pupils whose education ends with them, and the schools aim to give facts rather than discipline.

Music and Drama

A revised edition of "The Music Lovers' Cyclopedia," by Rupert Hughes, will be issued in the autumn by Doubleday, Page & Co.

Oscar Hammerstein has never produced a work by Wolf-Ferrari; yet it is to Mr. Hammerstein that that half-German, half-Italian composer owes his present prominence. It was Hammerstein who proved that it pays to mount new operas. His success caused a diligent search for new operas all over Europe by both the Metropolitan and Mr. Dippel. It so happened that Wolf-Ferrari had several to offer. They were produced in New York and Chicago with success—rather more success, indeed, than they deserved; and now that composer has entered the race with Mascagni, Puccini, and Leoncavallo.

Unfortunately, Wolf-Ferrari seems to have made up his mind to rival Mascagni and Leoncavallo in productivity, a method of work that cannot but harm him in the long run. From Venice comes the news that he is at work on three new operas at once! One is a setting of Molière's "Le Malade imaginaire"; the second, "Miss Figaro," which is to have only one act; the third, a comic opera entitled "Honi soit qui mal y pense."

Rumor is persistent, says the London *Times*, that "the last Handel festival has now been held, and for the most decisive, if not the best, reason that it is ceasing to pay." It urges, however, one more try.

Mahler's eighth symphony, which requires a thousand players and singers for performance, is not only being produced all over Germany and Austria, but will probably be heard in Paris and London next season with the same chorus that sang it in Berlin, and with the Philharmonic Orchestra of that city.

Mahler's ninth symphony had its first performance anywhere in Vienna during the musical festival of July. Bruno Walter and the Philharmonic Orchestra had rehearsed it carefully, and it was received with much enthusiasm. Like Tchaikovsky's "Pathetic," it ends with a slow movement. The first is an energetic allegro, the second a slow Austrian waltz (ländler), the third a rondo full of grim humor and burlesque details, amid which the euphony is not always preserved. On the whole, it made the impression on Dr. Moritz Scheyer of being head music rather than heart music like Mahler's eighth. He was struck by the feverish activity of the composer's brain in the working out of details. In the dissonantal orgies of the rondo Mahler may have had in mind his enemies as Strauss did, avowedly, in one part of his "Heldenleben." The concluding adagio symbolizes the resignation of the composer to his fate.

The Bach-Jahrbuch for 1911 has just been published by Breitkopf & Härtel. It contains articles on the history of Passion performances in Leipzig, the symbolism of keys in Bach's time, the St. Luke Passion, the use of the viola da gamba, and a list of the mediæval musical instruments in the Bach house at Eisenach.

While Brahms was always coy about writing letters, he nevertheless penned a considerable number in the course of his busy life. Seven volumes of them have already been published by the Deutsche Brahms Gesellschaft, in Berlin. The first two contain the letters to Herzogenberg and his wife; the third, his letters to Max Bruch, Carl Reinthaler, Ernst Rudorff, Bernhard and Luise Scholz, and others; the fourth, those addressed to J. O. Grimm. Joachim was the recipient of a sufficient number of letters from his bosom friend to fill, with the replies included, two volumes. The seventh volume, edited by Dr. Leopold Schmidt, contains the correspondence with Hermann Levi, Friedrich Gernsheim, and the families, Hecht and Fellinger. In each volume the answers of his friends are given, and usually they take up more space than Brahms's letters, who was seldom as diffuse as he is in his compositions.

Leoncavallo's latest move is to pose as a Viennese operetta composer. Having failed to duplicate the success of his "I Pagliacci," he has written a comic operetta entitled "La reginetta delle rose," which was well received at its recent production in Florence. The plot is concerned with the revolution in Portugal and the King's love affairs, and the music is said to sound a good deal as if the composer of "The Merry Widow" had written it.

Another English composer has been deemed worthy of attention in Germany. Berlin has undertaken to produce, in September, "König Harlequin," by George H. Chitsam.

Montreal will have a season of opera lasting twelve weeks. The same company will give three weeks to Toronto, one to Quebec, and one to Ottawa. By an arrangement with the Boston Opera Company the management will be able to present some of the operas, notably "Aïda" and "Thaïs," with exceptionally fine scenery. The repertory includes twelve French and eight Italian operas, as follows: French—"Louise," "Thaïs," "Hérodiade," "La Vivandière," "Cendrillon," "Le Jongleur," "Carmen," "Faust," "Romeo et Juliette,"

BURLINGA
PUBLIC
LIB.

"Lakmé," "Pêcheurs de Perles," "Zaza." Italian—"Aida," "Trovatore," "Tosca," "Bohême," "Butterfly," "Barbiere," "Rigoletto," "Cavalleria."

The long and honorable services of W. Carew Hazlitt to literature as editor and antiquarian are well known, but from the point of view of the Shakespearean student we fail to see the *raison d'être* of the new issue of his "Shakespeare, Himself and His Work: A Biographical Study" (Bernard Quaritch), which is described on the title-page as "Fourth edition, entirely recast, with important additions." Anything more intolerably rambling and unsystematic it would be difficult to find in biographical literature. The ascertained facts of the poet's life are, of course, few enough, but Mr. Hazlitt makes up for the deficiency by a perfect deluge of fanciful hypotheses which are developed with an interminable discursiveness. The most pardonable, perhaps, are those which identify the rival poet of the sonnets with Bartholomew Griffin, author of "Fidessa, More Chaste Than Kind" (1596) and "the only begetter" of these poems, W. H., with a William Hammond of Nonnington, Kent, although neither is supported by evidence of any weight. If in the Fiftieth Sonnet Shakespeare speaks of riding horseback, this is taken as proof that he came to London in this way, when he began his career as a dramatist; or if the expression, "false gallop," occurs in "As You Like It," our author is inclined to imagine "that the treacherous step of his horse, on some occasion, led to a serious casualty." Mr. Hazlitt identifies Shakespeare with Hamlet and Yorick with Tarlton, the actor; so, as Hamlet says of Yorick, "He hath borne me on his back a thousand times," and as, on the other hand, there is no reason to believe that Tarlton was ever at Stratford, he jumps confidently to the conclusion that Shakespeare paid a visit to London in his boyhood. The Hathaways suffer especially at Mr. Hazlitt's hands. He does not believe that the poet ever saw his wife on his visits to Stratford or in any event ever stayed under the same roof with her. He even suggests the suspicion that she was living in a state of adultery. Mr. Hazlitt's animosity, however, extends also to Shakespeare's sister-in-law, Catherine Hathaway, of whom we know, of course, nothing whatever, and he advances the idea that the poet's dislike for this lady gave him an aversion even for her name.

In view of such biographical methods as these, it is, perhaps, a minor offence that our author should so often appropriate the results of recent research without acknowledgment to the scholars concerned. The omission, however, is particularly striking, inasmuch as Mr. Hazlitt is uncommonly profuse in references to his own productions. Among those who have reason to complain of such omissions are Dr. C. W. Wallace—whose name, to be sure, is mentioned, though not in connection with the most interesting of his discoveries, the Mountjoy affair—Sir Sidney Lee, Dr. W. W. Greg, and A. W. Pollard—the last two in the matter of the 1619 quartos with forged dates. Harold Fuller is more fortunate than most, inasmuch as in the notes on "Romeo and Juliet," though not named, he is at least referred to as "an American gentleman." The work has no merits of literary appreciation to offset the defects just commented on. The Sonnets, for instance, are condemned as "poor and weak." "The Tempest" is "quite long enough to have borne some curtailment." Mr. Hazlitt gives a measure of his critical capacity when he says that "the constituent parts of [Tennyson's] 'Maud' are susceptible of rearrangement or redistribution at pleasure." We find here repeated with the usual exaggeration the old reproach against the early eighteenth century of being indifferent to Shakespeare's work. But if this is true, what is the point of Pope's lines?

Shakespeare, whom you and ev'ry playhouse bill
Style the divine, the matchless, what you will.

One might cite, likewise, the encomiums of Fielding, never surpassed in their warmth, to say nothing of others. But even in the *Spectator* Shakespeare is frequently referred to and always as a standard classic. For our own part, when Addison says: "It shows a greater genius in Shakespeare to have drawn his Caliban than his Hotspur or Julius Cæsar; the one was to be supplied out of his own imagination, whereas the other might have been formed upon tradition, history, and observation," he evinces, in our judgment, both sympathy and discernment in a far higher degree than Mr. Hazlitt shows in the following gem of criticism: "This character [Caliban] is not an attractive one, and in some of the language which is put into his mouth, the revolting coarseness jars with the ideal simplicity and purity of Miranda. One can scarcely avoid regretting that a passage or two was not omitted."

Art

AT THE TATE GALLERY.

London, July 19.

Change is the order of the day in England, and it has reached even the national galleries and museums. There was a time when enterprise was about the last thing to be expected from them, and, as you left them on your last visit, so you found them on your next. But directors and curators are beginning to learn that their position has not been awarded to them as an agreeable retirement for their old age, and they are as a consequence making a surprising show of activity. This is especially the case at the Tate Gallery, where, for some months past, there has been a succession of loan exhibitions, Charles Aitken, the new director, no doubt, feeling the necessity of keeping up the reputation he earned at the Whitechapel Gallery as a purveyor of popular entertainment—a reputation to which he probably owes his present promotion from the East of London to the West. First, at the Tate, came the Alfred Stevens Show—the English Alfred Stevens; then the Pre-Raphaelites, the Birmingham Gallery in the moment of building having lent its celebrated and fairly complete collection; next followed Alphonse Legros, who is known, except to the few, so much less in his own work than in that of his pupils; and now Legros is succeeded by Whistler, just why it is not easy to explain.

This list might almost suggest that not chance but repentance had inspired the choice. It is, at least, a curious coincidence that so many of the artists represented are those who were officially slighted and overlooked in their own day. The case of Alfred Stevens was, some years after his death, worked up into a public scandal. The fate of the Pre-Raphaelites the world by this time knows to the most minute detail, into such an excellent advertisement was the world's first abuse of them quickly turned. Legros, obscure and virtually forgotten in his suburb, lived to see pupil after pupil recognized at the Royal Academy and in other official places, though he continued until the end an "outsider." The prejudice Whistler had to face all his life is now an old story.

Whistler, who was not given to turning the other cheek to the oppressor, resented this prejudice, and, in his resentment, expressed his desire that no picture of his should ever find a place in an English gallery. It is one of the little, or big, ironies of life that, hardly had death silenced his protests, before he received the distinction he so little coveted, or rather so strongly objected to; and his Old Battersea Bridge found a permanent place in a national collection, while within a very few years an exhibition of his work has been made the special attraction at the National Gallery of British Art. Nor does the show offer any obvious reason for this indifference to his wishes. The Memorial Exhibition, held seven years ago, was much more complete, much more important. It should seem almost as if there could have been no reason for getting together the present collection at the present moment, unless to prove how much, or how little, of his work remains in Great Britain since Americans, once they discovered it, began to buy it up. But if this were the reason, the result has not been entirely successful. Whistler's earliest period is represented by At the Piano, but then La Mère Gérard, which Swinburne owned, is still in England. Miss Alexander, whose beauty never fades, familiar as it has grown by reproduction, is the one large full-length portrait; but the Carlyle is still the property of Glasgow; the two memorable full-lengths of Lady Meux have not yet left the country, and I have not heard that the Mrs. Hutt and the beautiful, almost unknown, Mrs. Leyland have passed into American collections, though so much mystery attends some of these transactions that one can never be too sure; all are pictures, and there are others of perhaps lesser note, that would at the same time have strengthened the exhibition at the Tate, and given a better idea of the number of Whistlers that have not been drawn from out the hands of their British owners, across the Atlantic, by the irresistible force of the American collector's millions.

However, it is always a pleasure to see a collection of Whistlers, complete or incomplete—always a pleasure to see again the most splendid of his masterpieces; and some of his masterpieces are to be seen among the thirty-eight paintings, pastels, and water-colors that now fill Room V at the Tate, where, unfortunately, no space is left for any of his etchings or lithographs. It is well that the attention of Americans should be called to the exhibition, for, as it is to remain open until October, many who are coming abroad this year will have the opportunity of visiting it and of studying and enjoying pictures which are not likely to be exhibited in America soon, if, indeed, ever, again. Here are not only At the Piano and Miss Alexander, but The Little White Girl, as perfect as it is famous; the Valparaiso—Twilight on the Ocean, one of the long series in which Whistler revealed to a blind world the true loveliness of evening and twilight, of night and moonlight; others as memorable of the same series: Mr. Alexander's Nocturne and Mr. Studd's, and the beautiful Old Battersea Bridge from the permanent collection of the Tate Gallery; the early Battersea Bridge—Brown and Silver, that belongs to Edmund Davis, also has a place. And there are characteristic examples of the marvellous little seas and the studies of children he painted in his later years; there are several of those charming pastels of delicately draped figures; there are a few water-colors; and there is one very interesting study of three women in flowing drapery that I have never seen before, but the balcony where they are grouped, with the view beyond of the opposite shores of Battersea, suggests that it belongs to the period of the painting called The Balcony, one of the series known as his Japanese pictures.

I make no attempt to describe in detail these different works. The most important have been described many times; in fact, few old masters have been so honored—or dishonored—by description, as Whistler. But the occasion is too interesting to be passed altogether in silence, partly because of the belated official attempt at reparation which Whistler, foreseeing, protested against; partly because of the opportunity to study him in so many moods and phases, in so many mediums and manners. Certainly, it is interesting enough to make one regret the carelessness of the small catalogue that is given free to the visitor. If a fee for it would have entailed more care, I doubt if many people would have grudged the expense. It is hard to understand why some pictures, the best known, should be entered with elaborate notes, and others, the least known, with no notes at all, except that exact notes for all would have meant more research, which means more trouble. It is a distinct mistake to say that an American critic in 1867 wrote of The Little White Girl, exhibited in the Universal Exposition at Paris: "A powerful female with red hair and a vacant stare in her soulless eyes"; it was of The White Girl, a very different picture, hung in the American section of the Exposition, that this was written. The mistake already has been widely repeated by the art critics of the British press. It is thus by official carelessness that history is perverted. It is misleading to say of The Artist's Studio, lent by the Dublin Gallery, that "another version of this picture . . . was lent to the Memorial Exhibition organized by the International Society . . . in 1905." The other "version" referred to was the painting then in Douglas Freshfield's possession, now in the Chicago Art Institute, and it is perfectly well known that doubt has been cast—even by Whistler—upon the Dublin version. If mistakes can be made officially so soon after an artist's death, what faith can we put in the modern "expert" and his exact knowledge of masters dead centuries ago?

N. N.

John Alsop Paine, formerly curator of the Metropolitan Museum of Art, died on Wednesday of last week at the age of seventy-two. He wrote a number of handbooks and treatises on art, and was also interested in various Oriental and scientific subjects.

Finance

THE DECLINE OF SPECULATION.

Speculators in Wall Street keenly appreciated both the quality and manner of the retort made last week by a returning financier upon a newspaper reporter who bothered him with questions down the Bay. "Young man," the reporter said the financier said, "I don't know and I don't think." Though the speculators had long previously attained to that utter blankness of mind, they could not have believed a great financier to be in the same intellectual plight. On the contrary, they had been looking forward to his return as an event of some consequence to the stock market. On the day following, the tape offered nothing new, there was no increase in transactions, and people were in the same uncertainty as before whether to buy stocks on the fine crop prospects or to sell them on the "political situation." For three months there has been first one pretext and then another upon which to defer speculation, until the cumulative effects of Stock Exchange dulness are now becoming acute. Brokers lament the absence of business, speculators the absence of speculation, and bond dealers the absence of investment buying, all in terms so sweeping that one might think there was literally no business done in Wall Street.

It is then surprising to find from the record of a half-year's financing that new security issues in the six months to the end of June surpassed all previous half-year records, and exceeded the record of the corresponding half of 1911 by $327,000,000. As speculators complain most loudly of the present state of things, and as speculators deal principally in stocks, it is further surprising to find that of the increase of $327,000,000 in security issues in the six months ended June 30 above the corresponding six months of the preceding year, $185,000,000 represented an increased output of stocks.

By every measure save that of Stock Exchange activity, there has been more business in Wall Street since the first of the year than ever before. The Stock Exchange record furnishes a strong contrast. The number of shares dealt in on the New York Stock Exchange from the first of the year to the close of last week, and in the corresponding time of previous years, has been approximately as follows:

	Shares.		Shares.
1912......	76,000,000	1906......	158,088,197
1911......	57,901,925	1905......	147,182,995
1910......	106,891,609	1904......	60,732,084
1909......	107,982,244	1903......	94,057,898
1908......	90,452,764	1902......	98,823,522
1907......	124,880,744	1901......	187,299,850

Thus, Stock Exchange sales so far this year have been, with two exceptions, the smallest in twelve years. The excepted years were 1904, when the market was slowly recovering from the effects of the long 1903 decline, and last year, when the state of things was less unsatisfactory to speculators than now only in degree. The evidence is that, while Wall Street's work of producing and distributing securities has continually increased, reaching actually in the first six months of this year a new high record, Stock Exchange speculation, as expressed in terms of activity, has tended to decline. One explanation is that Stock Exchange speculation comes and goes, in eccentric cycles, and is not otherwise to be accounted for.

But it may be asked whether, in the decline of the ratio of Stock Exchange activity to the actual production and distribution of securities, there is not a reflection of a change in method. The methods of distribution have changed, to some extent, almost everywhere else in the last ten years. Conspicuous among the new flotations this year have been the shares of new industrial companies, representing the incorporation of old firms and trade-marks and legends, nearly always with a large addition for good will. Formerly flotations of that sort went directly to the Stock Exchange, and manipulators were engaged to distribute the shares to the public, with the assistance of professional speculators. The United States Steel Corporation's shares, for instance, were distributed to the public via the Stock Exchange, and that achievement helped greatly to swell the volume of 1901 Stock Exchange transactions. Nowadays it is differently done in very many cases. A syndicate is formed to underwrite the new securities, which are then offered to the public on subscription. Afterward, a New York Stock Exchange listing may or may not be applied for. Houses of issue place new securities either directly with investors or with dealers who reach the investor, and no assistance is required from speculators. In brief, it has been found possible on a pretty large scale to create and merchandise securities without the assistance of speculation, whereas formerly it was thought that it was not feasible to distribute securities, except by fomenting a speculation in them.

RENSEIGNEMENTS GÉNÉRAUX

L'enseignement de l'Ecole des Sciences politiques est le couronnement naturel de toute éducation libérale. Chacune de ses grandes divisions constitue en outre une préparation complète aux carrières d'Etat (diplomatie, administration, finances), à la vie publique et aux grandes entreprises financières tant en France qu'à l'Etranger.

Les élèves sont admis sans examens, avec l'agrément du directeur et du Conseil de l'Ecole; ils n'ont à justifier d'aucun grade universitaire.

Uns conférences spéciale est résérvée aux élèves étrangers dans le but de faciliter leurs études.

La durée ordinaire des études, est de trois ans, toutefois, on peut la réduire à deux années. Un diplôme est délivré, en fin d'études, aux élèves qui ont subi avec succès les examens.

ANNEE SCOLAIRE 1912-1913.—L'année scolaire commencera le 11 novembre 1912 et finira le 7 juin 1913. On s'inscrira au Secrétariat à partir du 4 novembre 1912. **Inscription d'ensemble** donnant entrée à tous les cours et conférences réguliers et complémentaires et à la bibliothèque (environ 25,000 volumes et 160 revues et journaux francais et étrangers)....PAR ANNE 350 fr.

Une **Brochure spéciale** *donne des renseignements détaillés sur l'organization de l'Ecole et sur les carrières auxquelles elle prépare.*

S'addresser au Secrétaire Général de l'Ecole, **27 Rue Saint-Guillaume, PARIS.**

The Western Theological Seminary

N. S., Pittsburgh, Pa.

Founded by the General Assembly, 1825.

A complete modern theological curriculum, with elective courses leading to the degree of B.D. Graduate courses of the University of Pittsburgh, leading to degrees of A. M. and Ph.D., are open to properly qualified students of the Seminary. Exceptional library facilities—34,000 volumes. A new dormitory, equipped with latest modern improvements, including dining-room, gymnasium and social hall, is now ready for occupancy. Next term opens Sept. 17, 1912. For information apply to Pres. James A. Kelso. Ph.D., D.D.

THOROUGH AND EFFECTIVE PREPARAtion for college by an experienced tutor. Highest references. WALTER B. WATERMAN, A.M., 214 Boylston Street, Boston, Mass.

Just Published

A Two Years' Course in English Composition

By CHARLES LANE HANSON

90 cents

A reader of the manuscript says of Hanson's *Two Years' Course in Composition*: "Teachers should jump for it, for the wealth of material is just what we need and what we now have to supply at the cost of much labor."

The book contains more drill work than any other composition manual of its size. It provides an abundance of material for the first and second year of any high school. Every chapter will be found stimulating and practical.

The Nation

NEW YORK, THURSDAY, AUGUST 8, 1912.

The Week

We are in full accord with those Washington dispatches which describe the Lodge resolution as a new and greater Monroe Doctrine. For, whereas the original Monroe Doctrine had but one object, the prevention of European wars of conquest on American soil, the present declaration has no less than three objects in view: to safeguard the Panama Canal, to maintain inviolate the peace of the world, and to save Senator Lodge's face. Magdalena Bay is at the bottom of it all. Mr. Lodge and Capt. Hobson were in agreement that terrible things were going on in Magdalena Bay. The Senate Committee on Foreign Relations took up the matter and found—nothing. It would have been more than human for Senator Lodge to bring in a report to that effect, especially if, by intuition, he knew that something must be wrong, even if the evidence was missing. He was like Montesquieu's philosopher, who could draw the right conclusions from the wrong data. If it wasn't Japan, then it must be Germany. If it is not a foreign Government that threatens the territorial integrity of the American continent, then it must be a foreign syndicate. Historians who love to trace the connection between epoch-making effects and insignificant causes have now another instance at hand. The world is to have a newer and greater Monroe Doctrine because Senator Lodge got himself into a hole.

It is, of course, quite unpardonable of Jane Addams, Dr. Henry Moskowitz, and Dr. J. E. Spingarn to do anything to break the force of Col. Roosevelt's expulsion of the negro delegates from the South by trying to commit the Progressive party to an expression of sympathy for the colored man. That they are all three directors in the National Association for the Advancement of Colored People is naturally no excuse. Miss Addams even went so far as to make an eloquent plea for the colored people, on the ground that this new party, which is to be dedicated to the workingman and woman, and is heartily in favor of the enfranchisement of women, cannot afford to turn its back upon ten millions of American people because of their color. This will irk the Colonel not a little. The friends of the negro and the negro himself should take their medicine like men—and women.

"Funds will be ample," is the glad news that comes from George W. Perkins, rocking the cradle of the Progressive party in Chicago. His message of good cheer conveys a double reassurance. All legitimate expenses of the Convention and the new party will be paid; and one infers that the word legitimate will be interpreted with genial elasticity. Furthermore, the Harvester Trust ally of Roosevelt has the reputation of being a reasonably thrifty citizen who does not like to throw good money after bad. If he paid out the large sums with which he has been credited in the effort to procure the Colonel's nomination by the Republicans, and now is willing to go deep into his jeans again to finance the third party, he must be hopeful of getting some return on his investment in politics. At any rate, he shows an accurate knowledge of the ways of the lavish Bull Moose campaigners when he hastens to assure them in advance that they will have plenty of money to handle. But suppose the moving spirit of an indicted Trust were thus flourishing his wealth in behalf of Taft—what howls would come up like thunder 'crost Oyster Bay!

Everybody at Washington is busily engaged in putting everybody in a hole. That is the seeming explanation of the general tariff tangle into which the two houses of Congress have fallen. The Democrats are anxious to embarrass the Republican Senate and the Republican President by sending them tariff bills which they will hate to take and dread to reject. On the other hand, the Senate wishes to make it awkward for the House. La Follette seeks to dish the regular Republicans; and hence wool and cotton and sugar and steel are knocked back and forth in the game of battledore and shuttlecock. All this is called making "political capital." Statesmen are exerting themselves to see if they can get the better of one another in the matter of party tariff strategy. It apparently occurs to no one that political capital could be made by uniting in a real measure of relief from needless tariff taxes, or that there is no better tactics than straightforward action in the interest of the whole country.

The significant feature of our record-breaking exportation of manufactures for the last fiscal year is not that for the first time they have crossed the billion-dollar mark, but that they are outstripping our exports of foodstuffs. Twenty years ago, they formed but 18 per cent. of our total exports, as against the 50 per cent. that foodstuffs made. Ten years later, the 18 per cent. had become 33, and the 50 per cent. had gone down to 38. To-day the proportions of 1892 are almost exactly reversed, manufactures comprising 47 per cent. of the exports, and foodstuffs but 20 per cent. What used to be said of business in this country as contrasted with scholarship is evidently increasingly true of manufactures and agriculture. Brains are going into the former rather than into the latter. The question that keeps rising is, how long can the process continue?

One murder a day during July is the record for Greater New York. In Manhattan and the Bronx, twenty-three murders have been committed, and the proportion of arrests is less than one out of every three. Commissioner Waldo is reported as welcoming the investigation of the Police Department, which now seems inevitable. As a preliminary he cites figures tending to show a higher degree of efficiency in the Department in 1912 than for the corresponding period in 1911. Mr. Waldo's figures deserve serious study. We are well aware that such a dreadful homicide record as the month just past has attained, sometimes needs correction in the light of statistics extending over a long stretch of time. But in Commissioner Waldo's own figures we observe that during the first six months of 1912 there were 140 complaints of homicide, as against 81 in the first half of 1911. An increase of 75 per cent. in the number of murders would be an alarming thing in itself, even if the earlier record did not reveal a swollen murder ratio, judged by European standards. It has been the manifest purpose of Gaynor's police régime to do away with petty arrests and petty tyrannies on the part of the police. The presumption was that the police would have more leisure for dealing with serious crime. Instead, we have—one murder a day and one arrest in every three cases

---

Lord Mersey's report on the loss of the Titanic is free from rhetoric, but there are times when a bit of honest indignation is not altogether out of place. The desire to let facts speak for themselves has served to make the British report err much more on the side of cautiousness than the findings of the William Alden Smith committee sinned on the side of oratorical vehemence. As it is, the excessively judicial tone of the Mersey report is a rather incongruous garment for the terrible array of facts it covers. The ship was "sufficiently and efficiently officered," but it was reckless navigation which brought about its destruction. "In the circumstances I am unable to blame Capt. Smith," but the desire to establish a record made the commander oblivious of the safety of his passengers. The conduct of the crew is praised, but it is "regretted" that members of the crew neglected to save life when they might easily have done so. A certain British passenger of distinguished lineage is exonerated from the charge that he bribed the crew of his life-boat to abstain from making rescues, but "if he had encouraged the men to return to where the Titanic had foundered, they probably would have made an effort to do so, and could have saved some lives." The judicial temper could hardly go further.

The Mersey report embodies a long list of useful recommendations. It calls upon the Board of Trade to investigate the practicability of an increase in the number of bulkheads, of a double "skin" above the waterline, and of water-tight decks. Lifeboat accommodation is to be based on passenger capacity instead of tonnage. Lifeboat equipment is to be improved. There should be frequent inspections and drills. The changes recommended are in many respects so far-reaching that they must continue to absorb the attention of the shipping world for years to come. It is a subject to which there will be frequent occasion to return. But one point may here be emphasized: it was the reckless speed at which the Titanic was being run that brought about her destruction, and it is in the prevention of such criminal conduct on the part of commanders in the future that the simplest and most efficacious way of avoiding similar disasters is to be found.

The cable brings the news that the White Star liner Gigantic is to be provided with an inner bottom at a cost of no less than $350,000, and the loss of 250,000 cubic feet of carrying capacity. Still another ship now being planned is also to be safeguarded in this manner. Thus one great lesson of the Titanic disaster has been learned, and by this action another step taken towards the day of the practically safe passenger steamship. Gratifying as this is, it remains a sorrowful thought that this change in construction was purchased by such a frightful waste of valuable human lives, particularly as other types of ships have long had these double bottoms—our own battleships, for instance.

Many of the 60,000,000 readers of the 16,000 small newspapers of this country must often have looked with awe upon the columns of matter, most of it printed on the inside pages, from Washington and London, Peking and the Azores, which their enterprising editors somehow manage to give them every week. A few have been in the secret of the "boiler-plate" and the "ready-print" which made such a feat not only possible, but ridiculously easy. The entire 60,000,000 will now be somewhat aghast to learn that they have been saved from becoming victims of a peculiarly vicious Trust only by the efforts of a watchful Government, which has obtained a decree against the various concerns engaged in supplying this matter, on the ground that they were about to form a combination that would "mould public opinion." A Trust in restraint of thought has been nipped in the bud. Since this immense quantity of words is sold without change to newspapers of all shades of political opinion, one would suppose that it must be pretty impartial. Indeed, most of it is not political at all, but is devoted to the latest fashions in dress, wonderful happenings in the way of accidents and discoveries, and, in general, anything that may interest, amuse, or thrill. But the Department of Justice foresees the misuse of this power over the human mind by those who would pay large sums for the opportunity of "instilling certain economic ideas in the minds of the public." This must not be, and the news associations proceeded against will have to go to the trouble of corrupting the nation singly instead of in combination.

It has been almost sixty-five years since gold was discovered in California, and the State is only just now to have a Hall of Fame. This long delay demands explanation, although we must remember that the custom of building a Hall of Fame first, and school and courthouses afterward, is recent. New York's record in this respect is far inferior to that of California. Not only did we wait until more than two centuries had dragged their slow length by, but we imposed the ridiculous condition that no one could be admitted to the society of the immortals until he had been dead ten years. Of course, with such a restriction, it is doubtful whether the Hall will ever be filled. They have been wiser in the West, and will include the living as well as those whose names have been forgotten because they were not promptly commemorated. The trouble in the past has been in a mistaken conception of the purpose of Halls of Fame. Our forefathers, so far as they had such things at all, established them in order that they and we might be reminded of the virtues of the illustrious dead, and be led to emulate them. The modern Hall of Fame, on the other hand, is founded in order to swell the repute of prominent personages who without such memorials might be overlooked by subsequent generations.

It is a pity that Franklin is not here just now to enjoy the reports of Premier Borden's visit to the mother country. The anxious waiting of the British Cabinet upon every word of the Canadian, the dawning recognition that he is silently proposing to demand first and to give afterwards—these things would delight the philosophical American as he reflected upon the change that has come over the English attitude towards provincials since 1765 or thereabouts. It must be admitted that the Premier's course is a wee bit vexing to Imperial Preference politicians, who expected him to announce something important as to what Canada would do in that slowly-moving matter. Instead of setting the pace for her sister-colonies in this respect, the Dominion, as represented by its Premier, keeps asking what Westminster is thinking of doing in the direction of an Imperial Parliament, in which Canada would have a prominent place. Downing Street was looking for the promise of four battleships, and it is somewhat disconcerting to be told, however indirectly, that British America has determined to receive, as well as to give, favors.

Simultaneously with the House of Commons debate on the atrocities in the Putumayo rubber country, our own House Committee on Foreign Relations has begun work on the question by calling on the State Department for all available information concerning conditions in the rubber forests of Peru. In the House of Commons, Sir Edward Grey was inclined to lay stress on the diplomatic difficulties involved in forcing internal reforms upon a foreign Government. We hope that no such scruples will be allowed to prevent or postpone an honest attempt to make an end of the abominations which have been recorded in the Casement report.

It is odd that diplomatic propriety always comes to the front when it is a case of saving a hapless people from destruction. When it comes to extorting a railway or mining concession from a South American republic, there is no such tenderness on the part of Foreign Offices. What the Peruvian Government's feelings in the matter may be, is a secondary consideration. The primary fact is that an intolerable situation must be dealt with. "Our fathers," says Chesterton, "had a plain sort of pity. . . . When they saw something that in their eyes, such as they were, really violated their morality, such as it was then, they did not cry 'Investigate!' They did not cry 'Educate!' They did not cry 'Improve!' They did not cry 'Evolve!' Like Nicholas Nickleby, they cried 'Stop!' And it did stop." Congo atrocities or Putumayo atrocities are the sort of cases where "Stop!" must be said promptly.

Lloyd George's latest terror in England is a threatened campaign to "free the land." In one or two speeches he has said that his next step would be to attack the monopoly in land. At the recent bye-election at Crewe, it was stated by a Liberal M.P., Mr. Outhwaite, that "Mr. Lloyd George, with the support of the Prime Minister, will embark this autumn on a great campaign, which is to be continued right up to the next general election, to do something for the overthrow of the land monopoly." The matter has been made the subject of inquiries in Parliament. It was rumored that Mr. George would go in for the single land tax. This has been officially denied by Mr. Asquith. In the House of Lords, the Lord Chancellor, answering questions about the Government's "new land policy," rather made light of all the current stories. He did not know of any land monopoly, and did not understand what was meant by the talk of "overthrowing" it. Very likely, the Government might attempt to do something to "bring the land and the owners and occupiers of land into closer contact"; but this, as the Lord Chancellor pointed out, was only what the Conservative party had long professed to favor. Indeed, only the other day Lord Lansdowne made a long speech on the need of devising means to enlarge the ownership of land in England. Thus it looks very like the old story over again: the same measure is either wise and healing, or radical and incendiary, according as it is taken up by the Tories or the Liberals.

An Olympic Association has been formed in London for the purpose of sending an adequately trained and organized team to the Olympic Games at Berlin in 1916. There is even rumor that American training methods may be adopted. This bit of news would be more welcome if it were not accompanied by evidence showing that the spiteful and foolish anti-American spirit aroused by events at Stockholm is still alive. There is not very much sportsmanship in the ugly sneer attributed to Lord Desborough. "Kohlemainen did so well," said the noble lord, "that we should not be surprised to have him running for America at Berlin." Yet even such a temper is conceivable, if it were only consistent. Applaud if you like or growl if you like, but to growl at the sin and imitate the sinner is childish. If American training methods are to be imported into England, it might as well be done graciously. Any other procedure argues a muddled state of mind which is as inimical to good fellowship as it is to winning athletic contests.

Prussian military men are not blaming the Italian army and its leaders for their slow progress in Tripoli. Thus Lieut.-Gen. Metzler feels that both the troops and their generals are entitled to credit for what has been accomplished. But the comfort which he offers them will sound peculiarly cold even under the blazing Tripolitan sun. He bids them look at Algeria, and remember for how many decades, from 1830 on, the French army labored to subdue the Algerians. Mistakes, retreats, the bloodiest defeats, were by no means unknown to them—and, he might have added, terrible massacres by them as well. The Italian War Office, Gen. Metzler recalls, reports up to May last a loss of only 37 officers and 499 men. A mere trifle. Italy, he writes, "must make clear to itself what enormous sacrifices of blood, money, and energy must be expended by any nation to bring such an adventure to a *happy* conclusion." For Italy, the happy conclusion still seems far off, and the stubborn refusal of Turkey to yield is certainly increasing Italy's expenditures of money and energy, as well as of men. And as for the Algerians, what "happy" outcome has there been for them?

A German hygienist, Professor Flügge, attempts to cope, in the *Deutsche Revue*, with the problems of the summer heat in city houses. The solid walls of German buildings, while slow to absorb heat, retain it proportionately longer, and electric fans and other appliances, such as are used in this country, are too costly to be within the reach of the ordinary German household. Professor Flügge suggests, as the only practical relief measure, the construction of outer summer walls of wood, bamboo, matting, or, best of all, climbing plants, which would prevent the intense radiation of heat from the stone walls. His further suggestion of the establishment of "colonies" of small houses within the city, is in line with serious efforts now making in Berlin to provide an outlet for the population of the congested and unsanitary districts.

A DEFECTIVE CRUSADER.

Mr. Roosevelt's speech at Chicago on Tuesday was intolerably long and repetitions. And a large part of it came from him for the hundredth time. Some of his old ideas he utters with fresh emphasis; but it is evident that he has so frequently emptied himself of all he has to say that nothing remains wherewith he may burst upon a startled world. His new speech launching a new party is only what we have heard from him in wearisome iteration before.

To some, it is true, parts of his programme as indicated in this Chicago address will bring disquiet or alarm. He hints at several ambitious proposals which, if they were to be written down in concrete form and definitely pressed as legislation, would mean something like revolution. They would at least involve a sweeping away of established convictions and practices, and would involve an enormous increase in the burdens of taxation. But the careful reader will note that Mr. Roosevelt only hints at these things. He is vague and also hesitating. Not one of these radical doctrines does he fail to qualify, hedging characteristically at point after point; and not one of them would he delay in running away from if it should appear politically expedient to do so.

We challenge anybody to read in full what he says about the tariff, the Trusts, the high cost of living, the currency, and bring away a definite idea of what he thinks or intends. Take one test case. The need of recasting our currency and banking system is now universally admitted. But as to the best means of doing it there is sharp division of opinion. It is as sharp among the Progressives as among the Republicans or Democrats. One of Mr. Roosevelt's whole-hearted and heavy-pursed supporters, Mr. George Perkins, is strongly in favor of the Aldrich plan. But Dean Kirchwey, of the platform committee, declares that the Aldrich plan is the sum of villanies and cannot be approved except over his dead body. Now, what light does the Colonel throw upon the matter? He knows all about it, of course, and his judgments are true and righteous altogether, but what does he say? Why, he uses words that are ludicrously meaningless. They read like one of those burlesques of political platforms which have been published to show how politicians can dodge and hide. Let any business man try to get through this without grinning:

> The system to be adopted should have as its basic principles soundness and elasticity. The currency should flow forth readily at the demand of commercial activity, and retire as promptly when the demand diminishes. It should be automatically sufficient for all of the legitimate needs of business in any section of the country. Only by such means can the country be freed from the danger of recurring panics. The control should be lodged with the Government, and should be safeguarded against manipulation by Wall Street or the large interests. It should be made impossible to use the machinery or perquisites of the currency system for any speculative purposes. The country must be safeguarded against overexpansion or unjust contraction of either credit or circulating medium.

Such hollow generalities, however, such absolute lack of definiteness, we encounter in his entire speech. He turns from class to class, and section of the country after section, offering to each a kind of millennial happiness if it will only confide in his wisdom. But when you ask for distinct proposals you get only a fog-bank of words. Mr. Roosevelt talks emphatically of making all his political pledges take on the nature of a solemn "contract" with the people, but if anybody sought to reduce them to precise writing he would find them all escaping in vapor.

It is not, however, in the light of a speech-maker or platform-builder that Mr. Roosevelt asks the country to view him, but in that of a crusader. The phrase, "the spirit of a crusader," is often on his lips. He would have us think of him as a man driven by holy zeal to do what he is now setting about. His speeches may not be overpowering and his platform may not be perfect, but look at the man himself and his motives and his mission! Well, it is much easier to study Theodore Roosevelt as a crusader, than as a constructive statesman, and we think that there is no difficulty in showing that he is fully as defective in the former guise as in the latter. The real crusader must have a fanatic strain in him; but Mr. Roosevelt is wholly without it. He does not rush forth as one impelled by an inward revelation; he plots and calculates and poses. The true crusader is self-forgetful; his cry is let my name rot but let the thing itself be done. What a glutton of the limelight Theodore Roosevelt is, everybody now knows. A cause without himself at the front of it is to him unthinkable. The genuine sincere crusader, finally, is a man who has a certain austerity of bearing. He is not forever hobnobbing with people and clapping them on the shoulder. He moves among them, rather, as one whose lips had been touched by a live coal from off the altar. A jolly crusader is almost a contradiction in terms. But that is what Mr. Roosevelt essays to be. It is "fun" for him to fight grievous oppression. He thinks it "bully" to be in the political struggle. And his obvious love of excitement and joy in combat necessarily shake one's faith in his entire sincerity as a crusader. He repeats at Chicago his magnificent *blague* about Armageddon, but one all the while feels him capable of saying cynically, after it is all over, as Disraeli did on one occasion, "They call it the Battle of Armageddon—but let *us* go to lunch."

MR. TAFT ON THE ISSUES.

The country long since left off looking to President Taft for kindling public utterance, and it is not to be found in his speech of acceptance. He has many admirable qualities, but among them is not a gift for pungent writing. Even what he sees clearly and feels deeply he does not express in a way to go home to the business and bosoms of his fellow-citizens. No watchwords of debate fall from his pen. His is sometimes weighty but never piercing. His speeches often impress but do not thrill; and he is a stranger to those words that are half-battles. To-day, as he himself is fully aware and plainly states, his party is face to face with a great crisis, yet his speech does not reveal the man of resource, vigor, and skill, with a certain *élan* of leadership, whom the Republican situation cries out for. Hence there will inevitably be disappointment with his rather tame words at a juncture that demands an assured and moving deliverance.

This is not to deny that many things in Mr. Taft's speech are excellently conceived. His warning against the peddlers of panaceas is sound. Those who go about preaching an instant millennium are, when they are not self-deceived, public deceivers, whose proposals are both futile and chaotic. The President has a firm grasp of the true principles of progress, which he well understands must come about by slow and cautious experimentation, proving all things and holding fast that which is good, and never by hurricane methods. Thoroughly well-considered is also what Mr. Taft has to say about maintaining the fundamental guarantees of the Constitution, in all its scope and adaptability, and about the duty of resisting stoutly every attempt to undermine the independence and authority of the courts. In this last matter, he is guilty of unfairness in associating Woodrow Wilson with Theodore Roosevelt. He should have known that Mr. Wilson has expressed himself strongly against applying the "recall" to judges. And no one has ever charged that the Democratic candidate has a particle of sympathy with what President Taft properly calls Mr. Roosevelt's "grotesque" notions about the recall of judicial decisions.

The President speaks of "the issue" in this campaign, but does not make it entirely certain what he thinks the issue is. At one point he seems to make it the preservation of the Republican party. He refers to "the issue presented to the Convention," as one which constituted "a crisis in the party's life." This was forced by the attempt to violate the third-term tradition, and also to nominate a man who "would have committed the party to radical proposals involving dangerous changes in our present Constitutional form of representative government and our independent judiciary." In this view, the result of the struggle at Chicago was to "save" the Republican party for "future usefulness." This leads Mr. Taft to a long review of what that party has been and done, together with an account of the achievements of his own Administration. In all this we get little but the ordinary commonplaces of the campaign orator, though this time the "pointing with pride" is followed by a "viewing with alarm" of an unusual sort, for to-day the alarm is felt lest the Republican party may be, not merely defeated by its historic foe, but destroyed by internal factions.

Evidently, however, the President feels that this appeal to keep the Republican party alive is not enough by itself. That will do as against the Roosevelt deserters and traitors, but the campaign is also to be waged against Democrats, and therefore some missile must be found to hurl at them. This the President finds in the threat of tariff changes and the hoary old argument that the success of the Democratic party will mean panic and disaster. It seems hardly credible that Mr. Taft, after what he has sought to do, and still favors, in the way of pruning away the excesses and enormities of the protective tariff, should fall into this ancient vein of calamity-howling, but he does. Ohio blood will tell. Brought up in the tradition that the way to beat the Democrats is to accuse them of intending to close all the mills and ruin all the farmers, Mr. Taft reverts to it in his speech of acceptance. He attempts once more to identify the Republican party with "prosperity." Yet he betrays a highly uncertain and vacillating idea about prosperity. In one passage he informs us that the Payne-Aldrich tariff bill has "gradually restored prosperity, since the panic of 1907." Only a little further on, however, he tells us that the acceptance of the Democratic tariff plan would "postpone indefinitely the coming of prosperity." Thus it appears that the restored prosperity is still to come. But at the end of his speech Mr. Taft points to a "prosperity which is just at our door," and, for a moment forgetful of the tariff, speaks of the need of discouraging "demagogic agitation," as the only thing which can prevent "the enjoyment by the whole people of the great prosperity which the *good crops* and the present conditions ought to bring us."

This, as George III said of Shakespeare, is "sad stuff." Yet no one should overlook the significance of it. It undoubtedly means that the Republican managers have decided to make one more dead set at the Presidency on the high-protection issue. The old arguments will be refurbished, the old cries revived, and the old collectors will be sent out to fry the fat out of the protected manufacturers. It is a choice of battle-ground which the Democrats ought to welcome.

OVERRIDING A VETO.

The action of the Senate last week in passing a bill over the President's head gave Mr. Taft a new experience. He has vetoed important tariff measures with impunity. Even his disapproval of the Arizona-New Mexico Statehood bill was sustained. But his refusal to sign "A bill for the relief of certain persons having supplied labor and materials for the prosecution of the work of constructing the Corbett Tunnel of the Shoshone irrigation project," a piece of legislation involving the disposition of the sum of $42,000, was too much. The second day's debate on the question resulted in the re-passage of the bill by a vote of 42 to 17, and its reference to the House of Representatives. The merits of the situation are not entirely clear. Justice-loving Senators found themselves on opposing sides, and the passing of this bill has only prepared the way for the introduction of another, of which formal notice was given in advance of the voting. Plain citizens will be at a loss to understand how so much smoke can arise from so little apparent fire, for there was no partisanship to complicate the discussion and make stubborn the legislators.

The facts behind the bill are neither numerous nor doubtful. A contractor, who had undertaken to construct the Corbett Tunnel for $750,000, was soon made aware that he had put in too low a bid. Accordingly, when he had completed about 16 per cent. of the work, he failed. Thereupon the Government finished the task, and proceeded to sue the defaulting contractor on his bond of $75,000. A cross bill was then filed by the concern that sold a portion of the equipment to the contractor, and a tentative agreement was reached that included the payment of $42,000 by the bondsmen to the Government. This, however, left unprotected the small tradesmen in Montana and Wyoming who had furnished supplies to the contractor and even cashed time-checks for his laborers. Their claims amounted to $42,000 also. Hence the bill, which gave these creditors priority over the Government in respect of their losses. But the ultimate loser, even so, would not be the Government. The last clause in the bill is a proviso "that no action prosecuted under this act shall involve the United States in any expense." What would happen would simply be the shifting of this threatened loss of $42,000, first from the trusting citizens who are now facing it to the Government, and then from the Government to future settlers on the tract of land served by the tunnel or on the total irrigable acreage of the Shoshone project. This would increase the charge for the land 33 or 91 cents an acre, according to the alternative adopted, and since the average holding is sixty acres, this would make his land cost the farmer $19.80 more at the least, and possibly $54.60.

Here are obviously several pretty problems. Is it right to saddle the losses of one set of men upon another set? Would the addition of $19.80 or $54.60 to the price of the land take away its attraction for practical farmers? Did not the tradesmen assume the risk in furnishing supplies and cashing time-checks? To this last question it is replied that they were relying on the Government, in case of any failure on the part of the contractor. They were not intimately acquainted with the technicalities, but "they knew they were dealing with a contractor with the United States." It was even asserted that the unlucky contractor himself had been misled by the representation of Government officials, and so was not altogether to blame for his impossible contract. President Taft, upon the advice of his Secretary of the Interior, vetoed the bill upon the ground that it was of retroactive character and imposed an additional burden upon certain of the settlers. Everybody agreed that the small tradesmen had suffered hardship. The President preferred to let them suffer it to imposing it upon the settlers. The Senate apparently prefers to let the settlers suffer it. And a bill is to be introduced relieving "the project," that is, the settlers, from the burden. If it passes, the kind-hearted Government will in the end bear this burden, as it bears so many others, and the matter will thus have happily progressed

> To where beyond these voices there is peace.

But before the Senate made up its mind to pass the bill over the veto, it indulged in some debate upon the veto power itself. Senator Cummins led off in this branch of the discussion with an observation that provoked unusually pointed comment. "I do not understand," he said, flatly, "that the veto power given by our Constitution to the President ought to be used in order to overthrow the will of Congress in respect to such a measure." He continued:

> I do not believe that the veto power in a free country is intended to authorize the Executive to veto every measure which he would have opposed had he been a member of the legislative tribunal which passed it. . . . I think we ought to pass this bill notwithstanding the veto of the President simply, if for no other reason, because Congress has determined that it shall become a law, and because it is not one of the cases in which a President ought to interpose his veto.

This position was at once challenged. "As I understand," remarked Senator Sutherland, "the alternative of the veto is the approval of a bill. Does the Senator think the President ought to approve a bill which he, in fact, does not approve?" But the Senator from Iowa was not to be caught. "I do, most emphatically," he replied. Senator Root then wanted to know upon what Mr. Cummins based his "extraordinary proposition," and cited Mr. Cleveland's vetoes of private pension bills, "separate and relatively insignificant measures," as also the practice of giving Governors the authority to veto items in appropriation bills. The answer of the Iowa Senator was not very specific, but for a few moments the debate took an enjoyable turn into the preserves of political philosophy.

THE STANLEY COMMITTEE'S REPORT.

The so-called Stanley Committee of the House of Representatives was appointed in May of last year to investigate the United States Steel Corporation's history, with a view to throwing light on its alleged violations of the Anti-Trust law, and its relations with independent producers, with railways, with interlocking directorates, with Stock Exchange operations, with promoting syndicates, and with financial panics. It has conducted an exhaustive series of public hearings during the fifteen past months, in which much very frank testimony has been given by financiers connected with the corporation and with the steel industry, and it has now submitted its report.

The findings of the Committee's members, so far as regards the remedial legislation suggested for the evils which they believe to have been disclosed, are not unanimous; there is, in fact, so wide a divergence of opinion as to necessitate three distinct reports. But on the question of facts, and on the question of what those facts mean, there is surprisingly complete agreement. In only two essential considerations—the influence of the "Gary dinners" on arbitrary maintenance of prices and the culpability of President Roosevelt in agreeing not to block the Steel Corporation's purchase of the Tennessee Coal and Iron Company in 1907—do the majority and minority reports conflict. The minority believes that the dinner conferences of Trust and independent managers were "the shadow of price understandings rather than their substance"; but it considerably modifies the scope of this conclusion by saying that "there is complete accord as to prices" between the Trust and its rivals, and that "in general, the United States Steel Corporation sets the prices and the independents follow." As to the episode of 1907, the minority believes it to have "but little practical bearing on the serious issues of which we are treating," and dissents from the majority's conclusion without further comment.

The findings of fact on which there is complete agreement cover wide ground. They are not new discoveries; we pointed out, when the Committee began its work, that there could be little that had not, in one way or another, been brought already to public knowledge. But the hearings have at least had the effect, when taken along with the earlier hearings by the Industrial Commission, of giving to facts which were generally known the seal of expert testimony. Of these facts, the most essential are as follows: The great consolidations which culminated in the billion-dollar steel merger were intended by their authors, among other things, to restrict competition and maintain prices; and their stock was prodigiously and intentionally watered. The sum paid for promotion services was so excessive as to bear, even in the language of the minority report, "no relation whatever to the service rendered, the risk run, and the capital advanced." The steel industry itself, as well as the investing public, has suffered serious detriment from the "persistent and pernicious practice of stock manipulation and stock inflation by certain financiers who had secured the complete and absolute mastery of so large a part of this great business." The company possesses enormous control over other outside enterprises through the system of "interlocking directorates" and the use of the holding-company device.

The majority report holds that the "Gary dinners" were instituted as a means for notifying independent producers of what the Steel Corporation's attitude was, and for "impressing upon all concerned that it was the part of wisdom and prudence to govern themselves accordingly." It finds that the Tennessee Coal purchase of 1907 was in violation of the law; that President Roosevelt "had no right to condone or encourage its violation," that the purchase was not necessary to stop the panic, and did not stop it. In rejecting the absurdities which the Steel Trust financiers themselves have uttered regarding that purchase as the sole means of averting general financial ruin, the Committee, fortunately, refuses to endorse the other and greater absurdity, that the whole panic of 1907 was caused by the Steel Trust "insiders" in order to capture the Tennessee Coal.

The body of evidence supporting these various conclusions can hardly be ignored hereafter, in discussions of the general subject. The question of remedy is another matter. The Committee's majority advocates wide publicity, frequent reports on the company by the Commissioner of Corporations, and the prohibition of ownership of interstate railway enterprises by industrial concerns. It suggests amendments of the Anti-Trust law, whereby parties injuriously affected by trade combinations may bring suit under the law, equally with the official Government prosecutors; and it proposes that where restraint of trade shall have been established in the course of a suit, the burden of proving "reasonableness" shall rest on the party who contends that the restraint is reasonable.

It recommends a bill prohibiting directors in companies manufacturing railway steel or mining coal from serving on the boards of interstate railways. The minority report recommends an "Interstate Commission of Industry," which shall supervise interstate corporations and, in general, fix prices for the goods of such corporations when existing prices are "found to be unreasonable by some competent authority to be determined hereafter." This shadowy repetition of the notion thrown out in his evidence by Judge Gary, last year, the majority report positively disapproves, remarking that the real evils of the situation could not be cured by such an expedient, and that "such control, semi-Socialistic in its nature, is beyond the power vested by the Constitution in the Federal Congress." There can be little doubt that this last-mentioned proposal will be the focus of a good deal of controversy in the next few months. To people who have any doubt about the merits of the suggestion, it may be well to recall the plain and incisive comment of the veteran jurist and legislator, ex-Senator Edmunds, in his statement of last December:

> Such a commission, substituted for the courts of justice, necessarily implies that it is to exercise a discretion in granting or withholding privileges that are not defined by law; and it is clear, from human experience, that it would be in danger of becoming the victim of political influences.

BRITISH UNIVERSITY PROBLEMS.

To most Americans, the universities of Great Britain to-day are neither more nor fewer than they were fifty years ago, or than they will be fifty years hence. Oxford and Cambridge, and if one thinks a second time, Edinburgh, they have always been, and Oxford and Cambridge and Edinburgh they will continue to be. To think otherwise would be as difficult as to imagine direct primaries for members of Parliament. Yet the facts are far different. Within the last thirty-five years no less than seven universities have been founded in England, five of them since 1899; and the character of the University of London has been transformed. Birmingham, Bristol, Leeds, Liverpool, Manchester, and Sheffield, along with Wales, now boast institutions of learning which, if lacking the prestige that crowns their older rivals, have a freedom from the past and an ambition for the future that have already given them a special place in the world of scholarship. Nor has their appearance been without effect upon the ancient establishments. For their creation has been more than an evidence of local aspiration. It is a symptom of dissatisfaction with the rigid policy that has been followed so consistently at Oxford and Cambridge, which in consequence have felt compelled to admit modifications here and there.

This new and rapid development has brought novel problems in its wake, and these have just been the subject of consideration at a Congress of the Universities of the Empire. Some of these are parallel to problems of our own, one such being the question of division of work among universities. The new universities are much more narrowly limited in resources than the older universities. For this reason they cannot attempt to cover the entire field of knowledge. What, then, shall they do? The spirit of modern efficiency answers, Specialize, Divide, and Conquer. Why should every university have a School of Medicine or of Law? But there are obstacles. To those who argue for the establishment of some outside central authority which shall say to one institution, Do this, and to another, Do not do this, but do that, it is replied that only the endowment of such a body with omniscience could make its decrees safe. One speaker put the matter concretely:

> A great teacher arises in some subject—no one can foresee where it will be—he attracts students to hear him, draws to his lectures and laboratories men keen in the pursuit of learning and science, whose researches he will direct, encourage, and stimulate. A wise university will provide him with assistants, enlarge his laboratories, provide the equipment he needs, even when it involves serious strain on its resources. Private donors may then step in and aid the work. Sometimes, again, a private donor interested in a particular university may provide a handsome endowment for some special branch of work in it.

The teaching activity of our own Professor Gildersleeve was instanced as having "virtually marked an epoch. He has done something in America to revive the days of the great Heyne, who is said to have trained in Germany over one hundred professors of philology."

The same problem is discussed on its reverse side by William Lowe Bryan, president of the University of Indiana, in a recent number of *Science*. He calls attention, not to the limitations of the institution of modest resources, but to the peril that the richest university is in, "of so multiplying the lines of its work that all the lines of its work shall be lowered in quality." As a remedy, he suggests that heads of departments should resist the constant temptation to add courses of elementary collegiate grade, "in order, as the phase is, to cover the ground represented by the department"; that they should also consider well before offering new electives; that graduate professors should be equally careful in providing equipment for research over wide ranges of their fields, and that trustees should be slow to increase departments and schools. His warning is almost a confession that we have already been guilty of doing the things that these English educators are hoping to prevent. Certainly it is one more indication of the turning of the tide in the direction of quality rather than quantity. An approach towards the solution of the problem as it exists in England was made by a speaker who urged that there was a minimum of equipment for any university, including courses in certain languages and literatures, history and philosophy, mathematics and "the main science, physics and chemistry." What lay beyond these depended upon local conditions, geographical as well as financial.

Especially interesting to an American is the discussion of the doctor's degree for England. One speaker at the congress was so bold as to ask why the English universities should not offer the degree, and thus catch many Americans who now ignore Oxford and Cambridge for the German universities. The growth of graduate students in this country during recent years was characterized as one of the most remarkable phenomena in the history of higher education among us. It was this very fact, however, that put these educators on their guard respecting the eagerly-sought symbol, for they recognized that "its popularity in the United States is too intimately connected with its financial value," and quoted President Butler upon the development of "a deplorable form of educational snobbery which insists that a candidate for appointment to a teaching position shall have gained the privilege of writing the letters Ph.D. after his name." If one were to generalize about British education on *a priori* grounds, one would be apt to argue that educators being by nature slow to move, and Britons being by nature devoted to standing still, British education must inevitably be the height of conservatism. If this was true once, the proceedings of the recent congress are enough to disprove it now.

A VOTE'S A VOTE FOR A' THAT.

(A Third Party Version.)

Is there a visionary wight
Who dreams reform an' a' that?
We'll humor him wi' promises;
A vote's a vote for a' that.
For a' that an' a' that,
Utopian schemes, an' a' that,
Our platform will hold a' his whims;
A vote's a vote for a' that.

What though a malcontent he be,
A radical, an' a' that?
We're bound to win his sympathy;
A vote's a vote for a' that.
For a' that an' a' that,
His red flag, an' a' that,
We'll make concessions to his kind;
A vote's a vote for a' that.

Wi' those who seek for patronage
Aspiring chiefs, an' a' that,
Wi' a' such we make common cause;
A vote's a vote for a' that.
For a' that an' a' that,
Their sordid aims, an' a' that,
We've got to flatter their poor hopes;
A vote's a vote for a' that.

Aristocrats an' hoi polloi,
E'en suffragists, an' a' that,
We'll find a plank to please them a';
A vote's a vote for a' that.
For a' that an' a' that,
Divergent views, an' a' that,
We'll win wi' our elastic clause;
A vote's a vote for a' that.

O. MORES.

ANDREW LANG'S GENIUS.

LONDON, July 26.

You have only to stretch out your hand in literature, and whatever it strikes you can support yourself upon—by making, say, three guineas out of it. Whether it be a cricket match at Lords, or a theological novel, or a big trout very nearly caught at the "nest," or a new theory of creation, matters nothing to you. Given the subject, you provide the "copy," and while you are putting a little water into your ink-bottle you decide whether it is to be a ballade, or a newspaper brochure, or a St. Andrew's lecture, or an article for the *Contemporary*. If it may be any of these, you prefer nowadays (alas!) to make it a newspaper "leader," because you can dash these off as easily as some smoke cigarettes.

Thus wrote, nearly twenty-five years ago, the anonymous author of an "open letter" to Andrew Lang. "We know not," said the same candid friend, "whether to call you a great poet, critic, essayist, novelist, scientist, journalist, or all those in one, or nearly all, but not quite any." At the time these words were written Mr. Lang had yet to make his first ventures in biography, history, and psychical research. Nor would the addition of these items complete the list of his achievements, for the writer of this appreciation had strangely overlooked one of his earliest claims to distinction—his scholarly and artistic work as a translator of ancient classics.

There is left to us no man of letters who runs the risk of receiving a similar compliment. Versatile men there remain, but nobody with quite the versatility of Andrew Lang. Take, for example, the anthropologists. It is curious to note how many of them have come to their research into primitive customs through their Greek studies. J. G. Frazer, F. B. Jevons, and more recently R. R. Marett, had all of them won distinction in pure classics before they began to investigate totems. But there is nobody nowadays who can turn from discussions of the meaning of myths to the concoction of Rhymes à la Mode or the compilation of Fairy Books of whatever color.

Journalism, too, employs scores of practitioners who first learned to write in Oxford classrooms. But nearly all of them have specialized in some particular type of article. Most of them have succumbed to the fascination of politics, and chastise the Government or the Opposition in daily or nightly editorials. A few, like Hilaire Belloc, have made their mark in the art of the literary causerie. Some, like Thomas Seccombe and J. C. Bailey, give themselves mainly to literary criticism proper. Several others, following the lead of the late G. W. Steevens, have magnified the office of the descriptive reporter. But we look in vain for any one who, even within journalism itself, can compass the gamut of Andrew Lang.

His death reminds us of a change that has been quietly passing over journalism itself. "For an Andrew Lang," as the *Guardian* acutely points out, "there must always be room in the newspapers, but in future it will probably be as the 'star' writer of signed articles rather than as the anonymous journalist who makes his daily or weekly contribution to the reputation of his paper." It is significant that in recent years Mr. Lang's own journalistic work mainly took the form of signed articles in the *Morning Post* and elsewhere, whereas probably his best work in this line was done as an anonymous member of the regular staff of the *Daily News* in its palmy days. In the eighties that journal owed much of its success to the brilliant non-political articles that appeared day by day in its editorial columns, but it was not until selections of them were reprinted in a book of "Lost Leaders" that the general reader knew he was indebted for them to Andrew Lang. Nowadays editorial writing, except on political topics, has become so scrappy that, except in the *Times* and the *Manchester Guardian*, the well-informed and brightly written leading article on general subjects is almost extinct. Even the old-established quarterlies have at last abandoned their tradition of anonymity. A few years ago the *Quarterly Review* began to admit signed contributions, and now the *Edinburgh Review* has followed suit under its new editor, Harold Cox.

The lighter side of Andrew Lang's output was really the recreation of an active mind that found in ballades and causeries a relief from more serious tasks. "He had always a big book or two on hand," says Richard Whiteing, a former colleague on the *Daily News*, "and his newspaper and magazine articles, his endless gossip on all the highways and byways of literature, came as mere chips from a scholar's workshop. The reading and thinking had been done elsewhere." This fulness of resources, plus his lightness of touch, gave him his remarkable facility. "I have seen him," continues Mr. Whiteing, "get his marching orders for a column leader, sit down at a table in a room full of chatter, and polish off his task within the hour. When it was done, he picked up the pieces from the floor, and without a second glance at them sent them up to the printer." H. W. H.

THE ROYAL SOCIETY.

London, July 20.

The celebration of the quarter-millennial of a great learned society is no ordinary event, and when that body is the Royal Society of London, than which no other has a more glorious history in the creation and promotion of scientific knowledge, the world may well take note, as it has done in the past week. In response to invitations issued last spring, there assembled at Burlington House on July 15 one hundred and thirty-two foreign and oversea delegates, representing universities and learned societies from all over the world, besides seventy-one delegates from the British Isles. The largest delegation was that from the United States, with twenty-three members, including nine members of the National Academy of Sciences and the presidents of Yale, Columbia, and the Carnegie Institution. Germany followed close with twenty-two, and France with fifteen. The handsome meeting rooms of the Society, adorned with portraits of its distinguished presidents from Sir Isaac Newton to Lord Rayleigh, and the grand library, furnished an excellent place for the exercises.

After an informal reception on Monday evening, at which the delegates met one another and the officers, the ceremonies opened at noon of Tuesday with a solemn service at Westminster Abbey, the delegates in the multi-colored academic robes of many countries filling the choir, while their ladies were placed in the transepts. After specially prepared prayers and music, the Dean delivered a short address of welcome, emphasizing the change in religious sentiment regarding science, and the fact that not long ago such a service would have been impossible. In the afternoon the formal reception of the delegates took place in the great library of the Royal Society, where an address of welcome was delivered by the president, Sir Archibald Geikie, to whom each delegate presented an address from his institution, short speeches of congratulation being pronounced by one representative of each country. That for the United States was appropriately spoken by Prof. W. B. Scott of Princeton, as the representative of our oldest scientific society, the American Philosophical Society of Philadelphia, founded by Franklin, his ancestor, who was a valued member of the Royal Society, and whose portrait hangs in the meeting-room opposite Thomas Young's. Many of the delegates were greeted with applause, the most falling to Lord Rayleigh, the grand old man of British physics, who from his place as past president beside the president stepped, as chancellor of the University of Cambridge, into the line of delegates.

On Tuesday evening a banquet was held at the Guildhall, above five hundred being present. Probably that historic hall had never contained a more distinguished gathering, judged by the criterion of intellectual achievement. Toasts were proposed by the Prime Minister, Viscount Morley, and the Archbishop of Canterbury, and responded to by a number of foreign delegates for the universities and learned societies of the world.

Each morning parties were conducted by guides to various points of interest in London, and several great houses opened their treasures of art to the delegates and their families. On Wednesday afternoon the Duke of Northumberland held a garden party at Syon House on the Thames. In the evening a *conversazione* was held at Burlington House, at which the ladies were present. Many interesting historical and modern scientific exhibits were inspected.

On Thursday the King and Queen graciously received the foreign delegates at Windsor Castle, shaking each one by the hand, while the ladies enjoyed the great garden party, at which their Majesties appeared and talked with their friends. Thus culminated a most auspicious celebration. But this was by no means all, for now British private hospitality, which had already provided dinners and receptions for the ladies when space had not permitted of their accompanying the delegates, was applied to all. Parties were invited to the Universities of Cambridge and Oxford, and lavishly entertained by the Masters and Fellows of St. John's and Christ's Colleges at the former, and Wadham at the latter. Congregations were also held at which honorary degrees were conferred, Prof. E. B. Frost of the Yerkes Observatory being honored at Cambridge, and Prof. W. B. Scott of Princeton at Oxford. At Cambridge, the undergraduates in the gallery conveyed their appreciation of the work of the physiologist, Professor Pavlov, by letting down a large stuffed dog as the procession passed out.

The whole celebration was admirably managed, the comfort and convenience of the delegates thoroughly looked after, while English hospitality produced the usual strain upon the capacity of the guests, to whom the whole occasion will forever be memorable. Those Britons who are so fortunate as to be able to write F.R.S. after their names may look with pride at having furnished a red-letter day in the intellectual calendar of the world. Arthur Gordon Webster.

SWISS NOTES.

Neuchâtel, July 10.

The Swiss are always ambitious to excel in the science and art of education. Next autumn will be opened at Geneva a carefully organized school of pedagogy, under the direction of Pierre Bovet, formerly professor of philosophy at Neuchâtel. The school is to be called "L'Institut Jean Jacques Rousseau." E. Claparède, professor of psychology at Geneva, who will take part in the undertaking, has published a pamphlet giving an account of the plans for the new institute, and discussing in general the education of the child.

The object of this school is twofold; first, to prepare teachers for their work, and, secondly, to study education in its various branches. It is the opinion of Professor Claparède that the principles of Rousseau have not been sufficiently observed; he upholds the theory in "Emile," that education should be conformed to the nature of the child, and that the child should not be made the victim of any absolute system of training. He further holds that in educating the young there are five principal groups of problems to be solved. (1) The development of the child; (2) individual psychology; differences of structure and temperament; (3) technique and economy of labor; (4) method of teaching; (5) the psychology of the teacher; what should be his qualities.

The new institute is to be a school, a centre of research, a centre of information, and a centre of propaganda.

A meeting, largely attended, of the "evangelical-social labor unions" has lately been held at Bâle. These societies represent a sort of Christian socialism; but it does not appear that their association is very successful. Their object is to influence the labor unions by means of the principles of the gospel. Meanwhile they are hostile to the Catholic Church, on the one hand, and to the non-religious socialists on the other. The movement was begun in Bâle in 1893, and such progress as it has made has been at Berne and Zürich.

In this day of many novels, it is worth while to direct attention to a new book by the Swiss novelist Porret, entitled "Mini Lalonet." The scene is laid at Lausanne. The style of the author is at once realistic and elegant, and as a student of character he appears to be a disciple of Balzac. The heroine is vividly portrayed as a person of great beauty, but with very little intelligence.

Professor Gaitschick of Zürich has published at Berlin a volume of about six hundred pages, entitled "Reality and Perfection, Thoughts on human knowledge and worldly truth." It is composed in an aphoristic style; and although the author does not follow Eucken, one is reminded of Eucken's rather loose philosophy. Gaitschick has been captivated by Pragmatism, and regards Intellectualism as an evil which leads to mental ossification, the suppression of moral life, to inner death. Only the psychical experience has any value. "True worldly wisdom depends on what has been lived, not on what has been thought." Applying this principle to religion, the author, as in his earlier books, while accepting Christianity, takes a very liberal view of creed and dogma. Although a professor at Zürich, Gaitschick is by birth a Russian. The lack of system in this his latest book renders his moralizing tiresome; and after reading it, one has the impression of having been overwhelmed with platitudes. He is spoken of in both Germany and Switzerland as the leader of a "new idealism." If this be true, one may perhaps be excused for preferring the old.

A meeting of "les philosophes de la Suisse romande" was held at Rolle the other day. Flournoy made a long and interesting address on "Intellectualism and Pragmatism." In the discussion which followed, professors from the faculties of theology and of natural science, as well as the "philosophers," took part. Among the opponents of Pragmatism who spoke were Naville, who belongs to a famous family of professors at Geneva, and A. Schinz of Bryn Mawr, whose study, "Anti-Pragmatism," is well known. Flournoy's book on the philosophy of William James, which has been already noticed in the *Nation*, is to be translated into English.

The most thoroughly Swiss university is that of Bâle. There are 911 students, of whom 666 are natives. This is quite different from Geneva, Zürich, Lausanne, Berne, and Neuchâtel, where the proportion of foreigners is very large.

The Reformation monument to be erected at Geneva has engaged the attention of the German Emperor. When the first stone was laid, he sent 10,000 marks to the Committee. In his letter, he praised Calvinism, and wrote with grateful remembrance of his "ancestors" Coligny, William of Orange, and Frederick William of Brandenburg.

A valuable addition to the observatory of Neuchâtel has been completed, owing to a legacy of Dr. Adolphe Hirsch, the first director, who died in 1901. A special annex has been built in which there is an equatorial telescope from the famous factory of Zeiss. In the building are the most modern arrangements for celestial photography and spectroscopic work. The architecture of this new building is excellent, and the surroundings are picturesque. The Observatory has just celebrated its fiftieth anniversary.

At Lucerne there exists a school of a peculiar kind. It is called eine Hotelfachschule, and is intended to educate men and women in the hotel business. It is managed by the Union Helvetia. The institution seems to be successful, as there are 608 students, male and female. There are 218 in the cooking course, and 62 learning to be waiters and waitresses. Instruction is given in foreign languages to more than two hundred students. No course on the collection of *pourboires* is announced. Probably none is necessary.

The federal musical festival at Neuchâtel begins this week. The town has been elaborately decorated, and is crowded with strangers. The principal event is an "Ode lyrique" by a Swiss author and composer. Musical societies from all the cantons are assembling in great numbers to compete for prizes.

A. A.

NEWS FOR BIBLIOPHILES.

The Club of Odd Volumes of Boston has recently published "Isaiah Thomas, Printer, Writer & Collector," by Dr. Charles L. Nichols of Worcester. This is the substance of a paper read before the Club a year ago, which is here expanded by the addition of a carefully compiled bibliography of books printed by Thomas. This latter part is a reprint, with additions, of a portion of Dr. Nichols's admirable "Bibliography of Worcester," printed privately by him twelve years ago. In the present volume, however, the Worcester bibliography is preceded by a description of books printed by Thomas in Boston before he was driven out of that city by the British in 1775.

Isaiah Thomas was apprenticed to Zechariah Fowle, owner of a single press and a few hundred pounds of type, when the lad was only seven years old, and he used to set type standing on a bench, in order that he might reach the cases, "though he knew then only the letters, and had not been taught to put them together and spell." When eight years of age, he tells us, he set the types from which were printed an edition of ten thousand copies of the "New England Primer," but no copy of Fowle's edition of this book is known. At the age of thirteen he had already become an engraver on wood, and in the collection of the American Antiquarian Society (of which he was the founder, and to which he gave his library) there is a copy of "The New Book of Knowledge," with a note in Thomas's handwriting: "Printed and Cuts engraved wholly by I. Thomas, then 13 years of age for Z. Fowle when I. T. was his apprentice."

Like Franklin, who had been apprenticed to his brother at the age of twelve, Thomas prospered. In 1771 he began a weekly newspaper, *The Massachusetts Spy*, and in 1779 started the series of Thomas's Almanack, which was issued annually, without a break, by Thomas and by his son, for more than forty years. Like Franklin, he furnished press and types to enable apprentices to set up printing shops in other cities, but Thomas's interest was more permanent, and his name appeared as partner in the various enterprises. There were establishments in Walpole, Brookfield, Portsmouth, Windsor, Newburyport, and other places. Franklin was the founder of the American Philosophical Society; Thomas of the American Antiquarian Society, whose purpose, in his words, was "to assist the researches of the future historians of our country," a purpose which the institution has ably carried out.

Franklin early gave up the personal management of his printing business, but he was a printer to the last, and his will begins: "I, Benjamin Franklin, of Philadelphia, printer." Thomas transferred his business to his son in 1802, but in 1825, in his seventy-seventh year, he wrote, "Could I live my life over again and choose my employment, it would be that of a printer."

We wish that some one would give us as good a bibliography of books printed by Franklin as is this work of Dr. Nichols on Isaiah Thomas. The book has been printed by Mr. Updike, at the Merrymount Press, and the edition is limited to 110 copies.

SENTIMENTAL BORROWING.

TO THE EDITOR OF THE NATION:

SIR: Apropos of your interesting essay on George Borrow (*Nation*, June 27), it may be worth while to point out that the famous episode of Mumpers' Dingle in "Lavengro" has been imitated, with variations, in two recent novels, one of which has attained wide popularity. In Nina Wilcox Putnam's "In Search of Arcady," a wandering Englishman of athletic tastes buys the outfit of a chair-peddler and camps in various romantic spots, with a beautiful girl, supposed a gypsy, who makes her living, as Isopel Berners did, by peddling "notions" in a cart. On the occasion of their first meeting the hero has a desperate fist-fight with a gigantic gypsy, who resembles Blazing Bosville both in appearance and in his mode of fighting. The hero gets the better of his enemy, as Lavengro does of the Flaming Tinman, only by taking advantage of the gypsy's slipping. Like Bosville, the gypsy is knocked senseless, but recovers and limps off.

In Jeffery Farnol's "The Broad Highway," an itinerant athlete-scholar takes up his abode in a lonely and romantic dingle, and becomes a blacksmith, as Lavengro did. A beautiful and mysterious young woman arrives upon the scene, pursued by a powerful villain, whom the hero, by a lucky chance, bests in a rough-and-tumble fight. The girl then remains, and camps for some time with the hero. There is still another fist-fight, more closely resembling that with the Flaming Tinman. In the course of the idyllic life in the dingle, the hero torments the heroine with his learning, as Lavengro tormented poor Isopel with the lessons in Armenian.

In both stories the central events are those of the Mumpers' Dingle Episode: an innocent but unconventional camp in a romantic spot with a beautiful girl, and a bloody pugilistic encounter with a stalwart scoundrel. In both there are various minor resemblances to "Lavengro." There can be no question, I think, that both owe their origin to the word-master. Like Borrow's story as they are, however, in situation, they are at the opposite pole from it in style and tone. Instead of the square-cut sentences of Borrow, we find in the recent stories a somewhat mincing and elaborate affectation of style. The power of Borrow's story, as your essay suggests, lies in its extraordinary restraint. It is as free from sentimentality as a pamphlet of Swift's. Both the recent writers, on the other hand, sentimentalize the whole situation. In both cases the fights are to protect the heroines from violence; the heroines prove to be heiresses in disguise; the hero of one turns out to be a nobleman; of the other, a rich baronet. No better object-lesson in realism could be imagined than to read the story of Isopel Berners, and then one of the modern novels. Borrow's story remains in the reader's memory as if the experience it describes had been his own. The others are entertaining, but never real, and soon become confused and vague in memory.

"Lavengro" was pecuniarily a failure. It made its way very slowly, the first edition of three thousand copies lasting for twenty-one years. In the two years since the publication of "The Broad Highway" I am informed that it has sold in the neighborhood of two hundred thousand copies. But two generations hence? Sentimentality in the abstract is immortal, but in the concrete highly perishable; every age demands it, but scorns the sentimentality of the age before. Even a great genius like Dickens is suffering now from the very quality that in his own time contributed most to his popularity. And as for lesser lights—who now reads Charlotte Yonge?

HOMER E. WOODBRIDGE.

Colorado Springs, Col., July 20.

LIFEBOATS AND HARBOR STEAMERS.

TO THE EDITOR OF THE NATION:

SIR: In view of your recent comment on the Federal requirement of lifeboats sufficient for only 30 per cent. of all passengers on certain vessels, such as harbor steamers, between May 15 and September 15, may I ask whether a rule requiring boats sufficient for all on board would be any better? And further, whether it might not be best of all to lay stress on some other means of life-saving in the case of such craft?

Harbor steamers commonly do not run in stress of weather. If they should carry boats enough for all, it is unlikely that these would prove to be of much use in case of accident, owing to the congestion on such steamers in crowded seasons. To launch lifeboats, or fill them with passengers, would usually be a physical impossibility. Requiring boats for a third of the passengers could insure little more than a wild panic. And in all human probability more lives would be saved, or better, fewer would be lost, if it were understood that there were no boats at all, but ample and well-tested lifebelts for everybody on board. Those could be used, and it is probable that boats could not be. Immersion in a summer sea for the brief interval of, say, an hour would do infinitely less harm than a frantic scramble of several hundred persons for boats—and the ordinary harbor steamer could probably be beached in ten minutes from any point on her course.

I incline to believe, therefore, that the failure to require boats enough for all, in the case of harbor craft, is not "to neglect the solemn warning of such disasters as that to the Titanic and the Slocum." What is demanded by an ocean-going liner is not necessarily what is demanded by a steamer running to Coney Island only. Ocean liners are slow in sinking, as a rule, and their decks admit of assembling passengers for debarkation. Harbor steamers, if they sink, sink quickly; and if they burn, they burn like tinder. Their decks are likely to be thronged with excitable people whose one chance of escape is to go overboard with speed and await succor there.

This does not apply, of course, to coastwise steamers making long runs, and perhaps not to steamers in Long Island Sound. But to such craft as ply in harbors, like those of New York and Boston, the reasoning does, I think, apply with obvious force.

PHILIP S. MARDEN.

Lowell, Mass., July 23.

ON WRITING GOOD ENGLISH.

TO THE EDITOR OF THE NATION:

SIR: From a letter printed in the correspondence columns of your issue of June 27 I have copied the following sentence:

> The student at once learns this when he undertakes to describe an experiment, as compared with the writing of an essay on some literary or historical theme.

I trust it will not convict me of snobbishness if I make a passing query as to the comparison implied in the words quoted. Is the "experiment" supposed to be compared with "the writing of an essay," and does the gentleman mean that a student learns something or other when he undertakes to describe a scientific experiment with regard to its likeness or unlikeness to a certain literary experiment? I cannot think that this is the thought your correspondent would convey. Quite seriously, I suppose the comparison had in mind, if not exactly mentioned, is between describing an experiment and writing a literary or historical essay. Doubtless, the writer could have expressed his meaning with formal clearness if he had thought it worth while to do so—and here we come to the point of what I feel moved to say.

Horace Greeley said that the way to resume specie payments was to resume. A very "'umble" person may be allowed to suggest that the way to remedy this notorious trouble about writing English is to write English. Righteousness exalteth a nation, undoubtedly; but no theory of righteousness, no method of teaching or of learning righteousness, will exalt a nation until men and women of light and leading, and men and women who follow, dimly groping, are righteous. Boys and girls in college or elsewhere may campaign with Cæsar, and thumb the Greek grammar, or they may dissect malodorous lobsters, count stamens and pistils, and rig private wireless nuisances—but they will not learn to write good English unless they try to write good English; and they are not likely to make the effort very seriously and persistently so long as their eminent elders continue to treat good English as something not worth the effort it would cost to achieve it.

My note-books are burdened with excellent illustrations of how not to do it—specimens of bad English taken, not from local weekly papers or yellow journals, but from serious books issued by good publishers and from periodicals of the better class. It chances that I have just been reading an historical work in four handsome volumes, written by an eminent author, lately deceased, and reprinted by an old and supposedly respectable Boston house. It is not merely that much of the proof-reading is such as our best dailies would be ashamed of, but behind the publisher is the author himself, with sentences here and there that would be unworthy of a sophomore. He may have deliberately preferred never to put the much-misused word *only* in its proper and logical place—if so, he has been commendably faithful to his own principle, or lack of it; but he could hardly have said with malice aforethought that "an electoral system constructed on these lofty principles would be sure to turn out exactly as the open voting system proved to be," or "The condition of public feeling was somewhat different from that of London," or ". . . as if we and the world in general had no right to be troubled with these American quarrels," or ". . . had either not seen the popular drama or had missed the point of its broadest joke."

More than one of our present aspirants for the Presidency has had literary ambitions, and has blackened much white paper. The candidate who rightly estimates "that faith in small confounding facts which is contempt for large reassuring principles" has written in golden words of "the incomparable music of perfected human speech." Do we of the present generation care for that music, or even think we ought to care for it? It is not out of place here to write of the music of speech; for, as Sidney Lanier has told us, not only the living voice, but the printed page, speaks to the ear. The printed page, giving our speech in a comparatively permanent form which admits of its being studied and appreciated, should be taken very seriously by every lover of good English, and everyone who cares for the choice of the best things.

JAMES P. KELLEY.

Chicago, July 20.

THE PASSING OF DOUBT.

TO THE EDITOR OF THE NATION:

SIR: In Robert Grant's last book, "The Convictions of a Grandfather," a visit to Grasmere, and the discovery there of a memorial tablet to Arthur Hugh Clough, in whom the young people of the party are frankly uninterested, are made the occasion of the following generalization:

> The young read Clough no more, so alluring to us because he epitomized the anguish of the soul which revolts with fervor, but reluctantly, from orthodoxy . . . The youth of half a century ago is constantly impressed with the subsidence of the torments of doubt. From such a different angle does the world approach polemics to-day that people either believe or they do not; and the failure to succumb to faith has in the main ceased to involve that poignancy of distress which bade us vindicate the bitter glory of the reproach.

That statement should challenge the attention of any whose business it is to try to understand the spiritual needs and moods of the youth of to-day. For a common mistake of the teacher and preacher is to speak into a psychological condition which no longer exists.

But is it true that the youth of to-day no longer doubts? Is it true even that the youth of to-day no longer reads Clough? Clough never had a wide circle of readers, and it may well be true that the son of the father who read Clough, and the son's immediate friends and associates, have never heard of "Dipsychus" and "The Bothie of Tober-na-Vuolich"; and that the son of the father who endured the fruitful torments of doubt is serenely insensitive to the solicitations of spiritual hopes and fears. But there are other sons of other fathers. This impossibility of sharing with those of his own blood all of the spiritual inheritance which has strengthened and enriched himself, is a hard truth for the fond parent to assimilate.

Even supposing that Clough is not read by the youth of to-day, however, it by no means follows that there are no valleys of perplexing shadow in the path of the coming generations, or, at least, in the path of that little group of the coming generation who walk the ways of careful thought.

I remember when I was an undergraduate, and at the height of my enthusiastic devotion to Clough, I happened to express my enthusiasm in the presence of one of the older professors, who proceeded to shock me by confessing that he had never read Clough's writings, and never intended to read them. "It is no use," he said, "Clough is not my prophet, or the prophet of my generation. He does not speak the language of my province of time. But that which you experience through Clough and Arnold and Tennyson, I experience through Wordsworth and Coleridge and Shelley. It was they who lit the torch of the intellectual life for me when I was young, and in reading and rereading them I keep my soul alive."

Perhaps, then, all that is signified by the experience out of which Robert Grant has written the passage I have quoted is that in the last thirty or forty years the youth of the world has passed into another "province of time," where a different spiritual dialect is spoken. In that dialect, however, the vocabulary of distressing doubt and delicately balanced faith is by no means a lessening factor. Nietzsche and Maeterlinck, Bernard Shaw and Chesterton, have made no small contribution to such a vocabulary. Moreover, personally I have evidence of a young man here and there who still reads and relishes Clough.

At any rate, he who has occasion to deal with youth cannot yet venture to ignore the psychology of doubt.

AUGUSTUS M. LORD.

Providence, July 25.

A SQUARE DEAL.

TO THE EDITOR OF THE NATION:

SIR: The *Nation* has (and rightly) shown itself sensitive in political matters. In reading the current *Nations*, however, we discover that this admirable sensitiveness vanishes in matters of bias. Every move that a certain Colonel makes, for instance, is hounded and found odious by the sensitive *Nation*. But Taft's billingsgate, his meaningless speeches, the shameless political tactics he permits his managers to use in his behalf (and theirs), the coolness with which his advocates and their press discuss the plausibility of this or that unfair play to gain their end—to all this the *Nation* seems distressingly shock-proof; and this is much to be regretted.

EDWARD STAFFORD.

Boston, Mass., July 27.

A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: In the excellent review entitled "A Great English Diplomat" in the *Nation* for May 23, p. 514, I was interested to see a famous remark on the Schleswig-Holstein question, reproduced, by the way, in an abbreviated form, attributed to Lord John Russell. So far as I know, Lord Palmerston has always been regarded as the author. See, for instance, Spencer Walpole's "The History of Twenty-five Years," I, 407-408.

Literature

BOSANQUET'S GIFFORD LECTURES.

The Principle of Individuality and Value. The Gifford Lectures for 1911 delivered in Edinburgh University. By B. Bosanquet. New York: The Macmillan Co. $3.25 net.

Mr. Bosanquet's Gifford Lectures could hardly fail to be an important contribution to metaphysics, even though, as he modestly admits, they present no new fundamental ideas. The present volume contains the first of two series and develops the conception of individuality, or self-completeness, as the clue to reality and value, while the second series, to be given this year, will "apply these ideas to human (*i. e.*, finite) value and destiny." Even for the student of philosophy they are not altogether easy reading. The argument is sketched rather than worked out, in a series of difficult points for which the reader must supply the connections, and presupposes a special initiation into the dialectic of recent idealism—assuming, indeed, that there is a reader in mind. For the style is suggestive of meditations, or of private correspondence, rather than of lectures, and the sentences have an often perplexing informality of structure which, in a finished and skilful writer, would appear to indicate a special aversion for the conventional and obvious. Yet perhaps this is the price to pay for a work which is at every point solid thinking and which in its maturity and seriousness well reflects those "graver experiences" assumed to be the clue to reality. And if the type of philosophy is not new, the argument is fresh and specially relevant to present issues.

Mr. Bosanquet's attitude is one of steady conservatism along the lines marked out by the absolute idealism of T. H. Green and, of course, of Plato. Plato he quotes as the Christian quotes his Bible, with little patience for those who fail to find in him the text for any doctrine necessary to salvation. And for Mr. Bosanquet the essence of Platonism is rationalism, or, if you like, intellectualism, the doctrine, namely, that the logical is the true type of the real. The present volume, then, is a reaffirmation of intellectualism, chiefly against Bergson, incidentally against the pragmatists—who, however, are dismissed with a single paragraph—but also against certain heresies to be found in his own school, in Royce, MacTaggart, and even Taylor and Ward. In his view all of these writers are at some point tainted with what we should call romanticism, in that they undertake to procure meaning for the world and freedom for human life at the expense of law and order, to vindicate the efficiency of the mind by denying its dependence upon the body, and to justify intuition by belittling science and reason. His purpose is to show that freedom and law, intuition and reason, creativeness and logical determinateness, are absolutely continuous—in other words, that this whole set of contrasts is false. But part of the showing consists in a broader interpretation of the conception of logical order, the many interesting refinements of which we must unfortunately pass by, which not only extends the range of the logical but discovers its most characteristic features in the region beyond the narrowly "intellectual."

The dominant issue in present philosophy, and in some terms in all philosophy, is the status of natural science; in other words, the significance of the mechanical order and the assumed uniformity of nature. Bergson and pragmatists have reduced the uniformity of nature to a merely casual working-hypothesis, and most of the idealists have sought to discredit the principle in the interest of the supposed spontaneity of mind. Mr. Bosanquet's idealism is opposed to this tendency. Holding that mind, in the "true" (*i. e.*, absolute) sense, is the clue to reality, he nevertheless contends that the essence of mind is logical determinateness rather than a miraculous "spontaneity." The uniformity of nature is simply a demand for such determinateness. It means that reality must constitute a rational system. But, on the other hand, a rational system is a coherence of differences in a whole, and not a mere repetition of abstractly similar cases. Strictly speaking, repetition is never found in nature, and so far the principle of "uniformity" is falsely abstract. The truly scientific principle would be that of *relevancy.* Yet even the abstract uniformities are not wholly meaningless. "It is easy to show that the abstractions of the sciences which deal with things as in space are not everything; but it is a great mistake to suppose that they are nothing." "A shallower world does not give law to a deeper," but on the other hand, the deeper view is marked by its larger and finer determinateness. And this, again, is the very essence of individuality and freedom—not irrelevant "spontaneity," but depth and breadth of connectedness.

As a corollary to the doctrine of spontaneity, recent idealism has been marked by a revival of emphasis upon the contrast of teleology and mechanism. For the "commonplace" variety of teleology Mr. Bosanquet barely disguises his contempt. In his view it is a purely anthropomorphic notion derived from the situation of the "finite contriver," who is obliged to select from among various possible ends and unwillingly to accept certain lines of conduct as means. The conception of "purpose," with the implied alternations of want and satiety, can mean little for a being whose point of view is the whole. And the application to nature is mostly fallacious. The purposes of the lower organisms are not their own purposes. Little more are our purposes those of our finite human consciousness. The ideas implied in the structure and working of our bodies have obviously not been conceived by us, nor can we claim as our own the contributions that we inevitably make to the history of civilization. The "plan," in other words, is the working of the whole—which is a timeless whole. And upon a deeper view the apparent contradiction of teleology and mechanism is transformed into convergence. For in the attempt to conceive purposes coherently and in detail we see that every purpose must express itself in a determinate form of mechanism, while all attempts to banish meaning from the mechanical order presuppose that abstract "uniformity" which makes nature a repetition of similars.

The issue is brought to a point in the question of the mind's independence of the body. Here we must indeed sympathize with his criticism of those idealistic writers who persist in cherishing, in some form, the time-worn and flimsy idea that, while the mind cannot move the body in a mass, it may control the body through some small part, as the ship is steered by the rudder—as if in the magnitude or directness of the effect there were any difference of principle. According to Mr. Bosanquet, mind and body are a unity, and mind is throughout dependent upon body. Mind is, however, not the effect of the body, but its meaning; while the body furnishes the content, the meaning of which is to be developed, and without which consciousness would be utterly empty. Following Green, he holds that through our bodies our nature is "communicated" to us and in mind we develop our nature. And thus, though mind and body are a unity, mind is not parallel to body, but a "higher aspect" of the one reality. Yet, in the end, of a reality which is not so much ourselves as the Absolute. The function of our minds, it appears, is "to elicit, to represent in themselves, that special field of experience in which they are embodied."

The central idea of the work is thus the continuity of the real; the continuity of soul and body, of purpose and mechanism, of consciousness and nature. But when the continuity of these contrasted terms is established, it becomes a question (as Mr. Bosanquet sees clearly enough) whether idealism in fleeing from romanticism has not fallen into the arms of materialism. For where mind and body are one, the body tends to become the one, and it is not easy to see how the mind as a "communication" through the body differs from the mind as a mere reflection of the body. In reply, Mr. Bosanquet would doubtless point out that for him, as for other idealists, mind is reality at a higher level, and that he in particular is emphatic in asserting that the truest types of the real are communicated by the "graver experiences" of art and religion. "A judgment of color harmony, or of decorative or dramatic fitness, or of appropriate biological response to environment, or of morality, may, or rather must be, the proper background presupposed, as necessary as a geometrical axiom; and if equally necessary, it possesses, considering the greater fulness of its content, a considerably higher degree of truth." But the effect of such assertions seems to be weakened by his constant insistence upon the finite and fragmentary character of all human consciousness and its dependence upon the physical. For human experience, human individuality, and human ideals he shows a scant respect—so little, indeed, that it is difficult to escape the conclusion, at least from this first course of lectures, that for him the sole value of human life lies in the glimpse it affords of the Absolute, which, again, it rather unexpectedly appears, is the sole embodiment of "the principle of individuality and value."

It is not easy to do justice in a limited space to a work so maturely thoughtful, but it is clear where the centre of criticism must lie. For Mr. Bosanquet self-consciousness is the type of the real. Now, it is true, as he insists, that every case of consciousness presupposes, not merely an object, but at least a subject, in the form of something beyond consciousness which becomes conscious. A disembodied soul would be lacking in all the essentials of a point of view. Every state of consciousness is thus in some sense continuous with a reality beyond. But equally clear and equally characteristic is the fact that every state of consciousness completely alters the situation of that which has become conscious. The victim of a habit, an influence, of heredity or circumstances, is placed in a relation of independence towards the habit, or what not, so far as he clearly realizes that he is a victim. Now this is the aspect of consciousness upon which the romanticists, the humanists, and the individualists have based their case. Readers of Mr. Bosanquet can hardly escape the conviction that, while claiming to give it due weight, he really views it with contempt. Yet this is the aspect of consciousness which is needed to give distinctiveness to an idealistic metaphysics; and the question is, what is left when the significance for reality of the self as against the outer world has paled before its lack of significance in the presence of the Absolute? Mr. Bosanquet is unmistakably an idealist. But he can hardly complain if his absolute idealism seems to many only a sublimated materialism.

CURRENT FICTION.

Through the Postern Gate. By Florence L. Barclay. New York: G. P. Putnam's Sons.

It is safe to say that lovers of "The Rosary" will find in this story the traits they cherish. The beautiful lady of thirty-six with firm, white, soft, strong, capable hands is here; and the youth whom she calls "Boy dear"; the comic relief in old family servitors, the games of tennis, the cups of tea with sugar and cream and explosive buns in the garden. Moreover, the distant wings of an airship are heard to flutter as becomes the tale of the moment. The sentiment is no less honeyed than before; the lover is a little younger and more audacious, his lady a little older, relatively, and more maternal. "Boy dear" or "Little Boy Blue" sets out to win his fair senior in seven days, in the face of her motherly objections. She is Jericho and he the besieging army of Israel. Of course, there is a rival; of course, an intermeddler. And these ingredients are served in a sprinkling of humor and with sugar, honey, glucose, and saccharin in amounts bordering on the indigestible.

The Sheriff of Badger. By George Pattullo. New York: D. Appleton & Co.

Here is a cowboy story which lacks a pretty and refined Eastern heroine and a perfect gentle knight in "chaps." In other words, its staple is plain human nature of the variety that occurs in the Southwest cattle country. Parts of the book have appeared in the form of magazine stories, and some of the incidents are of the kind commonly manufactured for Eastern consumption; but the characters and the setting are evidently drawn from life. Lafe Johnson, the hero—not a Swede, in spite of his name—is a fine fellow according to his lights; but when he goes to town with a friend who has made some money, he is not unlikely to find himself the next morning "lying under a pool-table in the 'Fashion,' lost in vague conjecture as to how he arrived there." The women, from Grace Hawes, who "bathes dishes" at the "Cowboys' Rest," to Mrs. Floyd, the pretty young wife of the boss of the "Lazy L," are primitive in their plainspokenness and their readiness to show their feelings. The heroine is a Chicago shopgirl who has come to the Southwest as a result of answering a marriage advertisement, and has been rescued from her worthless correspondent by the excellent sheriff. The interaction of characters and points of view is managed with skill and a good deal of humorous insight. There is not much plot, but there are plenty of interesting situations and lively sketches of customs along the Southwest border. The style is refreshingly breezy, and the dialogue expressive and racy of the soil. Some interesting snatches of cowboy song are quoted; for instance:

O bury me not on the lone prairee,
Where the wild ki-yotes will howl o'er me,
Where the rattlesnakes hiss and the wind
blows free.

The Burgundian. By Marion Polk Angellotti. New York: The Century Co.

Rosemonde, daughter of a poor Provençal knight, went to Paris with the avowed intention of marrying a great man, and satisfying her unbounded ambition. Jean sans Peur, Duke of Burgundy, and Louis d'Orléans, brother of Charles VI, both fell in love with her, and by skilful manœuvring she brought Louis to the point of a proposal; unfortunately, Jean caused him to be murdered, as history relates, and Rosemonde was foiled. For reasons unexplained, Jean treated her with the utmost respect, though she was entirely in his power, living as she did in his palace as lady-in-waiting to the Duchess. Therefore, nothing prevented her eventually marrying the devoted young knight, Jean's former squire, who had loved her always, and whom she had always loved, in spite of her ambitions. The story is really an excuse—not a bad one—for a pseudo-historical sketch of Jean sans Peur. Why are such violent and bloody tales invariably written by women?

The Street Called Straight. By Basil King. New York: Harper & Bros.

The author of "The Inner Shrine" here makes a business-like attempt to follow up that notable success. The result is not happy. We should say that this writer has little or no story-telling impulse—that he has a good deal of ingenuity in construction, and a clever knack with words. But the whole thing is derivative. Auræ of Mr. Howells, of Mrs. Wharton, of Henry James, even, hang about these pages. A certain finesse of style, that is, is cultivated. But the substance is anything but subtle. Some of the dialogue is almost ludicrous in its inappositeness: the opening scene, for example, in which a number of supposably well-bred people discuss their most delicate affairs in the presence of a stranger. Mr. King's real affiliations are with Robert W. Chambers rather than with the finer chroniclers of the social episode whose manner he emulates.

The Prison Without a Wall. By Ralph Straus. New York: Henry Holt & Co.

This is the story of Sylvanus de Bohun, Fellow of St. Mary's College. The author says he wrote a "Social History of the Roman People" in four brilliant volumes, but this cannot be true, for Sylvanus gives no signs of human intelligence. He is even less alive than the other characters in the book. One of the latter, Aunt Anne, smokes cheroots, and Sylvanus "watches her place one into (*sic*) a holder." She says: "Tah! I draw the line somewhere. Must. Eh?" So do we, at this novel; it is artificial, badly written, and eminently dull.

The Fall Guy. By Brand Whitlock. Indianapolis: The Bobbs-Merrill Co.

A wide and diversified field is embraced in this collection of stories. Several of them centre in a town in southern Ohio, which is evidently homeground to the author. It is safe to say that the circus under canvas tents came to Macochee in Mr. Whitlock's day, and that by open or secret ways he made acquaintance with it at a tender age. Odd old folk must have lived and died there. There court was held, and judge and lawyer figured large in the town eye. On the glorious "Bloody Sixty-Sixth" of Civil War times "we were all reared," says the Macochee boy. Its exploits enter into more than one of the fourteen stories here assembled. There are minor tales of holiday tours in Maine; portraits of town characters which may hardly be called stories, and drawings in detail of quaint episodes, as of an old woman watching a funeral across the road, that show what may be done with homely little happenings by the seeing eye and the discriminating pen. There are, besides, other and wider flights of no little impressiveness. Such are "The Fall Guy," the story of the man whose business was thieving; "The Field of Honor," a tale of a coward in the Civil War, and other stories of judgments passed on "grafter" and "loiterer." In these is revealed the most pronounced bent of the author's mind—sympathy for the under dog and a tenderly sharp eye for his readiness to make sacrifice for some other dog yet farther under. Mr. Whitlock goes still farther. In pitying his criminal he bitterly condemns the public, accusing it of making the criminal, and blaming it for exacting penalty. The fine imposed on "the girl that's down" for "loitering" is described as money "to buy society off, to bribe it not to take its revenge upon them." When the "grafting" alderman gets one year in prison, as a lenient sentence, Mr. Whitlock's comment is that one and ten years in prison are the same; that "society does not forgive or forget, or keep its bargain with its prisoners, but pursues them after they come out, to the end that all sentences to prison may be sentences for life." In the writer's social scheme there appears to be scant room for the law—a reform less needed than some others perhaps at this moment.

MARGARET OF SAVOY.

Margaret of France, Duchess of Savoy. By Winifred Stephens. New York: John Lane Co. $4 net.

Sixteenth-century France rejoiced, as Pater says, in "three royal Margarets, much praised pearls of three succeeding generations." The celebration of the author of the "Heptameron" and of the adventurous Queen Margot has never ceased, but the memory of the second Margaret, daughter of Francis I and wife of Emmanuel Philibert of Savoy, was swift to fade. In our own century, however, she has twice won the honor of biography, as Miss Stephens's book follows a monograph by Roger Peyre. It would be hazardous to assert, with Miss Stephens, that Margaret of Savoy was the most learned woman of the century, for she left no writings other than her simple letters, and the contemporary evidence of her attainments is not conclusive; and it is certainly an exaggeration to say that at the time of her marriage she held the peace of Europe in her hand; but her beneficent energy, both in letters and in politics, was very great nevertheless, and the writing of the two biographies is fully justified. Both are excellent. M. Peyre's consists of a series of special and somewhat isolated discussions, while Miss Stephens's more extensive work is a complete and coherent narrative.

Margaret first came into individual prominence as patroness of the Pléiade. It was through her active intervention, as Ronsard narrates, that the court was won to interest in the poems of the young writers, despite the scorn of Mellin de Saint-Gelais. She is constantly celebrated in their verse, either by her own name, with its obvious opportunities for allusions and superlatives, or as the Pallas of the Renaissance. As Pallas, too, with the classic attributes of that divinity, she appears in a contemporary enamel by Jehan de Court. Ronsard, Du Bellay, and Jodelle are the three who are most constant in poetic devotion. Their tributes show that her relation to them was a very personal one, vigorous in encouragement and warm with sympathy. Miss Stephens adopts the theory of Léon Séché, that

Margaret was the lady sung in Du Bellay's "Olive," but that theory is by no means established. The fourth and the twenty-fourth sonnets of the collection seem clearly to have been written to one who really bore the name "Olive"—to say nothing of the fact that Miss Stephens places the presentation of the poet to Margaret in June, 1549, while the "Olive" appeared in the spring of that same year.

Many others wrote in her honor and with her favor, in French, Italian, or Latin: Saint-Gelais, Desportes, Del Bene, Flaminio, Scaliger, Buchanan, l'Hospital. It was to her interest that l'Hospital owed his political advancement. She made him chancellor of her duchy of Berry, and after her marriage called him to Savoy, whence he returned to be the chancellor of France.

Margaret's administration in Berry gave notable proof of her executive ability and of her enthusiasm for learning. By wise and generous measures she checked the commercial decline of the territory, and she did much to confirm and increase the prestige of the University of Bourges.

Her marriage to Emmanuel Philibert, the "second founder of Savoy," which renders her of interest in our day as ancestress of the royal Italian line, brought her into a field of new opportunities, which she used with admirable skill. She was constantly her husband's welcome counsellor. Frenchmen and Spaniards, jealous of each other and loath to leave Savoy, still garrisoned several of the chief cities, and her tactful influence was one of the main forces in effecting their peaceable withdrawal. Her last years, marked now and again by intervention on behalf of the Waldenses, were devoted mainly to the education of her son, Charles Emmanuel.

Miss Stephens devotes many chapters to circumstances and events in which Margaret's part was less prominent: the various unsuccessful plans for her marriage, famous tournaments she witnessed, episodes of court life in Paris and in Turin. Sometimes the matter thus included has little to do with Margaret. The amount of space devoted to her youth is disproportionately large, and the chapter on the Duc de Nemours and Françoise de Rohan would better have been omitted altogether. Yet Miss Stephens has done well not to limit her narrative too strictly, and her book as it stands affords an interesting, varied, and trustworthy picture of French court life in the Renaissance.

The book is admirably illustrated from sixteenth-century portraits and frontispieces, and the bibliography and index are excellent. Very few errors of any sort occur in the body of the work, but the rather casual preface is marred by reference to the present King of Italy as "Humbert." The publisher's announcement, for which, of course, Miss Stephens is not responsible, locates the archives of Savoy at Tunis.

Notes

In "Boston New and Old," which Houghton Mifflin will issue in the autumn, T. Russell Sullivan will give a series of pen pictures, and Lester G. Hornby furnishes seventeen full-page drawings, headbands, tail-pieces, etc.

Scribners bring out this month "Majority Rule and the Judiciary: An Examination of Current Proposals for Constitutional Changes Affecting the Relation of the Courts to Legislation," by William L. Ransom, with an introduction by Theodore Roosevelt.

Earl Barnes's "Woman in Modern Society" is promised by Huebsch for this month.

Among the new books which Holt will issue in the autumn are: "Why Women Are So," by Mary Roberts Coolidge; "The Making of an American Business Woman," by Anne Shannon Monroe, and Mrs. Dorothy Canfield Fisher's "The Montessori Mother," which is said to be an untechnical account of what the Montessori method is.

The Century Company announces: "English Fiction from the Fifth to the Twentieth Century," by Carl Holliday; "Source Book in Economics," by Frank A. Fetter; "English Composition and Style," by William T. Brewster, and S. E. Forman's "The American Republic."

Among the autumn announcements of Rand, McNally & Co. we note: "The Little King and Princess True," a series of nature stories by Mary Earle Hardy: "The Lovers," by Eden Philpotts; "Rowena's Happy Summer," by Celia Myrover Robinson; "When Were You Born," by "Cheiro"; "The Mermaid's Gift," by Julia Brown; "Modern Business Methods," by Teller & Brown; "Stories of the Pilgrims," by Margaret B. Humphrey; "A Christmas Party for Santa Claus," by Ida Huntington; "David Dunne," by Belle Maniates, and "The Story-Teller's Book," by Alice O'Grady.

Professor Gomperz has completed the fourth volume of his "Greek Thinkers," which will be issued by Murray next autumn in an English translation by G. G. Berry. The volume deals especially with Aristotle.

In a book to be published by Martin Secker, Lascelles Abercrombie reviews the work of Thomas Hardy, and makes a critical estimate of his place in English literature.

The announcements of Sampson Low, Marston & Co. include: "Dame Fashion," a history of feminine modes since 1786, by Julius M. Price; Kinglake's "Eothen," illustrated by Frank Brangwyn; an edition of "Lorna Doone," specially pictured by Christopher Clark; "Round the World for Gold," by Herbert W. L. Way; "Panama and the Canal To-day," by Forbes Lindsay; "Rough Roads: The Reminiscences of a Wasted Life," by Dyke Wilkinson; a series of the best stories by the leading English and French authors, issued at a popular price under the general head, Masterpieces of Fiction; "An Amateur Gentleman," by Jeffery Farnol, and Mr. Farnol's "The Broad Highway," illustrated by C. E. Brock.

As a permanent memorial of the celebration of its 250th anniversary, the Royal Society has had printed, at the Oxford University Press, collotype fascimiles of all the signatures of the founders, patrons, and fellows of the Society recorded in its first journal book and the charter book from 1660 to the present time. The volume of signatures (which measures 18 by 14 inches) contains a photogravure portrait of Charles II, who gave the Society its charter, and a preface by Sir A. Geikie, the president. This memorial is now about to be issued by Henry Frowde, together with a third edition, entirely revised and rearranged, of "The Record of the Royal Society," originally edited by Prof. Michael Foster and Prof. A. W. Rücker.

Dr. Edwin Post, head of the Latin department of De Pauw University, is at work on a critical edition of the "Satiricon" of Petronius. Mr. Post's bibliography of the subject is said to be the best that has yet been compiled.

A correspondent directs attention to a recent paper in our Bibliophile columns, wherein our contributor dealt with documents, newly come to light, relating to Edgar Allan Poe without giving credit to their discoverer. It is true that Dr. Killis Campbell described these documents in the *Sewanee Review* for April, and his paper was widely commented upon in the press. No doubt the publicity which it then received was our contributor's excuse for not mentioning it in further using the material. We regret if the *Nation* has seemed to do Dr. Campbell any injustice.

"Elizabethan Adventures Upon the Spanish Main" (Dutton), adapted from Hakluyt by Albert M. Hyamson, contains stirring tales about such worthies as Drake, Hawkins, Oxenham, Grenville; their hazardous voyages of plunder and discovery, and their fights for supremacy on the high seas. There is an account of the great Armada's destruction, for the author has not confined himself to the Spanish Main alone. He has modernized Hakluyt's spelling and elucidated involved passages, but has retained the original flavor of the narratives, in most instances written not by men of letters but by rough and ready mariners. The book should appeal to boys as well as their parents.

"New Auction and Dummy Play" (New York: A. W. Gleason), by John B. Gleason, is one of the most comprehensive books in the game yet printed. It is a complete treatise for beginners and advanced players, and should help both. Methods of bidding, common errors, information in bids, limits of bidding, and the many fine points that go to make up the game before the play are fully and clearly set forth.

Charles Thomas-Stanford is not an Orientalist, and knows it. He is an antiquary of the cultured, leisurely, old-fashioned kind, and so his "About Algeria" (Lane) has a flavor quite different from that of the ordinary tourist book. He frankly admits having read up Algeria before going there, but he digested his reading, and his own book can be read. Besides a good little sketch of the French conquest, there are suggestive bits on the colonizing and development of the country and on Roman life in Africa. The thirty-two illustrations, from drawings and photographs, have distinction. But with an index of only seventy-seven entry words, it was not well to remark on the generally indexless state of French books.

The Rev. E. J. Hardy, an English army chaplain who achieved fame once by writing a book called "How to Be Happy Though Married," dedicates another venture, "The Unvarying East" (Scribner), to "Sunday-school teachers who would learn in order to teach." The volume consists of rambling notes on various customs in Chinese and Mohammedan Asia which the author has affixed by way of commentary to some seven hundred Bible texts. It has been a good man's labor of love and has, probably, done him no harm, but its effect upon those accepting it as a source of information illustrative of Scripture life cannot be dismissed so lightly. To be told that all Orientals are alike is only true in the sense that they are all human beings more or less highly civilized. They are not similar because they may happen to hold to customs which are only superficially alike. Mr. Hardy finds that "in the north of China where it is very cold in winter a whole family—parents, children, and sometimes even servants—sleep together on a sort of platform over a stove. This illustrates what the man in the parable said, 'the door is now shut and my children are with me in bed' (Luke xi 7)." If he means that Syrians sleep like the Chinese on *kangs* he is grossly incorrect. The brick bed is as unknown in Palestine as in New York. If he means that whole households sleep together on the floor in both countries, he could find the same in this or any other great city. In many instances his explanations are useless because they do not explain; sometimes—but rarely, it must be said—they are untrue. Baalzebub, the "Lord of Flies," was not "worshipped by the Philistines hoping to be saved from the annoyance which flies and mosquitoes caused them in that country, as they do now," but because in some mysterious way the carrion flies suggested or symbolized re-birth.

The Virginia Military Institute, situated at Lexington, was before the Civil War a good school for soldiers, and since then has been vigorously maintained. Its greatest tradition is that for ten years Stonewall Jackson was one of its instructors, but it has others which it cherishes. In May, 1864, its cadets, organized as a battalion, boys ranging in age from fourteen to twenty, formed part of the small army under Breckenridge which at New Market defeated Sigel, who with a superior force was marching up the Shenandoah Valley. Enthusiasm and good leadership won victory for the Confederates, among whom the young soldiers were conspicuously brave. The New Market campaign was only a small ripple in the ebb and flow of the mighty warfare of the year 1864. The world in general cares little about its minute details. To participants, however, and their descendants, particularly to the honorable school whose young sons did here such valiant service to their cause, the careful story will have interest. This is given in "The New Market Campaign" (Richmond: Whittet & Shepperson), by E. R. Turner, a Southern scholar and now professor of European history at Ann Arbor. The narrative is well studied and clear, and fair to the combatants on both sides.

The appearance of S. C. Woodhouse's "English-Greek Lexicon" (Dutton) is a pleasing indication that strict academic etiquette in England no longer requires the student to use time-wasting methods when he wishes to know the Greek equivalent of an English word that he can safely use in his "copy" of Greek verse or prose. The lack of such a handbook by a reputable scholar is due, in England, at any rate, to the same unyielding attitude that makes the Eton boy acquire his Greek from a grammar written in Latin, and has given rise to that unhappy phrase, "compulsory Greek." Of course, there existed inferior Lexicons of this kind, but in the English universities they were contraband, and, if seen, would have blackened the reputation of the owner, who was supposed to quarry the required word or phrase from the author in whose style he was composing. So in producing this solid and respectable work of above a thousand pages Mr. Woodhouse is breaking with a tradition, and will save the undergraduate many an hour. In this country, where Greek verse is not written, and no such proficiency in prose writing is demanded as in England, the boon will be less keenly appreciated, but many a teacher who sets and corrects Greek prose will welcome this trustworthy lexicon. If he does not need the word and phrase supplied here for the verse-writer, he will at least be warned what to avoid for pure prose. The author often gives whole phrases to illustrate a usage, and in all cases indicates by initials what writers have used a word. He confines his attention to the Attic language, but adds a useful vocabulary of proper names, and gives the Greek forms of a number of Latin and other names. This will be a great comfort to the English youth who has to write a prize poem and cannot find in a classical author the Greek for Lincoln or London, Sennacherib, the Kurds, or the Seine. The volume is well got up, and the printing is admirably clear.

In the volume entitled "Acts of the Apostles" (Clarendon Press; Frowde), Dr. W. M. Furneaux offers the reader who is acquainted only with the English language an elaborate and trustworthy commentary. In a brief introduction designed to set forth the presuppositions upon which the exposition rests, the Dean of Winchester frankly admits that all parts of the book are not of equal historical value; that some incidents may have been duplicated, and that others betray traces of legendary accretion. These historical difficulties, however, do not prevent the assumption that the author is Luke; but they do intimate rather strongly that the work was planned and written, not during the lifetime of Paul, but in the latter part of the first century. The commentary proper is furnished with an independent translation, which is itself an interpretation. The notes may be read consecutively without weariness. Though the editor has drawn from many authorities, all duly indexed, he is not a compiler, but an original and withal judicious commentator. The fact that he writes for readers who know only the English tongue explains the omission of references to such German commentaries, not translated into English, as Overbeck, Wendt, and Holtzmann.

The twelfth volume of the Camden Miscellany (Camden Society, 3d ser., Vol. XVIII, London, 1910) contains four groups of documents relating to English history. "Two London Chronicles," edited by C. L. Kingsford from the Stow MSS. in the British Museum, describe with laconic quaintness the penalties inflicted for "sellyng of Martyn Leuthar's bokes," for heresy, counterfeiting, murder, treason, and other common crimes of the reigns of Henry VIII and Elizabeth, as well as some sermons and other edifying public events. It is rather amusing to compare these chronicles with that of Stow himself and find that the famous author of the "Survey of London" was engaged in slavishly copying these identical chronicles at the very time when he was censuring Grafton for having made an unfair use of his own printed work. The second document is a confident seventeenth century eulogy of that so-called Hector Britannicus, Sir John Digby. Sir John is remembered not merely as the brother of Sir Kenelm, but as one of the ardent champions who fought and died for Charles I in the Civil Wars. This is followed by an Iter Bellicosum, an eight-page description of the Battle of Sedgmoor by an eye-witness; it includes an apparently accurate list of prisoners which the writer, a drummer, jotted down on the head of his drum. The volume closes with several valuable agrarian documents of the seventeenth century, edited by the veteran economic historian, Dr. William Cunningham. These report with vivid minuteness the customs and regulations which governed the mutual relations of copyholders and other persons entitled to share in the enjoyment of the common lands in a couple of villages near Cambridge, England. They illustrate the interesting system of collective management of commons which was once generally prevalent, but has now died out. Its democratic town-meeting machinery, however, was transplanted to Massachusetts, and in the new atmosphere and new surroundings came to play an important part in the constitutional and political history of the United States.

Volume XIX of the Camden Society (3d series, London, 1910) is devoted to Oscar Browning's edition of the dispatches sent home to England by the English Ambassador at Paris in the years 1788 to 1790. Before the advent of the electric telegraph, the submarine cable, and the modern newspaper, a foreign ambassador had, as these dispatches bear witness, a somewhat more important and independent position than his twentieth-century successor. The eighteenth-century ambassador also enjoyed more importance as a gatherer and transmitter of general news than is possible when he has to meet the competition of modern news-agencies. Thus, these dispatches from Paris, aside from their value as to the relations between France and England and European politics in general, give a good summary every few days of the great events in the early months of the French Revolution from the point of view of a detached and intelligent observer. Incidentally, they tend to show, as Mr. Rose has recently pointed out, that Pitt personally had a strong desire for friendship with France.

The "Essay on Hinduism, Its Formation and Future" (London: Luzac), by Shridhar V. Ketkar, which forms the second volume of his "History of Caste in India," is in all respects a most disappointing book. The common charge that the Hindu mind is devoid of the historic sense will only be confirmed by such productions as this, nor will the author's superficial views on sociology tend to mitigate the severity of this judgment—his chapter on the Theory of Social Evolution would be ludicrous, were it not pathetic. The very title of the book disguises the real purpose of its author, who is simply and solely polemizing on behalf of Vedantism, to hasten the day when, as he hopes, the entire world will accept this somewhat vapid pantheism. Thus all mankind will be Hinduized. The process is so simple! Mohammedans and Christians (the chief bugbears of Dr. Ketkar) will renounce their "theophraties," join some such body as the Arya or Brahmo Samaj, and adopt a few Hindu ideas, besides renouncing the hideous sins of eating meat and drinking wine. They will then declare themselves to be Hindus, and they will *ipso facto* be Hindus, provided no native-born Hindus are rude enough to contradict them. True, they will be only low-caste, but they ought to be thankful that they are any caste at all. These "theophraties," if we may believe Dr. Ketkar, are very bad, indeed.

> Once [the reviewer, and, perhaps, some others, would be very glad to know just when] the entire Hindu civilization was in process of spreading itself over the whole world, and was going to accomplish a unification of civilizations in the world. But this course was arrested by the rise of "religions," the great dividers of mankind. These two Semitic religions sharply differentiated themselves from each other and both from the rest of the world, and thus made mutual understanding of men more difficult (p. 157).

The "Future of Hinduism," as outlined by Dr. Ketkar, has all the attractiveness of sugared gruel, although the past history of India lends little support to this figment of his imagination. Equally superficial is his attitude towards religion. By an amusing series of quibbles, Dr. Ketkar demonstrates very conclusively (to his own mind) that the Hindus have no religion. The falsity of this is self-evident, and so little comprehension does he have of Hinduism itself that he regards as ignorance any effort to distinguish between it and animism. In fact, anything and everything is Hinduism to him which

> has not fallen from Hinduism; that is, taken up the membership of any community like Christian or Mohammedan, which is not considered as a Hindu community (p. 33), . . . and the one and only mark of heterodoxy is the "formation of new tribes with a separate social existence with some theological doctrine, wise or stupid, at the basis" (p. 104).

Happily, two chapters, on Internal Ties and on Modern Social Conditions, stand apart from the general level of the book. Yet the material given in them, where the author is stating actual present-day facts. and not theories and prophecies, is to be found equally well (and usually better), in almost any standard work on India and its religions, and is really a mere commonplace to all students of the subject.

As A. Hilliard Atteridge says in his "Joachim Murat, Marshal of France and King of Naples" (Brentano's), the career of this soldier-monarch "is one of the romances of history." One rereads the record of the events in which he figured, curiously alert to discover in the man himself some adequate explanation of his extraordinary rise from the rustic seminarist, wearing the soutane, and from the military ranks, to the highest dignities of the Empire, and to a royal crown. And again one is disappointed. Purely physical courage he had, and a certain personal magnetism which made him a leader on the field of battle. But outside of a limited administrative ability, this is about all. For the rest, it is clear that he owed everything to circumstances—and that he never recognized this fact. Fatuousness and vanity are, indeed, the dominant traits of his personality. They are seen to perfection in a veritably simian passion for finery. More than any one else in that bedizened epoch, he compromises the grandeur of the Napoleonic régime by a touch of the grotesque. Napoleon himself must have felt this on one occasion at least, when, at Tilsit, he told Murat that he looked like a circus rider and ordered him to go and put on a general's uniform. And yet it is impossible to deny that in Baron Gros's painting of the Battle of Eylau—a picture that Mr. La Farge called one of the great battle pictures of the world—the presence of Murat striding his steed in semi-oriental splendor is responsible for no small share of the imaginative strangeness or fantasy that pervades the scene. Transported thus to a world of dreams, Murat can have his theatrical effectiveness as a symbol. He stands, ideally, for certain elements of legend and history in the background of his master's revery of world-wide conquest and of an empire reminiscent of all empires that had ever existed from the dawn of time. It is only in the lowest sense that Murat can be regarded as a hero of any kind.

The Rev. Samuel Macauley Jackson, editor of several encyclopædias of religious knowledge, died just a week ago. He was born in 1851. As an author he is remembered especially for his "Huldreich Zwingli" in the Heroes of the Reformation series.

The Rev. Samuel Fitch Hotchkin, registrar of the Episcopal Diocese of Pennsylvania, and a writer, died on Thursday of last week, at the age of seventy-nine. He was a graduate of Trinity College and of the General Theological Seminary. Among his books are: "The Unseen Christ," "The Living Saviour," and memoirs of Bishops Stevens and Otey.

Science

The intimate relations of geography to the state and the Church are very clearly shown by Lord Curzon, Mr. Asquith, and the Archbishop of Canterbury in addresses reported in the *Geographical Journal* for July. Lord Curzon emphasized the "absolute revolution" between the study of geography when he was a boy and what it is now. Dwelling upon its present significance, he said: "The time has long gone by when a Secretary of State for the Colonies—was it Lord Palmerston?—upon being appointed to the Colonial Office, had to ask the secretary to open an atlas to show him where those 'something' places were. It is no longer possible to sign away, or give away, great and splendid dominions like the island of Java through the gross ignorance or the culpable ineptitude of Downing Street. Our present administrators live in an atmosphere of maps, and if you go down to a public office you will see that the most important decorations are the portraits of the present incumbents' predecessors—which I believe they contemplate with a certain gloomy satisfaction—and the maps which hang upon the walls. I dare say that the Prime Minister spends more time in consulting large-scale maps than he does in reading the speeches—I was going to say of his opponents, but I think I will say of his colleagues."

In reply, Mr. Asquith dwelt on "the enormous services the Royal Geographical Society has rendered, both to the expansion of human knowledge and to the building up and consolidation of this great Empire." The Archbishop spoke particularly upon the simplification of the work of the Christian Church throughout the world through the investigations of the geographers.

"Cotton Growing in Egypt" is a report by Arno Schmidt, secretary of the International Cotton Federation, who was sent to Egypt to prepare an itinerary for a tour of investigation by members of the Federation. It contains much valuable information derived from personal interviews with the leading cotton experts in the country and from a careful inspection of some of the cotton fields, gins, and presses. It is interesting also to learn from it that the new Agricultural Department is seriously working to enlarge the crop and improve the quality, and that Lord Kitchener himself is taking a large personal interest in the matter. There are sixteen illustrations and three diagrams, including a map showing the percentages of the area under cotton cultivation.

Interesting experiments during early spring of the present year were made in California for protecting almond trees from frost. These trees (California "papershell"), being in blossom in February, were covered with weather-proof manila, left on for a day and night, or longer. In a ten-mile breeze it took three men an hour to cover one tree, and it was also shown that the cover could not be put on after dark. With a temperature of 19 degrees Fahrenheit outside, the thermometer showed 24 degrees within the cover, a difference not as great as was expected. In short, while the loss of heat was retarded by the cover, it was not sufficiently decreased to warrant extensive use of the method in its present form. Evidently the idea needs further study and development. Careful statistics have been compiled with reference to the danger point of peach buds, but there should seem to be no set of similar experiments relating to almonds. Temperature of the air is not always that of the tree, and varying heights above the ground may also give different results. The freezing point of water is not necessarily

22 degrees Fahrenheit, and it may not be the same in all plants. Re-warming after exposure is an important point, and it took place too rapidly in the experiments described. The cover must be improved to prevent a more effective insulation: Perhaps it should be a double cover with intervening air space.

George Massee, assistant keeper of the Herbarium at the Royal Gardens, Kew, Eng., has taken advantage of the new processes of color printing to publish forty plates of mushrooms and the like, with about eight figures of fungi on each plate. His book, entitled "British Fungi" (Dutton), has a general account of the larger fungi, with their classification and identification, and text descriptive of the species. It has also a short statement in regard to lichens. In general the photographic copies are good, and many of them are far above mediocrity. Only practical use of the volume in the field can show whether mushroom-lovers in this country will be able to match our species by the pictures of these British forms. The trial is well worth while.

A book presenting to the intelligent reader one of the most modern tendencies in biological science is Czapek's "Chemical Phenomena in Life," in Harper's Library of Living Thought. Professor of plant physiology in the University of Prague, a doctor of medicine as well as of philosophy, and a skilled chemist, Czapek carries the reader through a clear and stimulating exposition of the relations of biology and chemistry to the discussion of chemical phenomena in the living matter. How far all this is from the botany of our childhood! Not a flower "analyzed," not a plant named, not a specimen embalmed in a fragrant herbarium. Analysis, but of matter by reagent and balance; names of substances, of elements and compounds, of colloids, gels, and crystaloids, of solutions, suspensions, and enzyms; specimens, if any, in vials and chemically pure.

The "Elements of Statistical Method" (Macmillan), by Prof. W. I. King, reads like a romance of common sense, general reasoning, and elementary mathematics applied to the use of statistics. Every educated person ought to read at least one such book. Most works on statistical method are intelligible to none but experts.

G. W. Evans's "The Teaching of High School Mathematics" (Houghton Mifflin), "The Teaching of Primary Arithmetic" (Houghton Mifflin), by Henry Suzzallo, and "First Journeys in Numberland" (Scott, Foresman), by Ada Van Stone Harris and Lillian M. Waldo, are all of them thoughtful and happy little essays belonging to the field of psychology, applied to teaching.

In "Junior Mathematics" (Frowde), by D. B. Mair, a course for beginners in algebra and geometry, one finds no list of definitions, no set of axioms or postulates, and no complete or formal demonstrations, the making or finding of these things being left for the pupil under guidance and suggestion; an excellent principle worked a bit too hard.

Dr. Maurice Howe Richardson, one of the foremost surgeons of this country, died at his home in Boston on Wednesday of last week. He was born in 1851, graduated from Harvard in 1877, was appointed demonstrator of anatomy in 1882, and since 1907 was Moseley professor of surgery. He contributed to "Park's Surgery by American Authors" and to "Dennis' System of Surgery."

Drama and Music

PLIGHT OF THE AMATEUR PLAYWRIGHT.

A recent court trial in New York, involving a well-known theatrical manager and an unknown writer of plays, has an interest other than that connected with the specific question at issue. Plagiarism is a difficult subject to deal with. It is hard to convict on the charge, even before the bar of public opinion. There is always the defence, and frequently it is a true defence, of simultaneous inspiration. The history of scientific discovery has famous instances of two men having hit upon the truth at the same time. There is no reason why this should not be true of imaginative literature, especially with the literature of the theatre, which is so much concerned with topics that are "in the air," and which has to deal with a fairly limited number of situations and devices. And even where plagiarism is proved, popular opinion has been educated to regard the crime as no crime at all, whatever the judges may say. The example of Shakespeare, of Molière, and of other men who were in the habit of taking their own wherever they found it, has served to establish the principle that literary peculation is justified by the use to which it is put. "Thou shalt not steal" does not hold in the history of the drama, if the stolen goods are converted into a product of higher merit.

Quite another phase of the dramatist's business is suggested by the law-suit to which we have alluded. The manager who is accused of borrowing an unknown contributor's ideas, has lost patience over the frequency with which such charges have been brought in connection with successful plays he has produced. No one, he complains, has ever gone to court to prove that he is the author of a play which has been a commercial failure. He has, therefore, determined to receive no more unsolicited manuscripts. The game is not worth the candle. The genius for whom we are all waiting to emerge from obscurity and create an American drama, refuses to appear. It is only a waste of time to plod through the thousands of manuscripts that pour into every theatrical manager's office, month in and month out. And, as the testimony in the present case shows, the manager in question has really been acting up to the decision he has just announced. Manuscripts that have never reached his hands are sent back by courteous secretaries, who regret that, after careful consideration, etc., the manager is forced to conclude that Mr. Smith's excellent play does not quite fall in with the requirements, etc. Thus the sheet of paper which the aspiring dramatist carries about with him, drawing consolation out of its vague politeness, is in reality a hoax and a delusion.

Now, even to such procedure there would be no reason for making serious objection, but for one thing. A man of business may reject a "proposition" on any terms he pleases. If an unwelcome book-agent besieges the office door, it is proper enough to make him go away, by any lawful means. But the unknown dramatists who flood the manager's offices with their manuscripts are, in a very important sense, not uninvited contributors. The cry of the theatrical manager for new plays continually echoes in the newspaper columns. When a play-producer yearns for a bit of publicity, he will usually take up the unknown dramatist. He will announce the most elaborate plans for the unearthing of hidden genius. He will speak of the army of professional readers whom he keeps busy on the hunt for new plays. In his most expansive moments, the manager will offer, or profess to offer, cash bonuses, free hearings, free trials, the free use of his theatres to any man of promise. He is willing to take even less than a play. Give him half a good play, and he will write the other half himself. Give him an idea with dramatic possibilities in it, and he will develop it himself. Fortunes are to be had for a good third act, for a good scenario, for a good single situation. Like the second-hand clothing dealers, there is no stock, of however little value, on which they are not prepared to make an offer.

All this is, of course, only skilful advertising. The wise do know it. But why blame the thousands of writers, bad and not so bad, hopeless and not so hopeless, who take all these fine professions seriously and hasten to enrich the United States Post Office? To turn round and sneer at this wistful army, as this particular play-producer has done, is unjust. It is a little more than unjust; it is misleading to spread abroad the impression that you will read everything that is sent to you, and then read nothing. This is quite aside, as we have said, from the question of plagiarism. In fact, if the practice of not reading plays is universal among managers, then the charge of plagiarism, of course, falls to the ground. If managers were really frank about this business of the unknown playwright; if, instead of dwelling on the amazing profits which await the successful author, they announced what the real chances are of an unsolicited manuscript's being accepted—the chance has been estimated as 1 in 10,000—they would do real good by effecting a notable reduction in the army of amateur playwrights whom the managers find so much of a nuisance and an expense.

David Bispham was one of the busiest of singers during the past season, putting to his credit no fewer than 170 appearances.

Caruso is studying the rôle of Wagner's Tannhauser, and hopes to sing it for the first time in Berlin next October. Lohengrin should seem more in his line; but he is a great enough artist, actor, as well as singer, to do justice to that extremely difficult rôle. His autumn tour in Germany begins on September 14 in Vienna, where he will appear three times. Munich and Stuttgart follow, and in October Berlin and Hamburg will have opportunities to hear him.

It will be easy sailing for Umberto Giordano if his opera, "Madame Sans Gêne," is produced at our Metropolitan next season, with a list of singers including Caruso, Farrar, and Amato. Giordano is not a great composer, but he is an Italian, and he is lucky. All Italian composers are thus favored at the Metropolitan. So are the German composers. The French are not. No great French singers are engaged at the Metropolitan, and French operas are given with inferior casts and conductors, for no other reason, apparently, than because two gentlemen from Milano do not, personally, like French opera. How much longer will the directors of the Metropolitan and the New York public tolerate this state of affairs?

Dr. Leopold Schmidt agrees with the Viennese critics that Mahler's ninth symphony is not the climax of his creative activity, as was the case with the ninth symphonies of Beethoven and Bruckner. It was Mahler's custom to file at his works till the day of the final rehearsal, and it is thought probable that he would have made some advantageous changes, especially in the second movement, the theme of which is rather commonplace. This movement, on account of its excessive length and comparative lack of interest, should be omitted altogether, or at least much shortened. It is not needed for the sake of contrast. The last movement was generally admired most.

As was to be expected, the renewed attempts of the Cosima-Wagnerites to persuade the German Parliament to make an exception to the copyright-expiration law and allow Bayreuth to retain its "Parsifal" monopoly, has called into existence a counter-agitation. By way of compromise it has been suggested most sensibly that, while that sublime work should be no longer withheld from the German nation at large, it should not be incorporated into the regular repertories, but given as festival performances on special occasions. That is what is done in New York, where "Parsifal" is never sung in the evening, but on certain holidays; and the plan has been found to work well.

Some years ago Finland's composer, Jan Sibelius, received a Government pension for life. It is now announced that the Czar has just made an addition to this of $500 a year. In the Scandinavian countries it has long been customary to aid composers in this way; among those who benefited by this wise policy were Gade in Denmark and Grieg in Norway.

Art

The Italians have explored a large necropolis at the ancient Roman town of Ola, near Tripoli, and have discovered twenty-one rock-hewn tombs containing many glass and bronze vases as well as earthenware cinerary urns.

At a recent meeting of the German Archæological Institute in Rome, Prof. M. Meurer read an important paper regarding the famous gold ornaments from the shaft graves at Mycenæ. He did not accept either the theory held by Schliemann that they were placed directly on the body of the dead, nor that advanced by Staïs that they were attached to the couches on which the dead were presumably placed; but made the interesting suggestion that they were used as decorations on anthropomorphic coffins, similar to those in use in Egypt. If his theory should prove right, we should here have another point of contact between the Egyptian and the "Mycenæan" civilization.

Interesting details of the discoveries made by Professor Garstang during his recent excavations in the Orient, at the head of the Hittite expedition of the University of Liverpool, have now been received. Work was resumed at Sakje-Geuzi, where excavations had been begun three years ago. A large mound, 160 feet high and 500 feet across, was found to be entirely artificial. Near the surface were unearthed splendid fortifications of Seleucid origin; lower down remains of the Roman and Greek periods; and at a depth of sixteen feet to twenty feet Hittite objects began to appear. Even forty feet below the surface Hittite buildings were discovered, these dating from about 1500 B. C., while those at a higher level belonged to the period of about 600 B. C. The Hittite houses of the eighteenth dynasty which were brought to light had been obviously destroyed by fire, suggesting that the place had been carried by assault, possibly by an expedition of the Pharaohs. Wooden verandas and roofs which had fallen between the still remaining walls and trenches could be traced. In a smaller mound near by was discovered a royal palace, where the local King-Priest lived; this palace was found in one corner of a regular enclosure, and was surrounded by a stout fortified stone wall. The chief result of the excavations was the recovery of the plan of the royal city and the discovery of some new sculptures. The expedition also explored the whole valley from Marash to beyond Antioch, and, among other things, located the royal cities of four or five petty kings.

The excavations carried on at Abydos by the Egypt Exploration Fund, under the direction of E. Naville, have led to some remarkable results. Work was concentrated on the "Osireion," a group of constructions originally discovered by Prof. Flinders Petrie. Here a passage was cleared, of which only the door had hitherto been known. It was found to have been cut in a mound of marl, the side walls being well preserved. The ceiling, which consisted of monolithic sandstone architraves about nine feet long, had been carried away almost entirely. On both sides were found chapters of the "Book of the Dead," with well-engraved vignettes. For a length of about fourteen metres the passage sloped downward, then it became horizontal again, and suddenly it came to an end. On both sides were wide openings which evidently were chambers, and in front a doorway with a huge monolithic lintel fifteen feet long. Behind this were two others of the same length and thickness, the whole forming a door in a stone wall of sandstone and red quartzite. Beyond this doorway seemed to be at least four more chambers, but only one could be traced and excavated. Except in the passage no sculptures appeared. On some painted scenes could be read the name of Meneptah. The excavators had hoped that the passage would lead to the Temple of Seti; the fact that it suddenly came to an end was therefore a surprise. At present no similar building is known in Egypt, and the questions raised by this discovery can only be answered when the work of clearing has gone further.

"Nature's Harmonic Unity" (Putnam), by Samuel Colman, N.A., edited by C. Arthur Coan, is an elaborate study of proportion in nature and in art. The method is geometrical. The demonstration of harmonic unity underlying plant and animal form, force, light, and sound vibrations, crystals and architecture is nothing more nor less than showing that all these phenomena may be graphically represented in their significant proportions by orderly derivation from the circle and the regular polygons. For example, the Parthenon front may be derived, as Jay Hambidge has shown, from the simple progressions of the circle and square. Mr. Colman plots it in several other forms. In fact, there could be no more striking proof of the fallacy of the method than that the Parthenon may or must result from any one of half a dozen elementary forms. An interesting diagram is that which derives the full face and profile of the Hermes of Praxiteles from a pentagon. The slightly heavier head of the Venus de Milo is born of a hexagon. All this sounds more absurd than it is. The geometrical webs are honestly made. Mr. Coan, the mathematical collaborator, vouches for the constructions and duly records in notes all slight errors, the greatest of which are artistically negligible. As to proving a geometrical basis for nature, this book merely shows graphically what is usually stated numerically. As a method of designing anything, these diagrams seem merely a confusing way of illustrating what is more simply expressed in numbers. For instance, Viollet le Duc's familiar statement that the cross section of the Cathedral of Amiens is based on a proportion of five to eight is far clearer than Mr. Colman's geometrical scheme. Returning to the Parthenon, it is evident that nothing really like it could be derived from the diagrams that contain it. These would conceivably establish the main proportions, but the great accents, the concealed curves in the columns and architrave—in short, all that makes the Parthenon what it is, could never be thus inferred. What this book offers is a graceful mathematical diversion, a method of saying elaborately to the eye what may often be said more plainly to the ear. The demonstrations are often ingenious, and may attract to the study of proportion some who might refuse the apparently, but not really more difficult, numerical approach.

The publishers of the well-known English periodical *Country Life* have, from time to time, collected and issued in separate volumes various series of articles on subjects connected with rural architecture and gardening. The most recent of these is a compilation entitled "The House and Its Equipment" (Scribner), made up of forty-four short papers on a variety of subjects relating to domestic architecture and gardening. Five of these articles are by the editor, Lawrence Weaver; the balance by various experts, among whom may be named Ernest Newton, Prof. Halsey Ricardo, J. A. Gotch, H. Inigo Triggs, C. H. B. Quenuell, Maurice Hird. The articles are non-technical and popular, too brief to be of particular service to architects, or to convey to the inquiring amateur any but the most elementary information on the subjects treated. These comprise such topics as Color, Plaster-work, Fireplaces, The Children's Attic, The Design of Grand Pianos, Sewage Disposal, Acetylene in the Country House, Garden Houses, and the like, arranged with no particular sequence or logical connection. The chief value of the book lies in its illustrations, which present and explain, far better than the text, the charm of much of the best modern English domestic architecture. Although some of the detail is peculiar to English practice and conditions, these illustrations are full of suggestions to the American architect and prospective house builder. They are beautifully reproduced and printed.

"John Lavery and his Work" (Dana Estes), by Walter Shaw-Sparrow, is a large octavo well illustrated both in color and monochrome. For the lack of variety in the work—Lavery is chiefly a fashionable portrayer of women—the author has offered a compensating vivacity, not to say flippancy. To the present writer the letter press was a considerable impediment to the enjoyment of the essential charm and rightness of the painting. Born in Ireland, fledged in Glasgow, eclectically trained in Paris, John Lavery has steadily and normally passed from honor to honor. All the desirable medals have come to him; his pictures are in thirty public galleries in five continents. This year the Carnegie Institute accords him an entire gallery at Pittsburgh. Nor can one grudge him his success. He has unaffectedly revived the straight tradition of British portraiture. To the obvious appeal of the grace of English womanhood his response is immediate and accurate. As Mr. Shaw-Sparrow rather tediously reiterates, Lavery is "chivalric" towards his fair sitters. Too much the gentleman to analyze them deeply, he is a sensitive appreciator of their moods and poses. One might say he has the gift of taking them at their best face value. The unfailing winsomeness of his work recalls his great predecessors of the eighteenth century. It would be absurd to admit that he has either the exquisiteness of Gainsborough or the stylistic authority of Sir Joshua, but Lavery does paint quite as Romney brought to date would have done. He is variously clever. His Morocco pictures, his decorations, his rare compositions, evince alertness and exceptional intelligence. But his portraits of women remain his most significant work. The rare merit is his of combining cleverness with simplicity. His dexterity seems never a self-assertion but a homage to the fascination of his sitter. A great popularity could hardly be more honestly grounded. We could wish a more sober and critical account of his career, but are glad to have, on any terms, so adequate a pictorial representation of a life work still actively in the making.

Finance

"PROSPERITY" AND THE PRESIDENTIAL CAMPAIGN.

Regarded from a calm and judicial point of view, there ought to be nothing especially surprising in the cheerful opinions which have prevailed recently concerning the general outlook, except the fact that the cheerful people should seem to believe that they had made a discovery. The general drift of affairs in the direction of better things has been plainly enough evident since the beginning of the year. It was recognized by the experienced observer, in the early months of 1912, that a very thorough process of liquidation and readjustment had been carried out in this country, that business had been brought to a sound and conservative basis, that our position in international finance had become that of creditor rather than debtor, that we had abandoned a mass of extravagant and fantastic ideas which had been leading our markets into trouble, and that we were in a position to get the benefit of any really favorable turn in our commerce and agriculture which might fall to our lot. Since subsequent events have moved smoothly in such directions, it was reasonable to expect that this cheerful attitude would continue.

That it was so frequently reversed or abandoned, during the recent months, may doubtless be explained as a tribute to the traditions of politics. Nothing is more difficult to shake than the belief that business must be injured and prosperity arrested by a Presidential campaign. The record of steady improvement in such directions, presented by 1908 and 1904, is not accepted as anything conclusive; indeed, one seldom hears any reference to those occasions. A Presidential contest, *ipso facto*, must stand in the way of better times.

This popular view has an element of humor in it. Not only the American markets, but the markets of Europe which discuss American affairs, have been gravely setting forth, for months, the view that nothing of real improvement can occur in American business prosperity until after the Presidential vote; but that after the polls are closed and the result announced, the "boom" will begin at once. This prediction, it should be observed, makes no account of what that result may be. Taft, Wilson, or the third candidate may carry off the honors. No matter; all that business is waiting for is to have the vote counted.

To any one not familiar with the habits of financial prophets, there would be something naïve about this. At ten o'clock in the morning of Wednesday, November 6, Prosperity will suddenly appear on the scene, but until that hour the markets are not to behave as if it were coming. Financiers are to talk with one another, during August and September and October, as if nobody could be sure of the fundamentals of prosperity until he knew what the voters had done; but they are always to add that, whatever the voters eventually do, it will be greeted by enthusiastic forward movements in the markets.

This would not seem altogether in line with Wall Street's much-vaunted practice of "discounting" the future, and, in fact, it is open to considerable doubt whether Wall Street and the world of business have been in the habit of acting on such theories. This attitude of the prophets may be in line with the attitude always assumed by the political orators while the campaign is under way—with Mr. Taft's assurances that "political and economic revolution and business paralysis" would inevitably follow election of Mr. Wilson; with Mr. Roosevelt's even louder assurances that all hope of freedom for the American people must be laid aside unless he is chosen to look after its preservation. There will be people—say in the late weeks of October—who will wake up at night with dreams of business insolvency and of political fetters, and no doubt even Wall Street is affected by such popular imaginings; for the Stock Exchange, even when it is not frightened itself, will often take account of the possibility of fright among other people.

Yet it is never quite easy to find the man who is adjusting his personal affairs with a view to the coming catastrophe, and the story on such occasions usually is, that the Stock Exchange and the mercantile community go on doing, in the face of the campaign, exactly what they would have done in a political off-year, and continue to buy securities or merchandise in a good season, or to sell them in a bad one, even while observing across the counter, to the party of the second part, that no one can know whether to buy or sell until after election day. As a rule, the only tangible result of this performance is that when the electoral news has been at last announced, a belated public rushes in with the firm conviction that the whole economic outlook of the country has been changed. When that happens, one is also apt to see the people who had been making their bargains a month or two before election, reversing their own position and taking their profits as if all the predictions of a "post-election boom" had been unfounded. When asked to explain such action on their part (as in 1908 and 1904 and 1900) they will usually reply that trade and finance had not waited for the November vote to begin improvement and had not been disturbed by the political contest, and that the stock market had been paying just as much attention, and no more, to the "political argument."

A PRISONER OF WAR IN VIRGINIA (1864-5)
By George Haven Putnam
Adj. and Bvt. Major, 176th N. Y. S. Vols.
Cr. 8vo. With 5 illustrations. 75 *cents net. By mail* 85 *cents.*

"It is rarely that the House of Putnam, which has a peculiarly wide and varied output, has given to the public so interesting a book. Major Putnam's experience was in itself unusual. There are now living few men who passed through one like it, and perhaps none who could recount it in so satisfying a manner. . . . The most striking feature of the Major's narrative is the humane spirit in which it is told. . . . It is well for the citizens of to-day, to whom the war for the Union is but a matter of written history, to realize that but for the service of men like Major Putnam there would have been no country such as ours now is in which to live in peace and security."—*N. Y. Times.*

G. P. PUTNAM'S SONS
NEW YORK **LONDON**

The Evolution of Sea Power
By P. A. SILBURN, D.S.O., Member of Parliament of the Union of South Africa, author of "The Colonies and Imperial Defence," "The Governance of Empire," etc. 8vo. $2.50 *net.*

The definite object proposed by the Author is an examination of the growth of Sea Power from that of the Phœnicians to that of the maritime nations of the present day, placing in relief the part Sea Power has taken in the delimitation of territory among the races of the world the determining influence it has exercised in the rise of Republics, Kingdoms and Empires; an attempt to show, where such is possible, the disaster which inevitably follows the neglect of the general principles of Sea Power.

Constitutional Government in the United States

By WOODROW WILSON

12mo, cl., pp. vii+236. $1.50 *net, by mail*, $1.62.

The chapters are: What is Constitutional Government? The Place of the United States in Constitutional Development; The President of the United States; The House of Representatives; The Senate; The Courts; The States and the Federal Government; Party Government in the United States.

The book, according to the author in his preface, is not intended as a systematic discussion of the character and operation of the Government of the United States, but is a presentation of some of its salient features in the light of a fresh analysis of the character and operation of constitutional government. The hope is further expressed that, for this reason, the book will be found to be serviceable in the clarification of the public view as to policy and practice.

JohnBrown: ABiography Fifty Years After

By OSWALD GARRISON VILLARD

SOME TRIBUTES TO THIS REMARKABLE HISTORICAL WORK.

Philadelphia PUBLIC LEDGER. "A tremendous book, more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesman Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with a great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

PORTLAND OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the Topeka CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The NORTH CAROLINA REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy, and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able even to add anything of importance to Mr. Villard's collection of material or to better its interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

Third Edition.

Fully illustrated with portraits and other illustrations. With copious notes and bibliography.

International Modern Language Series

Corneille's LE CID

Edited by COLBERT SEARLES, Associate Professor of Romanic Languages, Leland Stanford Junior University.

Just Published. **40 cents**

This edition aims to assist the student in an appreciation of the work as a piece of literature and as an historical and social document.

Following the text of the play is an account of the quarrel of the Cid as an introduction to the Examen which contains the poet's reply to his critics. The Introduction gives a short account of the poet's life; a discussion of the French drama before "Le Cid"; a summary of Guillen de Castro's Spanish original; and a brief description of the theatrical and social environment in which "Le Cid" was produced. The vocabulary is adequate. The notes are given up to the essential points in syntactical and literary historical comment.

The Western Theological Seminary

N. S., Pittsburgh, Pa.

Founded by the General Assembly, 1825.

A complete modern theological curriculum, with elective courses leading to the degree of B.D. Graduate courses of the University of Pittsburgh, leading to degrees of A. M. and Ph.D., are open to properly qualified students of the Seminary. Exceptional library facilities—34,000 volumes. A new dormitory, equipped with latest modern improvements, including dining-room, gymnasium and social hall, is now ready for occupancy. Next term opens Sept. 17, 1912. For information apply to Pres. James A. Kelso, Ph.D., D.D.

*THE URSULINE ACADEMY, A HOME-*School for Girls, delightfully and healthfully situated on the outskirts of Middletown, New York, also accepts young ladies and children during the summer months, and carefully provides for their protection and comfort. Students who wish to cancel College or High School conditions will find Summer Courses of Study provided. Terms on application. THE URSULINE ACADEMY.
Middletown, New York.

PENNSYLVANIA, Bryn Mawr.

The Misses Kirk's College Preparatory School

Prepares for Bryn Mawr and other colleges. Certificate privileges. Number of pupils limited. Special schedule arranged for each. Percentage of pupils who have entered Bryn Mawr College unusually large. Gymnastics, outdoor sports. 14th year opens Oct. 3, 1912.

Morristown School Morristown, N. J. College Preparatory Boarding School for Boys. Small classes. Supervised sports; new gymnasium. Lower School for boys 10 to 14. **Advisory Board**—President Hibben, Princeton; Dean Hurlbut, Harvard; Rev. Anson Phelps Stokes, Jr., Secretary of Yale; Prof. Hallock, Columbia; President Pritchett, Carnegie Foundation.

THE BRIARCLIFF SCHOOL FOR LITTLE GIRLS

A boarding and day school for girls under fifteen. Address
Mrs. FRANCES MARSHALL, Principal.
Briarcliff Manor, N. Y.

NEW YORK LAW SCHOOL. **Day School, 174 Fulton St. Evening School, N. Y. City.**
"Dwight Method" of instruction. Location near the courts and lawyers' offices. High Standards. Send for catalogue. GEORGE CHASE, Dean.

BETHLEHEM PREPARATORY SCHOOL, Bethlehem, Pa. Prepares for leading colleges. Catalogue, H. N. FOERING, B.S., Principal.

*THOROUGH AND EFFECTIVE PREPARA*tion for college by an experienced tutor. Highest references. WALTER B. WATERMAN, A.M., 214 Boylston Street, Boston, Mass.

GERMAN PROFESSOR, FOR MANY YEARS in the same position, contributor to journals and editor of text-books, desires a change. Subjects besides German: French (including Old French), Italian, Latin, Greek, Old English. Address M. N. O., care of *The Nation.*

THE FISK TEACHERS' AGENCIES.
EVERETT O. FISK & Co., Proprietors.

2A Park St., Boston	1845 U St., Washington
156 Fifth Av., New York	610 Swetland Bd., Portland
814 Steger Bd., Chicago	343 Douglas Bd., Los Angeles
920 Sav. Bk. Bd., Denver	345 Wright Blk., Berkeley

Send to any address above for Agency Manual.

Harlan P. French, Prop. Vincent B. Fisk, Mgr.
THE ALBANY TEACHERS' AGENCY knows how. Twenty-one years of successful experience in bringing together good teachers and good schools. 81 Chapel St. Albany, N. Y. Ask for bulletin 20 and see for yourself.

Dr. Esenwein

Short-Story Writing

A course of forty lessons in the history, form, structure, and writing of the Short-Story, taught by J. Berg Esenwein, Editor Lippincott's Magazine.

Over one hundred Home Study Courses under professors in Harvard, Brown, Cornell, and leading colleges.

250-page catalog free. Write to-day.

The Home Correspondence School, Dept 284, Springfield, Mass

WILHELM TELL, Act 1. By SCHILLER

Four Complete (juxtaposed) Texts Always Visible:
1. Fonetic (alfagamic) German
2. Ordinary (romanized) German
3. Word-for-word English
4. Free English (verse)

IDEOFONIC

Texts for Acquiring Languages

By ROBERT MORRIS PIERCE

Editorial Critic: GEORGE HEMPL, of Stanford University

265 pages. *Cloth* 50c, postpaid 60c; *paper* 25c, postpaid 31c

LANGUAGES COMPANY, 143 W. 47th St., New York

The Nation

NEW YORK, THURSDAY, AUGUST 15, 1912.

The Week

The Senate vote, 44 to 11, in favor of making the Panama Canal free of tolls to American vessels engaged in the coastwise trade, is a greater disgrace to this country than would have been a naval defeat in the waters off Colon. We say this, because it is our firm belief, and we think it was conclusively shown in the Senate by the speeches of Root and Burton, that this action is in clear violation of our treaty with Great Britain. It certainly is in flat disregard of the letter of that treaty, and it runs counter to its whole spirit. We induced England to surrender her right to joint control of the interoceanic canal by making to her certain promises, and one of these promises we now propose coolly to disregard. It is said that the matter will be referred to arbitration at The Hague. But the same vote that sanctioned the violation of the treaty will refuse to submit to arbitration the question whether we have violated it. To do that it would be only necessary to violate another treaty! We have agreed to submit to arbitration disputes involving the interpretation of a treaty, and we have besought the whole world to note our virtuous example and to follow it, but, of course, if we are now going to act as if treaties did not exist, no such covenants will bind us for a moment. This was made perfectly clear in the Senate debates. Senator after Senator bluntly asserted that the whole thing was a question of stark national power, and that we should not consent to arbitrate it, treaties or no treaties.

Gov. Wilson's speech of acceptance last week has been described by some as intensely radical; others think it unduly conservative. His description of the existing evils that cry aloud for remedy is clear and firm. The tariff as the *fons et origo* of special privilege; the Trusts as the destroyers of competition, and the arbitrary makers of prices to the consumer; the danger that what is called a "Money Trust" may unawares get its grip upon the nation's commerce and industry—all these things Gov. Wilson speaks of in strong and unsparing language. But there is nothing of the haste and rage of the leveller and remodeller about him. When he comes to speak of remedial measures, we hear the cool and sure-footed man of business, who knows that legislation takes time and must be born of something more than a theory. His definite goal is all the while there—and it is to cut away ultimately every form of privilege, every concealed right of the few to tax the many, whether under the disguise of a tariff or a combination in unlawful restraint of trade—but he is pressing forward with due consideration of everything involved, and never in a way to alarm or destroy.

The old superstition that men of letters cannot be men of affairs dies hard. John Morley gave it one buffet more in a speech which he made a few days ago. "I want to ask you," he said, "to banish from your minds the ridiculous idea that, because a man knows and writes books, he cannot know men, that he can not have the habits of public business, and cannot render useful service in Parliament, in Cabinets, and in the great departments of state." He went on to say that five or six of the last seven Prime Ministers of England had made a mark in the writing of books. Woodrow Wilson has also; but before anybody sneers at him as an amiable doctrinaire, it would be well to ask if he has not likewise made a mark for sagaciously judging men and events, and for displaying both political acumen and executive vigor. The Hon. Jim Smith of New Jersey had rather a patronizing opinion of "the Doc.," as he called him, until he discovered that the recluse from the shades of the academy was more than his match for initiative and determination even in the realm of practical politics. Mr. Wilson's speech of acceptance is another proof that he can combine the charm and freshness of style that to some may seem academic with practical knowledge of affairs.

It would be unfair to deny that there was a certain impressiveness about the second Chicago Convention. Though a very haphazard body, the members of which were virtually self-elected, the very fact that so many people came together from all parts of the country testified to their earnestness and their faith. And then there was the considerable number of enthusiasts and idealists and social reformers who have been swept along by the third-party movement. In it they think they see their dreams coming true. Their broad social programme they imagine that they are already on the eve of realizing. This is pathetic, but it is not a thing to fling a scornful word at. These men and women eaten up of zeal for the cause of social reform are doubly misled. They are deceived, first of all, in thinking that the kingdom of heaven can be taken by violence, or that inveterate evils can be swept away in a night; and they are most of all deceived in pinning their faith to the greatest egotist and self-seeker of the age, in whom there is no truth or loyalty to cause or friend. What adds a poignant touch to the whole is the well-known fact that many of these dreamers about a new heaven and a new earth really have no confidence in Col. Roosevelt. They know him as capable of any betrayal which his ambition seems to dictate. Yet they think they can safely use him as a means of furthering their reforming projects, and then drop him when they like. This illusion of the social reformers who have gone with Roosevelt is more sorrowful than blameworthy—though it is plainly the latter—and is certain to be followed by a tragic awakening.

It is a trifle amusing to read that Gifford Pinchot is to take the stump for the Third Party on the specific ground that it alone can be trusted to stand up for the true doctrine of conservation. The joke of this lies in the fact that the conservation plank of the Bull Moosers is one of the most wishy-washy and facing-both-ways of any in their collection. Those who profess to be in the secret declare that Mr. Pinchot did, indeed, draft a most thorough-going conservation plank, calling in the stiffest way for centralized control at Washington of all our unusual national resources, but that the Colonel edited the life out of it. At all events, the form finally adopted is a sad departure from Mr. Pinchot's known ideas.

Evidently Mr Roosevelt was in one of his most "practical" moods when he rewrote this part of the platform, and decided to give way to his Western adherents who hate conservation, and desire to get their hands as quickly as possible upon the remaining forests and agricultural and mineral lands. Hence the high resolve of the platform to "protect the national forests without hindering their legitimate use"; to "open" to the "genuine settler" "agricultural lands in the national forests"; and to "lease the public grazing lands under equitable provisions." All this is obviously intended to mollify the impatient exploiters of the Northwest. The new Roosevelt conservation policy is also very tender of the rights of the States in this business. One passage is peculiarly significant. It speaks of "natural resources" still under "State control," and goes on to say that they can be more "wisely controlled and utilized if held"—how? By the national Government, as the argument clearly calls for, and as Mr. Pinchot is known to believe? Oh, no, but "held in the public hands"! That might mean anything, and was almost certainly put in by the Colonel to placate the mountaineers and grazers who demand that the States shall control.

This is the time to hit the civil service. Everybody is busy with politics; Congress has tired everybody out, and the various squabbles at Washington provide a good cover for all sorts of schemes. Hence, besides the vicious project for a seven-year tenure of office, Senator Pomerene has smuggled into the Sundry Civil Appropriation bill an appropriation of $300,000 for additional clerks to be appointed outside the Civil Service law. The plan is obvious enough: 250 temporary employees are to be put on the Government payrolls for a year—a nice little collection of jobs for the spoilsmen in the middle of this Presidential campaign. There is not the slightest excuse for this, for, as *Good Government* points out, the Federal Civil Service Commission is ready and able to supply eligible persons who have passed satisfactory examinations. But that is the last thing to concern a Senator. Temporary appointments of this character, outside the rules, in 1898, demonstrated in more departments than one their wastefulness and inefficiency.

Kansas and Oklahoma have chosen a strange method of celebrating the birth of a new party. In Gov. Stubbs's State there was a fine chance to hit a reactionary head on the shoulders of Senator Curtis, who was running for an endorsement for reëlection. Curtis is so lost to all sense of shame as to be the Taft leader in Kansas. Opposed to him was the patriotic Stubbs, seeking elevation from Topeka to Washington. One would have thought that there could be no question of the result of such a contest. Yet the armies of the Lord were beaten to a frazzle in the popular vote, and only the vote by legislative districts saved Stubbs from retirement to private life. The significant thing about the Kansas primary is its ominousness for November. If this were 1904, with Parker opposing Roosevelt, the Colonel could afford to give Taft half of his vote. But Bryan polled 161,000 to Taft's 197,000 four years ago. It does not require much figuring to find how small a portion of his vote in 1908 the President must hold this autumn in order to make the State Democratic.

"Pidgin" English has seen its best days, if we are to believe the *North China Herald*. The time was when this jargon was almost a language in itself, and one that it was not at all easy to learn. Now it approximates ordinary English. There are thousands of educated Chinese whom no one would dream of addressing in "pidgin," and even the number of house and office boys who can understand simple English is increasing. This is hardly to be wondered at, and hence the proposal is made to go the whole length, and abolish "pidgin" altogether. Unless linguistic changes are more expeditiously made in the Orient than among us, however, this will be a very difficult process. Moreover, why should it be regarded as necessary, seeing what a few decades have done in the direction of dropping it for the genuine English? This consideration is enforced by the attitude of the Chinese Government, which is more and more insisting upon courses in English for Chinese students. It looks, indeed, as if English were to be the business language of the future in China. French and German, its natural rivals, have come into the field too late to be serious competitors.

The services of William J. Burns in capturing criminals are insignificant in comparison with his services in feeding the imagination of a great people. Yesterday he was telling District Attorney Whitman all about the underworld in New York city. To-day he informs a State's Attorney of Maryland whom he should prosecute for a recent lynching. To-morrow he will lay before the Cabinet of Hayti a map showing the series of events that culminated in the burning of the palace and the death of the President. But this ubiquity is only one element in his appeal to the newspaper-reading public. Of even greater interest is his detachment from the ordinary and official forces to which we have committed our lives, our fortunes, and, as now appears, our sacred honor. The ludicrous contrast which the creator of Sherlock Holmes was always drawing between him and the representatives of Scotland Yard comes close to being true now and then, as between Burns and the local detectives. A Baltimore police captain, indeed, might well figure in Conan Doyle's next story of Holmes. This worthy actually penetrated the disguise of the Burns detectives, who politely declined his offer of assistance. But Burns's chief hold on the popular mind is his unvarying success. The mere suspicion that he had entered the Baltimore City Hall aroused consternation in every office situated there. He has revived the dying legend of the omniscient sleuth.

The action of the Rutgers faculty and trustees in reference to the master's degree is one more manifestation of the revival of the humanistic spirit in our educational world. This degree, as the report of the faculty committee recognizes, has lost its individuality. Sometimes it is merely the reward for the completion of work in law, medicine, or divinity. More often it marks a step towards the doctorate, or is turned into a consolation prize for those who fail to attain the higher degree. In many colleges, it is the symbol of the finishing of a year of graduate study. Rutgers proposes to rehabilitate it, and at the same time to strike a blow for liberal study. The degree will require two years of work instead of one. Moreover, it will be sharply contrasted with the doctor's degree by a distinction of purpose between them. It will be regarded at Rutgers "as a degree to be given after extended liberal study, and not, as in the case of the doctor's degree, after intense application to one subject and to original research," and the studies pursued by the candidate for it will "constitute a distinct course by themselves, as they would if he were studying law or divinity." More specifically, the character of these studies is not to differ essentially from that of the elective courses generally offered to seniors; that is, they are to be "elementary and liberal." This innovation, following the effort of Amherst to increase interest in Greek, will be watched closely.

The loss of a Liberal seat in the bye-election at Northwest Manchester was generally expected—though not by so large a majority, above 1,200—but it is none the less a severe blow to the Asquith Government. For ever since 1906 Manchester, as, indeed, all Lancashire, has been regarded as a Liberal stronghold, absolutely committed to free trade, upon which it was hopeless for the Conservatives, toying with protection, to make an assault. But now another seat even there has been wrested from the Liberals. The result plainly witnesses to much dissatisfaction within the party, for it was the falling off of the Liberal poll by more than a thousand which gave the Tories the victory. Moreover, the vacancy itself was created by the resignation of Sir George Kemp, who alleged business reasons, but who thinly veiled his real motive, which was strong disapproval of some of the Liberal policies, especially those advocated by Lloyd George. In fact, it is the intense dislike of the latter's workingman's insurance law which is supposed to account for the undoubted loss of popularity which the Ministry has incurred. There have been also serious internal troubles in the coalition party. The Liberals and their Labor allies have almost broken. In two recent bye-elections they have put up rival candidates. Despite this, the Liberals won Henley, but the divided vote lost them Crewe. Now comes Northwest Manchester to add to the feeling of depression. The Tory rejoicings are, of course, a little exaggerated. There remains a large coalition majority in the Commons, which will take a lot of hammering before it crumbles away. And these reverses may induce the Government to order Lloyd George not to attempt to reform everything at once. But there is no mistaking the present strong drift against the Liberals.

To our grandchildren, the funny columns of our newspapers may seem sad enough, but they will find sufficient to regale them in the serious items. Five Englishmen, for example, go on a yachting cruise. One of them is an artist, who lands at an inviting spot and takes some photographs. Shortly afterward, the party is placed under arrest by a German officer, who charges them with "espionage." Things do, indeed, look black for them. They have taken pictures of landscapes that struck their fancy, but as every keen-witted Government official is well aware, these are identical with "topographical records of the coast,' to make which is almost equivalent to a declaration of war. Among these pictures are some of actual warships, which, by all the rules of international law, may appear only in illustrated Sunday supplements and magazines. The facts that the yacht bore no name or number, and was operated by the five gentlemen instead of by a paid crew, complete the case against them. Solemn diplomatic negotiations, the details of which will be buried in the secret archives, are undertaken. In the end, the Englishmen who disturbed the peace of mind of a group of German officers in order to make a British holiday, are released from custody, with we know not what warnings of the fate that will fall upon a second offence. The doors of the temple of Janus happily remain closed. And all the participants in the affair keep their faces straight.

New Zealand as "the land without strikes" is rapidly coming to deserve to be known as the land that does not enforce the law against strikes without notification. The main feature and chief strength of the Act of 1894 lay in provisions designed to prevent labor unions from striking without due notice, or employers from locking out their men as the result of a dispute about wages or other conditions of work. Heavy fines were to be imposed on either for violations of the law. In 1908 the Minister of Labor, reviewing the operation of the Act, stated that of all the fines inflicted upon employers, 88 per cent. had been paid, and in the case of the workmen, 84 per cent. But since then there has been a great change for the worse. First of all, the teeth were drawn from the law, by amendments doing away with the power of imprisonment, and also annulling the liability of the individual worker. Thereupon the unions became more and more defiant, ordered strikes in distinct contravention of the law—*e. g.*, the street-car strike in Wellington, last January—and counted upon immunity from prosecution owing to the weakness of the Government and the timidity of judges. The net result is, as summed up at the end of a long review by a correspondent of the London *Times*, that "the law has but few terrors for the intending striker, and he is openly encouraged by the revolutionary Socialists, who have captured some of the labor organizations and proclaim their contempt for law of any kind."

In a most interesting article in the Berlin *Tageblatt*, Major August von Parseval, the inventor of the Parseval airship, summarizes the financial results of investments in the airship and aeroplane business in Germany. The Zeppelin Company started out with above a million dollars of capital, in addition to gifts to Count Zeppelin of a million and a half from the country at large. It has had, however, to face the loss of four of its great ships. Thus, while it has been able to perfect its system and its craft, it has made no money. The Parseval Company has also been unable to pay any dividends. At first it undertook to produce only small airships, but the competition of the aeroplane on the one side and the Zeppelin on the other cut the ground from under its feet, and it has had greatly to increase the size and speed of its vessels. At the same time, the Major feels that its prospects are not bad; that it ought to be able to compete with the Zeppelin Company. Both of them suffer from the fact that they cannot sell their product outside of Germany. As for aeroplanes, there are many companies manufacturing them; some are prosperous, but not the Wright Company, which began business with six hundred thousand marks capital ($150,000). It was doomed to failure in advance because of the excessive price exacted by the Wrights for the use of their patents—$100,000.

RELIEF AGAIN VETOED.

President Taft's veto, for the second time, of a bill reducing the duties on wool and woollen manufactures, is a proceeding hard to explain and still harder to justify. He may be acting from a sincere sense of duty, but it will be difficult to make the country believe it. People cannot have failed to notice the suggestive articles which have appeared in the Boston *Herald* and other protectionist newspapers, confidently predicting a Presidential veto of any bill altering the wool duties, and frankly connecting it with the exigencies of the campaign. The intimation was clear that the protected manufacturers demanded a veto as a condition precedent to campaign contributions. We do not say that this has been a motive with Mr. Taft, but it has obviously been such in the minds of his campaign managers. The veto will go before the country violently under suspicion that it was written for political effect.

The President, to be sure, gives his reasons, but they are far from convincing. Last year, when he vetoed substantially the same measure, he had at least one argument: the Tariff Board had not completed its investigation of the wool schedule. Until it had done so, President Taft affirmed, he would not depart from the principle that Congress must wait for expert guidance in reducing the tariff. It seemed at the time that he should have been willing to give the consuming public the benefit of the doubt, especially when it was a case of cutting down high duties which he himself had pronounced "indefensible." But he preferred to side with the beneficiaries of Schedule K. He told us that we could get no relief till the report of the Tariff Board was in hand. Well, it came at last, and when it did, left the Payne-Aldrich rates on wool not a leg to stand on. It showed how duty after duty levied in Schedule K was prohibitive or extortionate. Without recommending any specific reductions—that was not its function—it presented a mass of statistics and analyses which rendered it certain that large reductions could be made without harming anybody but monopolists, and greatly to the advantage of the purchasers of clothing and blankets and carpets These conclusions the President now accepts, as he could not avoid doing, but by some mysterious process of deduction, he seeks to show that the duties proposed in the vetoed bill are a shade or a fraction too low here and there, and hence would mean injury to the wool-growers and disaster to the woollen manufacturers.

A brief comparison of the figures will show on what slippery ground the President chooses to stand. He declares that the reduction in duties on raw wool ought not to exceed 20 per cent. A bill making such a cut he says he should promptly approve. But what is the amount of the reduction which he vetoes? The percentages, based on the actual importation of last year, were given to the Senate by Mr. La Follette. On clothing wool, the *ad valorem* rate under the existing tariff figures out at 44.5 per cent. The duty which the President vetoes is 29 per cent. But 20 per cent. off 44.5 would leave the rate at 35 per cent. How does Mr. Taft know that this would mean safety, while 29 per cent. would mean ruin? Especially how does he know it, in view of the fact that at least one-fifth of all the wool grown in this country is a by-product, the sheep being raised for the profit derived from mutton? The comparisons might be extended all up and down Schedule K. For example, on "Combed wool or tops and on wool or hair advanced in any manner beyond the washed or scoured condition," the Payne-Aldrich duties range from 73 to 252 per cent. Will Mr Taft seriously maintain that no more than 20 per cent. can be taken off those monstrous rates without, as he says, causing "irretrievable injury to the wool-growing industry"? The thing is absurd on its face. If a 20 per cent. reduction from 252 could be endured, it is certain that one of 25 or 30 or even 50 could be.

Another excuse which the President gives is that he was elected on a platform pledging him to "maintain a degree of protection necessary to offset the differences in cost of production here and abroad." But that little protectionist dodge of 1908 has now been completely discredited—so much so that the Republican platform of this year shamefacedly abandoned it entirely. And the one thing that did more than anything else to destroy the notion that you can frame a tariff on the basis of cost of production at home and abroad was precisely the wool report of the Tariff Board! Again and again in that document the admission was made that trustworthy figures showing the true cost of production could not be obtained. Thus in reference to wool by-products, noils, and the various wastes, the Board explicitly said: "No comparison as to the cost of production of such products can be made." Again and again in the report we find phrases about there being "fluctuating" elements and "the widest divergencies," which made anything like an accurate determination of the cost of production impossible. Yet the President in his veto leans upon this theory which skilled economists and experienced business men knew from the first to be hollow, and which his own Tariff Board was forced to admit to be a broken reed!

The force of inconsistency could hardly go further. President Taft, to be sure, asserts that he is anxious to procure reduced wool duties, and urges Congress to stay in session until it can frame a bill which he will sign. But there is a shorter way. The House has already passed the bill over his veto; let the Senate do the same.

TRADE REVIVAL AND THE CAMPAIGN.

In the history of American politics, many diverse influences have contributed to the turning of popular majorities to the one side or the other after the campaign was under way; and one of those influences is the condition of business. Good times in a Presidential year have always been helpful to the party in power and have frequently been a decisive campaign factor. All political experience goes to show that people who are prosperous are disposed to vote for continuance in office of the party under which prosperity prevailed, and that people confronted with hard times in their own affairs are apt to follow any party which proposes changes in legislation and promises restored good times as a result of them.

The election of 1908, when the party previously in power was continued in office notwithstanding the financial panic of the year before, might seem an exception; and in fact it was the only instance in our history when that result followed on just such an occasion. But recovery from financial depression had been unusually rapid in 1908; a weak

Democratic candidate, discredited by his attitude on the currency in 1896, ran against Mr. Taft, and probably, also, recollection of the immense prosperity under the Republican régime, a very few years before, did much to counterbalance resentment at the business distress with which 1908 began.

In another way, the election of 1896 might appear to be an exception to the rule; for the judgment of political history is that Bryan was defeated in that year largely through the return of good prices for an abundant harvest in the agricultural States, and yet the Democratic party, which had nominated Bryan, was the party in power before election. That, then, was apparently an occasion on which return of better times helped the opposition party. But the Bryan Democracy of 1896 had deliberately cut itself off from association with the Cleveland Democracy which was in office; it had denounced the policies and actions of the Administration, and had declared that conditions were such that prosperity could not return, to the farming districts especially, until those policies were reversed. It naturally followed that when something like prosperity did return in the two or three months before election, there was a drift of popular support away from Mr. Bryan.

The relation of the parties this year is not wholly unlike that of 1896. Mr. Taft, running against Mr. Wilson alone as he ran against Bryan four years ago, would be helped in his candidacy by the return of better times and hurt by continuance of business reaction. But Mr. Roosevelt and his third party stand this year in the same relation to business conditions as Bryan and the Democratic-Populist alliance did sixteen years ago. The Roosevelt platform appeals to discontent. It not only endeavors to take advantage of the demands for reform, in such directions as tariff schedules and corporation regulation, in which the great body of thinking citizens unite, and which both the other parties have incorporated in their platforms, but it assumes, explicitly or implicitly, that everything is wrong, and that our whole governmental and social system must be ripped wide open to bring back real prosperity.

Now, such an appeal as this would be most effectively reinforced by hard times. Conducted under such conditions as those of the autumn of 1907, or even those of a year ago, when the familiar reaction from a premature effort at after-panic trade revival was distinctly under way, it would have offered ideal opportunity for appealing to people angry, despondent, and discontented over the state of their own affairs. Business recovery, a profitable harvest, and increasing employment would equally be a heavy handicap. How is this influence likely to operate on the present occasion?

After a checkered and uncertain season, it is beginning to appear that the country will have this year one of the largest and most profitable harvests in its history. The wheat crop will probably be the largest, with one exception, in half a dozen years, and forty to fifty million bushels above 1911; the oats crop will surpass all precedent; the corn crop promises to run close to the largest of our past harvests, and prices for all these products are on a basis profitable to the farmers by reason of the deficient yield of all of them last year. There is little dissatisfaction over the cotton-crop outlook; the South will not duplicate the unprecedented harvest of last year, but, because of that fact, the planters' lately acute apprehension of non-remunerative prices is removed.

By all the larger tests, something like genuine business revival is at least fairly in sight. Labor is unusually well employed. The country's iron output for last month far exceeded the highest July record in our history, and the steel industry is supplied with advance orders running well into next year. This is ordinarily the most trustworthy of all indications regarding the tendency of business generally. The total amount drawn in checks on the banks of the country, another test of trade conditions, last month exceeded by 7 or 8 per cent. the highest figure ever previously reached at that time of year. Along with this, the condition of our money markets is unusually sound and strong.

In setting forth these known facts, we make no account of any such temporary and artificial reaction as sometimes occurs as a result of political misgiving itself; that influence is usually overestimated. Nor have we any idea of predicting what Wall Street calls a "boom." The essential fact is that we are not confronted by hard times, and that the voter is not likely to lend a ready ear to the professional agitator merely because of disturbance by trade depression. If these signs of the moment are pointing the way to good times generally in the autumn, there can be no great doubt as to whose candidacy will be hurt by them.

THE CHILD IN COURT.

So quickly do we become accustomed to a new order of things in our social arrangements that it is not easy to realize how recent is the system of treating an offending child according to other methods than those we have established for his erring elders. Yet it was not until July 1, 1899, that Illinois led the way in this respect by the founding of a separate court for children. Up to that time, children who were arrested were dealt with, so far as any provision of law recognized, in the same manner as adults. If unable to furnish bail, they were put into cells in the police station, tried by the police justice, and, if convicted, were fined and committed to the city prison. If the parents were unable or unwilling to pay the fine, it was "laid out" by these youthful criminals at the uniform rate of fifty cents a day. In Chicago, a fine of $500, which was sometimes imposed, was sufficient to keep a boy in the Bridewell for the greater part of a year, and did actually so confine a boy of fifteen just prior to the establishment of the juvenile court, while one of nine served between three and four months. As the payment of the fine reduced the limited resources of the family by just so much, its imposition presented a cruel problem to all concerned. Under these conditions, it is not strange that police justices often "let off" the children brought before them. A considerable number were pardoned by the Mayor. But discharge was no remedy. One-third of the boys committed to prison in the six months preceding the opening of the juvenile court had been committed before, some of them as many as six times.

The records of the Chicago Juvenile Court for the first decade of its existence have now been tabulated and studied, and the results published by the Russell Sage Foundation in a volume entitled "The Delinquent Child and the Home." In the introduction Miss Julia C. Lathrop, the chief of the Federal Children's Bureau, points out that the main consequence of the juvenile court system so far is not so much definite improvement in the condition of those from among whom juvenile offenders mainly come; still less is it a solution of the problem. Rather, it is a revelation of the situation, "the truth made public." The fundamental element in this revelation is the necessity of dealing with the children concerned, not as isolated units, but as organic parts of families and neighborhoods. Even less than his elders does the child live unto himself. He is deeply affected by the family fortunes, whether the unfortunate aspect of these is merely financial, or has relation to such darker phenomena as drunkenness, ill-treatment, and disregard for all that makes a real home.

The fact that has to be faced here is nothing less serious than the breakdown of the idea of the home. This situation has two sides. There is the home which is destroyed as a home by the indifference of those who are at the head of it, and there is the home which is adversely affected by circumstances, such as the death of the natural wage-earner, lack of work, illness, or desertion of one of the parents. None of this latter class is more common than the "home" of the mother who has no time to be anything to her children except a breadwinner. Little wonder that they "get ahead of her," and that she turns in despair to a mightier power than her own, however much of disgrace she feels in having to do with courts and probation officers. Of this group also is the family whose parents, with the best will in the world, are without control over their children. It has become a commonplace that the child of the immigrant, because he is Americanized so much faster than his parents, must be relied on by them in matters in which ordinarily this relation is reversed. He soon develops a sense of superiority towards them, therefore, that renders him difficult if not impossible of control. Of the home that is broken down through the indifference of the parents to their duties, an example is that in which the child's earning ability is exploited for the selfish benefit of his natural protectors. His pay envelope must be handed over to them every week unopened.

Intimately connected with this breakdown of the home is the rise of the "gang." There is no doubt that the more serious offences, and even some of the purely mischievous acts, are committed by boys in groups who would never have been guilty of the offence singly. So definitely localized are these "gangs" that occasionally the mere moving of the family to another street solves the problem of the "bad boy." But the "gang" spirit lies deeper than this would indicate, and it is evident that the way out in this respect lies in the direction, not of abolishing the "gang," but of elevating its motives. Somehow it must be led to care for play of a higher sort than taking what belongs to others. But the profounder question remains. Are we to attempt the salvation of this portion of society by substituting a court for the home? Such an outcome is unthinkable. The juvenile court is but a temporary help for the trouble. There is, and cannot but be, something grossly incongruous in the appearance of a child in court. Indeed, the authors of the work mentioned above say uncompromisingly, "the only way of curing delinquency is to prevent it." Justice Hoyt of this city, in discussing one phase of the matter, remarks: "The main work of a children's court should be to preserve as much as possible the family intact when misfortune overtakes it." To this we may add that every means must be resorted to for the purpose of building out of wrecks the real home that, however humble, is infinitely better for the child than all the judicial machinery that can be devised.

HUMANISM.

The title of the latest book from Oxford in support of the Classical propaganda is not without significance. Formerly it seemed sufficient to dwell on the æsthetic superiority of Greek art and literature, but of recent years that appeal has been reinforced by an attempt to set forth the ethical and practical value of Greek ideas for men to-day in the distraction of our own civilization. And so Mr. R. W. Livingstone calls his volume of essays "The Greek Genius and *Its Meaning to Us*." The change is well, and will have its effect in time, though at present the new appeal may seem to fall on deaf ears.

Mr. Livingstone is right also in seeing that the crux of the matter is in the sense to be attached to the word "humanism." "There are few more important problems than this," he declares; "is humanism right? Is it right to take a purely human attitude towards life, to assume that man is the measure of all things, and to believe that, even though the unseen may be there, still we can know our duty and live our life without reference to it? That is perhaps the biggest question of the present day." The real problem could not be stated more vigorously, and no one can read Mr. Livingstone's exposition of Greek humanism without pleasure and enlargement of mind. Yet in the end it is not quite plain that he has grasped the full force of the word. Certain writers, among whom not the least guilty is a philosophical Fellow of his own college, Corpus Christi, have deliberately clouded the meaning of "humanism" by confusing it with "humanitarianism," which is in fact its very opposite, and it is not clear that Mr. Livingstone has escaped entirely from this entanglement. His praise of the Sophists as the true exponents of humanism, his acceptance of Nietzsche's sharp distinction between the Dionysian and Apollonian aspects of Greek civilization, his emphasis of the exotic side of Plato, and his rejection of Sophocles as the norm of Athenian genius, are sufficient at least to raise a doubt in one's mind. "Man is the measure of all things"—no doubt that is humanism; it rejects the superhuman, and, in a sense, the supernatural, but he is far from understanding its full scope who supposes that it excludes also the higher, even the highest, elements of human nature itself. The error is not new. The Greeks gave us the sense of beauty, is the old saying, but they did so by limiting themselves to laws of harmony and proportion; the Middle Ages gave us the sense of the infinite. Renan made the notion popular by his Prayer on the Acropolis, in which, after praising the spotless and radiant beauty of Athena, he turned from her shrine to the vault of St. Sophia with the cry: "O abîme, tu es le Dieu unique!"

The notion is doubly false. The Greeks have had no monopoly of the sense of beauty on the one hand, and on the other hand their submission to the laws of harmony by no means excludes that religious exaltation which we call, for lack of a better name, the infinite. Their great creation, their unique contribution to the world, was just the union of beauty and religious exaltation in forms which remain normally human—that, indeed, is humanism in the highest meaning of the word. If a man doubts the uniqueness of this gift he can easily persuade himself by looking at the Elgin marbles and comparing them with what he may see elsewhere of art and religious decoration. It is a dull soul that can stand before those weather-worn blocks of stone, commonly called the Three Fates, and not feel, along with their wonder of sheer beauty, the strange lift and thrill of emotion, the mystery of deep opening within the heart to deep, which Renan professed to feel before the *abime*. There are infinite treasures of beauty that owe nothing to Greece, there are idols and temples which strike the beholder with awe, but this human sublimity will be found nowhere else in the world, or if found, whether in the Western Renaissance or in the Buddhistic art of the Far East, can be traced directly to the influence of Greece. Wherever this influence has not passed, you will find a divorce between measured human beauty and religious exaltation, and an attempt to express the infinite by symbols that are either exaggerated or grotesque or merely vague. The Hindu who wishes to image the divine wisdom will carve an idol with many heads, or if he wishes to set forth the divine power, will give to his god a hundred arms. The men of the Middle Ages knew well enough what is beautiful, but when they undertook to visualize the saint they made him meagre and unlovely. Even the cathedrals seek the impression of sublimity by spaces and lines that overwhelm the worshipper with the sense of his littleness; they may be beautiful, but they are not human. Goethe could create beauty, but when he thought of the power which speaks to us so humanly in the Three Fates he could only express it in the vague and grotesque symbolism of the mystic Mothers.

The true humanism, which speaks in the marble of the Parthenon, does not possess authority and saving power because the human is there regarded as excluding the divine, but the very contrary. The Elgin marbles merely put into visible form the philosophy of Plato, who was ready to follow as a god any man who knew how to combine in his conduct the law of the one and the law of the many; they express the same truth which Aristotle taught in his Ethics, that virtue is the golden mean of compromise rather than any excess of self-sacrifice, but that the golden mean is rightly known only to him who desires in contemplation to behold the unmoved, all-moving unity. If we forget this composite meaning of humanism, we shall confuse it either with the hard, dry formalism of the pseudo-classics, or with the sentiment of modern humanitarianism.

"DETECTIVENESS" IN FICTION.

Stories of crime and mystery form one of the streams of literature which show no signs of drying up. We do not mean shilling shockers, but the respectable novels of the season. Formerly these represented no particular fad, and the public found at least variety in them. Some years ago, when "The Mystery of the Yellow Room" appeared, it was generally assumed that nothing so good of its kind would be published for a long time to come. A detective story, in the popular estimation, was not to be rigged up out of hand, but required inspiration comparable to that of the poetic sort. But the past season has seen a somewhat changed attitude. There have appeared "The Mystery of the Second Shot," "The Mystery of the Boule Cabinet," and other thoroughgoing detective stories, besides a number of books, like "The Ealing Miracle," which, though not belonging strictly to that class, have made use of what one critic has termed a certain "detectiveness," or zest for the professional manner of unravelling complicated episodes. We may hope that a most enjoyable type of fiction is not to be lost by being overdone or gradually merged into other sorts of tales.

For a good detective story affords a unique pleasure for certain moods. Precisely what its special virtue is can perhaps be best appreciated when the motive for a great crime, like the Rosenthal murder, is in the process of unfolding. Some people will have it that even the best detective story does not reflect actual conditions; that, as with Charles Lamb's well-known experience with Restoration drama, the reader is transported to a pleasant land of burglary and murder which is harmless because not real. But such a view is controverted by the attitude created by merely reading the newspapers these days. Interest is sharply centred upon the links of cause and effect leading to the conviction of the culprits; whereas the conditions of gambling in New York which have incidentally been laid bare, as well as outlying domestic tragedies connected with the crime, fall into the background. The public interest for the nonce has become relentlessly detective, with little sentiment to spare. A more complete picture of the crime will excite general interest only after the business of conviction is at an end.

For devotees the detective story sets a stirring mental exercise, with just enough of the complex background of life to distinguish it from a problem in mathematics. Whatever thrills of horror are excited come by way of the intellect, never starting directly in the emotions. The reader divests himself of sympathy, and applies to every situation the dry light of reason. It is only when one's reason is baffled, leaving the murder unexplained or the ghost at large, that one feels privileged to shudder. And such a shudder is remarkably different from a start that is unthinking. The detective story applies reason to some of the big half-mysteries of human conduct; and the result for the ordinary reader is not dissimilar to that felt by the philosopher when trying to square with his poor apparatus the secrets of Nature and Providence.

In the best detective stories, intellect is paramount. Characters, judged by other standards, may seem unreal without disturbing the reader's equanimity, provided the chain of causation is kept logically perfect. The disregard of this axiom has resulted in many failures. Gaboriau, not content to write a mere tale of mystery, tried to convert it into a well-rounded novel. But the most notable recent instance of the thing was the endeavor of Gaston Leroux in "The Perfume of the Lady in Black," the sequel of "The Mystery of the Yellow Room." Without knowing quite why, readers found their interest in it flagging. In some respects it is the subtlest story of its kind. The shifting semi-tropical atmosphere is finely caught and ought *a priori* to add intensity to the central mystery of doubtful identity. The mystery itself is developed with rare psychological insight, and the relation between a mother and son is so acutely defined as to make a certain noticeable halt in the process of detection seem perfectly natural. Yet impatience with the story is inevitable. From habit the reader holds his attention in readiness for running down a crime—for that and nothing more—and his mind relaxes when outlying material is brought in.

There is another feature which writers of detective stories would do well not to throw overboard. Sir Conan Doyle understood its value. Every such tale should have its confronting detectives. That they must always be an amateur and a professional is not so necessary, and that the professional should sometimes win out would make a desirable climax; if he happened to be a member of the regular police force, not a Burns man, and was still successful, the climax would be greater yet, and, on occasion, probably not undeserved. In any case, the reader is best served when the ratiocination is carried on in the formal way thus offered. If it is not, he has not the necessary spur to reason out every situation for himself, which is really the best part of the game.

AUSTRALASIAN LITERATURE.

SYDNEY, Australia, July 6.

If "colonials" watch the personages and methods of the motherland with a keener eye than most Englishmen, it may happen that foreigners take a truer view of a colony than its own citizens. Dr. Marcus Herz has been touring in New Zealand, and, besides the usual description of the remarkable features of that picturesque country and some account of the surviving fragments of its indigenous race, has felt himself able to estimate its public policy and appraise its public men. Dr. Herz's judgment on the new legislative measures and administrative institutions peculiar to New Zealand is uncompromisingly adverse. All of these, he unhesitatingly asserts, or nearly all of them, are failures. The industrial arbitration system is even worse than a failure, he alleges; it has increased the antagonism between classes and fed the greed of the artisan. The old-age pension scheme, and indeed the whole industrial policy, have killed the spirit of self-reliance among the workers. Had such legislation and such institutions been more successful, they would still be unsuited for adoption by larger and more populous countries that are necessarily less self-sufficing.

Such criticisms would be deadly were they well founded, and there is certainly much to be said in their favor; but Dr. Herz has almost ignored the other side. The spirit of self-reliance cannot be quite destroyed in countries like New Zealand and Australia, where the investments of the working classes equal, if they do not exceed, those of the same classes in any other country. So far from being unsuited for exportation, the new institutions are actually passing to older lands. Twenty-five years ago England adopted from New Zealand county councils; she has lately adopted the public trust office; and compulsory industrial arbitration is looming in the distance. Italy, we may add, has just taken state life insurance from New Zealand, and she has gone further than New Zealand is yet prepared to go by conferring a monopoly on the state department; but New Zealand has now incorporated fire insurance with her life insurance, also without the monopoly that would alone justify either.

Dr. Herz has justly appraised Richard Seddon, the chief author or initiator of most of these measures. He was not a great man; he fell far short of greatness. His ideas were never original, but always borrowed; his function (is it not that of all statesmen?) was, with undaunted courage, to convert them into realities. He was only the speaking-tube of the masses, never their leader. He it was who taught them to see in the state a milch cow. He was the slave of Demos. Not great, assuredly; but only lucky.

The Maori people is probably the only indigenous race whose warriors have had biographies all to themselves. Three at least have been thus honored, and of the third, Te Rauparaha, a second biography has just been issued.* What had this brown-skinned savage done, the American reader may ask, to deserve such a distinction? He was the most talented member of an intelligent race that English officials encountered in New Zealand. He had gentlemanly manners and a taking address; he was a persuasive and impressive, nay, an eloquent and powerful speaker and a close reasoner. Though born a chief, he worked his way up to unquestioned ascendency by the exercise of faculties that would have won him a high place in any country, either as a civilian or as a warrior. As a fighting chief, he showed personal bravery, skilled tactics, and a genius for strategy, while his diplomacy before, during, and after a war was worthy of a statesman. About the time when Napoleon died at St. Helena this "Napoleon of the South" conducted a bold and daring migration of his tribe from its ancestral seats to a land of promise in the south of New Zealand, fighting his way inch by inch, inflicting a succession of defeats on the tribes that resisted his advance, and aiding his march by careful planning, discreet forethought, delicate negotiation, accurate calculation, and sagacious strategy. It was an epic expedition, almost as memorable in its kind as the Retreat of the Ten Thousand, and by means of it the Maori chief almost realized his own wild dreams of building up a Maori kingdom along the shores of Cook's Straits. Then he came into collision with the English, who had just set foot in the land they were to convert into a new Britain at the antipodes, and the unconquered chief—as great in his own world as Pompeius and Cæsar were in theirs—fell before a conquering people. All this and much more is told in a unique biography, a masterpiece in its way, written by an ex-legislator who at one time promised to be "the John Bright of New Zealand." The glowing diction betrays its oratorical origin, but the eloquent style is based on exhaustive research, ample knowledge of the traditions that still linger among Rauparaha's tribesmen, personal acquaintance with men who knew the old warrior, and a complete mastery of the abundant literature relating to him and his race.

James Cowan's "Adventures of Kimble Bent" (Whitcombe & Tombs, 5s.) is a romance, but no fiction. It narrates, in words taken down from his own mouth, the story of an American, who was born in Maine, where his father, Waterman Bent, was a shipbuilder at Eastport, and his mother, Eliza Senter, had been a half-caste Indian girl of the Musqua tribe, whose villages stood on the banks of the Ste. Croix River. At Eastport Kimble was born on August 24, 1837. With his mother's roving blood in him he ran away from home and took ship on board the United States training frigate Martin, where he remained for three years, till he was paid off. He next booked his passage to Liverpool, where he enlisted in the British army in 1859. Escaping thence, he made himself a stowaway on an American ship, but was buffeted by heavy seas and landed at Glasgow. There he was detected as a deserter, and sent with his regiment, first to India and next to New Zealand. The restless Indian blood in him again prompted him to desert, and he fled to the Maoris, with whom the British were then waging an inglorious guerrilla war. He took an oath never to go back to the English, or he would have been burnt alive, and though he once made the attempt, he never again left the Maoris. He became one of them, lived as they did, and had three successive (not simultaneous) Maori wives. Though, in a photograph, he now appears clothed in European fashion, he was then dressed in a flax mat or a blanket, like his brown-skinned mates, eating their food, and made to toil like a slave, as indeed he was. He dwelt with the more savage tribes—those who had revolted against British rule and had forsaken the religion to which the missionaries had converted them. They had concocted a new religion largely from the Old Testament, though with loans from the New, and strangely blended with some of their own wild superstitions. They had even gone back to cannibalism. In all this, save cannibalism, Bent took part.

---

*_An Old New Zealander; or, Te Rauparaha, the Napoleon of the South._ By James Cowan. London and Melbourne: Whitcombe & Tombs. 10s. 6d.

His accounts of the tribe and its usages, as given to Mr. Cowan, are of eminent value. He tells of the council town or village and of the praying-house and council hall there, 120 feet in length. He portrays the founder of the new religion, its high-priest and prophet, whom he knew. He tells of the daily worship, the long prayers, night and morning; the morning hymns, the daily processions around the flagstaff. His history of the war is the first that has been given from the Maori side. He describes the secret war-rites of the Hau-Haus, which no living white man but himself has witnessed. He narrates the storming of the fort and the inability of the well-handled Maoris to resist the wild rush of the maddened troops. It was believed that in the course of the action he killed his old colonel, but he declares that he never fired a shot. After the war was over, he continued to live with the Maoris. In later years he has been a medicine-man and a *tohunga*, or priest. For he still lives, in his seventy-fifth year, and he sometimes yearns to return to the home of his boyhood on the coast of Maine.

J. C.

NEWS FOR BIBLIOPHILES.

The memory of George Dyer is inseparably associated with that of Charles Lamb, who dearly loved the shy, awkward, and half-blind student. Writing to Moxon in February, 1832, he bears this, a final, testimony to G. D.:

> G. was born, I verily think, without original sin, but chooses to have a conscience, as every Christian gentleman should have; his dear old face is insusceptible of twist they call a sneer, yet he is apprehensive of being suspected of that ugly appearance. When he makes a compliment he thinks he has given an affront—a name is a personality.

Dyer loved Lamb with equal sincerity, and this will give interest to an obituary notice written by him which appears to have eluded the notice, so far as I remember, of the various biographers and bibliographers who have dealt with gentle Elia. Dyer, as is well known, became a Unitarian, and to the number for March, 1835, of the *Christian Reformer*—a periodical issued in the interests of that denomination—he contributed the following memorial notice:

> We now announce the decease of an amiable, benevolent, and ingenious man, Mr. Charles Lamb, who died at Edmonton, after a few days' illness, on Saturday, the 27th December last, in the 61st year of his age. Mr. Lamb was well known to the public as a man of literature, and the memoirs of men of literature are often to be traced in their writings. Thus, in the case of Mr. Lamb, we collect that he was descended from a family in Lincolnshire, but was born in London, and received his education in Christ's Hospital; that at an early period he became a clerk in the India House, where he was greatly esteemed for his good humor; that he removed from it, at length, with a handsome annuity (being placed on the superannuated list); and that he lived in intimacy with the first geniuses and poets of his time. The following is a list of his published works as correct as we can give them:
>
> A small volume of poems, in conjunction with his friends Charles Lloyd and S. T. Coleridge. 1795.
>
> Another small volume, entitled "Blank Verse," in conjunction with C. Lloyd. 1798.
>
> John Woodville, a Tragedy. 1802.
>
> Specimens of the English Dramatic Poets. 1808.
>
> Tales from Shakespeare. 2 vols. 1807; the 3rd edition of which was published in 1813.
>
> A Tale of Rosamond Grey and Old Blind Margaret.
>
> The Adventures of Ulysses. 2 vols.
>
> The Works of Charles Lamb. 2 vols. 1818.
>
> Elia, a Collection of Essays and Prose Papers. 1823. This may be termed his most popular work, and appeared originally in the *London Magazine*.
>
> A volume of Poetry, entitled "Album Verses." 1830. To which may be added, a Second Series of his "Specimens of the English Dramatic Poets," which appeared in Mr. Hone's "Every-Day Book," under the title of "The Garrick Papers, from works contained in the British Museum."
>
> A small poetic piece, entitled "Satan in Quest of a Wife." 1831.
>
> A volume comprising "The Last Essays of Elia." 1833.
>
> An afterpiece, under the title of "Mr. H."
>
> It is but justice to Mr. Lamb to say, that in the above works he has in general displayed as much literary taste as he has pathos and wit; his peculiar talent was humor, and his principal delineations are taken from private and domestic life; but he is always pleasing, and his style is rather after the manner of our old English masters, of which he was a professed admirer (although we do not consider him in the light of an imitator), rather than of those authors termed classical, on whom he was taught to put so high a value at [a] public school; and though he continued to read and admire the latter, he chose to be considered as an English writer of the old school.
>
> The above list will, we think, present a true picture of the late Mr. Charles Lamb; for, what he appears in his writings before the public, he was seen to be in his life and conversation among his friends. He was sociable in his manners, critical and exact in his taste, of a rich imagination, and a most sprightly wit; and as a man humane in his feelings and benevolent in his actions. His jokes, which were always kept within the bounds of decorum, never lost him a friend nor made him an enemy. To sum up the whole, we consider him to have been a person possessed of the finest qualities, both of head and heart.
>
> Mr. Lamb's amiable disposition eminently fitted him for domestic life, but he never was married; he lived forty years in a most tender friendship with an only sister; they were similar in their pursuits and studies, in their joys and sorrows, their affections and recreations, and may be referred to as the most perfect model of fraternal and sisterly love. Miss Lamb was the authoress of an excellent work, entitled "Mrs. Leycester's School," which was brought out under the superintendence of her brother.
>
> It does not appear from Mr. Lamb's writings that he intermeddled much in the political or theological disputes of the times; but to the estimation in which he held our old dramatic writers and poets, we must add the admiration which he always felt for the political works of Milton, Sydney, and other standard writers of the same class. Nor was he unacquainted with many of our best puritan authors, whom he respected for their earnestness, variety, and seriousness, and, above all, for their sincerity; and, being himself of a quiet, peaceable disposition, he was fervent in the praise of George Fox and the other founders of the Society of Friends, called Quakers, although he never joined their Society, and did not separate himself from the Church of England, to which he was trained at Christ's Hospital.
>
> Clifford's Inn. G. D.

This appreciation has that reticence which a friend writing immediately after Elia's death would feel to be most fitting. Underneath all the restraint there is clearly visible the close friendship, the generous esteem, and the warm admiration that George Dyer felt for Charles Lamb.

WILLIAM E. A. AXON.

Correspondence

PROFESSIONAL MOTIVES.

TO THE EDITOR OF THE NATION:

SIR: Let us labor under no fond delusion with regard to the motives that lead our young men to enter the learned professions. A bit of loose reasoning in your editorial comment of June 27 upon President Pritchard's introduction to Dr. Abraham Flexner's report on medical education in Europe, has helped to spread an error only too common in recent discussion of professional problems in America.

In the editorial in question, entitled "Professional Rewards," you not only subscribe to President Pritchard's contention that the desire for social service plays an important part in determining young men to enter a profession as poorly paid as that of medicine, but you also make the assertion that the same altruistic motive operates largely in the young man's choice of the other learned professions, viz., the law, the ministry, teaching, and letters, as well. You acknowledge, to be sure, that "there will be plenty of people to scoff at [President Pritchard's] idea," but you, nevertheless, go on to say that "the desire to serve remains an important factor in the man's own choice of his profession. It takes various forms It may be consciously altruistic, or it may be the joy of doing well what one likes best." "What calls one," you add, "is the desire to do well what one likes, and hopes to make useful."

Now, setting aside the pecuniary reward as too small to serve as an inducement, I am sure that you will agree with me that, while a certain few of our young men enter the learned professions—chiefly, perhaps, medicine and the ministry—from the "consciously altruistic desire to serve," by far the larger number of candidates for these professions are actuated principally by what you term "the joy of doing well what one likes best." In fact, your subjoined statement—"What calls one is the desire to do well what one likes"—sufficiently indicates that you believe this latter motive to have the greater prevalence.

But it is not with regard to the number actuated by this joy in one's work, but with regard to your diagnosis of this motive, that I am concerned. When you classify this sheer delight in the exercise of one's intellectual powers as an altruistic motive, directed, though unconsciously, to the good of society, and, again, just below, when you identify "what one likes" with what one "hopes to make useful," I must confess that, though a college professor myself, and therefore a member of one of the professions that your editorial seems intended to honor, I feel strongly tempted to turn scoffer on the spot. Indeed, I am convinced that I shall run no risk of casting aspersions upon this essentially laudable motive of choosing a profession from a pure love of the work therein involved, when I refuse to regard this motive as other than one of a purely egoistic character. It may, of course, and often, in fact, in accordance with a benevolent providence, does prove true that the man who enters upon a profession because he finds it intellectually congenial, succeeds thereby in conferring upon society the greatest benefit of which he is capable. Is this not, after all, but another way of expressing the familiar maxim that by serving self, one may often at the same time best serve society? But, unfortunately, in serving one's own intellectual appetites, one does not always at the same time serve society; and, even if one did, ought we not to distinguish carefully between the egoistic motive that prompts one to enter a profession and the altruistic result that may possibly accrue therefrom. I, for example, may take keen delight in proposing an emendation to a corrupt passage in the text of Bacchylides, and it may, of course, prove that by virtue of some "divine, far-off event," my emendation may redound to the benefit of humanity. I hope, to be sure, that it may. I may even be willing to go down on my hands and knees and pray that it may. But, since the emendation is at best but conjectural, and since, furthermore, were it otherwise, I can hardly myself detect any connection between my achievement and the good of the race, and, since, finally, even if I could, it would still be impossible for me, by any effort of the will, to deceive myself into the belief that I had undertaken the task with the benefit of society, even unconsciously, in view, must I not, forsooth, renounce my claim to the lofty and disinterested motive with which I am graciously accredited in your editorial?

I have, of course, not the slightest quarrel with the noble end of social service. But why not reserve that title for those to whom it legitimately belongs, and allow the professional classes, who must necessarily largely labor *con amore*, to rest satisfied with the humble, but at least frank, acknowledgment that they pretend to be nothing more than what they are, namely, essentially egotists—egotists of a somewhat enlightened species, if you will, but none the less egotists. Why try to measure the efforts of the intellect in terms of social service? Let us of the professional classes frankly acknowledge that, as benefactors of society, we can rarely hope to rival the too frequently disprized business man who gives a flat million to charity.

NATHANIEL E. GRIFFIN.

Milan, Italy, July 25.

THE PANAMA TOLLS.

TO THE EDITOR OF THE NATION:

SIR: There is one political move, the proposal to pass American shipping through the Panama Canal, toll free, which is especially objectionable, on the ground that only a comparatively small part of our shipping will be benefited—that part which now has to make the passage round the Horn. The South American trade, the West Indian trade, the East Indian trade outward bound, the European trade, the African trade, of which there is still a considerable amount, none of these can be benefited by the remitting of the toll. There is danger that this particular special privilege may be obscured by the fact of England's objection to it. Many who are generally keen to scent the iniquity of such a thing may, on account of what they regard as England's interference, oppose any objection to this scheme. The *Nation* has already opposed the scheme, but the fact that it benefits only a small part of our trade I have nowhere seen exposed.

HENRY CHEQUER.

Somerville, Mass., August 1.

THE METHOD OF THE BULL MOOSE.

TO THE EDITOR OF THE NATION:

SIR: "The Crowd—A Study of the Popular Mind," by Gustave Le Bon, was first translated into English in 1896, and is now in the seventh edition of the English version. Chapter iii treats of The Leaders of Crowds and their Means of Persuasion. I quote from page 141 of that chapter:

> Affirmation pure and simple, kept free of all reasoning and all proof, is one of the surest means of making an idea enter the mind of crowds. The conciser an affirmation is, the more destitute of every appearance of proof and demonstration, the more weight it carries. . . . Statesmen called upon to defend a political cause, and commercial men pushing the sale of their products by means of advertising, are acquainted with the value of affirmation. Affirmation, however, has no real influence unless it be constantly repeated, and so far as possible in the same terms. . . . The thing affirmed comes by repetition to fix itself in the mind in such a way that it is accepted in the end as a demonstrated truth.

CHAS. B. WILBY.

Biddeford Pool, Me., August 6.

A FAMILIAR TARIFF OSTRICH.

TO THE EDITOR OF THE NATION:

SIR: I have no sneer for the President's message; but one passage affords a text for a comment in crying need of expression, for it has been parroted and harped on by the defenders of the "protective" system ever since high prices began. This is, that tariffs have nothing to do with the rise, because this rise is seen also in unprotected articles and in the one free-trade country. The fact is true, the inference false. The rise they cause, or help and maintain, in their own field "jacks up" prices in other fields, since the victims have nothing and nowhere to run to. The rise is world-wide, we are told; so are tariffs, except for one country.

The principle is as simple as the water balance, and any one can verify it from his daily experience. The best cuts of meat go up; middling people turn to livers and hearts and corned beef and bottom rounds, and these go up to near where the others started; fish follows; we fall back on vegetables, and these are raised with the demand. And so on till every hole of refuge is stopped up. The tariff pushes prices up high in its own lines. Consumers try to escape into other and cheaper directions, but this new demand raises those well up to the tariff prices, because there is no escape back into the tariff lines; the fire cannot ever be much cooler than the frying pan. And this acts on English prices as on others, since English trade must get back what it has to pay outside.

In a word, the world-wide tariffs are one—in my judgment the greatest single—cause of the world-wide rise in prices, and the President seems to me to discredit either his perspicacity or his fairness in pretending they are not. I know the further argument that the tariffs existed long before the régime of high prices came, and therefore cannot be related to it. I answer that they have steadily increased in real incidence and severity of collection even where not in nominal volume (that, too, to a considerable extent), and still more, that gigantic combinations to take advantage of them and exact the pound of flesh have arisen and strengthened as never before—probably the chief proximate instrument of the rise. That the tariff is not the sole cause I admit; that it is none at all I deny.

REVENUE TARIFF.

Westbrook, Conn., August 2.

PARTIES AND THE CONSTITUTION.

TO THE EDITOR OF THE NATION:

SIR: Your correspondent, "Laudator Temporis Acti" (*Nation*, July 25), calls attention to the indifference, on the part of the Progressives, to the distinctions on which the Republican and Democratic parties are founded.

In 1879, Alexander Johnson wrote the introduction to his "History of American Politics," which introduction concludes with the following paragraph:

> The question of a strict or loose construction of the Constitution has always been at the root of legitimate national party differences in the United States. All other pretended distinctions have been either local or temporary, or selfish and misleading, and the general acceptance of any such party difference would mark an unfortunate decline in the political intelligence of the people.

JAMES H. PERSHING.

Denver, Col., July 30.

BISHOP BROOKS'S MOT.

TO THE EDITOR OF THE NATION:

SIR: Some years ago I came across a story in the New York *Tribune* telling how Phillips Brooks taught his young men's Sunday school.

The topic was "White Lies." One scholar wished to know what Mr. Brooks would do in case he visited an artist who had labored long over a picture and who expected encouragement, although the picture was not good. Mr. Brooks was reported to have answered, "I would say as I do, when the fond mother shows me the first-born homely baby: 'Well, that is a baby.'"

After some satirical talk from the other artists about ministers, I concluded to write to Mr. Brooks about the matter. I said in substance that we half-dozen painters disliked to believe that a man as intelligent as he would countenance this sly refined manner of lying. I got a letter almost by return post from Mr. Brooks, in which he declared there was no truth in the story I had sent him. It is an old story, he said, and had been fitted on many shoulders, and finally on his. He thanked me, and wished I would not make his letter public.

Now, I at last break silence because I see the venerable old lie reappear in one of your editorials.

ROBERT B. BRANDEGEE,

Farmington, Conn., August 5.

Literature

RUINS OF DESERT CATHAY.

Personal Narrative of Explorations in Central Asia and Westernmost China. By M. Aurel Stein. With numerous illustrations, color plates, panoramas, and maps from original surveys. In two volumes. Vol. I, pp. xxxvii, 546; Vol. II, pp. xxi, 517. New York: The Macmillan Co. $12.50.

Dr. Stein's celebrated work on the explorations carried on by him in 1900 and 1901 and published under the title "Ancient Khotan" (see the *Nation*, April 9, 1908) had been preceded by a "Preliminary Report" (London, 1901), and a popular work called "Sand-Buried Ruins of Khotan" (London, 1904). His second great journey in Central Asia, still more extensive and more successful, is described in two stout volumes, richly illustrated, which are to precede the main work forthcoming; they anticipate the chief results as did the "Preliminary Report," and furnish the public with a popular account as did "The Sand-Buried Ruins."

This second journey has covered a much larger field than the first. From Srinagar and Peshawar it took the traveller through the northeastern hills of Afghanistan and the Pamir to Koshgar, from whence he skirted the northern slope of the Nan-shan as far as Kan-chóu-fu in Kan-su, returning by the northern route to Aksu, from there crossing the desert to Khotan and through the Kun-lun back to India.

The present account of this important journey, which extended from the spring of 1906 to the autumn of 1908, deserves to be called an ideal book of travel, inasmuch as it combines a vivid description of personal adventures and of scenery, with the results of geographical as well as archæological research in the countries explored.

Geographers will find their science enriched by the exact investigations carried on by the traveller's faithful assistants, Ram Singh, who died, unfortunately, after losing his eyesight by glaucoma, and his successor, Lal Singh, native Indian experts in charge of triangulation and the surveying of unexplored mountain ranges, under the author's direction. Geological information of great value is given in regard to many of the territories traversed, and the methodical measurements taken of a dozen tribes, supported by lucid comment and well-chosen portraits of ethnographical types, will help to fill the storehouse of anthropologists.

Historical matters were not neglected. Dr. Stein's first great journey had already compelled him to make himself acquainted with the history of Central Asiatic nations as far as it can be derived from the ancient and mediæval literature of the several nations which came into contact with one another in the common meeting-ground of Eastern Turkestan. Special studies, based on his former experiences, must have preceded this second journey, for, from stage to stage, the author succeeds in identifying the track of former travellers, especially the great Chinese Buddhist Hüan-tsang, who traversed a similar route nearly thirteen hundred years ago. Copies of Dr. Legge's edition of Fa Hién's "Travels" of the Chinese pilgrims, who performed the same journey from China to India in 400 A. D., he left as souvenirs with his Chinese hosts in recognition of their hospitality. Dr. Stein was fortunate enough in the services of his Chinese secretary, Chiang Ssï-ye, who joined him at Kashgar. From him he learned to speak Chinese, not the orthodox Pekingese of our consular interpreters, indeed, but the dialect of Hunan, the secretary's native province. Mr. Chiang's great intelligence, with his local experience and familiarity with his native literature, must have been of great help, especially in the scrutiny of what forms so considerable a part of the archæological discoveries of the expedition, the Chinese documents written and printed. Mr. Chiang deserves particular praise on account of the critical self-distrust he exhibited when expressing his opinion in cases of which he did not feel quite certain. Collectors of antiquities, and especially the dealers in this profitable ware, are only too quick in guessing at dates. Dr. Stein's expert is of a different calibre, as shown on the discovery, among the remnants of an ancient Chinese frontier wall, of a carefully cut piece of hardwood bearing on its flat side some Chinese characters, which Dr. Stein thought must belong to the Han period. "But my devoted helpmate," the author remarks, "modest in spite of his learning, confessed that palæography had not been his special field of study, and would commit himself only to the cautious statement that the characters looked decidedly older than those used under the Sung dynasty in the tenth to the twelfth centuries A. D." To draw conclusions as to age from the mere appearance of Chinese writing calls for as much preparation as is needed in the problems of Greek or Latin palæography.

The archæological discoveries resulting from this expedition are simply overwhelming, both in their number and in the historical interest attaching to them. To them is largely due the immense progress in our knowledge of Central Asia and of its interesting culture made within less than a quarter of a century. The discoveries of this second journey of Dr. Stein's outnumber those of the first as described in his "Ancient Khotan," and are perhaps more important; they certainly place England on a level with Germany, France, Russia, and Japan in this field of study.

By far the most important of all these "finds"—for such they were, indeed, the greater part being excavations from the sand or rediscoveries in forgotten cellas, and not purchases from dealers—are the documents of ancient script and language, which, in connection with the discoveries coming from other expeditions in that newly discovered "officina gentium," the Tarim Basin, and its eastern outlet, are the sensation of Orientalists at the present day. Among the scripts which have been, or can be, deciphered, we find documents written apparently by natives coming from all parts of Asia to this general meeting-ground. Eastern Turkestan must have been a much more cheerful country in years gone by than it is now, and, though under Chinese suzerainty, a home for temporary settlements from everywhere. Missionary zeal and commercial interests must have been the chief inducements for immigration, unless the soil offered attractions we look in vain for at present. Buddhism, with its tendency to expand, had its roots in India. Thus the oases in the margins of the Tarim desert became the bridge by which it spread northward to the Turks and eastward to the Chinese. India sent her missionaries to China by sea and overland, and Chinese Buddhists went to India in search of sacred books. We need not wonder, therefore, at finding monasteries on the beaten track; religious hostelries as it were. The result is that, apart from Chinese, the government or business language of the country, most of the documents are Indian. Sanskrit, Karoshthi, Brahmi texts have been found in many of the places visited, chiefly in the southern oases and in that great temple library of the "Thousand Buddhas" near Tun-huang in Western Kan-su. Rival religions followed Buddhism with isolated settlements, chiefly on the northern margin of the Basin, and of these religions also we find documents, confirming recent theories of the existence of Nestorian and Manichean colonies in Central Asia. Dr. Stein's discoveries comprise manuscripts in Aramaic, Tibetan, Uiguric, Runic Turki (*i. e.*, the so-called "Old Turkish," or "Kök-turkish," inscriptions, first discovered by Russian travellers and deciphered by Vilhelm Thomsen, the Danish scholar, and translated by Radloff and Vambéry), and Arabic sgraffiti. Certain specimens of an unknown language may bring new surprises, like the discovery by Prof. F. W. K. Müller in Berlin of the ancient Sogdian language, specimens of which were also found by Dr. Stein in Aramaic and Uiguric writing. The richest crop of these literary treasures comes from the "Caves of the Thousand Buddhas." Dr. Stein's attention had been drawn to this eldorado of Asiatic art and literature by Professor de Loczy of Budapest, who had visited the place in 1879 as a member of Count Szechenyi's expedition. Its site had been visited by the French traveller, C. E. Bonin, in 1899, but apart from certain inscriptions, copies of which were brought to Europe, nothing but the glowing accounts of these few eyewitnesses were known before Dr. Stein's arrival. Since then many thousands of curious manuscripts have been brought to Paris by a French expedition under Prof. Paul Pelliot, subsequently appointed to the newly created chair at the Collège de France for "the geography and archæology of Central Asia."

One of the chief triumphs of Central-Asiatic exploration is the light it throws on the history and development of exotic art. Many of the sand-buried ruins visited by Dr. Stein furnish proof of the refined artistic taste of their former inhabitants, but two sites have quite particularly excelled in this respect: the Temple of Miran, about twenty-five miles southeast of Lop, and facing the Lop-nor in the South, and the "Caves of the Thousand Buddhas" in Kan-su. The treasures laid open at these newly discovered sites in the shape of architectural, pictorial, and sculptural monuments and fragments, added to the specimens already in the Museums of London, Berlin, and Paris, reveal to us the existence of a great art, which received its impulse from India and Persia, with its Iranian dependencies, and through these channels from Greece, with occasional indications of Egyptian influence.

Many of these magnificent works had to be left behind for obvious reasons; but we have in Dr. Stein's volumes really fascinating pictures of such works of architecture as stupas, arches, domes, temple-cellas, architraves, and balusters. Wall-paintings, too, have been photographed so successfully that even without color the reproduction gives us an idea of the artistic spirit that created them. It may be said without exaggeration that these works impress us as far superior to the religious art practiced in Europe at the same time. Their only contemporary rivals were the works of such Chinese masters as Ku K'ai-chï, Wang Weï, and Wu Tau-tzï. To prove this, there needs only a glance at the photographic reproductions of the frescoes of Miran, with its angels and Bodhisattvas, its beautiful girls suggesting the Circassian type and the early Greek portraits of Egyptian provenance which created such a sensation at the time of their discovery, and the magnificent fresco compositions devoted to the Buddha and the life of his saints. Even then we must remember the words of the author, one of the very few Europeans who have beheld these wonders with their own eyes:

> No photographs could convey an impression of the charm which these compositions derive from their rich and harmoniously blended coloring. In the design and grouping of the figures, in their drapery and general iconography, most of what is presented to us by these panels is a direct inheritance from Graeco-Buddhist art as developed in Central-Asia. But when we come to examine the technique, the difference in treatment is striking. Everywhere the free sweep of the brush so characteristic of the Chinese pictorial art endeavors to assert itself over the delicate outline drawing which the same figures display in the frescoes and panels of Ancient Khȯtan.

There can be no doubt that ancient Khotan and what may be called its cultural dependency, the entire Tarim Basin, with the centres of Buddhism in northwestern China, were the seat of dominating art schools which strongly influenced religious art in China herself. Chinese records show that some of her most influential masters were natives of Khotan, whose kings by the name of Weï-chï (or Uetchï, possibly a transcription of Turkish *ülchï*, *i. e.*, "people's leader," "king," or "prince") had on several occasions sent their princes to the court of China, where they were honored by the bestowal of high posts in the Emperor's bodyguard. Dr. Stein refers to this somewhere in his book. He might have gone a little further and said that the greatest representative of the Khotanese school, whose name and life have been preserved in Chinese art history as one of the classics of the T'ang dynasty, Weï-chï I-shöng, must have been one of those princes, since he was a native of Khotan, bore the King's family name, Weï-chï, and held a post in the Chinese Imperial bodyguard, with the rank of a duke, an honor not usually accorded to artists pure and simple. Weï-chï I-shöng, Chinese art historians further inform us, cultivated his own style, which differed widely from what the Chinese of his time were accustomed to see, and this must have been the style represented in those wonderful cellas of Miran and the Buddha Caves. Who knows whether they do not contain originals by one of the Weï-chï's? For the great man's father and brother were also artists, the latter having remained behind in Khotan or one of its oases at the beginning of the seventh century. Weï-chï I-shöng's style, we further learn from Chinese records, was much admired and imitated in Korea, especially his representations of Avalokitesvara, the Kuan-yin of the Chinese; and from the Koreans of the seventh century many elements of Khotanese Buddhistic art may have been introduced into the beginnings of Japanese art. Greek elements in their Græco-Buddhistic form may thus be accounted for in the earliest Japanese paintings; it is not likely that they reached Japan by sea.

It is quite impossible to do justice to a book like Dr. Stein's in a short review. The information it contains throws the most important light on the entire Central-Asiatic civilization of former centuries, the historical reconstruction of which will occupy generations of scholars to come. Relics were discovered at the various sites dating from the very beginning of human life, such as the stone-age relics and implements of flint-stone in the Lop-nor region and numerous prehistoric weapons, such as arrow-heads and celts of jade and bronze, down to ancient and mediæval domestic implements, such as hand-made pottery, glass fragments, musical instruments, seals, dies, brooms, spoons, eating sticks, weaving instruments, textures and embroideries of every kind, fishing nets, shoes, and even mouse-traps. Of coins the discoveries reveal a great variety. Chinese cash of the Han dynasty was found at Lop-nor, and specimens of the T'ang and Sung periods were particularly frequent in several places.

Much of the value of this collection of literary, art, and cultural treasures has depended, and will depend, on the coöperation of dozens of specialists, whose names we cannot here enumerate, though they represent the first authorities of each of the many branches of Oriental, geographical, and historical study, such as Professors Chavannes and Pelliot for Chinese, the literature which may be said to be more than all others concerned in the elucidation of historical problems of Central Asia. Dr. Stein had behind him a phalanx of excellent workers for Indian, Tibetan, Iranian, and Semitic problems when describing the results of his first great journey. We find the same great names among his recent authorities.

As to the spelling of Chinese names, it is to be regretted that the dialect of Peking, a mere Manchuism, which ought to be banished from purely scientific works, has been made the basis of transcriptions. This way of spelling is not compatible with tradition in Europe. We would not tolerate a map of China which spells "Nan-ching" for Nan-king, or "Chiu-chiang" for Kiu-kiang. Such spelling is particularly out of place in historical names. The author may have felt that himself, when he tried to correct his "Chü-shê period," corresponding to the year 8 A. D., on p. 95, Vol. II, into "Kü Sheh period" in the Index, although, to be consistent with Wade's spelling, elsewhere adopted, the period ought to have been called Ch'u-shih.

Not enough praise can be bestowed on the excellent photographs, color plates, and panoramas, forming the more than three hundred illustrations of the two volumes. Nearly every one of these makes a perfect picture. To select the point from which to take the best view of a group of hills, or indeed a landscape of any kind, an architectural view or an ordinary object for purposes of illustration, is an art claiming artistic taste and much more than mere photographic skill, and of this art the author's long experience and familiarity with Central-Asiatic surroundings have educated him to be a past-master. His assistant, Ram Sing, was in charge of the developing, and to judge from the results, there seem to have been no failures. All readers will be thankful for these magnificent illustrations.

CURRENT FICTION.

Over the Pass. By Frederick Palmer. New York: Charles Scribner's Sons.

Readers who enjoy stage villains will be hard to please if they are not satisfied with this story, for it contains three of the most popular villanous types. There is the old stand-by, smooth-tongued, dishonest, and cowardly; there is the Western bad man who says, "Damn you, I'll get you yet!" and who has six notches in the butt of his revolver to keep green in his memory the number of men he has killed; and, finally, there is the self-centred and unscrupulous captain of industry. All of these are leagued against the hero, the wicked millionaire having the unfair advantage of being his father. As against these powers of darkness there is set a sort of beloved vagabond, a jaunty and whimsical Don Quixote, who, however, can shoot extremely straight, and who conceals under his irresponsible exterior a will and nerves of iron. There is, too, a beautiful and high-spirited heroine, and an ideally faithful and plucky Indian servant. We must not forget the "Eternal Painter," who always provides a gorgeous setting of dawn or sunset over desert cañons for the great scenes, and who earns his title by becoming rather a nuisance before the end of the story. The background and the hero are fanciful, the other characters are conventional, and the style is deliberately mannered; but the plot does not lack interest, and is unfolded with some skill. An exception must be made of the "gun-fights," which violate all plausibility. For his style and his hero the author is considerably indebted to the novels of W. J. Locke; but he has not Mr. Locke's ease and lightness of touch.

Both Sides of the Shield. By Major Archibald W. Butt. Philadelphia: J. B. Lippincott Co.

This little story was written some years ago, and Major Butt's death would seem to have liberated it from some vague publisher's limbo, in which it had been suffered, not surprisingly, to linger. For it is a rather crude and feeble story. The idea is commonplace. A Northern man goes South on a journalistic assignment, and falls in with a war-impoverished planter and his family of stalwart son and beautiful daughter. There is no manner of doubt from the outset that the Northerner is going to marry the daughter—he does, after a suitable amount of misunderstanding; and there is nothing more to say, unless that, thanks to the generosity of the author, the Northerner is a man of fortune, and so able to restore the old plantation to its early glories. The tale is interesting, as the efforts of youth and simplicity are always interesting. Major Butt was not very young when he wrote it, and the ingenuousness which gives it an engaging quality was evidently a characteristic of the man. This is made clear by Mr. Taft's affectionate introduction—a touchingly simple and earnest tribute to an exceptionally simple and loyal nature.

The Principal Girl. By J. C. Snaith. New York: Moffat, Yard & Co.

If you are unwary enough to take this writer heavily, it is possible to be impatient and even indignant with him. Certain readers of the *Atlantic Monthly*, we understand, have endured the present story as it has appeared in those staid pages with a restiveness only equalled in the days of "The Helpmate." Clearly, it hasn't a leg to stand on as a piece of "serious" fiction; and as a work of humor it is disconcerting not because it is flippant, but because it is flippant in unexpected places. We know a paradox when we see one: Mr. Chesterton has taken care of that, if it needed to be taken care of. No variety of humor follows more trustworthy rules. But you never can tell what Mr. Snaith will do. Mr. Bennett and Mr. Wells are household pets beside him. The only safe course, in taking up one of his books, is to expect nothing in particular—for that you are sure of getting. "The Principal Girl" cannot safely be docketed as social satire, or literary satire, or romance, or even extravaganza, though it takes on one or another of these tints, with chameleon-like ease, when there is nothing better to do. At times it seems to be approaching a burlesque of the Neo-Victorian school. At other times it flings a cheerful challenge to the Last Word in fiction. The heroine, thereafter admitted to be in all ways charming, is introduced as "a rather plain young woman suffering from a cold in the head." But her creator and sponsor is prompt to assert that he has called her plain "as much out of deference to Mr. G-lsw-r-thy and Mr. H. G. W-lls and Mr. Arnold B-nn-tt, as any other reason we can think of." Other transparent hyphenations are to be found in later pages, attesting the story-teller's perfect irresponsibility towards his fellow-tradesmen. The story itself is slight enough. The "principal girl" is a queen of pantomime, and her predestined young man is "heir to a barony," according to the oldest traditions. She is a charming and clever girl, and he is a stupid and good-hearted young man; and after the natural difficulties involved in such a match, they are made happy, even unto twins. But you will not read the book as a story so much as an amusing monologue.

The Sins of the Father. By Thomas Dixon. New York: D. Appleton & Co.

Mr. Dixon's ideas have been given such wide publicity in earlier books that it is hardly necessary to recapitulate them here. He is a hot defender of the white man's right to supremacy in the South, a violent opponent of each and every attempt to educate or elevate the negro, because it will defer the day of complete separation between the races, in which alone he sees safety for the white American. To let the negro alone is not enough. In the long chain between such a policy and the final complete extinction of national character by mixture of races he sees no broken link. His hero in this novel, in planning a process which in two hundred years shall effect complete separation, proposes disfranchisement and the repeal of the Fifteenth Amendment to the Constitution as the first steps. He deplores the reappearance of the carpetbagger in the still more dangerous guise of the philanthropist; he reviles the black educator and the white millionaire who supplies educational funds, and he closes his story with a description of an ideal Southern household, where a negro has never been allowed to cross the threshold or enter the gates. He has drawn a terrible picture of a white man's intrigue with a negress, with a cloud of tragic consequences which may be expected to become general unless politics comes to the rescue. As a novel, the book pays the penalty of being immeasurably more a pamphlet. The opening chapters show the Ku Klux Klan having "a little fun." Follow private horrors and their results, which are not made less horrible by being frequently smothered in sweets of rhetoric and imagery.

CONFEDERATE PRISONS.

A Prisoner of War in Virginia, 1864-5. By George Haven Putnam. New York: G. P. Putnam's Sons. 75 cents net.

Major Putnam has rendered a genuine service in recounting in this clear, straightforward, unvarnished narrative his own terrible experiences in Libby and other prisons of the Confederacy. We have reached that stage in our national development when we are trying hard to smooth over, if not to misrepresent, the horrors of that struggle—to the point of erecting a statue to one of the cruel jailors of the South. Even Gov. Woodrow Wilson in his history of the nation dismisses the murders in those apologies for prisons with the superficial statement that the death rate in Northern jails was about as high, and that after all the Northern prisoners in the South were not much worse off than Lee's soldiers in the final years of the struggle. Now, it may be the duty of politicians to pour further balm upon these sectional wounds of 1861-65, but it is the duty of history to tell the truth. The historian must in this case rely chiefly upon the narratives of survivors, and when one of these is written fifty years after by a man of Major Putnam's literary powers and high standing, after all feeling of personal resentment is at an end, it becomes at once authoritative and unimpeachable. If there are any other prison survivors who can record their recollections they should pattern after this excellent volume.

But no one can lay it down without a shudder and a wonder that a mere slip of a boy, such as Major Putnam then was, could have survived such inhuman treatment, could have lived for months in rags, covered with vermin, sleeping on the bare floor in the dead of winter, starving on a handful of cornbread a day, and carrying out the dead every morning. There were epidemics and unsanitary conditions in the Northern prisons, but there were no starved and frozen, half-naked men, nor anything comparable to Belle Isle and the Andersonville stockade, where men dug in the earth to exist, no better off than the swine of the farm, and not as well cared for. These facts history cannot and will not gloss over. Particularly is Major Putnam's book valuable in that it destroys once and for all the theory that these inhumanities were unavoidable. He testifies to finding, in the course of his duty as exchange officer on parole in Richmond in the last days of the Confederacy, remnants of thousands of packages addressed to Northern soldiers in Libby and other prisons by their relatives in the North, which had never been delivered. The death agony of the Confederacy was never so intense that these packages, with the clothing, food, and trinkets and messages of love that might have prolonged the life of many a starving, homesick, hopeless soldier, could not have been delivered, had humanity and not inhumanity ruled in Richmond in the department of military prisons.

Again, if the Confederacy could not have afforded blankets and the actual decencies of life, the Federal Government, as was well known in Richmond, would have freely supplied all that was needed. Why could this not have been accepted? It would not have diminished the injury to the Union armies in the loss of the services of those poor prisoners. As it is, the stain of these horrors must be forever borne by all Americans North and South. Nothing can ever blot it out.

The Story of the Zulus. By J. Y. Gibson. New York: Longmans, Green & Co. $2.50 net.

Among all the native races of Africa—that paradise of unknown peoples—few present as fascinating problems to the ethnographist as do the Abantu. Alone, or almost alone, among negroid races, they have evinced an aptitude for constructive statesmanship and, under a dynasty of great rulers, in the House of Zulu, evolved a military empire in some ways curiously reminiscent of modern Germany, which, had it not come into contact with an irresistible external power, might have changed the history of Africa.

The title of Mr. Gibson's volume is in some degree misleading; more truly it might be called a chapter of Zulu history—the more so because, like a chapter, it begins and closes with an abruptness almost disconcerting. The author has attempted nothing so ambitious as has Sir Harry Johnston in his "Colonization of Africa." Instead he merely quotes from that work that the Abantu came from the north of the Continent "under three thousand years ago," describes a few ruins, and then commits himself to the very doubtful statement that, until the last twenty years of the eighteenth century, the Abantu were one of those happy peoples that have no history. This, curiously enough, he later himself controverts, when dealing with the famous chief Tschaka—consolidator of the Zulu power—by pointing out that he was the descendant of a line of noted rulers, one of them—third of the dynasty—so eminent for his prowess that his personal name, Zulu, was adopted as that of his subject-tribe and has ever since been retained.

However that may be, Mr. Gibson prefers to date the commencement of Zulu history from the exile of Dingiswayo, son of a chief of the Umtetwas. Exiled by his father, he visited the Cape, where for the first time he saw European soldiers drilling. Returning home in due course, he profited by the lesson, set about dividing his people into regiments, and thereafter to conquering his neighbors, with gratifying results. When, in due course, Tschaka entered, of course by conquest, into the heritage prepared for him, he turned the screw of discipline several degrees tighter by adding certain cruelties of his own invention, such as the infliction of summary death upon all "cowards," which word he interpreted according to his whim of the moment. He it was who first came into political contact with those Europeans who were finally to crush the Zulu power, his first cession of land in what is now Natal having been made to Lieut. Farewell in 1824. Murdered later by his brother, as was the amiable family custom, Tschaka gave place to Dingaan—or, as Mr. Gibson prefers to call him, "Dingana." This is doubtless the more correct form, though as "Dingaan's Day"—the anniversary of his defeat by the Boers—is as such familiar to every Afrikander, a plea might be made for the more popular spelling. So again Mr. Gibson's rendering of "Cetshwayo" is no doubt nearer the correct pronunciation than is the more familiar "Cetewayo."

It is, in fact, upon the pitiless superiority of Mr. Gibson's knowledge that the weakness of his book is founded. Formerly a magistrate in Zululand, he is so familiar with the names of people and places whereof he deals that he overlooks their possible effect upon even the best-intentioned readers. When he traces with meticulous care the long tragedy of Umpande's and later of Cetshwayo's intercourse with Boers and British, he peppers his narrative with a discouraging number of tongue-torturing names of unimportant chiefs and kraals. Nor has he the gift of narrative; he provides innumerable facts, but very little flavoring. The effect upon the ordinary reader will be, it is to be feared, very much what would be that of a rather dry, old-fashioned account of the Wars of the Roses upon an intelligent Zulu. For the student who desires only facts, on the other hand, or for one who is able to see the forest through the innumerable tree-trunks, the "Story of the Zulus" is a valuable contribution towards the study of that true tragedy—the downfall of a brave nation.

The Making of Poetry. By Arthur H. R. Fairchild. New York: G. P. Putnam's Sons. $1.50.

One may admit that the plan of Professor Fairchild's book begins well. After showing in an introductory chapter that it is profitless to attempt a precise definition of poetry, which for the most part refers the facts of life to intangible human feelings, he enters upon a discussion of the most elementary material out of which poetry is constructed. This, like Aristotle, he finds to be the mental image. But at this point there arises a confusion. Aristotle was careful to distinguish between the mental image which is only the recollection of an object and that which has been developed by the mind into a type. Two processes are involved. The mind, which is not a camera, slightly colors the objects which it recalls, through the bias of feeling, sometimes through sheer inattention. At this stage the poet differs in no great degree from ordinary mortals. His special province lies in the further process of fashioning "universals."

Aristotle furnished examples of his theory from his own day, and we should have been pleased if Mr. Fairchild had filled out the same plan with modern instances. For undoubtedly much remains to be learned from a study of such poetic minutiæ. The mental image (ιδύλλιον) is at the bottom of imagery, and without imagery poetry can hardly be. Mr. Fairchild's investigation amounts merely to an exhibit. For Aristotle's subtle, æsthetic considerations he substitutes manifold examples of the obvious truth that the poet more than the layman reads his own feelings into surrounding objects. "Personalising," the process is awkwardly termed. The examples, however, are well selected and illustrate the multitude of ways at the poet's disposal for voicing impressions which in ordinary persons are at best only dumbly present. The writer avoids the very necessary question, To what extent may a piece appeal to the intellect and yet be poetry? Pope's works, in this respect, cause as much disagreement as ever, and Mr. Fairchild's study was headed in a direction to throw new light on them. Do Pope's figures of speech differ greatly from Milton's? Do Milton's project themselves further? How do both men succeed in bestowing a certain poetic afflatus upon passages which by themselves look prosaic? These are a few of the questions which must be faced by any thorough examination of poetic elements.

From individual lines our author proceeds to large compositions, lumping roughly together stanzas, whole poems, and plays. "The second process in the making of poetry," he asserts, "is the combining of images." The vagueness of the statement must be evident from what we have said of his neglect to define "image." If it means the mental recollection of an object, wherein does a poem differ from ordinary speech, which is based upon such symbols? If it signifies symbols "personalised," what is the method of combining? The author supposes that he answers the question by restating certain laws of psychology, especially those of suggestion by means of contiguity, similarity, contrast, etc., whereas, of course, all human consciousness is controlled by them. Somewhat helplessly he remarks that a poem must present life which lies within the range of human aspirations, and that its unity is derived from the poet's personality, which is a unit.

Subsequent chapters deal with Versifying, The Nature of Poetry, and The Need and Value of Poetry. Here anything like a thesis is abandoned and the pages are given over, often to platitudes, but at times to a not unpleasant vagueness. Taken by itself, the summary: "Poetry as a form of pleasureable and unified self-realization must represent either something new that is valued; or, if not something new, something known and wished for, but not consistently obtained in feeling, thought, or action," piques one to test its worth. But the chapter which it concludes really contains nothing new or very stimulating. Withal, this book is sure to impress the reader with the author's unaffected love of poetry and with his wide reading.

The Egyptian Conception of Immortality. By George Andrew Reisner. Boston: Houghton Mifflin Co. 85 cents net.

The author of this volume, which contains the Ingersoll Lecture for 1911, is connected with the Boston Museum of Fine Arts and with Harvard University. He is a skilled excavator and is learned in his special lines. His reputation rests on solid grounds, but they are not in the line of the present work.

At the foundation of a discussion like this lies the Egyptian belief as to the component parts of the human personality, and their distribution at death. There are certain traditional views and statements as to these parts, most of which will be found reproduced in this volume, and some of which the latest investigation has shown to be erroneous. Many of the statements are too technical to be of general interest, but some may be briefly stated. The results of the latest study of the earliest religious texts show that the Egyptian notion of personality made it a combination of two elements, the visible body and the invisible intelligence. The soul has usually been included as a part of personality, but it is now seen that the "soul," *ba*, was believed not to come into existence till death. The *ka*, "genius," "double," has also been included, but it was really conceived as a guardian being, distinct from the man himself and not a component part of him. This is shown by the phrase used of a deceased person, who by dying is said to have "gone to his *ka*."

The earliest religious texts are those found in the smaller pyramids of Saqqarah, dating from the fifth and sixth dynasties and embracing a period of 150 years. The earlier pyramids of Gizeh were huge, and were expected to preserve the remains of the dead king by reason of their immense size and solidity. Those that are inscribed were much more vulnerable in this respect, but by reason of their texts were believed to be rendered quite safe. The magical formulæ appearing in them were believed to be even more effective than massive masonry. But in both cases the object was the same: to make the mortal remains of the deceased king permanent till the time when the return of the intelligence and the reacquisition of the other faculties should result in a process of revivification. The notion of "death" was one against which most vehement protest was made in iterated phrase by the early funerary pyramid priests.

Whether the Egyptians believed in "immortality" depends upon the definition of the word. They believed in a continued existence of the body, because they took such solicitous care to preserve it, though after a fashion which, by removing the vital organs and even the brain, effectually made a revivification impossible. The soul, which first appears at death, dwelt in or near the tomb and was aided to find the dead by means of portrait statues which were placed in a convenient receptable inside of the tomb. These statues were not "*ka*-statues," as the author repeats, but represented the man himself. That which the Egyptians clung to was a belief in revivification, not in what we mean by the phrase "the immortality of the soul."

It is quite true that this future, which was one of bliss, was conceived at first as belonging to the king alone, but it was gradually extended to include wider and wider circles till at length all looked forward to ultimate felicity. This change was accompanied by new conceptions of moral values, with the introduction of the future judgment to which the king as well as the private person was subject. Only such as successfully withstood this judgment might hope. This process of evolution and development was a long one and was connected with a corresponding change in theological attitude into which it is quite impossible to go here. Suffice it to say that the author has treated this branch of his subject inadequately.

Notes

The Blake Society of England, recently founded, is preparing to publish for its members a bibliography of William Blake, a Blake concordance, and other similar works.

Towards the end of this month Henry Holt & Co. will begin the publication of their autumn list. It includes in fiction: "The Collectors: Being Cases mostly under the Ninth and Tenth Commandments," by Frank Jewett Mather, Jr.; "The Soul of a Tenor," by W. J. Henderson; "The Flight of Faviel," by R. E. Vernede; "Martha By-the-day," by Julie M. Lippmann; "Phœbe, Ernest, and Cupid," by Inez Haynes Gillmore, and "Making a Business Woman," by Anne Shannon Monroe.—Gift books: "The Home Book of Verse, American and English, 1580-1911," selected and arranged by Burton

Stevenson; "Bill the Minder," written and illustrated by W. Heith Robinson, and "Gulliver's Voyages to Lilliput and Brobdingnag," illustrated in color and line by P. A. Staynes.—Juvenile: "Partners for Fair," by Alice Calhoun Haines; "Sir Walter Raleigh," by John Buchan; "Saints and Heroes, since the Middle Ages," by Dean Hodges; "Betty-Bide-at-Home," by Beulah Marie Dix, and "The Boy Scouts of Bob's Hill," by Charles Pierce Burton.—Miscellaneous: "A Montessori Mother," by Dorothy Canfield Fisher; "Why Women Are So," by Mary Roberts Coolidge; "Socialism and Democracy in Europe," by Samuel P. Orth; "On Some of Life's Ideals," by William James; "Village Life in America (1852-1872)," by Caroline Cowles Richards; "Some English Story-Tellers: A Book of the Younger Novelists," by Frederick Taber Cooper, and "The World's Leading Conquerors," by W. L. Bevan.

The Century Co.'s autumn list of juveniles will include: A new Ralph Henry Barbour book, "Crofton Chums"; "The Lucky Sixpence," by Emilie Benson Knipe and Arthur Alden Knipe; Rupert Sargent Holland's "The Knights of the Golden Spur"; Frederick Orin Bartlett's "The Lady of the Lane," and a story of schoolgirl life, "Sue Jane," by Maria T. Daviess.

J. B. Lippincott Co. announces: "The Advance of Woman," by Mrs. [illegible] J. Christie, and "The Flowing Road," in which Caspar Whitney recounts his experiences in South America.

The Cambridge University Press (Putnam) has arranged to publish in two volumes a collection of "The Political Writings of Rousseau," edited by Prof. C. E. Vaughan of Leeds. The work will consist of a revision of the text of Rousseau after manuscripts in the libraries of Neuchâtel and Geneva; or, in the absence of manuscripts, after first editions. The manuscripts will include the first draft of the "Economie Politique," the "Lettres écrites de la Montagne (vii-ix)," and various fragments, all hitherto unknown; together with the first draft of the "Contrat Social" (books i and ii), the "Projet de Constitution pour la Corse," and more fragments; and finally the autograph text of the "Considerations sur le gouvernement de Pologne," containing a large number of readings altered either by Rousseau himself or by his editors before the posthumous publication of the work. An introduction will attempt to correct current opinions as to the bearing of Rousseau's work in this field and its importance in the history of political philosophy.

Arthur George Sedgwick is bringing out, through the Scribners, "The Democratic Mistake," in which he argues that the cardinal error in our political history has been the attempt to procure responsibility in public officials by popular election at short intervals.

Rodin, the sculptor, is the author of a prose rhapsody addressed to the Venus of Milo. An authorized translation of it, which has been made by Dorothy Dudley, will be published by Huebsch as a small book next autumn.

The total number of students in German universities, 59,560, shows an increase of about 2,300 above that of last year. About 5,000 are foreign students; 56,602 are men.

Canon H. D. Rawnsley has reissued his gracious "Memories of the Tennysons," the first edition of which was published by the Macmillans in 1901 and duly noticed in the *Nation*. To this second edition there has been added an account of the Tennyson celebration at Somersby in August of last year, with the text of the principal addresses.

"Dombey and Son" has come to us from the press of Henry Frowde, in a volume attractively put together. The print is not too small, and does not show through. There are forty colored illustrations by "Phiz."

R. J. Hart's "Chronos: A Handbook of Comparative Chronology" (Macmillan) provides notes on history, art, and literature from 8000 B. C. to 1700 A. D. The book is designed "for the use of travellers." Whatever advantages it may have above such a work as Plötz's "Epitome of Universal History" obviously consist in its portable compass of 300 pages and in the fact that only those events are selected which the traveller, as opposed to the scholar, will require. Why the book should be chopped off at the year 1700 is not clear.

H. M. Rideout has written an interesting tribute to "Dr. William Jones," the young ethnologist, who gave his life for science in the Philippines, where he was murdered by natives. Ordinarily, a man of Dr. Jones's comparatively brief career would not seem to merit a memoir, for he was but thirty-eight at his death, and it cannot be said that his achievements had really made him conspicuous. Throughout his life, however, there ran a tragic note, for he was born an Indian, and lived with his tribe until about ten years of age. Then, taken from these associations, he lived the life of the white West and of the cowboy until he went to Hampton Institute in 1889. Thence he found his way to Andover, and from Andover to Harvard, from which he graduated in the class of 1900. At Harvard, he was neither one of the best known nor the most popular in his class; but those who were admitted to the circle of his friendship were devoted to him, for they found that the combination of the Indian, cowboy, and Eastern college student made an exceedingly attractive, if rather reserved, character. On graduation, he naturally drifted into ethnological work, being affiliated for a time with Harvard and Columbia, taking his degree of doctor of philosophy at Columbia June 8, 1904, spending summers at first, and later winters, also, in studying the ethnology of certain Indians whom he could estimate and appreciate as almost no one else. The Field Museum of Chicago then sent him on a scientific expedition to the Philippines, where his tragic death only emphasized the minor tones of a life which was probably never without its shadows. Mr. Rideout has done well to bring out the story, and has written it with true feeling and excellent taste, though he has printed some letters with all their college slang, which were obviously never intended for print. Certainly, no one can lay down the book without a genuine feeling that here was a life of unusual romance and pathos, filled with promise of great usefulness. The book is published by Frederick A. Stokes Co.

Dr. Alfred J. Morrison, the compiler and editor of "The College of Hampden-Sidney Calendar of Board Minutes" (Richmond: The Hermitage Press), has told the story of the development of the struggling academy of 1776 into the vigorous and useful college of 1876 by a judicious selection of excerpts from the minutes of the Board of Trustees. The body of the book is followed by an appendix of fifteen pages containing the names and brief records of the trustees of 1775-1876; this is followed by a topical index, the whole being a volume of 186 pages. The value of the volume is much enhanced by thirty cuts of portraits of some of the distinguished men who have served as members of the board.

An attractive volume is Mabel Loomis Todd's "Tripoli the Mysterious" (Small, Maynard), which is based on a residence of several months in that city while assisting her husband in the observations of total eclipses of the sun in 1900 and 1905. The book is evidently written *con amore*, and the vivid descriptions of the city and its manifold life give her work a distinct charm. Though heartily enthusiastic, her appreciation of the beautiful never degenerates into sentimentality. Even the non-technical reader can enjoy her descriptions of the eclipses, and no side of Tripolitan life seems to have escaped her notice. Oriental music, which few Occidentals can appreciate, receives a special chapter; she is perfectly right when she says (p. 145):

> There is more in it than mere sound. I have been myself transported bodily into the depths of Sahara by these monotonously chanted tales. I have felt the free winds blow in my face as the racing dromedary bore me on to strange scenes over moonlit sands.

By virtue of her sex, Mrs. Todd was privileged to see much of the feminine life in Tripoli, and for this reason her account of the bride's side of Mohammedan weddings (pp. 92-112) is of permanent value. In her sketch of the history of Tripoli (chap. vi) Mrs. Todd might perhaps have referred to the injury wrought to the city in the fourth century by the Libyan Ausuriani (Ammianus Marcellinus, xxvi, 6), and in the chapter on The British Consulate-General it would have been interesting to note that Hakluyt's "Voyages" includes a record of the appointment of John Tipton as her Majesty's "Consul of the English in Algier, Tunis, and Tripolis of Barberie" in 1585, as well as Sanders's story of the Tripolitan seizure of the English ship Jesus in 1583, which resulted in a sharp controversy between Queen Elizabeth and Sultan Murad III. Mrs. Todd is incorrect in supposing (p. 160) that idolatry had only recently been introduced among the Arabs in Mohammed's time, for it is merely necessary to glance at the pages of Herodotus to see the character of early Arab paganism. On p. 166 she refers to a very interesting bit of folk-belief in connection with the sinking of bowls in the grave-blocks of the more wealthy citizens:

> These receptacles, however, were not for flowers, as one might imagine, but to hold water for birds. . . . The birds are said to bring good fortune, so their drinking basins were not provided for wholly philanthropic reasons.

It may be suggested that these birds are really held to contain the souls of the deceased, who thus visit the graves where their bodies lie, and that they also come to receive refreshment from the water in the bowls. We should here, accordingly, have another instance of the widespread Mohammedan belief in the abiding of the souls of the righteous in birds, to which Goldziher called attention in 1903 (*Globus*, lxxxiii, 301-304). We cannot but wish that Mrs. Todd had included among her excellent photographs one of a doorless, windowless, probably pre-Mohammedan ruin, which she briefly describes in her visit to Ghirgaresh (p. 76), as well as pictures of some of the prehistoric *senams*, or trilithic dolmens of dressed stone, which are found in the vicinity of Tripoli itself (p. 71).

By mutual agreement between the publishers of "Readers' Guide to Periodical Literature" (Minneapolis: H. W. Wilson & Co.) and the "Annual Library Index" (New York: Office of Publishers' Weekly), arrangements have been made to prevent duplication of work and to assign exclusive lines of effort for each in the library field. Under this agreement the Wilson Company gives up to the Office of Publishers' Weekly its index to current events, which has been a feature for the past two years, and the latter gives over to the Wilson Company its index to current periodicals, which it has been publishing since 1892. As by this arrangement the "Annual Library Index" loses what has heretofore been its main feature (covering, in 1911, 364 of its 475 pages) and gains only a few pages in its enlarged index of current events, it was necessary, either that it should be greatly reduced in size and importance, or that it should be enriched by the inclusion of new features and functions. The latter alternative has been chosen, and the old series of indexes has now been merged into what is virtually a new work, under the title "American Library Annual." Features of the old series which are retained in the new are: list of bibliographies published during the year; annual necrology of writers; list of libraries in United States and Canada; list of private book collectors in the United States. New features added are: alphabetical directory by places of booksellers in the United States and Canada (88 pages); directory of publishers in United States, with number of titles issued by each during the year (14 pages); directory, with names of officers, of national, State, and local library and book-trade organizations throughout the world (13 pages); list of library and book-trade periodicals of all countries (8 pages); statistics of leading foreign libraries (8 pages); and a detailed statistical and critical survey of the year in books (19 pages), including statistics by classes of books published in different countries, report of the Register of Copyrights, enumeration and discussion of the "best sellers" of the year, and a brief critical estimate of the leading issues of the year in their various fields. While entitled a library annual, it will prove quite as useful in the book trade as in library work.

By reprinting two papers by Simon Sterne under the title, "Railways in the United States, Their History, Their Relation to the State, and an Analysis of the Legislation in Regard to Their Control," G. P. Putnam's Sons have placed students of transportation problems under obligation to them; at least to the extent that the papers will serve to warn other writers not to express with too great emphasis predictions as to any future solution of an economic problem. Mr. Sterne will be remembered for his forty years of association in speech and print with corporate problems, and particularly as the chief instigator of the Hepburn committee investigation in New York in 1879. In the first of these papers, published originally in 1883, in the Cyclopædia of Political Science, while anticipating accurately the legislation that four years later created the Interstate Commerce Commission, he finds the eventual solution of the problem to lie in government ownership. In the second paper, published twelve years later, he declares it to have become generally recognized that "a State administration of the railways, by an actual acquisition of the system, must be relegated in the United States to the limbo of discarded ideas, probably never to be urged again." He declares the true development of governmental control to lie in the direction of strengthening the Interstate Commerce Commission as a tribunal. Such strengthening having been accomplished during the seventeen years since Mr. Sterne wrote his final word, we are, in spite of his emphatic predictions to the contrary, again hearing, and with increasing persistence, demands for the public ownership and operation of our transportation system.

A suggestive comparison of the movement of wholesale prices, chiefly in the nineteenth century, and the production of gold is made by Walter T. Layton in "An Introduction to the Study of Prices" (Macmillan). From 1820 to 1849, when falling prices coincided with a decline in the annual output of gold, there was a rapid increase in the productivity of industry, at the same time that the English working classes, partly because of general labor disorganization and partly because of the tariff, received no benefit from the price decline. From 1849 to 1874 the influx of new gold from California and Australia was attended, towards the end of the period, by a rise of prices, wages, and profits, while labor benefited from the fact that food rose less in price than other commodities. Thereafter, until 1896, prices again fell, with a decreased gold production, as before, but also with an expansion of other forms of currency, which, by adding to floating capital, but not to the volume of money in consumers' hands, increased the productivity of industry at the same time that it depressed prices. Since 1896 both prices and gold output have been rising. Mr. Layton's conclusion is that gold, as a standard of value, is "not behaving in the most desirable way," since it is at present steadily declining in value in relation to commodities in general; and that steadiness must be sought either in devising a method, such as a wider use of index numbers in adjusting wage or long-time contracts, by which incomes and price movements may be harmonized more readily than at present; or else by attempting to control the value of gold in currency, as proposed by Prof. Irving Fisher. There are some useful statistical tables, and a chart showing the movement of wholesale prices since 1800 in comparison with the world's production of gold.

Many will welcome Sir Frederick Pollock's new book, "The Genius of the Common Law," being the Carpentier Lectures delivered in 1911 in Columbia University (Columbia University Press: Lemcke & Buechner). To profound knowledge of the subject, on its practical and historical sides, he adds a thorough acquaintance with the civil law and with the modern systems which are to a greater or lesser extent based on it. Sir Frederick Pollock, assuming that his audience was familiar with the general lines of the topic, proposed to examine the processes of the common law, its general characteristics and guiding principles, and what may be learned for our profit from its success or failure. Of such failures many are recorded. The present system of pleading, the law of real property, the regulation of economic relations, in particular the relation between master and servant, are not only of statutory origin, but are to a considerable extent opposed to the common law's original doctrines. It is true that, in many instances and on many subjects, the practical sense of judges succeeded in finding solutions in harmony with modern needs, and that in the main the greatest work of the common law has been towards a spirit of freedom; but the lyrical outbursts of the author seem forced. His criticisms are too many and too sweeping for one who "does homage to Our Lady of the Common Law, and is her man of life and limb and earthly worship." The author compares our body of law to the new German Civil Code, which, he says, "resembles ours in being both composite and original; but differs from it in being the product of a systematic design deliberately worked out with the best learning and skill available." Although our attempts at codification up to the present time have not been made in a scientific spirit, it is to be hoped that with the development of the study of jurisprudence as a science, the Anglo-Saxon race will succeed in evolving a body of law which, in the words of Professor Jhering (when speaking of the spirit in which Roman law should be studied) shall make use of the common law but go beyond it.

Lewis Orsmond Brastow, until 1907 professor of practical theology in the Yale Divinity School, died in New Haven on Saturday, aged seventy-eight. Besides several magazine articles and short treatises on religious subjects, be published "Representative Modern Preachers" and "The Modern Pulpit."

Isaac Nelson Ford, London correspondent of the New York *Tribune* since 1895, died in London on Friday. He was born in Buffalo in 1848 and joined the staff of the *Tribune* in 1870. He was the author of one book, "Tropical America."

Alfred Ludwig, professor of Sanskrit at the University of Prague, is dead. He was in his eightieth year. He was a man of marvellous learning on the one hand, and of such extraordinary originality on the other that his views of thirty-odd years ago evoked the most vigorous opposition of his colleagues. His monumental work, a complete translation of the Rig-Veda, with an elaborate commentary, despite the idiosyncracies of its external form, shows such keenness and ingenuity of interpretation and such knowledge of the native Hindu opining, that it will long remain an authority with which all students of the Vedas must reckon. His library is rich in works on the literature and antiquities of India and Persia, and the Semitic peoples, and his sister would like to sell it *en bloc*. Her address is Miss Ludwig, No 40 Kramerius-Gasse, Konigliche Weinberge, Prague, Bohemia.

Science

CONGRESS OF EUGENISTS.

London, July 31.

So many alarmist cries have been heard of late years that you have to shout "Wolf!" very loudly indeed to make the British public turn its head. Perhaps that is why the first meeting of the International Engenics Congress has been received in London with such equanimity. Its official prospectus was enough to make the hair of a nervous person stand on end. In all civilized societies, so we were warned, there has arisen a process of selection of the less fit, which is "a grave and growing danger to the future of the human race." The inevitable result must be "a racial degeneration rendering progress impossible and threatening civilization with destruction."

The same "scare-head" note was struck by the president of the Congress, Major Leonard Darwin, in his speech at the inaugural dinner. Whether our civilization was to be progressive or retrograde, depended, he said, on the success or failure of the eugenic movement. That the Congress itself was believed to be of tremendous importance appeared from a preliminary interview with one of its principal organizers, Dr. A. F. Tredgold, who prophesied that its sessions would "mark an epoch in the history of civilization."

It has certainly demonstrated the intense conviction and enthusiasm of the eugenists themselves. The Congress has brought together men and women of distinction from all parts of the world. They have been at the pains of preparing, as a basis for their discussions, statistics and reports that occupy nearly 500 printed pages. The members of the Congress have attended well, and have followed the proceedings with keen interest.

Only a diligent student of the official volume, "Problems in Eugenics," could fully estimate the value of the preparatory researches. In the expert opinion of Dr. C. W. Saleeby, "few of the papers add anything to our thought and knowledge." But at least they bring to light many interesting facts not generally known. For instance, there is Dr. Adams Woods's study of the portraits of royal, noble, and other historical personages, with the conclusion that the bony framework of the face has changed since the beginning of the sixteenth century. Similar points of interest emerge from Dr. Soren Hansen's paper on the recent increase of stature in the Scandinavian populations.

The discussion of most practical service was probably that in which Prof. Vernon Kellogg of the Leland Stanford, Jr., University called attention to a neglected factor in the peace question. Militarism, he pointed out, was eugenically disastrous through the direct selection for war purposes of the most sturdy individuals in the community. At the close of the Napoleonic wars, when the families of France were no longer drained of a great part of their able-bodied males, a new type of children began to be born, with a stature of an inch greater than that of the earlier generations born in war-time.

This attack on militarism provoked the dissent of a German general and two English colonels, who argued that militarism was eugenic because of the wholesome effect of its discipline upon the health of the recruits. The German general paid a high compliment to the "physical strength and high spirits" of the young soldiers he had seen marching through the streets of London.

Those outsiders who have watched the Congress with more than a superficial interest have been most concerned to know what help it would give in solving the problems of legislation. Many prominent eugenists in various countries have been calling for increased powers of state action to improve the human breed, or at any rate to prevent its deterioration. What impetus has the Congress given to the movement for the permission of marriage to those persons only who can produce satisfactory eugenic certificates?

None at all. On the contrary, it has strengthened the case of those who look with suspicion upon the claims of eugenists to inspire and direct Parliamentary action. It has done so by revealing in what a rudimentary stage the so-called science of eugenics finds itself at present. With all his glowing forecasts of the results of the Congress, Dr. Tredgold had to admit the two weighty objections "first, that our knowledge regarding the diseases which are transmissible and likely to produce racial deterioration is as yet incomplete, and, secondly, that we do not know enough about people's family histories." In his candid and critical speech at the dinner Mr. Balfour reminded his hearers that "probably there is more difference of opinion at this moment among many scientific men with regard to certain fundamental principles lying at the root of heredity than there was, for example, in the seventies or eighties of the last century." And in one of the discussions Prince Kropotkin declared bluntly that eugenics, so far from being a science, was simply a few ideas, generalities, and desires that had been expressed by a certain number of people.

H. W. H.

"The Living Plants," by William F. Ganong, is a title in Holt's autumn list.

Prof. Wm. M. Davis of Harvard, after finishing his course of lectures at the Sorbonne last winter, led the eighth inter-university excursion to study the forms of the earth in the "Bassin de Paris." The fourth day was spent in the valley of the Armançon, and in the *Annales de Géographie* for July is given his explanatory description of its surface, structure, and especially of the processes of erosion in its formation. The "prodigious powers" of erosion in the region of the Barron and Russell Rivers in Queensland are described by Prof. J. V. Danes of the University of Prague. There is also an interesting account, by Ph. Arbos, of the change in a French Alpine region from an agricultural to a pastoral life. The change has increased the activity of the people and has added to their wealth without taking from them the traits which have distinguished them for centuries. L. Gallois contributes an explanation of the growth of cities, taking for his examples Vienna, Grenoble, and Dijon. In some notes accompanying a remarkable colored chart of the coral reefs between Australia, China, and Japan Prof. L. Joubin pays an enthusiastic tribute to the work of Prof. Alexander Agassiz and the Prince of Monaco.

During the past two years the Mount Weather Observatory has conducted four series of "sounding balloon" ascensions, a method of investigating the upper air first extensively used by the late Prof. Lawrence Rotch, founder and director of the Blue Hill Meteorological Observatory. At two places in the first series ascensions were made simultaneously; all the balloons in the others were sent up from a single spot. The thin rubber, of which the balloons of the second series were composed, burst quite uniformly (with one exception) at low altitudes. The others, of similar material, but thicker and newer, did better. The ascension of September 1, 1910 (third series), is the highest aerial sounding of which a complete record was returned by the instrument. Hydrogen gas was employed. In making a summary of results, the data obtained by the Blue Hill Observatory in several series of free-balloon ascensions were combined with those of the Mount Weather Observatory. Increasing the number of observations from 79 to 138 added material help to the seasonal distribution. Data are given as to details of instruments, temperature, humidity, wind distribution, and velocity, the upper or permanent inversion of temperature, and other points. Of course, the absorption and radiation of heat by the atmosphere itself holds an important place. But as observatories with improved apparatus increase and are extended to other elements, early opinions may be more or less modified. Taken, however, in connection with cloud observations, they seem to give evidence of a comparatively deep upper condensation layer in the summer season, and of lower minimum temperatures at higher altitudes in summer than in winter. The effect is probably more pronounced in the long and warm summers of low latitudes.

In general, peculiarities in the temperature gradient, up to and including the upper (permanent) inversion, probably owe their existence to the influence of convection on the distribution of constituents in the atmosphere.

Prof. John Craig, head of the department of horticulture in the New York State College of Agriculture at Ithaca, which is a part of Cornell University, died on Monday at Siasconset, Mass., aged forty-eight. He was the author of "Practical Agriculture" and other scientific works.

Drama and Music

August Strindberg: Plays. "The Father," "Countess Julie," "The Outlaw," "The Stronger." Translated by Edith and Warner Oland. Boston: John W. Luce & Co.

These four plays, added to other recent translations by Edwin Björkman, place in the hands of English readers a considerable body of Strindberg's dramatic work. One of the plays in the present volume, "The Father," was produced in New York last season, and its central problem has been stated in these columns. But the piece requires a careful reading if one would see how characteristic it is of both Strindberg's best and worst. It embodies his fixed idea of woman's baneful influence upon man. A wife seeking to get absolute control of her child gradually convinces her husband, though falsely, that he is not the father, and brings him in the end to madness. Having fulfilled his function of father and breadwinner, he is no longer necessary to her. If one will calmly accept the fact that every spark of feeling between the two has died out before the play begins, one may admit that the portrayal is a subtle bit of diabolical plotting. The wife is no more human than Iago, whom it is known that Strindberg carefully studied, and the stages through which the father passes before believing himself wronged also suggest Othello's helpless but well-meant self-testing.

The resemblance to Shakespeare is a matter of some importance. Cleverness unhampered by human feeling, which is impersonated on several occasions in Shakespeare, most notably by Iago, but also by Richard the Third, and Margaret, strongly attracted Strindberg. It offered a good chance to indulge his skill in specious logic, and has thus produced much incisive dialogue. But whereas Shakespeare by poetic heightening gives adequate motive to, and for the moment glorifies, the diabolical, Strindberg's treatment results in little more than an inhuman contest of wits.

The "Countess Julie," the next play, might be supposed to correct this impression, for its action begins earlier, that is, while natural feeling still operates. The Countess Julie, a hoyden of twenty-five, becomes infatuated with her father's valet, Jean, having just dismissed her betrothed, who rebelled at jumping over her whip, like a dog, more than twice in succession. The temptation to abandon restraint receives a certain justification from the time of the action, which is Midsummer Eve when the whole countryside is junketing. The scene is laid in the kitchen, where Julie is coquetting with Jean. Manifestly, she is merely playing with fire, and is the victim of no strong impulse; yet before long she gives herself to him when they have fled to his bedroom to escape being seen together in the kitchen. This point marks the beginning of the real problem. Jean, inflated by his easy conquest, despises her, and she, naturally, hates herself and him. There is a resumption of Strindberg's typical method. It is a question which can wrest self-advantage from the catastrophe. The talk is of his marrying her and starting a hotel in Switzerland with the money that she can scrape together. He draws a hopeless picture of the plan in the working to discourage her, but she determines nevertheless to start out, taking with her only a pet canary. Whereupon Jean cuts off the bird's head with a butcher's knife. The upshot of the matter is that Julie leaves the stage fortified by Jean to cut her throat.

Throughout his life Strindberg was much impressed by dramatic moments in early Scandinavian history, and wrote plays around Olaus Petri, Gustavus Adolphus, and other such figures; they offer a pleasant relief from his preoccupation with modern sex problems. Readers will therefore be pleased to find included in the present volume "The Outlaw," a piece dealing with Iceland in the period of the Crusades. Thorfinn, Earl of that country, clings with heroic obstinacy to the old gods. Gunlod, his daughter, has been secretly converted to Christianity by a Crusader. Valgerd, the wife, is less obvious, the problem of her soul being somewhat overshadowed by her husband's coldness of heart towards her. The action begins on a stormy night when the Earl is returning home by sea. In a hut, where the scene is laid, the daughter and wife await him, the mother uncertain whether to place the beacon in a position where it will rescue or where it will destroy. Her passions are primitive, but she yields to the good. With the entry of the Earl the treatment of the main theme moves rapidly. In his heart he knows that the old religion does not satisfy him, and he suspects the women of still greater weakness. Sharpness is given to the problem by an attack on the Earl's domains which threatens destruction. The Earl holds in solution the destinies of the three. The wife, without further thought of religion, determines to die in the hut; Gunlod, to whom peace of soul and the joy of marriage are held forth, remains first of all her father's daughter. Just before the Earl capitulates to a greater God than his, his sense of loneliness and impotence is expressed by Strindberg in terms which again suggest Shakespeare, namely, the soliloquy of Richard the Third after seeing the ghosts:

> *Thorfinn:* What do I fear? Yes, loneliness. What is loneliness? It is I, myself! Who am I then to fear myself? etc.
>
> *Richard the Third:* What! do I fear myself? there is none else by, etc.

The juggling with two personalities is elaborated in both cases in much the same fashion. The end is at hand. Thorfinn yields to Christianity, to learn that material assistance has arrived from Gunnar, the Crusader and Gunlod's lover.

The fourth piece in this book is a scrap of dialogue between two actresses over the husband of one of them, the other woman being his mistress. The wife demonstrates that her influence on the man is "The Stronger"—such is the title.

Leoncavallo, having tried every possible style and method in the effort to win another success like that of his "I Pagliacci," has now conceived the brilliant idea of making prominent use of a new instrument which he provisionally calls the "contra-violin." It combines the notes of the violin with those of the violoncello, and even some of those of the double bass, and in his forthcoming opera, "Gypsies," it frequently carries the melody.

Not long ago, it will be remembered, Leoncavallo produced a work which was very much in the style of the "Merry Widow." He has now returned, he says, to his original passionate style as employed in "I Pagliacci." "Gypsies" contains, he further declares, his real self; he has followed simply his own temperament and inspiration. The scene of the first act is a gypsy camp on the banks of the Danube, while the second is built around an old village church. The first performance of the new opera will be at the London Hippodrome on September 16. If it succeeds, it will be taken on tour in England and later in America. The interruption caused by "Gypsies" has delayed the completing of another novelty, "The Marble Forest," which Leoncavallo has had in hand for some time for the Scala in Milan. He has also planned a one-act opera, to be called "Œdipus."

Twenty-three portraits of Richard Wagner are included in this year's Bayreuth guide, "Der Wegweiser für Besucher der Bayreuther Festspiele," the tenth issue of this useful little book. Like its predecessors it gives a complete description of Bayreuth, past and present. Among the articles specially written for this issue are the following (in German): "Wagner in France," by Houston Stewart Chamberlain; "Ernestine Schumann-Heink," by M. G. Conrad; "Countess D'Agoult," by C. F. Glasenapp; "Wagner's Portraits," by Professor Goether; "The Creation of 'Die Meistersinger,'" by Professor Prüfer; "Parzival and Parsifal," by Hans von Wolzogen.

The Dresden Opera House, after being subjected to a thorough overhauling, will be reopened on September 10 with a performance of Wagner's "Meistersinger," which is intended as a celebration of the fortieth year of Generalmusikdirektor Schuch's connection with that institution.

Statistics given out by the music publishers of Germany show that, while the trade on the whole is flourishing, there is an increasing output of trivial compositions. Does this indicate that musical culture in Germany is not holding its own?

The German Emperor is interested in the monumental complete edition of Joseph Haydn's compositions to be issued in Leipzig by Breitkopf & Hartel. He has ordered a number of copies and written his name in the subscription book, leaving the first page for the Austrian Emperor. Time was when the music publishers relied on subscriptions by members of the nobility for the issuing of a single symphony or choral work (see the letters of Beethoven *passim*). That is no longer so, but it was doubtless deemed necessary in the case of Haydn. He wrote a vast number of pieces, vocal and instrumental, which have never been printed. The majority are of little more than historic or biographic significance; yet it will be interesting to have them all accessible.

An interesting detail of the coming season of the New York Philharmonic Orchestra will be the performance of the "Peer Gynt" suite. It will be rehearsed with the care which it deserves. Always applauded, even when simply reeled off as a popular piece, it will, when thus presented, doubtless create a sensation equal to that made by the playing last season of Grieg's wonderfully expressive and melodious orchestrated song, "The Last Spring."

More than a dozen years have elapsed since Clara Butt was last heard in this country. She will return next January for a series of concerts with her husband, Kennerly Rumford, who is a baritone. In England, Mme. Butt made her début in 1892, in Sullivan's "Golden Legend." To-day she is among the popular idols, no great festival being thought complete without her services. She is a very large woman, and equally big is her voice, a contralto, with a curious tenor quality. One of her specialties is Schubert's song. "Death and the Maiden."

Julien-Emile-Frédéric Massenet died at his home in Paris on Tuesday. He had suffered for a long time from cancer, but his death was sudden and unexpected. Born at St. Etienne in 1842, he was destined, both by his talents and his parents' desires, for a musical career. When barely nine he was a pupil at the Paris Conservatoire, with Laurent, Reber, and Ambroise Thomas as his teachers. In 1862 he won the Prix de Rome. The two years which he spent in that city he has described as perhaps the most memorable of his life. On his return from Italy, his "Grand'tante," through the influence of Ambroise Thomas, was produced at the Opéra Comique. But it was not until after the Franco-Prussian war that he took first rank among French composers, by the production of the comic opera "Don César de Bazan," incidental music to the tragedy "Les Erinnyes," and an oratorio "Marie Magdeleine." Then followed in 1875 "Eve," an oratorio; later, certain "Suites d'Orchestre," "Ouverture de Concert," and the opera "Le Roi de Lahore"; in 1881 "Hérodiade," two years later "Manon"; "Le Cid" in 1885, and then "Esclarmonde," "Thaïs," "La Navarraise," "Sapho," "Cendrillon," "Griselidis," "Le Jongleur de Notre-Dame," "Ariane," and "Thérèse." Massenet was a grand officer of the Legion of Honor, and in 1876 was appointed both a member of the Institute and a teacher in the Conservatoire.

Art

Holt has in press "American Graphic Art," by F. Weitenkampf, curator of prints, New York Public Library.

E. Gurney Salter has chosen a capital subject in "Nature in Italian Art" (Black-Macmillan, $2.75 net. illustrated), but has done the theme less than justice in the working out. What we have is virtually an inventory or chronological catalogue of the landscape preferences of about a hundred painters. No adequate attempt is made to trace general tendencies; ideas of any sort are painfully rare. In short, this is a collection of material rather than a book, and, except in the case of the greater artists, rather for consultation than for reading. The survey closes with Tintoretto. The Bolognese eclectics might well have been included both for their intrinsic quality and for their influence on early landscape painting in the North.

The qualities of intelligent arrangement, logical treatment, and a clear and simple literary style, which so often characterize the products of French scholarship, are conspicuous in "L'Architecture Antiquité," by Prof. François Benoit of the University of Lille, recently published by Laurens of Paris, as one of a series of Manuels d'histoire de l'art, edited by Henri Marcel. It forms the first of two volumes in which it is proposed to cover the entire history of architecture; but it is evident that the scale of the present volume cannot be maintained in the second, which will have to be far less detailed and complete than the first, unless it is to be of inordinate size. M. Benoit's manual is by far the most complete of recent general handbooks on ancient architecture, not only in the discussion of certain styles and periods which the others pass over somewhat lightly, but in the number of monuments described, the statistical information furnished, and the detailed analysis of structural methods and devices. Prehistoric architecture, the architecture of the Ægean culture, Hittite, Syrian, Phœnician, and Etruscan architecture, are all reviewed with unusual care and detail, considering the scale of the whole treatise; while the skill with which analysis, synthesis, description, and criticism are combined is remarkable.

Each division of Professor Benoit's work begins with a section entitled *La Commande*, in which the general problem, conditions, and requirements of the style or period are briefly but luminously set forth, with a succinct chronology of its developments and monuments. This is followed by the analysis of its methods and processes of construction, and this in turn by a discussion of "the effect" (*l'effet*)—that is, of the æsthetics of the style, composition, scale, proportion, details, and decoration. All these discussions are accompanied by illustrations—maps, diagrams, plans, sections, elevations, details—for the most part original drawings of small size, conveniently adjacent to the text they illustrate. There are few photographic views or restorations of entire buildings, and this lack is the chief defect of the work, as it leaves the reader without means of judging the total effect either of the architecture of a people or of a period as a whole, or of its great monuments. Moreover, in spite of the ingenuity and intelligence shown in the drawings, especially the comparative diagrams, these are often misleading, from the lack of scales of dimensions—*e. g.*, in Figs. 28, 29, and 33, showing plans of various Egyptian temples all drawn to different scales; while in Fig. 30 two of the temples are mislabelled, and in Fig. 45 a blunder in the scale has led the author into a wholly erroneous comparison of the dimensions of Notre Dame Cathedral in Paris with the Hypostyle Hall at Karnak. For the most part, however, the statistical data are correct and illuminating. But M. Benoit's application of circles and triangles to the discussion of proportion in Persian and Greek buildings is not convincing. As in many modern treatises, the discussion of Roman architecture is less complete and thorough than that of the Egyptian and Greek styles, but it is on the whole intelligent and fair, and the italicized statements of its fundamental principles, aims, and conditions are keen and cogent. A bibliography occupying eighteen pages closes the text of the book. This bibliography is remarkably full, comprising works in French, English, German, and Italian. As in most French works, the foreign titles are often misspelled, but the proportion of these errors is smaller than usual. The indexes at the end are very complete and detailed.

Finance

THE GOVERNING INFLUENCE.

The notion is entertained, by some philosophic observers of the past week's events financial, that the stock market would have broken violently on the political occurrences, had it not been for the news of agricultural prosperity, and that it would have advanced enthusiastically on the crop and business information, had it not been for politics. The theory is plausible, and it is one of those theories which are impossible to disprove. It would naturally involve as corollary the assumption that the adverse influence of the political confusion is exactly equal to the beneficial influence of the harvest outlook; for the net result, in the week of the Third Party convention declarations, was a virtually motionless market. The main difficulty with the argument is that nobody knows what the stock market will do next, any more than he knows what will happen next in our present chapter of political history.

There is at least this much to be said—that while political tendencies are surrounded by almost complete uncertainty, harvest results are very nearly assured. They are most remarkable; they belong, indeed, all things considered, in the category of what may be called dramatic agricultural episodes. The great American wheat crops, coincident with a European famine, which came in 1879 and 1897, at exactly the moment when exactly that result was needed to lift the country from adversity to prosperity and thereby indirectly settle a critical struggle over the standard of value, were in this group of episodes. So, in the opposite direction, was the famous corn crop failure of 1894, when the resultant hardship and discontent in the agricultural West gave the impetus to the Populist propaganda which made possible its capture of the Democratic National Convention two years later. In yet a different way, the cotton crop of 1911 was one of these dramatic incidents; for we had had a series of short crops, supplies were on a famine basis, cotton prices were in the clouds, we had been told that the Southern planters and speculators had the world's spinners by the throat, cotton mills were closing throughout the world, and the experts were demonstrating how the fertility of the cotton belt was exhausted; when, in the very next season, an American crop 6 per cent. larger than the previous maximum was harvested, and the entire cotton-producing community engaged in a movement to restrict the acreage which, in their view, had swamped the cotton markets of the world.

Something at least of this dramatic element attaches to the promised harvests of 1912. There have been varying theories as to why last year was so distressing and disturbed a period. Some people laid the blame on the Trust prosecutions of the Taft Administration; some on reaction from overspeculation and overstrain on capital; some on the danger of war between France and Germany or Germany and England.

But once in a while, and with much emphasis, the harvest disappointments of 1911 would be mentioned, and it would be recalled that the American wheat and corn crops of the year were much the smallest since 1904, that small grains and fodder crops were so deficient in their yield as to create actual scarcity and to derange both our farming industries and our cereal export trade, and that even such a crop as hay, supremely important in agricultural activities, turned out less in amount by 20 per cent. than in any of the sixteen past years. When the country's industrial balance-sheet of the year was cast, and the causes for the disappointing railway business, for the diminished purchasing power of the West, and for the business depression generally, were sought, a very large share of responsibility was ascribed to the fact that, with cotton alone excepted, 1911 had been all but a disastrous agricultural year.

On such a situation, and after a season of much more than ordinary uncertainties and misgivings, there now comes at harvest time the brilliant picture which lies before us. A wheat crop which, as a whole, has been seldom matched in magnitude, and which is most bountiful in the States where the need of such a crop was greatest, a promise for corn with few parallels in our agricultural history, and the largest harvest ever gathered of barley, rye, oats, and hay—in fact, the total and complete reversal of last year's adverse conditions, along with profitable prices on which the farmers may sell their produce—these are the underlying facts of the present situation, confirmed by last Friday's Government crop report.

One or two crops are still somewhat dependent, for their total out-turn, on the weather conditions of the next two or three weeks. But even so, there can no longer be any doubt that we shall enter the autumn season under the auspices of one of the greatest harvests of our history, and not only does this agricultural windfall follow a season of dearth, which ensures a profitable market, but the quickening of trade and industry which should naturally follow such enhancement of the community's buying power comes in sequence to a year whose characteristic policies were close economy, pruning-down of unsold supplies, and careful use of credit. It is on these conditions that expectations for the next chapter in American business history will properly be based.

To what extent, if at all, such governing influence will be superseded by political disturbance and misgiving, is now, as always, a question for debate. The campaign is unusually late in opening. In recent Presidential years the trend of things has usually begun to grow plain about this time. It was certainly so in 1908, in 1904, and in 1900, on each of which occasions experienced political observers had made up their minds, before the 10th of August, who would be elected. In 1896, the feeling of doubt and consternation over Bryan's campaign was probably at its height at just this time, but it began to be allayed when Bryan's Madison-Square-Garden speech on August 12 turned out a political fiasco; and although apprehension rose to a high pitch again in the week before election day, the politicians had positively made up their minds as to his defeat by the middle of September.

But expert conclusions do not always bring conviction to the people at large or confidence to financial markets. Even in such a year as 1908, when Taft won the election by 1,269,000 plurality, there was a "political scare" on the Stock Exchange as late as the middle of September. Sometimes, too, the experts themselves find it difficult to discover how the political tide is moving. In 1872, when Grant's November plurality over Greeley was by far the largest ever polled for any candidate until 1904, some of the oldest hands at political prediction were in doubt up to the early autumn, and in August, political mercenaries were drifting from the Republican to the opposition camp because they believed the Greeley movement irresistible. In 1864, a year when the voters reëlected President Lincoln by a flat majority of 407,000 over McClellan, Lincoln himself, the shrewdest political observer of his period, made on August 23 a private memorandum to the effect that "this morning, as for some days past, it seems exceedingly probable that this Administration will not be reëlected."

So that the Stock Exchange, like everybody else, will quite possibly have its spasms of misgiving this year, even with the cheerfulness created by reviving trade. Whether resumption of trade activity can be checked by such uncertainties, is a different question.

Dr. Esenwein

Short-Story Writing
A course of forty lessons in the history, form, structure, and writing of the Short-Story, taught by J. Berg Esenwein, Editor Lippincott's Magazine.
Over one hundred Home Study Courses under professors in Harvard, Brown, Cornell, and leading colleges.
250-page catalog free. Write to-day.
The Home Correspondence School, Dept 284, Springfield, Mass

Just Published!
Elementary Entomology
By E. DWIGHT SANDERSON
Dean of the College of Agriculture, West Virginia University, and
C. F. JACKSON, *Professor of Zoölogy in New Hampshire College*
$2.00

An excellent general course for anyone interested in entomology.

The aim throughout has been to keep the text as untechnical as possible. Species of economic importance have been given special consideration.

The illustrations are abundant and excellent in quality and will aid much in identifying the species and understanding their habits.

The laboratory directions are given in the form of concise outlines of study of the habits, anatomy, life histories, and classification of insects. There are keys by which the more common insects may be traced, and full directions for the collection and preservation of insects.

NEW YORK, THURSDAY, AUGUST 22, 1912.

The Week

It can hardly be said that President Taft's special message on the Panama Canal bill is of a sort either to influence Congress or to strengthen his own position. He virtually asks Congress to do something which he at the same time makes it clear that he personally does not believe to be necessary. That is, he states it as his opinion that the free-tolls provision does not violate the treaty. If so, why hesitate to sign the bill? The reason he gives is that many eminent lawyers hold another view, and that he thinks it desirable, by way of abundant precaution, to provide for a test of the matter in our own courts. But Congress is not in a mood to do things out of abundant precaution. If it is persuaded that the President will, in the end, sign the bill as it stands, we may be sure that it will make no alterations in it, nor pass a joint resolution solemnly declaring that it had no intention of violating the treaty. Mr. Taft betrays a certain sensitiveness about bringing a reproach upon the nation, but it is too hesitating and flabby to make an impression upon Congress. The only way in which he can safeguard "our standing before the world," about which he says he is solicitous, is to veto the bill; but of a resolute purpose to do that, he gives no sign.

The Republican Campaign Committee has unearthed a highly confusing state of things in what might be called the world of political accident insurance. To begin with, it is stated that manufacturers in this country have taken out English policies, at Lloyd's, insuring them against losses which they may incur through the election of Gov. Wilson to the Presidency. This of itself is interesting; applied on a sufficiently liberal scale, the arrangement should not only rob of all its terrors the familiar "campaign scare" (usually due about the middle of October), but should also remove anxiety from the merchant's mind regarding all other vicissitudes of the season's trade. But the guarantee of home manufacturers' profits is not all; it appears by the statement that English manufacturers also are applying for similar insurance against loss, if Mr. Wilson is elected. That is to say, Lloyd's are guaranteeing the Americans against such losses as are expected by them to follow removal of protection against European competition, and at the same time are guaranteeing the European competitor against losses which the same policy would inflict on him. This, on first thought, would look like a disingenuous "hedge" by Lloyd's, in which that sagacious body of underwriters balance the English exporter's premiums against those of the home manufacturer. But on second thought, it begins to appear that Lloyd's are making certain a loss to the underwriters; that, in short, they are pledging an indemnity if the house burns down, and then pledging another if it does not. Is it possible that the crafty men of Lloyd's do not believe that any one, here or in England, will be hurt by "revision of the tariff downward"? Or is it possible that the Republican Campaign Committee is the victim of a hoax?

There is much evidence that the colossal straddle on the negro question has not helped Mr. Roosevelt. Those white Southerners who want an all-white party are satisfied with the Democracy, and look with suspicion upon one which faces one way in the North and another in the South. Nor will the typical moral obscurity of the *Outlook* on this issue help matters. It declares in its wisdom that the "passion for humanity" makes desirable the admission of negro delegates from West Virginia and undesirable those from Alabama. But the colored press shows no sign of being taken in by all this moral confusion. Those papers that are still sticking to Roosevelt are in obvious distress. Some of the leaders of the race like the Rev. R. C. Ransom have left Roosevelt, and influential journals like the Boston *Guardian* are driving home the nature of Mr. Roosevelt's treachery, which not only excluded Southern delegates, but left out of his platform of social justice all reference to disfranchisement, the denial of civil and political rights, and the wholesale lynchings, while putting in a plea for immigrants from abroad, and a plank approving the granting of pensions to the Confederate veterans who tried to destroy this Union.

Gov. Hadley's full statement of his reasons for refusing to go with the Roosevelt party contains little that is new but much that is effective. It is so particularly as coming from the man who led the fight for Roosevelt at the Republican Convention, and who was then hailed by the Colonel's followers as the very type of an honest man in politics and a true Progressive. Now, of course, he becomes at once a crook and a tool of the corrupt interests. However, in what he has to say on one point there is undeniable force. Gov. Hadley takes up the argument that it is time for a new party because the Republican party has become "sectional," and observes with truth that this would have been valid for the past forty years. Republicanism was just as much sectional during all the time that Roosevelt led the party and gloried in it as it is today when he leaves it and attempts to destroy it on the ground that it has no votes in the South. What a pure afterthought this is, Gov. Hadley makes it perfectly clear.

The repassage in the House, by more than the requisite two-thirds majority, of the reduced steel-tariff bill vetoed by President Taft, is the second instance in our history where a tariff-reduction measure has had that experience; the first being that of the wool bill. Its fate in the Senate is problematical. The bill, with one or two irrelevant amendments which were subsequently abandoned, passed the Senate on May 30 by a vote of 35 to 22, all but one of the Republican Senators voting against it. That majority was three votes short of two-thirds of the total vote cast; but a considerable body of Republican Senators absented themselves, during the vote, with a view to throwing on President Taft the responsibility of defeating the bill. It is a reasonable probability that they will now, either by voting against its repassage or by refraining from voting, sustain Mr. Taft's veto. On the other hand, it is to be observed that in the recent vote on the cotton-goods tariff bill, eight Republicans joined the Democrats in support of the measure, which was thereby passed by 36 to 19, virtually two-thirds of the vote cast. The case of those who support the veto of the steel bill is politically awkward, because, however Congressmen may dispute over the "difference in labor cost at home and abroad," and however they may contend that reduction of the average duty to 22 per cent. would fail to provide for such difference, there are on record the views of practical steel manufacturers on the subject which show that the proposed lower duty is abundantly adequate, even for purposes of protection.

Few people know how rapidly the navy is being increased in other directions besides battleships. Into the Naval Appropriations bill of this year there has been slipped a provision for 4,000 additional seamen, which will bring the total enlisted force up to 42,000 men. The last large increase was in 1908 and was obtained from Congress largely through the excitement attending the around-the-world cruise of the battleships. That increase was 6,000. Prior to the war with Spain the strength of the navy was not 10,000 men. To-day we are withdrawing more than four times that number from productive employments, in addition to the 75,000 taken by the army. This is a more serious drawing off of able-bodied men from industrial life than most people realize, but it will be much more keenly felt if Congress should pass a law restricting immigration by requiring that only those who speak and write the English language shall be admitted. This would be so serious a blow to the large mining and manufacturing industries that we are surprised not to have heard many complaints at this suggestion, for the dearth of men is growing worse every day in certain lines of employment, particularly in view of the competition which the big Western crops are beginning to furnish.

Mayor Gaynor is beginning to find his voice in reference to the most serious and alarming series of occurrences that has befallen New York during his Administration. He speaks out, as every one was sure he would when he got round to speaking, on the right side, but it must be acknowledged that, in addition to the tardiness of his words, he dipped his pen very lightly in the black ink with which he has so often pointed it. He makes the rather inopportune observation that he and his Commissioner have to a very large extent succeeded in removing the grafting that had infected the Department for forty years. He must further have his fling at those who have not always given him the help that he had a right to expect from them. Such irrelevant, if characteristic, remarks mar his confession that the great object is to have a thorough investigation, and weaken his admonition to the Corporation Counsel that there be "no lack of harmony, if possible," in working with the counsel chosen by the Aldermen's Committee.

A census bulletin, just issued, shows that the total value of the crops in this country made the immense increase from $2,999,000,000 in 1899 to $5,487,000,000 in 1909, or 83 per cent. We do not need the further information that the acreage of crops with acreage reports increased but 9.9 per cent. to know that "a large part of the extraordinary increase in the total value of farm crops between 1899 and 1909 is attributable to higher prices." Cereals, for example, increased in production only 1.7 per cent., but their value rose by 79.8 per cent. Their increase in price was thus no less than forty-seven times their increase in quantity. The production of hay and forage was much more in 1909 than in 1899, the percentage of increase being 23. The increase in value, however, reached 70.2 per cent. Of cotton, the production increased 11.7 per cent., while the increase in value was ten times as much, or 117.3 per cent. The average percentage of increase in prices during the decade was 66.6. Had the prices of 1899 prevailed in 1909, the value of the crops in the latter year would have been only 10 per cent. above what it was in the former. This 10 per cent., accordingly, represents the increase in quantity in the ten years, and may be compared with the 21 per cent. increase in population in the same period. Other statistics have demonstrated the truth of the bulletin's conclusion: "It is only by reason of a great reduction in the exportation of agricultural products that the increasing consumption of the country has been supplied."

One of those combinations of sentiment and business, as beautiful as they are rare, must be put to the credit of the National Association of Jewellers. For a long time, it appears, there has been dissatisfaction with the traditional list of birthstones. Some of these were so unattractive that there was little sale for them, in spite of their romantic appeal. Others were so moderate in price as to arouse no enthusiasm among dealers. All have now been subjected to a searching examination into their merits, and the list has been, so to speak, revised upward. Hereafter, accordingly, the public can be sure that its birthstones are of the first water, sentimentally and otherwise, for, oddly enough, in every instance where a change was made for sentimental reasons, a more expensive stone was found indispensable. This happy union of the romantic and the commercial should find prompt echo in other lines of trade. How many centuries has it been, for instance, since the language of flowers was revised?

The average of Ph.D.'s given by American universities is now more than one a day. Ten years ago, as *Science* points out in connection with its annual tabulation of this industry, less than half as many was the rule. Even so, we are still so far behind the Germans in this respect that, allowing for the difference in population between the two countries, we shall have to increase our degrees six-fold in order to be on a level with our Teutonic rivals. The exact figures are 492 this year for us, and 1,703 two years ago for them. Of these latter, 32 were conferred upon Americans. Three-fifths of all the Ph.D. degrees given in this country during the last fifteen years have been won at seven universities, namely, Columbia, Chicago, Harvard, Yale, Johns Hopkins, Pennsylvania, and Cornell, in the order in which they are named. Columbia's lead for the entire period is due to her sudden advance in the last two years, the number of Ph.D.'s conferred by her rising from 44 in 1910 to 75 in 1911 and 81 in 1912. A marked distinction between Germany and the United States is in the field of study most favored by degree-winners. There more degrees are conferred in the humanities than in the sciences, while here the latter have been gaining until in Ph.D.'s given they now outnumber all other departments combined.

Cuba, too, has a President who declared that under no circumstances would he seek or accept another election, but who easily translates that language into meaning under the first circumstances that come along. A great flutter has been caused among politicians in Havana by the remarks which President Gomez addressed to the Mayors of several cities who urged him to permit his candidacy for another term to be announced, in order to preserve "the unity of the Liberal party." Gen. Gomez said to them that any candidate whom the highest interest of the party demanded, ought to accept; and he added: "If I am so designated, I am inclined to accept, since I owe all that I am to the party." This public declaration will confirm the suspicion which has been current in Cuba, that the recent "race" rebellion was taken advantage of by President Gomez, if not secretly fomented by him, in order to make him appear "the indispensable man." But both the other announced Liberal candidates, Zayas and Asbert, as also the candidate of the Conservatives, Menocal, are as certain as Gomez is that Cuba will be ruined unless they accede to the Presidency.

Rumors persist that Mr. Lloyd George is to resign, or be forced to resign, from the Cabinet. Such reports are common enough about any Government, particularly in the case of some individual whose personality and policies kindle an exceptional amount of partisan heat, and usually they can be disregarded. In the present instance, while it is improbable that Lloyd George is meditating a *coup d'état*, the speculations as to what he might do are at least interesting. There is little doubt that his popularity in the country has suffered since the Insurance Act came into operation, and on the question of general policy his position in the Cabinet is becoming more and more isolated. Winston Churchill has adopted the big-navy policy, which is anathema to Lloyd George, and enjoys the support of his colleagues. Differences of opinion between the First Lord of the Admiralty and the Chancellor of the Exchequer are indeed the principal basis for the rumors that are now current, the argument being that there is not room in the same Ministry for these two young and ambitious men. The theory is that Lloyd George will emulate our own Colonel and put himself at the head of a new progressive party, which would include Labor members, Socialists, and the more advanced Radicals. Such a move, it is asserted, would drive the Whig element of the Liberals into the arms of the Unionists, and there would be a general realignment of parties. It is a pretty idea, but the best that can be said for it is that it is not absolutely impossible. Mr. Lloyd George will do well to postpone setting up for himself until he has seen how the Colonel fares.

It is unlikely that the withdrawal of Great Britain from the Brussels Sugar Convention on September 1, 1913, notice of which has been officially given, will have a marked effect upon the sugar trade of the world. England's reasons grow out of her own needs. She seeks cheaper sugar and desires to be assured of an adequate supply in years when the central European sugar-beet crops are short. At such times Russia may have a huge surplus, which is not available for British consumption only because of the terms of the Brussels Convention of 1907. Under this the total export of beet sugar from Russia to European markets was limited to 1,000,000 tons during the next five years. An effort was made by Great Britain, in September, 1911, to permit Russia to export 500,000 tons in the year 1911-12, but this was blocked by Germany, and all that England was able to obtain was 150,000 in addition to the regular 200,000 tons for that year, and a further 50,000 additional tons for each of the two succeeding years. Having withdrawn from the Convention, Great Britain will now be able to treat independently with Russia for a supply of sugar, and it is already reported that Russia, also, intends to do as England has done. Whether others of the signatories will follow, and the Convention come to an end, is an open question. It seems, indeed, to have outlived its usefulness, for the system of heavy bounties on export sugar, which it was called into being to check, is unlikely to be revived.

A new law requires men teachers in Schwarzburg-Sondershausen, Germany, to ask permission of the school authorities before they may marry, and permission will be denied in case of "obvious inability of the teacher to support a family." This may seem like tyranny, but it probably works no greater hardship than the practice in such matters in this country. Here college presidents have been known to advise members of their faculties to marry rich wives, and the married teacher receives, as a rule, more than the bachelor of equal ability. In one respect the German law may accomplish good. It may possibly help decide the old question on how little a teacher with a growing family can live and maintain the atmosphere of culture expected of them. Incidentally, it must irk Germany, anxious about her birth-rate and England, to oppose in any way the increase of little citizens and future soldiers.

A leader of the Ruthenians in Austria has issued a stirring manifesto, as a counterblast to the present agitation in St. Petersburg in favor of the "Russians" in Galicia and Bukowina. Until the year 1907 no one in these Austrian provinces thought of calling himself a Russian, although a few Old-Ruthenians sympathized with the efforts of the Russian Pan-Slavists. As a matter of fact, the Ruthenians—the second largest Slavic race—who as long ago as the eleventh century formed a powerful state, differ from the Russians in their language and traditions, and for political purposes their leaders in Austria have assumed the name of Ukrainists, in order to distinguish themselves from the Ruthenians of Russia. In 1907 there appeared for the first time five Old-Ruthenians from Galicia in the Vienna Reichsrat. Though elected as Ruthenians, two of them made their *début* in Parliament in the Russian language and styled themselves representatives of the "Russians" of Galicia. Since then Russian agents have been active in stirring up pro-Russian sentiment throughout Galicia and Bukowina. In September, 1908, a well-known agitator, Count Bobrinski, made a missionary journey through these provinces, and he went so far in his zeal as to cause the Austrian Government to take stringent measures against him. Galicia and Bukowina are now being flooded with Russian newspapers, and Russian private schools are being established there.

A JUSTIFIED VETO.

We have had occasion to criticise President Taft for his tariff vetoes, which have seemed to us a grievous mistake, but he deserves hearty commendation for his refusal to sign the Legislative, Executive, and Judicial Appropriation bill in the form in which it was presented to him. Upon it Congress had fastened two "riders," one for the indirect abolition of the Commerce Court, the other to establish a seven-year tenure of office in the Federal civil service. Either would have invited a veto: together they so vitiated the entire measure that the President could not conscientiously give it his approval. His returning it to Congress unsigned is a public service.

It will help, for one thing, to fix attention upon the bad legislative practice of attaching radical changes in the law to money bills. This is a matter which cannot be too jealously guarded. It is not merely a question of the amendments not being "germane" to the appropriation bill. Our parliamentary rules are not so rigid as the English in this respect, and a little skilful log-rolling can get almost any sort of "rider" through. The real vice of the affair consists in mixing up things that ought to be kept separate. Substantive legislation has no place in a routine bill for paying salaries. The Commerce Court was deliberately erected by special enactment. If it is to be abolished, the thing should be done with equal directness and openness. To seek to starve a court to death by refusing to appropriate money to pay the judges, is a proceeding both covert and cowardly. Similarly with the amendment aiming to upset the present law by decreeing a tenure of office of seven years: whether that step be wise or unwise, it is concededly one of great importance, and should not be taken except after full discussion, and the deliberate expression of the judgment of Congress on the measure *per se*. To sneak a change of such moment into a money bill is reprehensible. The President's words in condemnation are none too strong. He rightly resents and withstands the attempt to compel Executive approval of proposals which otherwise could not get it, by embodying them in an appropriation bill, a veto of which temporarily leaves the Government without money.

No President has taken a more advanced position about rescuing the civil service from politics than Mr. Taft, and he could not consistently put his name to a bill virtually legislating all Federal employees out of office after seven years. The hollow pretence that this would be a good way of weeding out incompetents, and dodging the need of setting up a system of retiring pensions, deceives no one. What was really aimed at was the placing of the whole body of civil servants at the mercy of the politicians. The plan would permit the spoils system to creep back through the window after being kicked out at the door. At first, the proposal was to make the tenure of office five years. The opposition to this was so strong in the House that it was beaten. But the Senate put the amendment back, despite the earnest protests of Senators who saw its harmful trickery, and made the term seven years. The scheme has now been disposed of by Presidential veto. The nefarious project was at once dropped by Congress. For his firm and decided course in the matter Mr. Taft will receive the thanks of all civil-service reformers.

As to the merits of the controversy about the Commerce Court, opinion will be more divided. That tribunal has been in some ways unlucky. A part of its personnel was of a sort to create prejudice against it; and the serious charges made concerning Judge Archbald, leading to his formal impeachment, deepened the bad impression. But the existence of one suspected judge should not destroy confidence in the entire court: a Cardozo or Barnard found on the bench did not lead to the abolition of the Supreme Court of New York. It is true that a few of the decisions of the Commerce Court seemed to be too strongly against the shippers; and it has been accused both of hampering the Interstate Commerce Commission and of exceeding its own jurisdiction. But this last matter has been fully cleared up by the recent decision of the Supreme Court; and the way appeared open for a fuller display of the real utility of the Commerce Court. Congress, however, would choose this moment to strangle it to death.

In the midst of all the controversy about the Commerce Court, it is well to consider such a dispassionate study of the actual record as was contributed to the *Public Ledger* by a member of the Philadelphia bar, Henry S. Drinker, jr. Basing his review upon the transcript of cases, before both the Interstate Commerce Commission and the Commerce Court, he makes out an excellent justification for the latter. It has greatly expedited final decision. The average time, under the old plan, between filing a complaint and getting final adjudication, was two years and one month; this has been cut by the Commerce Court to less than a year. Even in the matters of upholding the rights of shippers and reversals by the Supreme Court, Mr. Drinker shows that the Commerce Court compares favorably with the old method. It is at least plain that here was a case, not for jumping at conclusions, and cutting off heads with the impatience of the Queen in Wonderland, but for considering the matter in all its bearings and proceeding in a deliberate and orderly manner.

THE FACTS ABOUT THE TRUSTS.

Our modern Alcibiades, too, goes through the streets mutilating the national statues. Mr. Roosevelt's habit of hurling angry epithets at the men whom the country has delighted to honor has now become chronic. Anybody, no matter with how high a reputation, who ventures to differ with him becomes at once the object of the Colonel's blackguarding. President Taft is a "pickpocket." Mr. Choate is a "pettifogger." Senator Root is a tool of the interests. And now the venerable ex-Senator Edmunds is arraigned as the defender and servant of "every great and crooked corporation in Wall Street and outside of Wall Street." All this because the author of the Anti-Trust act, and the great authority on it, had dared to praise President Taft's strict enforcement of it, and to comment upon the way in which Mr. Roosevelt as President had either ignored it or made it the instrument of his whim. This is a fine beginning of Roosevelt's campaign in Senator Edmunds's own State. He is no longer an active force in Vermont, but he represents that even more dangerous thing to attack—a great tradition. Personally, he has, of course, no reason to notice Mr. Roosevelt's loose railing at him. No might or greatness in mortality shall 'scape the censure of the Colonel's reckless and scornful tongue. As Jeffrey was said to have spoken disrespectfully of the Equator, as well as damned the North Pole, so, it is whispered, Mr. Roosevelt has been known to pour his vitriol even over men prominent in the *Outlook* office. Who is Mr. Edmunds that he should be exempt?

We do not care to dwell upon this unpleasant aspect of the incident; but something should be said on one or two particular assertions in Mr. Roosevelt's retort, which he has frequently repeated and which will probably be often heard again in the course of the campaign. After declaring that "all the big Trusts, all the corporation lawyers representing big Trusts, and every public man who now represents or has represented the cause of reaction and privilege in public life have rallied to the defence of the present Administration's method of enforcing the Anti-Trust law"—a statement whose grotesque extravagance will be nowhere more fully recognized than in Wall Street—Mr. Roosevelt proceeds to say:

> The enforcement of the Anti-Trust law by Messrs. Taft and Wickersham against the Standard Oil and Tobacco Trusts has resulted in an enormous rise in the value of the stock held by Mr. Rockefeller and his allies and the Tobacco people, while the price of the commodities to the consumer has slightly gone up and the competing concerns are left wholly at the mercy of the two Trusts.
>
> Mr. Edmunds must know that while the Supreme Court has unsparingly condemned the Standard Oil and the Tobacco Trust people, yet that the only result of the suit has been to add to the already swollen and ill-gotten gains of the offenders, and still further to deny justice to the general public.

We are quite aware that in this insistent declaration Mr. Roosevelt has made use, with his usual political adroitness, of a notion which had gained considerable vogue in the public mind. We found it necessary to set forth the truth of the matter at the time of the Tobacco Trust decree of the Circuit Court, last October. It is entirely true that, since the dissolution of the Standard Oil Trust, the combined market valuation of the stock of the separate companies into which that Trust has been divided has reached a higher figure than had been previously attained by the shares of the old Trust before its dissolution. But there was not the slightest reason to be surprised at that result. Some influence in that direction was no doubt exerted by what were called the "concealed equities" of the companies—assets of great value, which were not known to the investing public in the old days of a secret consolidated management reporting to nobody, but which had to be disclosed when the subsidiary concerns were reorganized. But far surpassing this influence, in our judgment, is the well-known fact that the investor purchasing the old Standard Oil Trust shares was, in the market's language, "buying into a litigation."

Every business man must know what that means. Mr. Roosevelt's Attorney-General of 1904 could probably remind him that the shares of the Northern Securities combination were affected by precisely the same influence, and that after the combination had been dissolved, the shares of the railway companies sold at higher prices than before they had been combined. If, as Mr. Roosevelt now intimates, "it is too preposterous to discuss the question" whether the results of the dissolution of the Standard Oil and American Tobacco Trusts "represent anything even moderately satisfactory," the same conclusion must be drawn from his own Administration's Northern Securities decision.

But Mr. Roosevelt further states, as a clincher to his argument, that "the price of the commodities to the consumer has slightly gone up and the competing concerns are left wholly at the mercy of the two Trusts." This remark, we should say, contains one doubtful inference and one false statement. The inference is that, if prices of the commodities in question are higher now than before, it is because of monopolistic practices and because of nothing else. We are not willing to approach the question in that off-hand way, for there is such a thing as the law of supply and demand, which operates even under open competition.

But the assertion that in this adjustment of prices competitors are "left wholly at the mercy of the Trusts" is more important. Does Mr. Roosevelt seriously believe—to use his own form of expression—that the new corporations, formed through the dissolution of the Oil and Tobacco Trusts, are left with unrestrained power to continue their old monopolistic practices, with the approval of the courts? If so, he can never have read the Court's decree in the Tobacco Trust dissolution, which is sweeping and continuous in its application, and of which Mr. Taft has said, without dispute from anywhere, that its "inhibitions are set forth with a detail and comprehensiveness unexampled in the history of equity jurisprudence."

That is to say, the remedy for any act such as Mr. Roosevelt loosely asserts to be the governing policy of the disintegrated corporations is immediate and the penalty severe. As an alternative to this strict supervision of the companies in the field, Mr. Roosevelt informs us that "the Progressive platform is explicit" in its declarations on the question and that "every sincere man who has studied the subject will join with us" in that platform's conclusions.

We beg to rejoin that the Progressive platform on Trust regulation, advocating a Federal commission which must "attack unfair competition, false capitalization, and special privilege, and by continuous trained watchfulness keep open equally to all the highways of American commerce," is about as inexplicit as any declaration of the sort that we have ever heard. It must "attack"—what it is to do next, we are to imagine for ourselves. It is of a piece with Mr. Roosevelt's own assertion, last October, that the Tobacco Trust decree was a "miscarriage of justice" because the Trust "should be absolutely disbanded." Whether that meant reducing it to single competing mills or shutting down the mills entirely, the public was left to guess.

THE KRUPP CENTENARY.

The hundredth anniversary of the founding of the great firm of Friedrich Krupp has been celebrated in Germany much as if it were a branch of the Government, as in a sense it is. The Kaiser himself took part in the celebration, together with the Prussian Minister of Commerce, and many decorations were distributed among the leading employees. The firm divided $3,500,000 among its army of workmen. The newspapers devoted column upon column to the history of this great enterprise, the rise of which is so bound up with that of the German Empire itself. Indeed, the century that has passed since the first Friedrich Krupp started in business marks the modern development of this greatest of the Continental nations. A hundred years ago Germany was just beginning to throw off the Napoleonic yoke; she had begun to feel the first stirrings of that national life which was to flower at Versailles in 1871, and to that flowering the Krupps of that period contributed enormously in the munitions of war which they had produced for the wars of 1866 and 1870. Germany has proportionately grown not more than the company which is to-day, as for decades past, the greatest maker of war materials the world over.

The founder of the firm, the first Friedrich Krupp, began the iron and steel business with a handful of men, imitating English methods and practices. Of a family already well-to-do for that period, he would none the less have failed but for the aid and counsel of his grandmother—women have played a distinguished part in the story of this vast concern. The founder himself died in 1826, before achieving any material success. Indeed, the firm was insolvent when his widow, Therese Krupp, with her fourteen-year-old son Alfred, undertook to carry it on. But Therese Krupp's determination was speedily reinforced by the discovery of her son's remarkable scientific and business talents. Shouldering while still a boy the great cares and responsibilities which were his sole heritage, he had by 1837 an establishment of 55 workmen, with receipts of approximately $25,000 in that year. Gradually he forced his way into the field of high-grade machinery, and in 1847, a year before he bought out the other members of his family, he sent to the military authorities a 3-pounder, breech-loading cannon, which was the beginning of his connection with the military affairs of Germany. Not long thereafter he obtained the existing monopoly of supplying munitions of war, for the German Government has never built arsenals or ordnance works to compete with him. In return the Krupp firm has never stood still; their improved cannon of 1865 not only helped to subdue Austria, but gave to the German artillery a distinct superiority over the French in 1870.

To-day every German military or naval cannon is a product of the Essen works, and the Krupp devices and system have been adopted by Austria-Hungary, Italy, and Russia as the basis of their artillery. Up to 1902 alone the Krupps had sold 40,000 cannon to no less than thirty states—enough to make them great believers in the necessity of armed peace! But guns were not their only product. Steel rails and all sorts of railway and machinery materials have been turned out in great quantities; every invention in the steel or iron industries has been promptly adopted, and often improved upon. Nowhere else has the union of applied science and industry been more marked or more serviceable. In the perfectly equipped Krupp chemical and physical laboratories 500,000 analyses are made annually in direct connection with orders and routine business, quite aside from any experimenting. With the tremendous expansion of his work, Alfred Krupp gradually began to buy coal and iron mines, notably in the north of Spain. And as the German navy and mercantile fleet developed, the company, not content with furnishing the armor and guns, established the great German shipbuilding yards at Kiel to compete for vessels of war directly, and also bought ship-repair works at Rotterdam. Its foundries and iron works and mines are scattered all over South Germany, all operated on a capital of 40 millions of dollars. In 1903-04, the first year of operation as a stock company, the net profits were nearly three millions of dollars, after paying taxes of $800,000 and contributing $1,300,000 to the insurance fund of the more than 71,000 employees, or to benevolent and philanthropic undertakings on behalf of the workmen.

Such was the achievement of Alfred Krupp's genius. He died in 1887, and was succeeded by his son Friedrich Alfred, to whom the present Kaiser, his intimate friend, has erected a monument. For Friedrich Alfred Krupp died in Essen in 1902 and left his vast fortune to his daughter Bertha, whose husband, von Bohlen-Halbach, is the real director of the enterprise, or rather the head of the cabinet which now guides the works. But the influence of the real owner is visible in the steady extension of the philanthropic undertakings of the firm; their men are well housed in 4,342 model dwellings, and for their families there are schools and kindergartens, and institutions of every kind for the sick, the invalided, and the orphaned. Certainly it is no exaggeration to say that all Germany prides itself on the Krupp establishment. Yet even in Essen strikes have been known, and the Socialist vote is tremendous. The Kaiser once solemnly proclaimed in Essen to the workmen that to vote for a Socialist was to commit treason to the state—whereupon the Socialists promptly carried the district.

THE AIR OF QUIET STUDY.

The law of compensation rules in the scholar's world, as everywhere else, and he must pay the price for all that has been done to ease his life. There was a time when to write, about Shakespeare, let us say, all a man needed to do was to read Shakespeare and the available literature of Shakespeare's day, and then to depend on mother wit to clear up obscurities. Now the scholar must approach his author through an ever-thickening cloud of commentators. No doubt he has his profit in this. Much that baffled his predecessors is for him a commonplace; he is carried to an eminence, so to speak, on the shoulders of others. But there are disadvantages, too. Folly and conceit have been industrious in raising as many barriers as modest wisdom has levelled paths, and the scholar finds that half his time must be given to reading treatises that only obscure the truth.

Scholarship thus grows daily more specialized and mechanical. Scholars become more professional, and are drawn into the universities as into a kind of factory where the machinery for their work is already established. Such a life has its allurements and rewards. There is a certain inspiration in the very feeling that one belongs to a great corporation of learning, and that one's energies help to feed so imposing an engine of erudition. But there is an accompanying loss. The old life of the independent scholar, whose library was to him a university, has lost something of its prestige and attracts fewer and fewer men. The very word amateur as applied to such free spirits has become lowered, and suggests less the lover of letters than the trifler with books. One observes among our professional investigators a growing tone of condescension towards the unattached student, a feeling made up half of jealousy and half of contempt.

Yet withal, the old idea of the gentleman and scholar, as exemplified in Gibbon and a host of other great names, has not entirely vanished, and even in America we could name untitled men, still living, who have produced works in history and philosophy which command the respect of their less fortunate brothers. For in a way those are the less fortunate who are obliged by the *res angusta* or by some other cause to surrender learned leisure for academic routine, and the happiness of such a career as that of Dr. Furness, now brought to an honored end, is a lesson in wise living that will not soon be forgotten. It is an astonishing thing that more of those who are blessed with independence and who seek after pleasure in a kind of bewildered ignorance of their needs, do not see the joy of an intellectual purpose steadily followed year after year, binding day to day in orderly interest, and leaving no approach to the ravaging attacks of ennui.

We have not in mind the frantic pursuit of learning such as we read about in the giants of an older age—a Casaubon, for instance, by whom family and civic appeals were merely tolerated as an unworthy interruption, and who, only after a long day from early morning to late night spent in deciphering some crabbed manuscript, would write in his Journal, *hodie vixi*. We do not mean the sullen recluse,

> Covered with dust
> Of dreaming study and pedantic rust—

though there is, too, a sufficient reward for pedantic pains. The life so beautifully commended by the example of Dr. Furness is rather that which fulfils the Aristotelian precept, "We toil that we may enjoy leisure," or, better yet, which unites toil and leisure in so perfect a bond as to make them scarcely distinguishable one from the other.

Such a life is not debarred from the accomplishment of other duties. In its even, unhasting course it leaves time for the obligations of family and state; it may further bring to these the large outlook and sane tolerance of an intellect purged by sweet association with the wise and great, and steadied by the influence of a long-cherished, unselfish purpose. Nor does such a life deny the just relaxations of amusement; it may rather add to them a new zest; but its great and unique pleasure is that which comes to the man each morning as, returning to his study, "*perfumed* with many such days before," he sees before him the familiar implements and, with free heart and unhampered energy, enters once more upon that mental pursuit which has become a part of his very being.

Not every one—very few persons, indeed—has the means, or perhaps the endowments, to take up that noble career of lettered ease. Those who are able so to choose their path may well say, as Drummond of Hawthornden once wrote to a friend, "That I now live, that I enjoy a dear idleness, sweet solitariness, I have of Him, and not from man." But the wonder remains that so few who have the ability, and even the mental equipment, for such a life, are wise enough to select it. To quote Drummond again, whose "solitariness" was but a retirement into the neighborhood of Edinburgh, not unlike that of our Shakespearean scholar at Wallingford:

> Swift is your mortal race,
> And glassy is the field;
> Vast are desires not limited by grace;
> Life a weak taper is;
> Then, while it light doth yield,
> Leave flying joys, embrace this lasting bliss.

THE TWO ATHLETIC STANDARDS.

It is both curious and amusing to observe the change which is coming over the spirit of English athletics. It is a direct result, apparently, of American competition in the Olympic games. That there is such a change is the only inference to be drawn from reading the comments in the English press on the results at Stockholm. The dignified newspapers, more in sorrow than in anger, regret that English supremacy in the field of sport is not only threatened but already gone, and search about for remedies for what appears to them to be a very lamentable state of affairs. The less restrained section of the press frankly upbraids the unfortunate English contestants for shirking the rigid training which has made the American athletes successful, and does not hesitate to use the expression "national disgrace" in connection with the indifferent performances of the British competitors at Stockholm.

These patriotic convulsions, simply because the representatives of one country have been beaten in fair and open competition by the representatives of another, are plainly a bit theatrical, but they illustrate the new attitude which the Englishman seems to be adopting towards the whole question of athletics. Hitherto, despite the reputation fastened upon him by his Gallic neighbor of "taking his pleasures sadly," the Englishman, while takings his sports earnestly and zealously, has not taken them over-seriously. He has always drawn a clear line between what is his sport and what is his profession. He has had a genuine horror of anything approaching "professionalism" in sport. Athletics to him have been an absorbing pastime, giving opportunity to gentlemen to engage in friendly rivalry in tests of physical strength and endurance. In order to attain a high standard of proficiency in such tests he has been willing to submit himself to the discipline of training so long as it did not interfere too seriously with the ordinary affairs of life. He would leave off smoking for three weeks. For a fortnight before a race he would keep good hours and seek to make himself fit. Further than that he has not been willing to go. Nor has he thought it quite becoming to a gentleman, competing as an amateur, to expend on his preparation for an athletic event all that scorning of delights and living of laborious days under the severe eye of a trainer which is the rule with American athletes.

Right or wrong, wise or foolish, that about describes the historic attitude of Englishmen towards their sports. So long as international competition was limited in scope, they were able, with no more rigid discipline than that referred to above, to hold their own in athletic contests. But with the introduction of the Olympic games, the rivalry between nations assumed a new phase, and gradually, and very unwillingly, the Englishman has been forced to reconsider his position. For long slightly contemptuous and resentful of American methods of training and the immense pains taken in preparation on this side of the Atlantic, he has at last been compelled to face the alternative of adopting the methods about which he feels a little uncomfortable as being tinged with "professionalism," or of resigning any hope of regaining his old prestige in the world of sport.

Before the next Olympic games are held, the Englishman will have made his choice, and it seems likely, judging from the general tone of the discussion in England to-day, that he will have made it in favor of adopting the American style of training. There are those who will view this change of tactics with regret. It is not because this means keener competition for our athletes to face, but because athletic success may be bought at too high a price. There is an element of truth in the charge made by other nations against the spirit of American athleticism, that it is a spirit of "win at all costs." It tends to displace too rudely the old conception of "friendly rivalry between gentlemen." At Oxford the combination of a "blue" and a first in "Greats" is by no means an uncommon one, and among the English judges and bishops are men who were as distinguished in their time on the river as in the classroom. In our own colleges the development of brain and brawn does not easily go together—though there are exceptions, and their number seems happily to be increasing. If a man is to win distinction in athletics, he must be an athlete first, last, and all the time, and he is finally turned out into the world an athlete, who finds it difficult to become known as anything else. The British had fondly thought that theirs was the more excellent way. But they are now apparently about to abandon it, under the stern command: "Do anything necessary to win!"

THE FLIGHT OF ROMANCE.

Lovers of the brave days of old will be more pained than surprised to learn of the undoing of romance in China, following the establishment of the Great Republic. Almost any one, indeed, must be somewhat shocked upon hearing that the Ministry of Agriculture proposes to convert the Temple of Earth into a horse-breeding place, the Temple of Agriculture—although this is less revolutionary—into an experimental station for forestry, and the Temple of Heaven into a model farm. This last is enough to warrant intervention, and protests are already arising against it. Of all that Peking contains that is picturesque or impressive, declares a Shanghai journal, there is nothing to compare with the beauty and majesty of this temple and its attendant altar. Other temples in China may offend by their grotesque and even terrifying images, but the Temple of Heaven appeals by its pure emptiness, its seclusion, and its associations. Chief among the associations is the custom of the former Emperors of doing sacrifice at certain seasons of the year, thus making atonement for the people. The Emperors are gone, and now their successors are meditating the impious project of turning one of their most sacred spots into a model farm! If the Chinese are half as worshipful of the past as they are represented to be, the carrying out of this design will only render model farming the most unpopular of all the innovations of the foreign devils.

But China is not alone in this sacrifice of romance to utility. In India, complains a British journal, the English destroyed a large part of Shah Jehan's fairylike palace at Delhi after the Mutiny in order to make room for barracks. The old dainty and delicate Japan is fast passing. Ancient distinctions of costume are being ironed out by the steam-roller of civilization, so that half of the charm of travel is vanishing. The latest blow has been struck at Rugby, where the silk hat hitherto worn by the boys has been officially doomed; and even Eton may follow suit. After this, anything is possible. As a consequence, holidays, in Europe at least, are rapidly becoming a mad rush for a final glimpse of what is left of all the glory that was Greece and the grandeur that was Rome. A few more years, and what a halo will be that of him who can tell of seeing the Jungfrau before it was merely a railway station, or Stratford in the distant days when it was something more than a post-card emporium and the headquarters of the Stratford Shakespeare Society, or the Zuyder Zee previous to the time when it had become a bore in moving-pictures.

There is, however, an odd selfishness in this devotion to romance. Every nation demands that every other preserve, protect, and defend, at whatever cost, all that is picturesque or historic in its scenery, its structures, or its ruins. Yet every nation also feels itself under the necessity of doing whatever it deems wise in the direction of utilizing for the present generation every square foot of its soil, regardless of the effect upon the work of former ages, or of nature. An apparent exception to this policy is the care that is expended in keeping unscathed regions or edifices that have an appeal for tourists. The motive in this kind of activity is sufficient proof that it constitutes no real exception to the general utilitarian trend. Parallel to this Pharisee-like calling of nation upon nation to look after the portion of romance that has been committed to it, is our loud denunciation of the past for not taking better care of itself for our sakes. Even in the threatened Temple of Heaven at Peking, the courtyards are described as overgrown with weeds, the roofs and terraces as marred with grass and shrubs, "a witness," in the accusing words of an English writer, "to the strange carelessness of the Chinese for preserving in beauty what they have made in the first place so beautiful." And every one has been stirred to indignation at some time and place or another over the stupid shortsightedness of some ancient or mediæval people that was too indifferent to his interests to leave more relics of its civilization than barely enough to provoke curiosity.

All this seems to point to a gloomy future for romance. If we destroy, however slowly, the treasures that have been bequeathed to us by the storied past, and fashion none for ourselves, the end of the picturesque and the historic is but a problem in mathematics. But there is another aspect to the question. The romance that so promptly gathered about the telegraph, and particularly the wireless, is no less romance for being of a new pattern. No age is romantic to itself. We are no more modern in our own conceit than the Egyptians were in theirs. Romance attaches to the dying day rather than to the dawn. All those differences in costume, therefore, concerning which travellers are becoming solicitous, are of little moment compared with the great mass of what for us is romantic. Indeed, when we stop to look at it, we find that this treasure is, for the most part, not contained in earthen vessels. Is the Coliseum, for all its visible aggregate of marble, richer in romance for us than the vanished tournaments that no Queen of Love and Beauty will ever witness more? Will any one exchange the story of Helen for the site of Troy? Is there not far greater romance for us in the tales of the Round Table than there could have been for Arthur and his knights, or than there could be for ourselves in the actual discovery of Excalibur? How interesting it would be to revisit America in the thirtieth century and to listen to the general regret that it is so barren of the romance in which the twentieth was so rich! That at least would make us feel at home.

HORACE HOWARD FURNESS.

On Tuesday, August 13, Dr. Furness, the eminent Shakespeare scholar and editor of the "New Variorum Edition of Shakespeare," died at his home, Lindenshade, Wallingford, Pa. His illness lasted scarcely twenty-four hours, and he died, as he had wished that he might, passing away in sleep. Had he lived to November 2 next, Doctor Furness would have reached his seventy-ninth birthday; and although, as human life goes, it is a goodly thing so nearly to approach four-score, Dr. Furness's uniform good health and the remarkable longevity of his father, whom many of us remember in the enjoyment of the full vigor of faculties at ninety, caused this sudden death to come an unexpected blow to his many friends.

In the death of Dr. Furness the world suffers the loss of the greatest authority on Shakespeare. It is customary to speak of world-wide reputations and to dwell otherwise on superlatives when death has taken from among us one who has stood somewhat above his fellows. Here superlatives can barely reach the truth, and the eminence of Dr. Furness in the scholarship of his chosen field was not merely that of survivorship; with names even such as those of Collier, Halliwell-Phillipps, and the late Dr. Furnivall the American scholar might hold his own as in many respects the most notable authority on the plays of Shakespeare of our time. But it is not of this that we who knew him now think and speak. It is rather of the loss of a man whom to know even casually was to feel one's self distinguished; to know well was to be truly among the elect.

Dr. Furness, as is well known, came of literary stock. His father, Dr. William Henry Furness, was a writer of distinction, a personal friend of Emerson, and a leader among the Unitarians whose ministry he graced. Transplanted from his native New England, he lived for years in Philadelphia, radiating the influence of an unaffected piety and spirituality of ideals that made for unmixed good. The sister, too, of Dr. Horace Howard Furness enjoyed a deserved literary reputation as a translator, chiefly of fiction, from the German. Nor have his children failed to carry on the family tradition, one son, H. H. Furness, jr., having for years assisted his father in his work on the "Variorum Shakespeare," another, Dr. W. H. Furness, jr., having written several acceptable volumes of travel and exploration.

Horace Howard Furness was born in Philadelphia November 2, 1833, and, after receiving his preparatory training there, entered Harvard, graduating with the class of 1854. He subsequently studied law in Philadelphia, and would have practiced his profession but for the early development of deafness, which subsequently defeated also his desire to serve his country actively on the field in the time of the Civil War. The years 1855 and 1856 Dr. Furness spent in foreign travel, and in 1859 he married Miss Helen Kate Rogers of Philadelphia. Circumstances may be said to have conspired to make Dr. Furness a scholar, his infirmity, deafness which early developed, cutting him off from an active career, sufficient means making it possible for him to go through the necessary period of preparation and to await the gradual approach of that slow success which is likely, in pure scholarship, at least, to be the most lasting. It has been remarked that Dr. Furness was one of the last of that fortunate type of scholar who, in place of going out to seek his material, gathers it about him and makes his own library his workshop. Like his friend and fellow-townsman, the late Henry C. Lea, the historian, in a very different field, Dr. Furness was a collector, and to need a book was to add it, at some time sooner or later, to his collection. But unlike our contemporary book-hunter who collects volumes as one might gather together curiosities, Dr. Furness's collections had ever the scholar's purpose, and the result is a library of Shakespeare text and commentary, aside from the mere rarity of certain items, absolutely unparalleled alike for choiceness and, where imperative, for completeness.

The idea of editing a "New Variorum Edition of Shakespeare" was a gradual growth in the projector's mind. As early as 1850 Dr. Furness's interest in the tragedy of "Hamlet" had induced him to read the earlier commentators on that play and to make up, for his own use, a copy of "Hamlet" in which he incorporated not only the earlier notes collected by Malone and Boswell in what is known as the "third variorum edition of 1821," but likewise as much comment, the work of later editors, as was accessible to him at that time. Dr. Furness had long been sensible of the fact that it was only upon the foundation of what had preceded him that any editor of Shakespeare could hope to build any new fabric of his own; and, with a recognition of the amount and value of what had gone before, there gradually arose in him a determination to perform the great and needed service of the editor of a varioum Shakespeare, and to perform this service thoroughly and completely. Some years passed after this determination was formed, years of study and devotion, and with the mistrust which is born of knowledge, Dr. Furness chose as his first volume not "Hamlet," on which he had already worked and which first of Shakespeare's plays had claimed his scholarly attention, but "Romeo and Juliet," a choice, on his own confession, made from a sheer love of the glorious poetry of that most passionate of the dramas of love.

The first volume of "A New Variorum Edition of Shakespeare" appeared in 1871. The need of such a work was apparent in contemplation of the great mass and valuable content of the comment on Shakespeare which had accumulated since the days of Malone, its inaccessibility to the average student, scattered as it was in hundreds of volumes and pamphlets, in various tongues, inedited and unindexed. With a due acknowledgment of the critical and textual value of the "Cambridge Shakespeare" of 1863, which had given "a thorough and minute collation of the quartos and folios and a majority of the the *variæ lectiones* of many modern editors, together with many conjectural emendations," Dr. Furness set forth his own plan. This included, first, "a complete collation of the four folios, four out of the five quartos of 'Romeo and Juliet,' and the texts of thirty-five editions," and secondly, the collection and abridgment, "after the manner of a Variorum," of all the comments and emendations of critics of this play, "and the presenting of them, on the same page, in a condensed form, in connection with the difficulties which they explain." In the text of this first volume the editor followed, "as a general rule, . . . the reading of a majority of the ablest editors, but not always." This rule, which involved the making of an independent text, was adhered to in the earlier volumes. With the appearance of "King Lear," in 1880, Dr. Furness reverted to the text of the First Folio, and to that text he adhered ever after. In this he did an incalculable service to Shakespeare scholarship and turned back the rising tide of conjecture and unwise emendation into safer and more conservative channels.

The "New Variorum Shakespeare" includes, as Dr. Furness has left it, fourteen plays. Only those who have dipped into the strong current of Shakespeare criticism with its dangerous hidden rocks and its undertow that means annihilation can conceive of the strength of thew, the steadiness of head, and the soundness of heart that alone can sustain the hardy swimmer in these troubled waters. Dr. Furness displayed great dexterity in the avoidance of prolixity and repetition among the commentators, and he diligently sifted the huge rubbish heaps of unintelligent Shakespeare criticism for the pearls that have occasionally been lost therein. But it cannot be said that he misrepresented in any particular the huge fabric of Shakespeare comment, which is, in many respects, the most surprising, fertile, interesting, and at times subtle and invaluable structure which men have reared to the perpetuation of their mingled wisdom and folly.

Dr. Furness's work is technically the fourth variorum. An edition of Shakespeare furnished "with select notes from all the commentators" was projected by Edmund Malone as early as 1783. The first edition of Malone's Shakespeare appeared in 1790; but it was not in any real sense a variorum edition, and is never so called. "The 'first variorum' is the name bestowed on the edition of Johnson and Steevens, edited by Isaac Reed in 1803; and the 'second variorum' is that bestowed on the revision of Isaac Reed's work, issued in 1813." The revision of Malone's second edition of Shakespeare, by James Boswell, a son of the biographer of Dr. Johnson, is the "third variorum," which is thus the final outcome of Malone's original plan of 1783. This excellent work appeared in 1821 in twenty-two volumes under the title: "The Plays and Poems of William Shakespeare, with Corrections and Illustrations of Various Commentators: Comprehending a Life of the Poet and an Enlarged History of the Stage." Boswell takes a very modest share of this work to himself, and strikes the note of the variorum editor in the remark: "According to the plan laid down by Mr. Malone, I have inserted all the notes of his predecessors, although I am ready to admit that some of them might well have been spared. And again here I request it may be understood that my passing them over in silence is not to be considered as acquiescing in their propriety." The prolegomena of Boswell's edition contain reprints of the prefaces, introductions, and "proposals" of the previous editions of Shakespeare from Rowe, Pope, and Theobald to Steevens and Reed, with a general gathering of material bearing on the life and times of Shakespeare, the contemporary drama, and contributory forms of literature, criticism, and other matter. The variorum feature exhibits the various readings and emendations of the text in footnotes on the same page, ascribing each to its editor.

From the year 1783, in which, as we have seen, Malone first conceived his plan, to 1821, thirty-eight years had elapsed, and this had sufficed to complete a work which adequately represented the then fabric of Shakespeare criticism in its mass and in its detail. With the fifty years which had passed between the "third variorum" and the appearance of the first volume of Dr. Furness's "New Variorum," the material to be included had much more than doubled. In England Shakespeare comment had taken a new and highly important departure in the æsthetic criticism of Coleridge; and that fine, instinctive sympathy with the inner springs and niceties of poetic thought and expression, which defies analysis and takes to itself wings where other criticism painfully measures its way and crawls, had found its choicest exponent in lovable Charles Lamb. Malone had England alone to reckon with; by the time that Dr. Furness came to his task not only had America contributed her respectable quota of comment written in Shakespeare's own tongue, but critics, writing in foreign tongues, had swelled the chorus of Shakespeare praise and explanation to an orchestral tumult in which were many new, melodious, and insistent notes, not wholly referable to foreign idiom. The intellectual activity of Germany in this as in all subjects—be it said to her credit—has continued in an ever-increasing ratio, until not to know the language of the Fatherland is as hopeless a bar to sound and thorough scholarship in Shakespeare as in anything else.

With all this in view it was a daring thing for a man scarcely more than thirty, measurably removed from the literary treasure-houses of the world (which means so much in an undertaking of this kind), to conceive of a plan so stupendous. And the restraint and unselfish fidelity to high ideals with which the work has been carried out is even more surprising. The temptation to press on to completion must to some natures have proved irresistible. The allurements which beset the editor in the prosecution of such a work are legion. How fond men are of the expression of an opinion or of the turning of a quibble when Shakespeare is in question, these volumes of the "Variorum Shakespeare" abundantly attest. But through all the sage yet kindly judge preserves the fine decorum of a court of equity, suffering the tedious man to be heard and the fool to convict himself in his folly. Dr. Furness recognized no aristocracy in criticism and allowed neither the tongue nor the temper of those whom he cited to interfere with their testimony or to ruffle his own patient and courteous hearing. As he put it himself: "Those who read and study these volumes may be safely trusted to discover for themselves the wisdom or the folly of the critics, and the Editor gladly foregoes the pleasure of displaying how much wiser he is than those whom he cites." For the decision of each case we have words sufficient and no more; and only too rare are the occasions on which the judge is betrayed into those choice *obiter dicta* which, while they may determine no immediate issue, have often a significance of wider and weightier import. However, no one who reads the delightful prefaces and appendices to these volumes of the "Variorum Shakespeare" need remain in doubt as to the attitude which the editor consistently maintained in the essential matters of Shakespeare criticism. For example, Dr. Furness deals with the much mooted question of the chronology of Shakespeare's plays, in all its vexatious details, with honest and painstaking fidelity; but he also displays his own attitude to the question:

> No commentary on a play of Shakespeare's is nowadays complete without a discussion of the date of its composition. Could we be content with dry, prosaic facts, this discussion in the present play would be brief. Meres mentions "A Midsummer Night's Dream," among others, in 1598. This is all we know. But in a discussion over any subject connected with Shakespeare, who ever heard of resting content with what we know? It is what we do not know that fills our volumes.

Of some of the theories "fixing dates," the editor remarks that "they are apparently founded on two premises. First, that although Shakespeare's vocation was the writing of plays, yet his resources were so restricted that his chief avocation lay in conveying lines and ideas from his more original and vigorous contemporaries. And secondly, that although Shakespeare could show us a bank whereon the wild thyme grows and fill our ears with Philomel's sweet melody, yet he could not so depict a season of wet weather that his audience would recognize the picture unless they were still chattering with untimely frosts."

On verbal criticism we have the wise words: "We do not go to Shakespeare to study grammar or scanning, but we study his grammar that we may understand him, and arrange the scansion, that every charm which rhythm can yield may be his, as of right."

The Variorum edition was not long in receiving the recognition which was its due, although Dr. Furness used to delight in telling the story of its refusal by cautious publishers and how he had undertaken the whole venture from the first at his own risk. As far back as 1877 his own *alma mater*, Harvard, recognized the undertaking with an honorary degree, and later the University of Pennsylvania, Columbia, and Harvard once more honored themselves in thus honoring him. Abroad Dr. Furness received honorary degrees from the University of Halle and was made President of the German Shakespeare Society. He was among the earliest members of the American Institute and Academy of Arts and Letters, to say nothing of other learned societies. Finally, in 1899, he received the degree of Doctor of Letters from the University of Cambridge, England.

Among many activities, none of which were allowed to interfere with his great task, Dr. Furness gave years of service to the counsels of the Board of Trustees of the University of Pennsylvania, occupying himself especially in the needs of the library wherein his solicitude and advice bore fortunate fruit. Too rare a speaker, yet peculiarly happy in substance and charm of manner, whatever his subject, it was always an event in Philadelphia when Dr. Furness could be induced to read Shakespeare. This he did latterly only on rare occasions, for charity or for the favored few whose happy fortune it was to be near him. Possibly the last semi-public reading of Dr. Furness was at the annual dinner of the "Shakspere Society" of Philadelphia, last April, when he read to less than a score of us one of his favorite plays, "The Winter's Tale." Those who were present will remember that he seemed never in better voice, never in happier vein than when he read and at times half chanted, in a beautiful art now lost to us who remain, the rollicking songs of Autolycus. Yet there was ever about Dr. Furness in these latter years an undertone of sadness. His bereavements had been many, and while he suffered them never to interfere with the cheerfulness of those about him, to which his ready wit, his prodigious memory and happy agility of thought constantly contributed, it was plain to those who knew him best that sorrow had left its mark upon him.

Horace Howard Furness was an old-fashioned scholar and an old-fashioned man. He recalled at all times that leisure is an essential of sound scholarship, not leisure to dawdle, but leisure to do what is to be done wholly and completely no matter what the time involved, leisure to read, to know, to be infinitely more than the narrow specialist, digging one ditch in oblivion of the world about and the skies above. His was the old-fashioned courtesy that has time to remember trifles and to be kindly to unconsidered persons. His generosity to young scholars was abounding. Time and again did he spread the treasures of his library and the more precious treasures of his time for their faltering acceptance, and his modesty alone exceeded this bounty. I remember how to inquiries after his health he would respond with a sigh: "Vulgarly healthy, my boy, vulgarly healthy"; and speak in careless tones of his work as "serving excellently to keep an old fellow out of mischief." I have never seen him angry save where some act of oppression or ungenerosity was in question and then his indignation knew no bounds. For the arrogance of petty scholarship he had an amused smile; for even small, if genuine accomplishment an ungrudging and instant recognition. His affections were always on the side of justice. Verily here the man was even greater than his work; though we who have now lost him have, as has the world, in the "Variorum Shakespeare," a precious monument of efficient scholarship, ingenious criticism, and just appraisement of the work of other men.

FELIX E. SCHELLING.

NEWS FOR BIBLIOPHILES.

In the Horace Collection, recently presented to the Library of Princeton University by R. W. Patterson of Pittsburgh, is a book which bears interesting traces of ownership by the poet Gray. It is a copy of the "Vita di Orazio" published in Venice in 1760, which, according to an autograph note on the title page, was given to Gray by the author, Count Francesco Algarotti, in February, 1763. That the scholar-poet read the little volume with critical thoroughness is evinced by nearly a hundred marginal comments in his delicate chirography. These notes shed no new light, perhaps, on the recluse of Stoke Poges and Cambridge; but as evidences of his quiet habit of scholarly acquisition and of his nice sense for language many of them seem worthy of quotation.

At least an epistolary acquaintance existed between Gray and Count Algarotti, and it is on record that each publicly expressed a considerable degree of admiration for the work of the other. (Gray's Works, ed. by Gosse, London, 1884, Vol. III, pp. 147, 155, 159, 298.) The Italian *littérateur*, who was within a year of his death when the "Vita di Orazio" was presented to Gray, had at this time become well known among literary and court circles in Europe. Lord Byron, writing from Venice to the publisher, Murray, in 1818 (Byron's "Letters and Journals," ed. by Prothero, London, 1900, Vol. IV, p. 223) mentions a collection of manuscript letters addressed to Algarotti by Lord Hervey, Lady Mary Wortley Montagu, Gray, Mason, Garrick, Lord Chatham, David Hume, and others. Voltaire had affectionately dubbed Algarotti "Le cher cygne de Padove," and he had become a favorite with King Augustus III of Poland and with Frederick the Great. The former had appointed him a Councillor, and Frederick not only made him a Count of Prussia and a Court Chamberlain, but after Algarotti's death erected to his memory the tombstone which stands on the south side of the Campo Santo at Pisa. It was while coursing through the career of Frederick that Carlyle's impatient pen fell afoul of this "young Venetian gentleman of elegance, in dusky skin, in very white linen and frills, with his fervid black eyes"—and paused for the few strokes of characterization (Carlyle's "Frederick the Great," book x, chap. 7; book xi, chap. 3), which have probably succeeded better in making the learned Italian dilettante and his "Poesies" and "Classical Scholarships" rememberable to English readers than all the voluminous commendations of polite admirers. It is of interest that the virile criticisms of Carlyle are not without support from these private comments in the book which belonged to Gray.

Of these marginal notes in the "Vita di Orazio," some were evidently intended merely as a sort of irregular brief analysis of the contents. For example:

> Political cause of 3d Ode of 3d Book of Horace.
> False taste in language in Horace's time.
> Examples from Italian of word-coining.
> Character of Horace's works.
> Horace's Irony against himself.

There are other notes which, as might be expected, exhibit Gray's own somewhat pedantic knowledge of literature and history. His familiarity with Horace is indicated by several cases in which he skilfully detected quotations from the Latin poet which Algarotti had assimilated into his own Italian. The range is wider than Horace: references to Cicero, Ovid, Homer, Dante, Racine, Leo the Tenth, Vitruvius, Sperone Speroni, and as many others, were carefully noted in the margin. On one page Gray discovered that an expression used by Algarotti was "the motto of the Cruscan Accademy at Florence." Other comments are:

> This Influence of civil causes in forming the characters of Catullus', Ovid's and Horace's Muse is just and ingenius.
>
> this remark of Ariosto's want of knowledge with the polite world is just.
>
> Character of Plautus just.
>
> a just valuation of the work of the Augustan age.

To another passage, which discusses the popularity of the theatre over undramatic poetry, he added:

> natural enough as the greatest part of an audience even in the polite ages is illiterate and more prone to feed their eyes than their ears.

And in connection with Algarotti's estimate of Horace himself Gray queried:

> how far may these sententious passages of our Poet tend to give us a real notion of his *true* character? Should they not be parallel'd with the character given of him by other authors.

But a large proportion of these private annotations are criticisms of style. In a letter written to Count Algarotti a few months after he received this book (September 9, 1763), Gray apologized for his use of English by saying: "Forgive me if I make my acknowledgments in my native tongue, as I see it is perfectly familiar to you, and I (though not unacquainted with the writings of Italy) should from disuse speak its language with an ill grace, and with still more constraint to one who possesses it in all its strength and purity." (Gray's Works, ed. by Gosse, London, 1884; Vol. III, page 155; Blackwood's Edinburgh Magazine, Vol. IV, Oct. 1818, p. 38.) Yet these marginal comments reveal no hesitation on Gray's part to express the most specific criticisms of Algarotti's Italian. Curiously enough, many of the notes are addressed directly at Algarotti, as if Gray were a college instructor blue-pencilling a theme. He was some four years younger than the Italian. But as the fruit of above twenty years of writing, the author of the "Elegy" had up to this time permitted only eight of his poems to be printed; and to whatever cause this frugality was due, it is evident that his own severe apprenticeship had given him the confidence of a master in language.

Not all this criticism is adverse. We find such comments as "elegant expression," "excellent use of the word here," "this is a happy term and used by you very apropos." With these, however, are not only such brief strictures as "too affected a term," "Why not the common term?" "energetick but affected term," "I do not like this expression," "a little affected obscurity here," but also a series of fuller criticisms which sufficiently indicate Gray's conclusions concerning the style of the Italian writer:

> Avoid affectation in the use of certain uncommon terms.
>
> avoid prosing Horace's scraps too often.
>
> beware of affecting certain singularities and uncommon forms of diction.
>
> a friend of mine says you have ingenuity but that your works want to be translated into Italian.
>
> beware of borrowing the more trite images from the fine arts wch custom is unbecoming your refined genius.
>
> In transposition of words beware of uncommon peculiarities.
>
> why this continued affectation of *il* instead of *lo* the common expression.
>
> never generalize, but in the esponsal of sentiments or doctrines above the vulgar.
>
> avoid affecting the quotations of our English Poets: wch are sometimes too frequent in your Essays.

I do not at all approve of these sentimental quotations—except those from Horace's own text.

beware of too much Italianizing certain Latin terms of Horace.

I cannot help observing some affectation in your metaphorical expressions, something too recherchée.

I think you are too figurative in your common stile.

do not play so much with your Pen.

All this, as I have said, offers no discovery concerning Thomas Gray; but it unquestionably affords us a familiar glimpse behind the "oak" of the scholar's study.

HARRY CLEMONS.

Correspondence

THE CANDIDATES.

TO THE EDITOR OF THE NATION:

SIR: In this day of vituperative utterance, I wonder whether a concise expression of opinion concerning the several leading men in public life, made from an attempted dispassionate standpoint, might beg for room in your columns. I proceed with the sketches:

Roosevelt.—The Sage of Sagamore Hill has been viewed from so many augles so exhaustively that even the slightest comment entails repetition. One phase of his character which largely explains the driving force behind his activity, may not have been sufficiently emphasized. I refer to the idea of manifest destiny which seems to inspire his movements. "It is manifest destiny; I am the instrument," appears to be the controlling thought which rings in his mind. He is a profound student of history and evidently a believer in Hegel's idea that the universal spirit cbooses, for its unfolding, certain extraordinary men, called by Hegel "World Historical Characters," and uses them as instruments. This belief may have had its germination or an apparent substantiation in such favoring circumstances of fortune as Czolgocz's bullet and San Juan Hill.

I do not believe that Col. Roosevelt is now ambitious in the narrow personal sense, although it may have been otberwise in his earlier political career. His egotism has taken the peculiar form spoken of above. His place in history was already secure before he entered the race for the Presidential renomination, and he is surely clever enough to see that be is risking too much for the sake of gratification of a mere personal ambition.

I concede that he is fearless, determined, shrewdly courageous in matters in which he is able to win approbation, morally honest, democratic, a vigorous thinker, electrified and energetic, and I am inclined to believe thoroughly sincere in the ends for which he is working. On the other hand, he is unscrupulous in his use of men and means, ruthless, oftimes unkind, overactive, apt to be superficial, supremely arbitrary and dictatorial. There is a strange moral obliquity in the man.

It would be unwise to give him further political office, not so much because he might use it unwisely, although his impulsiveness makes that not unthinkable, but because arbitrariness, even when wisely used, may set dangerous precedents. Furthermore, a popular and energetic dictator, possessing a dramatic power of appealing to the imagination of the people, may, by mere distortion of office, set bad standards in a constitutional democracy such as ours.

Taft.—The President is the most misrepresented and the least understood man in public life to-day. His record, when viewed in the perspective of time, will show up admirably. Legislation under his régimo has been sane and progressive, and most of it is traceable to his instigation. His detractors unfairly debit him with all the mistakes of policy, appointment, and legislation, holding him responsible for the bad, while they refuse to concede to him any credit for the good. When driven to admit his sponsorship, they assert that the advocacy was forced on him against his will. Men who, at the outset of his term dubbed him in friendliness "Big Bill," now refer to him, apparently out of a barrenness of real criticism, as large and fat. He is said to be the creature of others without a mind of his own. A closer examination reveals him to be a big, muscular, courageous, and independent man, and a fine type of gentleman with sincere regard for the dignity of his office and the welfare of the people.

An examination of Mr. Taft's public career shows that his advancement up to the time of his Presidency was through political appointment. He is the product of party organization. To organization and party regularity is due bis political existence. His reverence for the organization is such that he holds it political sacrilege to think of disruption. Yet all organizations of whatever nature become hidebound and boss-ridden in time. They require purging. I believe that Mr. Taft had no desire, before he was forced into it, to stand with the bosses. In his regard for the party organization, he accepted them as a necessary evil. But as things now are, it is out of his power for practical purposes to effect reform in the organization. The bosses have taken advantage of his predicament, and without thought of the welfare of Mr. Taft are shielding themselves behind him and are using his position as a means of perpetuating their power in the organization. Mr. Taft thus finds himself the sad though seemingly inevitable creature of conditions.

I believe, therefore, that a vote for him would not dislodge the bosses, and would simply make their position more invulnerable, because he would be unable to extricate himself from his connection with them.

Wilson.—The Governor of New Jersey possesses such an intimate acquaintanceship with our political and economic history that the knowledge which most of those in political life must gain by experience is his through a minute study of the experience of others.

The fact that he has come late into the political arena leaves his opponents without opportunity to rake up early political mistakes. A man of such thorough thought and mature judgment should make no serious campaign mistakes. His soundness of judgment should satisfy most conservatives, and his progressiveness the majority of those in the vanguard of political thought. Moreover, he is independent, decisive, and patient, and, on the whole, eminently fitted for the position for which he is running.

Bryan.—I should feel that this letter were incomplete without a word concerning Mr. Bryan's great influence in our national life. Accused years ago of being visionary and an idealist, he is recognized to-day as a man of vision and of ideals. Accused of plotting for his own nomination at Baltimore, he has been vindicated by events as entirely unselfish. Accused of being unprincipled, he stands out as a man eminently courageous for principle. He is a wonderful preacher and teacher. Ahead of the ranks of the great army of political thought, stalwartly and consistently refusing to recede, he has educated, with the help of his great disciple, Theodore Roosevelt, the public up to his ideas. Mr. Bryan's place is secure in history. He is, in a sense, too great to be President. It is questionable whether he would succeed in that office. His place and usefulness lie in his remaining the great tribune of the people, the reiterator of the ideals of democracy. JAMES H. WOLFE.

Salt Lake City, July 28.

CONSERVATISM AND CONSERVATION.

TO THE EDITOR OF THE NATION:

SIR: Conservationist is nowadays a much more popular term than conservative, though the two words mean very much the same thing. The only difference is that the conservationist is bent on conserving certain features of our physical geography, while the conservative is trying to conserve certain features of our social system. Which is the more important policy would be difficult to decide off hand. It is true that some conservatives are moved by selfish, others by sentimental reasons, to work for the conservation of certain institutions which have only a sentimental or an historical interest, just as there are conservationists who are working for the preservation of the Palisades and Niagara Falls, thus putting æsthetic and historical interests ahead of practical and utilitarian. But there are also conservatives who are working for the preservation of such valuable features of our social system as the independence of the judiciary. They are quite as valuable members of society as those conservationists who are working for the preservation of our forests. T. N. CARVER.

Cambridge, Mass., August 13.

ROOSEVELT THE CRUSADER.

TO THE EDITOR OF THE NATION:

SIR: Has not the heat of your zeal in opposing Mr. Roosevelt led you (in an editorial of August 8) into a confusion of the Crusader with the Pilgrim Father? To the ordinary man, brought up more or less on historical romances, the typical crusader is probably Richard Cœur de Lion, who certainly was not lacking in hunger either for personal distinction or for "delight of battle with his peers." In fact, the more one contemplates the curiously mixed character of "Richard Yea and Nay"—his meanness and his generosity, his shrewdness and his reckless daring, his assumption of the troubadour (the man of letters of his time), his arbitrariness, his exceeding vainglory, his perfectly genuine and even humble enthusiasm for a cause greater than himself, his power of exciting unlimited devotion among his followers, and almost amusing terror and hatred among his foes (Philip's dispatch, "Take heed to yourself, for the devil is unloosed!" might have been sent by Barnes to Penrose), above all, perhaps, his inexhaustible *joie de vivre*—the more plainly one sees them, Richard and Theodore, riding down the devious ways of history, two Eternal Boys together.

L. W. HOPKINSON.

Chocorua, August 13.

FUNDS FOR ROOSEVELT.

TO THE EDITOR OF THE NATION:

SIR: The "Progressive party" will have no difficulty in obtaining funds from its rank and file. It is a people's movement, not a politicians'.

Heretofore we have been willing that the tariff beneficiaries should finance campaigns, but on this occasion the call for funds is not so much an appeal as an opportunity, to which we gladly respond. So far as I have been able to observe, the obligation to meet necessary expenses is taken seriously.

CHARLES ENFIELD.

Jefferson, Ia., August 10.

PEPYS AND THE ROYAL SOCIETY.

TO THE EDITOR OF THE NATION:

SIR: Apropos of the account in the *Nation* (August 8) of the quarter-millennial of the Royal Society, with a reception for ladies at Burlington House, and a display of scientific exhibits, it may interest some of your readers to hear what Pepys thought of such visits in the early days of the Society, and what sort of experiments it was thought worth while to show.

Under date of May 30, 1667, he writes:

> After dinner walked to Arundell House, . . . where I found very much company in expectation of the Duchess of Newcastle, who had desired to be invited to the Society; and was; after much debate *pro* and *con*, it seems many being against it; and we do believe the town will be full of ballads of it. . . . The Duchesse hath been a good, comely woman; but her dress so antick, and her deportment so ordinary, that I do not like her at all, nor did I hear her say anything that was worth hearing, but that she was full of admiration, all admiration. Several fine experiments were shown her of colours, loadstones, microscopes, and of liquors; among others, of one that did while she was there turn a piece of roasted mutton into pure blood, which was very rare.

Well it might be!

Literature

A STUDY OF MYSTICISM.

Mystics of the Renaissance and their Relation to Modern Thought. By Rudolf Steiner. New York: G. P. Putnam's Sons. $1.25 net.

Here is an excellent little work excellently translated by a competent English mystic, Bertram Keightley. It puts in brief compass and in popular form the scattered schools from Meister Eckhart to Boehme and Silesius; it gives clear and simple expositions of that which has not been accounted clear and simple. Avoiding the problems of remote sources or over-technical explanations, the author, by his sympathetic insight, has made friends even with that difficult trio—the Friends of God, Tauler, Suso, and Ruysbroeck. An engaging feature of the book is the endeavor to make mysticism a living doctrine. The problems raised by the men of the interior or hidden life are shown to be those of present and somewhat public discussion. Such are the problems of panpsychism, of the evolution of spirit, of the subjectivity of sensations, of the validity of inferential knowledge.

In this connection Steiner takes a unique position: he hopes that one may be a faithful adherent of the scientific conception of the world and yet be able to seek out those paths to the soul along which mysticism, rationally understood, must lead. Previous to these lectures, delivered at the Theosophical Library in Berlin, he had described his view of the world, which had no thought of driving out the spirit because it beholds nature as Darwin and Haeckel beheld it. There lies no contradiction, he explains, in the fact of saturating one's self with the knowledge of the most recent natural science, and at the same time treading the path which Jacob Boehme and Angelus Silesius have sought.

Is this conclusion valid? Is there no contradiction between mysticism and modernism? The first problem attacked is that of panpsychism, or the vitalizing of nature. Here it is held to be false to ascribe to a plant a soul which is supposed to be only remotely analogous to that of man, for man does not grasp nature by peopling it from within himself with arbitrarily assumed entities, but by accepting and valuing it as it is, as nature. This is a definite thesis. But it may be asked whether panpsychism is not a supplement, or rather an intermediate step to mystic pantheism. By analogy the modern thinker infers a logical possibility of an ensouling of all nature; the mystic assumes this by the direct awareness of the inner light. Panpsychism admits a dualism, matter infused with spirit; mysticism favors a monism, spurns matter, shuts its eye to the physical. Now, if panpsychism be a logical inference or supplement to the physical, there arise three steps or stages in knowledge—physical, logical, mystical. As Tauler has put it: "Man is just as if he were three men—his animal man as he is according to the senses, then his rational man, and lastly his highest, godlike man. The one is the outer, animal, sensuous man; the other is the inner, understanding man, with his understanding and reasoning powers; the third man is spirit." The master is here clearer and more comprehensive than the interpreter. The third man is above the first, but the second is not thereby precluded. Steiner, however, constantly disparages the second stage because the inferred panpsychism leads to the conceit of anthropomorphism, since, as he asserts, the false materialists and the false idealists confuse the sensibly-natural with the spiritual.

We take this criticism to mean that panpsychism runs the risk of blocking the advance into the truly spiritual. As the ensouling of nature it gives rise to two groups of thinkers, both over-satisfied with the position they have attained. There are no longer mere materialists, for they have more or less idealized matter. Nor are there pure idealists, for the physical universe is necessary for the embodiment of the spirit—without matter there can be no incarnation of form. In a word, panpsychism may be a half-way house to mysticism, but it has become so comfortably furnished, so filled with modern improvements, that it tempts many to linger there. To the true pilgrim on the path of pure spirituality there is the harder road, the *via negativa* of asceticism and renunciation, seldom travelled by the modernist.

And panpsychism runs the further risk of anthropomorphizing nature, of injecting into it a purposiveness conceived after human notions of design. In this point Steiner should agree with a panpsychist like Paulsen, who expressly disavows cosmic design after the manner of man, and suggests that nature has a life of its own, running alongside human life, yet not to be expressed in terms of the latter. The author at this juncture is evidently attacking an older type of thought, the Fichtean philosophy, which would inject into nature the creative ideas of the individual. The discussion raised is extremely interesting to the irenecist, for the difference between the two interpretations seems largely one of emphasis. Steiner emphasizes the subjective, and easily shows that the individual's self-inspired teleology is false. Paulsen emphasizes the objective, and from Haeckel himself offers illuminating inferences as to the existence of a world-soul in even the lowest forms of matter.

This reconciliation does not occur to the author. He holds that nature is entirely material, and that spirit is to be found only in man; this is the entity that connects us with the entire world, this the inner illumination that lights up all reality at once. For the evolution of this spirit he points for corroboration to nineteenth-century thought. Eckhart and Tauler, Boehme and Silesius, he explains, would needs feel the deepest satisfaction in contemplating this natural science which no longer sees in nature any being that is like unto the human soul, that no longer makes the organic forms to be created by a man-like God, but follows up their development in the sense-world according to "purely natural forms." If this be mysticism, it is unlike the mysticism alleged to exist in recent expositions of creative evolution. Steiner denies that any creative thought ruled in the forthcoming of the spirit in the organism, and yet admits that spirit as perceivable is a result of evolution, and that upon lower levels of evolution such spirit must not be sought for. It is difficult to see how such an evolution took place unless one call in the aid of some vital impetus, some psychic factor. Steiner's exposition may accord with the crude dualism of primitive Darwinism, where nature was regarded as purely material and man as its intellectual observer; it hardly accords with the Neo-Aristotelianism of the Bergsonians with their appeal to the internal perfecting principle. Indeed, this entire work gives an unusual, if not an unwarranted, exposition of mysticism. That doctrine has generally been thought of as tending towards monism, "the unfoldment of the Root-Being" as leading to a unitary view of the cosmos. But if that unfoldment be confined to man, and nature be put to one side as barely material, the resulting system is an ill-balanced dualism. It is the fallacy of taking the part for the whole to say that, if we experience the spirit in ourselves, then we have no need of such in external nature.

This haling of the world-soul out of the body of nature is our chief criticism of this stimulating work. Minor criticisms concern including among the mystics of the Renaissance such an early writer as Eckhart. Again, it is somewhat forced to assert that Paracelsus in his "astral" phenomena recognizes an intermediate stage between the purely physical and the properly spiritual or soul-phenomena, and thus anticipates the scientific conceptions of the sub-conscious. This is an aberration of the so-called New Thought, a false hypostatizing of the dream life, as if it were a separate existence and not a state of partial decentralization. In this connection the writer inadvertently contradicts his previous view of nature as merely material, man as solely spiritual. Connecting with this "astral" region all the phenomena belonging to hypnotism and suggestion, he asks if in the latter we are not compelled to recognize an interaction between human beings, which points to some connection or relation between beings in nature, which is normally hidden by the higher activity of the mind. From this starting-point one may indeed reach an understanding of what Paracelsus meant by the "astral" body, but such an interpretation is that of a discredited disciple of Paracelsus—Mesmer, that believer in "beamy spirits which stream forth invisibly." We have not space to discuss other anticipations of modern thought discovered among these worthies, but there are interesting expositions of such topics as the subjectivity of sensation under Valentine Weigel, and the validity of inferential knowledge under Nicholas of Cusa.

THREE FIGMENTS.

The Touchstone of Fortune. By Charles Major. New York: The Macmillan Co.

Queen of the Guarded Mounts. By John Oxenham. New York: John Lane Co.

The Just and the Unjust. By Vaughan Kester. Indianapolis: Bobbs-Merrill Co.

Strictly speaking, all fictions are figments, things feigned or invented, but it might be convenient to use the second derivative for novels which are inventions in the minor sense. That, after all, is the main point of distinction between story and story. Differences of theme and range, style and method, "realism" and "romanticism," are interesting enough, but they do not touch the main issue between novels of the higher order and novels of the lower. It is a pity we have no better word than "fiction" or "novel" to reserve for works of true creative imagination which take the form of prose narrative.

The author of "When Knighthood Was in Flower," which scored a double success as novel and play, is an accomplished manipulator of the past. One of his merits is that he does not strive to be quaint. That strange gibberish adopted, as if by some deadly consensus, by most of our current historical-romancers, is refreshingly absent from the present volume. The flavor of an older vernacular is suggested, but the pages are not lumbered with archaisms: we do not recall encountering a "thee" or a "thou" in the course of the whole narrative. A Pepysian simplicity is striven for, not without success, and here and there a turn of phrase pleasantly and not too obviously recalls the ingenuous Samuel. The scene is laid in the time of the Restoration. Charles himself plays an ignominious part in the action, a figure without glamour or dignity. The supposed narrator is a certain Baron Clyde, "who lived, thrived, and fell in the doleful reign of the so-called Merry Monarch." He is a courtier of the better sort, as better might be understood in that day. His chronicle is concerned chiefly with the adventures of Mistress Frances Jennings, elder sister of Sarah, the future Duchess of Marlborough. She was maid of honor to the Duchess of York, and is mentioned both in Pepys and the "Mémoires de Grammont" as heroine of a "mad freak" involving the disguise of an orange wench. She really married the George Hamilton who, according to the present story, turned from the vices of Charles's court for her sake, and carried her off in the nick of time from the clutches of the libidinous King. The incidents which precede and accompany that event are neither more nor less credible than swashbuckling tradition demands. With a good deal of spirit and ingenuity to its credit, and a general fidelity to the flavor of the period, the story is a mere confection, to be tasted and forgotten.

John Oxenham is a more experienced, but not more skilful, "restaurateur"—to use the Carlylean term. When a man has produced some thirty novels of the romantic-adventurous type, he is in danger of taking his work with increasing nonchalance. The public—his public—is so easily satisfied by that time, if it survives at all. It asks nothing more than the familiar and characteristic condiment—the sauce Oxenham, for example—which may have first given the purveyor his vogue. Even the great original restaurateur made sad work of his latest bills of fare: his shade still begs forgiveness for "Count Robert of Paris." We are not familiar enough with the work of Mr. Oxenham to judge whether this story and its immediate predecessor ("The High Adventure") are up to his possible level or not. They are of much the same quality, though one of them is modern and the other historical. "The High Adventure" recorded the preposterous experiences of two quite impossible young persons. "Queen of the Guarded Mounts" does the same thing in a different way. That is to say, the function of popular romance is successfully discharged in both instances. The "guarded mounts" are the two mounts of St. Michael on opposite shores of the Channel. The heroine, daughter of a French noble, has been reared up to the outbreak of the Revolution of '93 on Brittany's Mont St. Michel, and takes refuge upon the twin mount in Cornwall. Here she is cherished and properly fallen in love with by two Englishmen, nephew and uncle. For her sake they involve themselves in the struggle of the Vendeans, and plenty of scuffling (*quâ* heroism) ensues. When the author judges there has been enough of it, the lady is encouraged to reward one of the gentlemen with her hand, and betakes herself with him to the Cornish mount, to live happy ever after. Filet au sang, sauce Oxenham! What more would you have?

"The Just and the Unjust," by the late Vaughan Kester, though different in externals from the above-mentioned romances, is similar in kind. The setting happens to be an American town, the time is supposed to be the present. The plot deals with love, murder, gambling, circumstantial evidence which nearly hangs the wrong man, and so on. A beautiful maiden, daughter of a leading citizen, is provided to be in love with the accused man. Her devotion, and the extraordinary complaisance of her truly American parent, are powerless to protect the victim of the law; but he is, of course, quite safe in the hands of his author, and all is well in the end. The story does not lack touches of merit, as in the grotesque character of "Fightin' Shrimplin"; but as a whole it is machine-made, a contraption without life or savor.

Chronicles of Avonlea. By L. M. Montgomery. Boston: L. C. Page & Co.

Miss Montgomery continues to follow up the vein she opened in "Anne of Green Gables." These stories are all of Spencervale or Avonlea. Anne herself —or what we hope to be a caricature of her—appears on the cover, and is mentioned now and again within. But she is not the leading figure in any of the tales, which might have been called "Romances of Middle Age," so strongly does a single motive dominate them. Ten out of the dozen stories deal with belated love-affairs, or with the pathetic devotion of age for youth. Perhaps this is why the group as a whole reminds one of Mrs. Deland's "Old Chester Tales" —this and certain resemblances of style which are probably not due altogether to accident. The resemblance does not go very deep. The essential difference between the two chroniclers is the difference between sentiment and sentimentality, restraint and exuberance. Mrs. Deland looks upon her Old Chester scene with an eye both keen and affectionate; it lies peopled in her imagination, a thing real and complete. She is incapable of inventing pretty stories about these people. Miss Montgomery's Avonlea, on the other hand, is a place which furnishes types about which pretty stories may be invented. This writer has that fatal gift of neatness which is ready to sacrifice everything else to finish of plot. So she does not balk at the absurdity of a twelve-year-old boy who has never been taught to fiddle improvising masterpieces on the slightest provocation. This is a pity, because Miss Montgomery has certainly the story-teller's instinct, genuine humor, and a sentiment altogether clear of sentimentality—when she chooses to keep it so.

THE TITANIC.

The Loss of the Titanic. By Lawrence Beesley, One of the Survivors. Boston: Houghton Mifflin Co. $1.20 net.

An Unsinkable Titanic. By J. Bernard Walker. New York: Dodd, Mead & Co. $1 net.

When the Carpathia arrived in New York the best and calmest narrative presented to the reporters was that of Lawrence Beesley. He had composed it on the rescue-ship under the greatest difficulties in order that a straightforward unvarnished tale of this frightful tragedy might be available, rendering thereby a service not easily over-estimated. American friends induced him to elaborate it into this readable volume, in which self-restraint is again visible together with a deeply religious feeling which may well account in some degree for the composure of spirit. Moreover, the style is excellent, as befits the holder of a Cambridge first class, his descriptions are often vivid, and his scientific training doubtless explains also why he, who was making his first ocean voyage, should be one of the most valuable witnesses, if not the best, among the survivors.

At the same time it must be frankly said that Mr. Beesley adds but little to our knowledge or understanding of the tragedy. He does make clearer the psychological reasons which made possible that amazing calmness among the 1,500 souls who faced inevitable death. The wonderful quiet of all nature at the moment of the tragedy, the steadfast belief to the last that the Titanic could not sink, and the compelling sense of the necessity of obedience to duty—these are the familiar reasons he gives. Mr. Beesley also insists that this wonderful heroism was "largely unconscious, temperamental, not a definite choice between two ways of acting," and rejoices to know that heroism is an unconscious race quality instead of a conscious effort. History is also much indebted to the author for his picture of conditions on the Carpathia which he sets forth without the slightest effort to color the dramatic or the tragic. It is good to learn, for instance, that instead of terrible scenes of uncontrolled grief as pictured by the sensational press, even the women so suddenly bereaved "met their sorrow with sublimest courage, came on deck, and talked with their fellow-men and women face to face." Throughout the women were as heroic as the men.

In drawing the lesson of the disaster and analyzing the causes Mr. Beesley is not quite as happy as he might be, just as he does not seem to be aware that the unusually excited attitude of the press was due to the failure of the Carpathia to send a brief, clear narrative of what had taken place—a trained newspaper man was sadly lacking among the survivors!—while at least one highly sensational wireless came from the ship, distorted, perhaps, on its way to New York. In his effort to be judicial he is if anything too kind to the White Star Company and its officers. He does not realize, for instance, that in the disaster to the Republic the line had a prophetic warning of what was to happen to the Titanic. It was clearly brought out then that if the rescuing Baltic had not come in the nick of time there would have been a horrible loss of life. A far-sighted company would have realized this. Instead, the Republic accident did much harm by making people feel that the wireless had ended all danger of loss of life. Every company went on content to save money on boats and to live up only to the letter of the law.

Mr. Beesley makes the mistake, too, of awarding to the public virtually all the blame for the speed of the fastest vessels through fog and ice. Some of the companies were glad to raise this cry about the present-day speed mania in order to conceal their own shortcomings That there are a few travellers —Mr. Beesley cites one—who grumble if ships are late and desire more speed, may be true, but the fallacy of this argument is shown by the fact that the Hamburg-American Line, which owns more steamers than any other single company in the world, has not a single fast ship in its fleet—nothing to compare in speed with the Titanic or the Mauretania. It has found that its best policy is to cater to those who desire reasonably fast passages and lower rates. Hence it builds ships from seventeen to twenty-one knots, and has not had the reputation of driving them at any cost under all conditions.

Finally, Mr. Beesley does not attach sufficient importance to the grave structural defects of the Titanic, although he had, before writing, seen J. Bernard Walker's article on these in the *Scientific American*, which Mr. Walker has expanded into the volume that lies before us. In this Mr. Walker shows how the Great Eastern of 1858 was vastly superior to the Titanie of 1912 and points out many serious defects, the gravest of which were the failure to carry the transverse Titanie bulkheads high enough up, the failure to keep whole, and unbroken by openings, the bulkhead deck, and the lack of those longitudinal bulkheads which permitted the Great Eastern to come safely into port after ripping out her outer bottom on the rocks of Montauk. Mr. Walker, it seems to us, proves his case, which is that the unsinkable Titanic must be built on the plans of the Great Eastern, that ship of genius of fifty-four years ago. The White Star Line at least has seen the light, for it is to spend a million dollars to rebuild the Olympic along these lines and $250,000 to give the Gigantic a real double-bottom.

But if Mr. Beesley wrote too soon to realize all this, we would repeat that his clear, touching, and self-restrained narrative of the tragedy was well worth while. It will probably always stand as the best contemporary narrative by one who survived the tragedy, the frightful guilt of which rests primarily on official heads on both sides of the ocean—a pleasant thought for those who believe in a world completely controlled and regulated in its uttermost detail by myriads of official law-enforcers.

Notes

"Germany and the German Emperor" is the title of a book by G. H. Perris, which Holt will publish shortly.

The Harpers have in hand: "The Moth," a new novel by William Dana Orcutt; "May Iverson Tackles Life," by Elizabeth Jordan, and "The Montessori System in Theory and Practice," by Dr. Theodate L. Smith.

Dr. Maria Montessori's latest book, "Anthropologia Pedagogica," which furnishes the scientific basis of her theories, will be issued within a few months by Stokes, in a translation by Frederic Taber Cooper.

The autumn fiction list of this house includes: "Between Two Thieves," a story of the Crimean War, by Richard Dehan (Clotilde Graves); "From the Wreck I Rise," by Beatrice Harraden; "The Whistling Woman," by the English author, Robert Halifax; "The Bride's Hero," by M. P. Revere; "King-Errant," a novel of the Orient, by Flora Annie Steel; "Miss Wealthy, Deputy Sheriff," by Elizabeth Neff, and "The Long Portage," by Harold Bindloss.

Margaret Sangster's posthumous work, "Eastover Parish," is announced by Revell for publication early in September.

Putnams bring out this week: "Outlines of the History of German Literature," by J. G. Robertson; "The Gates of Knowledge," by Rudolf Steiner; "Pharisaism, its Aim and its Method," by R. Travers Herford, and "The Hoosac Valley, its Legends and its History," by Grace Greylock Niles.

Other forthcoming books in Putnams' list are: "Chinese Fairy Tales," by Adele M. Fielde; "Forty Famous Fairy Tales"; "Two-and Four-Footed Friends," stories by Anua Sewell, H. Rider Haggard, Bret Harte, Ernest Ingersoll, Charles Dudley Warner, Hezekiah Butterworth, etc., and "How to Find Happyland," by Jasmine Van Dresser, popular edition.

Dutton will shortly add forty volumes to Everyman's Library. Many readers will be interested to learn that included in this number is the old "Anglo-Saxon Chronicle, with the Original Introduction and Glossarial Index."

A child's story, by Anatole France, entitled "Bee, the Princess of the Dwarfs," is promised by Dent in an English translation by Peter Wright.

The same house has in press "Dante and the Mystics," by Edmund G. Gardner.

"Railway Economics, a Collective Catalogue of Books in Fourteen American Libraries" (University of Chicago Press) has been issued by the Bureau of Railway Economics, Washington, under the editorship of its librarian, R. H. Johnston. It undertakes to record the contents of the principal collections of railway economic literature in the United States, and contains nearly twenty thousand entries representing probably fifty thousand volumes. Its value is increased by a very comprehensive table of contents and a complete author index. Of all these invaluable aids to the student which the librarians of the country are producing, this is the most exhaustive and workmanlike of any that has been issued in the economic field. Its peculiar value lies in the fact that railway literature is widely scattered and much of it impossible to duplicate.

Clayton Sedgwick Cooper is the author of "Why Go to College," which the Century Co. announces for autumn.

In "My Friends at Brook Farm," John Van Der Zee Sears sets forth the life of that interesting coöperative association, in which he himself participated. The book will be published by Desmond Fitzgerald in September.

"Atlantis," Gerhart Hauptmann's forthcoming novel (Huebsch), is said to be devoted largely to American life.

The autumn list of Sturgis & Walton includes: "Boy Scout Stories," by John Fleming Wilson; "The Cat," the first in Our Animal Friends series, edited by Agnes Repplier; "Heroines of Modern Progress," by Elmer C. Adams and Warren Dunham Foster; "Hidden Anagrams," anonymous; "Story-telling in School and Home," by Emelyn Newcomb Partridge and G. E Partridge.

Yoshio Markino, author of "Miss John Bull," is bringing out, through Houghton Mifflin, "When I was Young."

Included also in Houghton Mifflin's autumn list are: "Intimations of Immortality in the Sonnets of Shakespeare," being the Ingersoll lecture this year at Harvard, by George Herbert Palmer; "Charles Eliot Norton," two addresses on Professor Norton delivered before the Archæological Institute of America by Dr. Edward W. Emerson and William F. Harris; "The Children of Light," a new novel by Florence Converse, and two volumes of verse—"Villa Mirafiore" by Frederic Crowninshield, and "Poems by Frederic and Mary Palmer."

Percy H. Browne, secretary of the Putumayo Mission Fund, No. 257 Finsbury Pavement House, Finsbury Pavement, London, E. C., requests the use of our columns to seek aid for the Indians in the Putumayo district of the Amazon. Sixty thousand dollars will put the undertaking on a sound financial basis, and promises for some $10,000 have been received. Mr. Browne will be pleased to supply any information which is desired concerning the mission fund, and will acknowledge all subscriptions sent either by cable or letter.

The July number of the *American Journal of International Law*, just issued, contains at least three papers of marked value: Senator Root's, on "The Real Significance of the Declaration of London"; Richard Olney's, on "General Arbitration Treaties," and William Cullen Dennis's, on "The Arbitration Treaties and the Senate Amendments." George Scelle's paper on "Bulgarian Independence" touches a Lower Danubian topic, and Mr. King's second paper on the "French Spoliation Claims" deals with a century-old question. The Declaration of London, 1909, discussed by Mr. Root, became almost immediately after its promulgation a topic of warm controversy in England, as it related to the laws of naval warfare. The Declaration was comprehensive, however, and it is interesting to note how closely related it was to our own war-time topic of 1861-5, the Trent affair. Surprisingly enough, the Declaration confirmed the American doctrine of continuous voyages, as applied to absolute, but not to conditional, contraband; it limited the widely extended list of contraband articles promulgated by Japan during her war with Russia, and as a condition of right to seize, required proof of intention to use for the benefit of the other belligerent. The distinguishing feature of the Declaration was that it embodied a provision for a general judicial court, to hear and determine all matters of international dispute, thus closely approaching the completeness reached in the Hague Convention for an International Prize Court. So obvious was the relation of the project of the Prize Court to that of a general Judicial Arbitral Court that Secretary Knox, who has seconded President Taft's humane international purposes, has proposed to the other Powers the enlargement of the jurisdiction of the Prize Court, so that any question between the signatory Powers may be heard and determined by the judges of that Court. In England, while the House of Commons unqualifiedly approved, the House of Lords rejected, the Prize bill, thus furnishing an analogy to our own Senate, which refused to ratify the arbitration treaties with France and England except encumbered with embarrassing conditions. Happily, our Senate approved the Declaration which the House of Lords rejected. Mr. Olney discusses in a broad and statesmanlike way the international arbitration question; concluding that the practical problem is to lessen the force of the obstacles, and determine on what lines treaties may be drawn that shall as nearly as possible approach one covering all differences. Mr. Dennis's conclusion concerning the two arbitration treaties which the Senate so radically amended, is, that to ratify them as thus amended, would, on the whole, rather hinder than help the cause of peace through justice.

Henry Frowde has just issued "The Tragedies of Shakespeare" and "The Histories and Poems of Shakespeare," completing the popular Oxford edition, of which the "Comedies" appeared not long since. The text is that prepared by W. J. Craig, and the introductory studies of the several plays are by Edward Dowden.

Two Chinese candidates for the degree of doctor of philosophy at Columbia have made contributions of rather unusual value for an understanding of the principles of Chinese statecraft in monographs recently published in the Columbia University Studies in Political Science (Vols. XL, XLV, and XLVI; Longmans). The first, Dr. Hawkling L. Yen, in "A Survey of Constitutional Development in China," supplies the Western reader with the only account of the political philosophy of ancient China and its development in the feudal period which is to be found in English. Brief as it is, this monograph on a great subject ought, when read in connection with a good history of China, to inform students of political science of the original character of Chinese institutions and their importance in the study of governmental systems. The formative period of the Chinese state culminated in the permanent establishment of a centralized empire by the Han Dynasty, in the second century, B. C., when the political principles of the Confucian school were incorporated in an accepted system of public law that has withstood the changes of two thousand years. Dr. Yen is disposed to ignore the work of the philosophers of the Sung Dynasty in recasting the theory of the state as the instrument of *tao*, or eternal Reason; but, from the standpoint of practical politics, his contention is substantially correct that the fundamental features of Chinese absolutism have remained unaltered until contact with the West aroused them to the necessity of remodelling their institutions.

The second thesis, Dr. H. C. Chen's "Economic Principles of Confucius and His School" (2 vols.), is a more elaborate examination of economic theory and history in ancient China. It is a treatise developed systematically in terms of a modern textbook on political economy, but only those acquainted with the so-called Confucian classics will comprehend the prodigious labor involved in discovering and collating the stray passages where these statements are found. The author, a former pupil of the reformer, Kang Yu-Wei, remains, like his master, a thorough believer in Confucian principles, though convinced of the necessity of rehabilitating his country by the introduction of Occidental methods. His work is incidentally interesting as revealing the intention of a typical classicist to revert to ancient Chinese ideals in reorganizing the state. The factors of production, distribution, and consumption are discussed with abundant references to the social status of antiquity which are likely to prove a mine of information to students in search of such data in a digested form. Confucius, they may be surprised to learn, advocated monogamy, though he allowed wives in moderation to the upper classes, and Dr. Chen is of the opinion that New China will allow her sons only one wife apiece. Among the peculiar institutions of the ancient régime in China was the *tsing tien* system of land division, under which eight families were grouped about a common well, or *tsing*, and allotted equal parts of a specified tract to cultivate, the return to the Government being a tithe, or the produce of one-tenth worked by all the *tsing tien* in common. The story of this combination of socialism and individualism, which was abolished by the tyrant Chin Chi-Hwang-Ti in the third century, B. C., is of considerable interest, as it passed from China to Japan and Annam and constitutes one of the most original contributions of eastern Asia to the economic systems of the human race.

"Biblical Quotations in Middle English Literature Before 1350," by Mary W. Smyth, is a doctoral thesis published as No. 41 of the Yale Studies in English (Henry Holt & Co.). It is to a certain degree a continuation of Prof. A. S. Cook's "Biblical Quotations in Old English Prose Writers," but it includes, also, poetical texts, and, on the other hand, the corresponding passages from the Vulgate are not given at the bottom of the page. It is difficult to attain completeness in such matters, and doubtless there are lacunæ in this collection, as proved to be the case with Professor Cook's first series. In beginning the quotations with one from an entry in a certain recension of the Anglo-Saxon Chronicle, under the date 1067, the writer is straining the application of the term, "Middle English" to its utmost limit, for the words in question are good Anglo-Saxon, as, indeed, it is not customary to date the beginning of the Middle English period with the Battle of Hastings, but rather from 1100, or even later. The quotations are arranged in chronological order, so far as this can be determined, and it is interesting to note that all but five books of the Bible are represented in the list, the Gospels and Psalms, as might be expected, most frequently. The passages seem translated for the nonce, and are probably in no case derived from earlier versions. Only a few expressions which have survived even into our Authorized Version appear already in the Middle English period to have been fixed in form, *e. g.*, "in the twinkling of an eye," I Corinthians xv, 52, and "the quick and the dead," II Timothy, iv, 1. The Introduction is rather slight, and in the historical survey of early English translations of the Bible is dependent on Professor Cook and Miss Paues. The longest section is devoted to Ways of Using the Bible, which do not appear to have differed very much from those that are familiar to more recent times. In this connection we may remark that Miss Smyth is mistaken in regarding as containing direct reminiscences of the Bible the passage in the fourteenth century romance, "Sir Gawain and the Green Knight," where Gawain consoles himself for having been the victim of a woman's trick by recalling the fate of Adam, Solomon, Samson, and David. Although probably derived in the first instance from homiletic literature, these Biblical illustrations of a favorite mediæval theme had long been a commonplace of the French romances on one of which the English poem was doubtless based, so, for instance, in the episode of the "Grand Saint Graal" recounting how Hippocrates, the Greek sage, was tricked, and in the "Mort Artu," where Bors complains of Guinevere's conduct to Lancelot. Miss Smyth's work concludes with various appendices and an index of Biblical passages represented in the Middle English quotations.

Scant praise can be given to Joseph King Goodrich's "Africa of To-day" (McClurg). The book is a superficial compilation from secondary sources, and is doubly useless in view of Keane's two volumes on Africa in Stanford's "Compendium of Geography and Travel," the second edition of which appeared in 1904. The treatment of the various topics, which include Africa of Fable, Northern Africa, Egypt and the Nile (three chapters), Central, Eastern, Western, and South Africa (one chapter each), America's Relations with Africa, and "Cape to Cairo," is so cursory as to be unsatisfactory from whatever standpoint. That Mr. Goodrich has not taken the trouble to keep in touch with scholarship is shown, for instance, by his criticism (p. 55) of Latham's theory that the Aryans were of European origin, for that hypothesis is the very one which is maintained by investigators of the rank of Hermann Hirt.

Mr. Goodrich informs us (p. 112) that the sphinx symbolizes "the time when the sun passes through the constellations Virgo and Leo," but these designations for the zodiacal signs, which are Babylonian in origin, are not likely to have been current in Egypt in the fourth dynasty (about 3000 B. C.), when the Sphinx of Ghizeh was probably constructed, and the theory also breaks down in the case of temple-guarding sphinxes (which the Sphinx of Ghizeh really is), as well as in the case of those sphinxes which have the head of a ram, hawk, or the reigning monarch. Again, although Mr. Goodrich mentions (p. 101) Petrie's discovery of the "Israel Stele," he dates this in the reign of Sety I (1326-1300 B. C.), whereas it was really carved by Meren-Ptah (1234-1214), and the passage referring to Israel is not to be translated "The people of Israel is spoilt: it hath no seed" (which Mr. Goodrich takes to mean that the Israelites had proved untrustworthy allies to the Egyptians!), but, as Petrie himself renders it ("History of Egypt," III, 114), "The people of Israel is laid waste—their crops are not." Neither is there any basis for Mr. Goodrich's allegation that the Jews of North Africa are "said to be looked upon by their orthodox co-religionists as almost apostate" (p. 58), for, on the contrary, this region has been for centuries a seat of Jewish learning of unimpeachable orthodoxy. Plainly the author did not include the "Jewish Encyclopedia" in his working library. The most interesting portion of the book is the account of railway development. The volume concludes with a bibliography quite of a piece with the other sections of the work.

The death is reported from Scotland, at the age of forty-seven, of the Rev. George Henderson, who did much for Celtic scholarship in that country. Besides several articles on the dialects of the Highlands, he transliterated in "Leabhar nan Gleann" a large part of the Book of Fernaig, edited the Irish saga, entitled "Bricriu's Feast," collected and edited the poems of the blacksmith-poet, John Morison, and in the last two years published "The Norse Influence on Celtic Scotland" and "Survivals in Belief Among the Celts."

Dr. Isaac Hull Platt, a close friend and neighbor of Dr. Furness, is dead at his home in Wallingford, near Philadelphia. Like Dr. Furness, Dr. Platt had for years devoted the greater part of his time to a study of Shakespeare. Besides editing several Shakespearean plays, he wrote "Bacon Cryptograms in Shakespeare and Other Studies" and an article on Walt Whitman in the Beacon Biographies series. He was born in 1853 and for several years practiced medicine.

Science

"Microbes and Toxins in Nature," by Dr. Etienne Burnet, with an introduction by Elie Metchnikoff, is promised for this week by Putnams.

As agents of the Cambridge University Press the Putnams announce: "Electromagnetic Radiation and the Mechanical Reactions Arising from It," by G. A. Schott; "Higher Algebra for Colleges and Secondary Schools," by Charles Davison; "Experimental Science, II, Chemistry," by S. E. Brown, and "The Stories of Our Trees," by Margaret M. Gregson.

"Gas Engine Principles," by Roger B. Whitman, is in Appleton's list.

Percy R. Lowe, the author of "A Naturalist on Desert Islands" (Scribner), had the good fortune to be a guest of Sir Frederic Johnstone on six yachting cruises in the Caribbean Sea, in the course of which many little-known, more or less desert, islands were visited. Three of these islands are here dealt with—Swan, Blanquilla, and Los Hermanos. We are not bothered with statistics, nor excess of personalities; now and then a scrap of history creeps into the account, but only as an echo of the doings of early discoverers and buccaneers, softened by time into romance. The theme is the fascination and beauty of desert islands for what they are in themselves, and what they contain of beast and bird, of rocks and land-flowers, of sea-flowers and coral-gardens. One finds some of the most elementary facts concerning shells and crabs, corals and lizards, yet so freshened by new points of view that the facts themselves seem new. Slips are few. The most noticeable is the author's confusion of the sexes of the man-o'-war bird. The little island folk are set forth with great vividness and with much information that is new and valuable. Light dull-finished paper, excellent half-tones, and a thorough index add to the worth of the book.

The scientific and practical outcome of Capt. A. H. W. Haywood's wanderings in Africa ("Through Timbuctu and Across the Great Sahara": Lippincott) is not very important, but as a straightforward account of hardships bravely endured, mainly for the sake of sport, the story is well worth reading. All told, he travelled 3,758 miles across Africa, 1,560 of which were through the Sahara, from Gao to Biskra. He bears enthusiastic testimony to the almost bird-like instinct of the native guides, who lead the caravans unerringly from well to well through the desert, sometimes hundreds of miles apart. As compared with such accuracy, the compass sinks into insignificance. Capt. Haywood tells us enough of the native fauna and flora, as well as of the habits of the people, to show that he is an observant traveller. He has nothing but praise for French enterprise, administrative skill, and individual self-denial in Upper Senegal and the Niger Colony. Bamako, the capital, is planned on the lines of a town in France, "with wide boulevards and solidly built stone houses." But, as elsewhere in West Africa, the liquor problem in French Guinea is becoming troublesome. How so much European liquor finds its way into these regions is a mystery. The author speaks guardedly of the results of the French Cotton-Growing Association's effort to introduce the cultivation of Egyptian and American cotton. The soil seems to be suitable enough, but the natives are too lazy to plant the cotton. Capt. Haywood thinks it worth while to print in an appendix a list of the principal game shot by him. He is a passionate hunter, but has qualms of conscience occasionally, when close to unalarmed game. "It makes one feel a brute to shoot it," he says, justly enough. The book has good illustrations and an excellent map.

Few men are better equipped to present the subject of the relations of plant-life to evolution than Prof. Douglas H. Campbell of Leland Stanford University. He is not only familiar at first hand with the early and later stages of development in the lower and higher plants, but he knows how to describe in untechnical language what he has seen. Therefore his little treatise, "Plant-Life and Evolution" (Holt), is a distinct contribution to sound popular science. The author does not disguise the fact that the whole question is one of extreme difficulty. But he brings to the subject all the light of recent investigations, and constructs from the materials at his command a satisfactory sketch of the probable sequence in which plants appeared upon our earth. The last decade has witnessed remarkable activity in two parts of the field of botany, namely, that which deals with the character of fossils and that which concerns itself with the behavior of varieties. The students of fossil plants have removed the last barrier which separated the flowering from the flowerless plants, and it is now customary in many botanical circles to use some of the terms taken from the grammar of flowerless plants in the description of flowering plants. There are many botanists now living who can remember when it was quite the other way. It is not an easy task to give an impartial history of a revolution, or to state in a perfectly fair manner the results which have been obtained by a study of the formerly despised variety. But Professor Campbell has succeeded in stating the case without prejudice, even at points where there are opportunities for very pretty quarrels. The use of this book should not be confined to teachers, although it will prove a mine of valuable illustration in the preparation of lectures, but it should be widely known to all readers who wish to keep abreast of the times in philosophic thought. We think that Professor Campbell has been wise in giving prominence to the recent discovery that certain bacteria have the remarkable power of assimilating carbonic acid even in the dark, whereas it has been heretofore confidently stated that this power belongs only to green plants in the light. To extend the range of constructive processes is to widen the outlook as to origin and early stages. But this is only one of the many surprises which Professor Campbell gives his readers.

Drama and Music

Henrik Ibsen: Plays and Problems. By Otto Heller. Boston: Houghton Mifflin Co. $2 net.

Mr. Heller's work, on its own lines, is a scholarly, sane, and vigorous book. These lines, however, are definitely restricted and require to be specified. What interests Mr. Heller is the work rather than the author, the social rather than the romantic or the historical dramas, and the social dramas in their ethical and technical bearings rather than as appeals to the sympathies or the taste. Three things touch Mr. Heller nearly: the social problems handled in the plays, the innovations in technique which are likewise part of Ibsen's wrestle with his time, and that relation between Ibsen and his public which constitutes almost as real and typical an Ibsen drama as any listed in the schedule of his works. Outside of these limits, Mr. Heller is silent or meagre.

The Ibsen cult has reached proportions which justify a partition of the field, and Mr. Heller's right to specialize in the social dramas may be unhesitatingly conceded. The principle once admitted, it would be captious to object to the assignment (at first, a little startling) of twenty-eight pages to "Ghosts" over against thirty-one pages allotted to "Brand" and "Peer Gynt" together. Such a method has, however, the incidental drawback of retrenching some of the data which give life and interest to Ibsen's personality. The Ibsen of the social plays, with his dry tenacity, his sardonic calm, his phlegmatic audacity, and his unimpassioned truculence, is a quite manageable problem; what is elusive and perplexing is the witchcraft which domesticated him in the same body with the author of "Brand" and "Love's Comedy." Mr. Heller's picture of the later Ibsen's character is just and clear, though it lacks novelty, and is kept subsidiary to the works. His admiration is intense, but wholesome even in its excess; too secure to be haggling or worrying or contentious, too spacious to deny houseroom, or even hospitality, to censures. Indeed, Mr. Heller would find it hard to forego the defects of his subject, very much as the lover of a great metropolis might be sorry to see its picturesque variety impaired by the elimination of its crooks and beggars. He uses Ibsen with the affectionate roughness of a Kiplingesque soldier, plying him with such phrases as "crabbed taciturnity," "exactingly and exasperatingly unsocial creature," "eremitical old grumbler," by way of pure endearment.

A significant comment and an incisive criticism on Ibsen are latent in the inability of his commentators to find anything in the plays themselves but criticism—criticism enlivened, it is true, by an exhibition of craftsmanship. The emphatic and eager declaration on the part of Ibsen and his critics alike that the dramas are primarily dramatic must be viewed as the last despairing resistance to an undertow sweeping them back to an exclusive concentration on his teaching and his technique. Mr. Heller shares in these limitations: the word "beautiful" scarcely occurs in the work: and the test of pleasure or enjoyment is all but absent from his criticism.

Apart from these qualifications, Mr. Heller's performance is highly competent and satisfactory. Eagerly observant and keenly critical of life, strongly radical but with a judgment less radical than his temper, idealist in the final reckoning but diverging towards idealism only at the end of a long pilgrimage in which cynicism has been his comrade and his guide, in all these points he is akin to Ibsen and fitted to be his sympathetic exponent. The plays appeal to Mr. Heller as observed realities would appeal, not to an artist, but to a warm-blooded and virile sociologist. He has assimilated Ibsen, and his book has a salt and zest, a healthy human glow and color, which rarely—in America at least—find themselves associating, on equal terms, with ripeness of scholarship and sanity of judgment. Absolute novelties are rare—they are rare in most good work—but the book touches nothing which it does not refresh.

Mr. Heller's judgment of artistic values in character is fallible: he gives the primacy among Ibsen's creations to Mrs. Alving, that official, accredited, forensic personage, Ibsen's certificated and medalled pet pupil, with Engstrand and Regina in the immediate vicinity to suggest the fallaciousness of such a preference. But his analyses and paraphrases of leading characters, which fill a large space in the book, are among his most trenchant, penetrative, and illuminative work; their accuracy is nearly unfailing, and they convey a breath of actual life seldom found in the criticism of idealities.

The interpretations of the plays are in the main trustworthy, and the estimates of relative excellence are commonly just. Mr. Heller has the sanity and courage to call "Peer Gynt" a minor work; he perceives the transitional and ambiguous quality of "Pillars of Society," raises "Ghosts" to its just eminence, realizes the high claims of "The Wild Duck," regards "Rosmersholm" as Ibsen's first clear departure from the ultra-individual standpoint, is alive to the treachery of symbolism, makes the needed discounts from the overvalued "Master Builder," and, in a sound reaction from the depreciation of "John Gabriel Borkman," awards that play rather more honor than it deserves. The handling of technique, apart from some failure to catch the finenesses of logical texture, is judicious and able. The philosophical classifications of Ibsen's work (pages 110 and 238-9) impress one as oblique to the truth rather than as clearly wrong or right. Again, it is hard to believe that Ibsen regarded "An Enemy of the People," apparently the most impulsive of all his plays, as an artful circuit or by-path by which he passed from the standpoint of "A Doll's House" to the ground taken in "The Wild Duck"; and surely only the application of the "third degree" to "Little Eyolf" could extort from that well-meaning play the dogma that marriage, to be wise and happy, must be childless.

We cite a few examples of Mr. Heller's critical sagacity. "On the stage it is the total impression which decides" (p. 172); "A stage play must be completely intelligible and enjoyable in itself, as a work of art, apart from its philosophical connotation" (p. 271); "Tragedy is not meant for weaklings, triflers, and prudes. It is meant for serious minds and valiant nerves" (p. 171). The excellent comment on Mrs. Alving's outbreak against law and order (p. 164) is too long for citation.

Many years of residence in America have not sufficed to render Mr. Heller's idiom impeccable, though they have bestowed upon him a vocabulary of remarkable—not to say, portentous—amplitude. The diction is polyglot and polychrome, ranging from "rampage" and "hullabaloo" to "de-transcendentalize" and "de-Scandinavianization," and all but passing into that sheer collectorship of words which is the bane of recent styles. He delights in the big and buxom phrase, and his sentence-structure, though vigorous in its massive way, is of that type which flourishes between the Rhine and the Vistula. That he has written a readable book, in spite of these drawbacks, is notable testimony to the vigor, vivacity, and humorous incisiveness of his mind.

A few errors may be noted in a book that is commonly exact. On page 116 Stensgaard is referred to "Love's Comedy"; on the same page, Mortensgaard, in an inscrutable parenthesis, is assigned both to "Love's Comedy" and to "Rosmersholm." On page 117 Krogstad is included in a class of persons described as "lame ducks" that flap idly about in their puddles. Hauptmann's "Der arme Heinrich" is cited as "Meister Heinrich" (p. 26); Norwegian scenery is attributed to the entire fourth act of "Peer Gynt" (p. 14). See also the curious difference between the accounts of Allmers on pages 115 and 295.

Doubleday, Page & Co. plan to bring out in the autumn several more volumes of the Ben Greet Shakespeare for Young Readers and Amateur Players. The next volumes will be "Julius Cæsar" and "The Comedy of Errors."

Miss E. M. Spearing is bringing out, through W. Heffer & Sons, of Cambridge, England, "The Elizabethan Translations of Seneca's Tragedies." Based upon an examination of the editions of 1559-66, it attempts to define more accurately than has been done heretofore Seneca's influence on Elizabethan drama.

The authorized translation of Gerhart Hauptmann's plays, which is announced by Huebsch, is in preparation by Ludwig Lewisohn. The first volume, shortly to be published, contains four dramas besides Mr. Lewisohn's general introduction.

The addition this autumn of seven new volumes to Crowell's edition of the First Folio of Shakespeare will bring this undertaking to completion

Reports from Bayreuth indicate that, as usual at the Wagner festivals, everything has been excellent this summer, except the singers.

Charlottenburg (a part of Greater Berlin) will soon have a circulating library at which it will be possible to take out sheet music and music books free of charge. It is believed that this Institution will counteract the tendency to buy cheap and trashy music.

A complete edition of the letters of Weber is being prepared by Dr. Georg Kaiser of Dresden. Weber was as interesting a letter-writer as Schumann and Wagner.

The Berlin critic, Dr. Leopold Schmidt, has produced a new operetta, "The Return of Ulysses," the music of which is made up of airs taken from works by Offenbach which have disappeared from the stage.

Salsburg, the proud birthplace of Mozart, will soon have a Mozarthaus. Two years ago a prize was offered for the best plans for a building in his honor; it was won by Professor Berndl of Munich. The house is now in course of erection. When completed, it will have a large hall for orchestral concerts and a smaller one for chamber music. It will be the home of the "Mozarteum" music school, and will contain, in fireproof rooms, a number of valuable documents and relics.

Probably no other country has so large a number of popular dance tunes as Austria. Lower Austria alone will be represented by 7,000 such tunes in the monumental work, "Das Volkslied in Oesterreich," now being issued under the auspices of the Austrian Kultusministerium.

Under the title of "Lauslusävelmiä" ("Worldly Songmelodies"), Dr. Ilmari Krohn of the University of Helsingfors has issued twelve volumes of Finnish folksongs. Other volumes will follow, the total number of melodies to be published being about 4,000. Another collection of Finnish folkmusic has been issued by Dr. Armas Launis of Helsingfors; it is called "Runsävelmiä" ("Rune melodies"). The collection includes 940 numbers, many of which were recorded with the aid of the phonograph.

In Berlin, the number of public concerts held between the first of October and the last of April was 1,800, or about five times the number given in New York. After a careful examination of the situation, the Berlin *Tageblatt* has come to the conclusion that, of those 1,800 concerts, only 150 yielded a profit. About 600 barely pay their expenses, while the remaining thousand or more cost the musicians who give them from $125 to $350 each.

Art

Charles H. Caffin will add a volume this autumn to the Century Company's Story of Painting series—"The Story of British Painting."

It is reported that Dr. Bode will retire from his post of director of the Kaiser Friedrich Museum, and will give his time entirely to his duties as general director of galleries and art museums. Professors Koetschau and Friedländer are announced as his successors.

The special spring number of the *International Studio* is devoted to "The Village Homes of England" (Lane). Text and most of the illustrations are by Sydney R. Jones. Additional color sketches, several of interiors, are contributed by Wilfrid Ball and John Fullwood. What distinguishes these unpretentious houses is the sensible and often beautiful use of local materials. Especially charming is the mixed brick and flint construction of Wiltshire. The little cut-stone houses of Yorkshire sometimes attain an imposing and piquant monumentality. More familiar are the half-timbered houses of the Midland counties, flimsy imitations of which are everywhere common among us. On the whole, the appeal is to the antiquarian and sentimental traveller. Architects also will admire the charming textures and patterns of these old walls, to imitate which, however, would be vain, for the old race of masons has vanished. Some attention is given to metal work and wood work in household furniture, and here the hope of a revival seems better.

Cyril Davenport's interest in English heraldic book-stamps, attested by his book on the subject published three years ago, has quite naturally led him further afield, with the result that we now have a fairly typical collection of the embossed book-stamps which adorn the leather bindings of the fifteenth, sixteenth, and seventeenth centuries ("Cameo Book-Stamps, figured and described"; Longmans.) These stamps are here reproduced in outline drawings, and arranged alphabetically according to their subjects, with a minute description under each design. Mr. Davenport makes no claim to an exhaustive catalogue, acknowledging in fact that, except for a few specimens found in English private libraries, his entire collection is drawn from the British Museum. From this single source, however, he is able to produce a hundred and fifty variant designs, dealing with almost as many different subjects, which range from incidents of Biblical story and pictures of the Saints to portraits of noted men and women, both ancient and modern. Only a small proportion of these stamps, moreover, are of English design, more than half of the collection being of German origin, while Italy, France, and the Netherlands are about equally well represented. English book-stamps are chiefly heraldic; the German are notable for the large number of finely engraved portraits; Italian stamps, earliest in date and now rare, are always small and often colored; while the French designs are distinguished by their large size and their beauty of workmanship.

Mr. Davenport believes that all these stamps will in time to come be highly esteemed, not only as having an art and an antiquarian value of their own, but also as forming a hitherto unrecognized and important development of the art of the diesinker. The author fails to mention what might be considered of even wider significance—their appeal to the book collector and the lover of fine bindings. So far as the art of die-sinking is concerned, Mr. Davenport's book unfortunately can give no adequate conception of the beauty of workmanship of these designs, in their actual relief, whether "blind" or colored, owing to his method of reproduction by mere outlines. While it is unquestionably true that photography would have been impracticable in many instances, some of the best stamps in the collection could easily have been reproduced in this way in addition to the outlines, so as to give some impression of their superb craftsmanship.

In "Concrete and Stucco Houses" (McBride, Nast), Oswald C. Hering brings out, with the help of more than a hundred illustrations, the need of a clearer comprehension of the use and abuse of concrete and stucco, especially in the construction of country homes. One of the most interesting features of the book is the attention that has been given to the question of outside decoration. Many striking illustrations prove that monotony of solid walls can be softened and relieved by providing agreeable variations in color.

Finance

GOOD AND BAD INFLUENCES.

It has been a matter of frequent remark, since the cheerful prospects for the country's autumn harvests and autumn trade defined themselves, that the Stock Exchange responded slowly and hesitatingly. It is admitted that values have been creeping up, and that shares of no less than fifty companies touched last week the highest prices of the year. But the absence of an enthusiastic speculation for the rise, of heavy purchases by the outside public, and of such a sensational upward sweep of prices as used to accompany the beginning of an "industrial boom," is equally manifest.

Occasionally, when one has recited in the financial district the admittedly strong points in the present outlook—the crops; the high-record midsummer iron output; the increase in orders on the steel trade's books (unprecedentedly rapid, when comparison is made for twelve months back); the news of quickening trade, reflected even in the more or less apprehensive talk of railway men about a coming freight-car shortage—one will encounter somebody who has a word or two to say on the other side. This person will usually begin by stating that his adverse arguments are not new and therefore are less captivating than unexpectedly large harvests or unexpected large steel orders, but that they may be fundamental nevertheless.

He will usually point first to the condition of the railways. Admitting that most of the roads have got through a trying fiscal year better than had been predicted, and that they are earning good dividends, he will cite the increasing taxation, cost of materials, and demands of labor. In particular, he will recall that the Arbitration Board has not yet settled the question of the Eastern engineers' wage schedules, whose decision in favor of the employees would add $7,500,000, or 18½ per cent., to that item of labor cost and would probably start similar demands by other classes of railway laborers.

The next consideration cited will probably be the high and increasing cost of living, as it applies both to individuals and corporations. Its result in the case of corporations, he will show is increasing difficulty in maintaining favorable net earnings, while in the case of individuals it curtails the annual surplus income and therefore impairs the purchasing power on the security markets. Finally, he will be likely to refer to the popular unrest and the consequent political unsettlement, more or less manifest in every party, which, in his view, threatens disturbance to business peace of mind, no matter which party wins in November. The Money Trust inquiry, conducted a few months ago in a spirit of something like vindictive attack upon all financial organizations, will undoubtedly be referred to as a clincher for that argument.

The inferred problem in his mind is, whether even abundant harvests can smooth the road for financial confidence when exactly these obstacles blockade it. In other words, is it not possible that good harvests and improving activity in trade are serving merely to neutralize temporarily certain other influences which, but for the season's good fortune in agriculture, might have given us a distressing chapter in midsummer finance?

Such questions are always impossible to answer convincingly, because, in the nature of the case, there can be no proof except the action of the market, and that may always be accounted for on some other theory. As a mere hypothesis, the assertion that expectation of trade prosperity is counterbalanced by these other and older considerations is no more plausible than the assertion that it is offset by doubt as to November electoral results. Sometimes the case is not wholly cleared up, even in the longer sequel. There are people who believe that abuse of credit did not cause the panic of 1907, but that Roosevelt's speeches caused it. There were oracles who explained the financial disorder of 1903, not by undigested securities, but by the Circuit Court's decision against the great railway merger. No doubt some part of the Stock Exchange liquidation and of the withdrawal of financial support was occasioned by these non-economic influences.

But the most that can be said with assurance, on the basis of past experience, is that the influence of such things as a country's harvest yield, or of a wise or unwise past employment of capital and credit, is usually more positive and always more enduring than the influence of political misgivings. When, indeed, one examines our financial history for a long series of years, one is likely to be impressed with the fact that there was always something afloat in politics which suggested apprehension on the markets. One will also, however, discover in nine cases out of ten, either that the catastrophe continued perpetually on the horizon and never actually arrived; or else that, even if the political events predicted by despondent financiers actually occurred, they were al-ferent from what had been predicted, both in character and consequence.

There have been very few occasions in that history when Wall Street was perfectly satisfied with the outlook for legislation, and one of the most singular facts on the record is that, even in the year's which heralded genuine revival of prosperity, the markets were still reciting the political unpleasantnesses which would stand in the way of it. At the beginning of the two most celebrated epochs of financial expansion in our history, in 1879 and 1897, it was similarly argued that Congress, the courts, and the popular agitation were bound to obstruct the movement of prosperity, unless they abandoned policies which they had in hand. The markets consequently hesitated; the policies were not abandoned; but prosperity pursued its course as if it had never heard of them. As a rule, the stock market follows suit; but its action is apt to be modified, as the action of trade at large is not, by such considerations as the extent of previous "discounting" and the extent to which it has to bid against outside trade for money.

AND OTHER STORIES

By Arthur Christopher Benson

Author of "From a College Window," "The Upton Letters," etc.

Cr. 8vo. $1.75 net. By mail, $1.90.

The tales which are gathered together in this volume are cast in the old romantic form; they have a semi-mediæval atmosphere, such as belongs to the literary epic; but they all aim more or less directly at illustrating the stern necessity of moral choice. In them the author touches with the light of romance some of the knightly virtues which are apt to be dulled into the aspect of commonplace and uninteresting duties.

Marie

AN EPISODE IN THE LIFE OF THE LATE ALLAN QUATERMAIN

By SIR RIDER HAGGARD. With Colored Frontispiece and Two Other Illustrations. Crown 8vo, $1.35 *net; by mail,* $1.45.

The author of "She," "King Solomon's Mines," "Allan Quatermain," etc., returns to Africa, the scene of his former successes, for this new story of the early love affair of Allan Quatermain. The exciting times when the Zulu despot, Dingaan, was at the height of his power are depicted with regard for historical accuracy, and furnish the setting for a story of lively adventure and dramatic situations.

"A really good story without a dull passage in it."—*The Nation,* England.

"One of the most exciting and interesting of all that cycle of romances which are concerned with that mighty hunter, Allan Quatermain."—*Spectator.*

"Exciting, delightfully naïve, rich in the art of story-telling."—*London Times.*

"Grips us just as its predecessors did."—*London Standard.*

"Exciting, dramatic, and so human."—*Toronto News.*

"The appearance of Allan Quatermain is always the signal for romance and adventure."—*N. Y. Times.*

"A tender beautiful and moving love story, heightened, perhaps, by its tragic end."—*N. Y. World.*

The Evolution of Sea Power

By P. A. SILBURN, D.S.O., Member of Parliament of the Union of South Africa, Author of "The Colonies and Imperial Defence," "The Governance of Empire," etc. 8vo. Pp. xiv+288. $2.50 *net.*

An examination of the growth of sea power from that of the Phœnicians to the maritime nations of the present day. An attempt is made to show, where such is possible, the disaster which, as Mr. Silburn argues, inevitably follows the neglect of the general principles of sea power.

The Life of Nelson

By GEOFFREY CALLENDER, B.A., Royal Naval College, Osborne. With 12 Illustrations and 7 Maps and Battle Plans. Crown 8vo. Pp. xxxviii+154. $0.50 *net.*

The text of this book—pages 1 to 148—first appeared in the third part of the author's "Sea Kings of Great Britian," issued in 1911.

Toys and Toy Making

By GEORGE F. JOHNSON, Inspector of Handwork, Liverpool Education Committee, Editor of "Educational Handwork," Author of "Handwork and Arithmetic," "Rural Handicrafts," etc. With 78 Plates. 8vo. Pp. 160. $1.00 *net.*

Modern Science and the Illusions of Prof. Bergson

By HUGH S. R. ELLIOT. With Preface by Sir RAY LANKESTER, K.C.B., F.R.S. Cr. 8vo. $1.60 *net.*

This work is a reply of science to the philosophy of Professor Bergson. It expresses scientific discontent with Professor Bergson's attempt to explain life and the universe; and it challenges the right of philosophy to intrude into the sphere of science. The work expounds the latest scientific views on the nature of life, and other problems of fundamental interest.

Early History of the Christian Church

FROM ITS FOUNDATION TO THE END OF THE THIRD CENTURY

By MONSIGNOR LOUIS DUCHESNE, de l'Académie Française, Hon. D. Litt. (Oxford), and Litt.D. (Cambridge). Membre de L'Institut de France. Rendered into English from the Fourth Edition. In 2 vols. 8vo. Vol. II. Pp. xx+544. $2.50 *net.*

The second volume of this work by one of the foremost of living Ecclesiastical historians unravels the tangled story of parties and controversies in the Fourth century. Monsignor Duchesne has the gift of making persons and situations live again; and the Great Persecution, the Councils of Nicæa and Ephesus, the figures of Athanasius, Ambrose, Hilary of Poitiers, Priscillian, Jerome, Basil, Pacomius and the Monks of Egypt, or again the Meletian schism and the schism at Antioch, or the conflicts at Rome between Pope Damasus and Ursinus are described with extraordinary vividness.

Long's English Literature

Fully illustrated, with frontispiece in eleven colors.

$1.35

This book is without question the most attractive one of its grade and scope to be found. From cover to cover, it is an inspiration to the student on account of its distinct charm of style and its unusually attractive make-up. Furthermore, it is a scholarly work, comprehensive in scope, and able in its judgments. Throughout the book there is a sympathetic atmosphere and an evident love for the whole subject of English literature that cannot fail to appeal to every reader of the volume.

JOHN BROWN: A BIOGRAPHY FIFTY YEARS AFTER

By OSWALD GARRISON VILLARD

Some Tributes to this Remarkable Historical Work

Philadelphia PUBLIC LEDGER. "A tremendous book; more thrilling than any book of fiction, powerful in its appeal, and which, while it is written soberly, as befits history, by the very nature of the narrative, often rises to the highest dramatic level."

THOMAS WENTWORTH HIGGINSON. "I can only say after reading from first to last its more than 700 pages that I have never encountered anything this side of Gibbon's 'Rome' which has made me feel more the personal power of a single work."

JOHN T. MORSE, Editor American Statesmen Series, in ATLANTIC MONTHLY. "Perhaps in thus dramatically fashioning his volume, Mr. Villard obeyed an instinct rather than acted upon a preconceived plan; that is often the case with great work, where a writer's feelings are deeply enlisted. Be this as it may, the merit and charm are none the less; he has seized well a splendid opportunity and has written one of the great biographies of our literature."

HORACE WHITE. "In my judgment a contribution to American literature to take rank with the very best historical writing of our time or any time. The only impartial history of the Kansas war."

ST. CLAIR McKELWAY in the Brooklyn EAGLE. "A biography replete with facts and marked by courage and candor, learning and justice."

Portland OREGONIAN. "The most valuable and comprehensive biography issued this season, and the best and most candid estimate of John Brown."

W. E. CONNELLEY in the TOPEKA CAPITAL. "The unprejudiced student and seeker for truth will herald the book as a great contribution to American history."

Des Moines CAPITAL. "More powerful in its appeal, more dramatic than any book of fiction, is this wonderful biography of John Brown."

The NORTH CAROLINA REVIEW. "In this biography Mr. Villard has touched high-water mark. The book is a delight to the reader for many reasons. Full of life and movement, . . . written in an attractive and scholarly style, full of sympathy and yet without any loss in accurate presentation, it sets a new standard for biographical efforts."

Baltimore AMERICAN. "While the book has popular features in that it is entrancingly interesting, its scholarship is of the highest order and its style reminds one a little of Anthony Froude. . . . Mr. Villard has illustrated in this book the finest ideals of literary conception and execution."

London TIMES. "It is scarcely likely that any later writer will be able either to add anything of importance to Mr. Villard's collection of material or to better his interpretation of the whole story. . . . It at once becomes the standard, and probably the final authority on its theme."

Washington (D. C.) STAR. "Mr. Villard draws a compact, vivid, historic picture of the terrible focussing of this period upon our Civil War. Straight and clear in its literary way, this biography is a marvel of research and fair-mindedness."

HENRY WATTERSON in Louisville COURIER-JOURNAL. "No fault may justly be found with Mr. Villard's telling of the story. It is minute and lucid, altogether fair and unvarnished."

Burlington (Iowa) HAWKEYE. "It is a book which will take a place in the library of every well established home in this part of the country."

THIRD EDITION

Fully illustrated with portraits and other illustrations. With copious notes and bibliography. $5.00 *net. Postage* 26 *cents.*

School Advertising in The Nation

THE NATION stands alone in its field. It has a larger circulation than any other politico-literary journal published in this country, going to all the principal libraries and reading rooms, and into thousands of families.

The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

Advertising rates, 15 cents an agate line each insertion with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions.

SPECIAL RATE

TEN CENTS A LINE NET FOR THIRTEEN TIMES (minimum space three lines)

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 20 Vesey Street, N. Y.

Usual rates for advertising.

The Nation

NEW YORK, THURSDAY, AUGUST 29, 1912.

The Week

In explaining his final decision to sign the Panama Canal bill, we think that President Taft would have done better if he had been franker. That is, he might have said more unmistakably that he strongly objected to some of its provisions, but that he wanted the other parts so intensely that he was, in order to get them, willing to put aside his scruples and even to abandon the position which he had publicly taken—namely, that the tolls, under the treaty, "must be the same to all." He desires very much to be able to appoint a Governor of the Canal Zone, and otherwise to set up the administrative machinery. It also seemed highly important to him that the shipping world should thus early be notified of the maximum charges. These are, of course, good arguments for passing a bill at this session of Congress, but they do not weigh as a feather against the possible violation of a treaty. To avert that, we could well afford to wait till next December—or for December of 1920—even at the cost of a certain sacrifice due to delay.

On this main point, we are sorry to say, the President holds the view, if not the language, of the most swashbuckling Congressman. He declares that we bought the canal territory and built the canal at our own expense, and that it is preposterous to suppose that we have not the right to deal with its administration as a "purely domestic" matter. Doubtless we should have that right, if we had not signed it away. But that is what we did in the Hay-Pauncefote treaty. In order to induce Great Britain to relinquish her right to joint control of the canal, we agreed to surrender our right to do in all respects as we pleased with our own. Now we take back what we gave up. It is this breach of faith which Great Britain will undoubtedly ask us to submit to the Hague Tribunal, but then we may expect President Taft to retreat from his high position respecting universal arbitration, and to insist, with the Senate, that such a "domestic" question cannot be arbitrated! First having signed a treaty, and then agreed to another one binding us especially to arbitrate disputes arising out of interpretations of treaties, we coolly propose to break two treaties at once by saying that even interpretation is a domestic matter. What the world will think of this, the comments of the foreign press are already making plain.

Mr. Roosevelt's diffident announcement prior to the first Chicago Convention that he was the only Progressive who could win, takes on a ghastly hue in the light of the formation of the Wilson National Progressive Republican League by such men as Rudolph Spreckels of California and John J. Blaine of Wisconsin. These men have been supporters of La Follette, and would therefore presumably prefer to vote for a Republican over a Democrat. Yet they turn from the self-proclaimed leader of the progressive element of their own party to Wilson. Their action, of course, is only a formal expression of the attitude of the thousands of Republicans who have been writing to the Democratic candidate to pledge him their support, and of those other thousands who, without having so written, intend to cast their ballots for him in November. Its significance lies in what it discloses as to the accuracy of Roosevelt's claim that he will draw the progressive vote from both parties, leaving to his opponents only the thick and thin partisans. It is evident that unless he does this, he is doomed at the start. But here is a formidable organization within his own former party to disprove the claim.

Again we have an explanation of the policy of the Progressive party towards the negro. The Colonel writes in the *Outlook* that the Democratic attitude towards the colored population has been one of "brutality," the Republican one of "hypocrisy," while only his own is filled at once with courage and humanity. From this one could only infer that it is brave and humane to submit to brutality—for that, on his own showing, is exactly what Mr. Roosevelt has done in barring negroes from his new party in the South. He is setting out as the great champion of the oppressed—but he rules out those of the oppressed whose skins are black.

Last week's *Independent* powerfully argues that the negroes are "the worst oppressed" of all our population. Nothing that corporations or Trusts do to any class of their employees can be compared with the wrongs daily put upon colored men. Political and civil injustice is worse than wages unduly low or prices made artificially high. Says the *Independent:*

> We are occasionally asked why we have so much to say about negroes and their wrongs. It is because they are one of the very largest elements in our population, and they are the objects of oppression very much worse than that suffered by any other large class of our people. If it is right to protest against other and slighter oppressions, much more is it a duty to protest against those terms of oppression inflicted on one-ninth of our fellow-citizens; for fellow-citizens they are, and of native birth, real Americans.

But the Colonel has a ready answer to all this. If he were to assent to it, he could not hope to get many votes in the Southern States, and what could be more "inhumane" than that?

Considerable significance attaches to the labor demonstration to be held in St. Patrick's Cathedral of New York next Sunday evening. The invitation to attend is given not only to religious organizations, but to labor unions and to workingmen not identified with any association, and the list of laymen who are in sympathy with the aims of the meeting is representative. This is supposed to mark the beginning of an organized fight of the Catholic Church against Socialism in its relation to the workingman. For a year past a "school of social study" has been in operation, having for its object the training of Catholic men to lecture on Socialism, and it is said that Cardinal Farley projects a college of labor, wherein workingmen shall receive instruction concerning labor causes. The problem of Socialism in this country has not reached the acute stage attained in Europe, nor is it likely to do so. But it is understandable that the Catholic Church, with the example of the Latin countries of Europe in mind, should view with apprehension the spread among workingmen

BURLINGAME
PUBLIC

of socialistic doctrines. In France, and even more so in Italy, Socialism has taken an anti-religious and an anti-Catholic tone. So much is this the case that in Italy the Vatican is a good deal more often the object of attack from Socialistic quarters than is the Quirinal. The Anglo-Saxon mind, on the other hand, does not necessarily find in the principles of Socialism anything irreconcilable with religion, and in England, as in this country, are to be found a number of clergymen who are avowed Socialists. But it is also a political danger which the Catholic Church recognizes, and in averting which its influence ought to be powerful.

There is an element of picturesqueness which appeals to the imagination in the death of James Wood Rogers in the jungles of central Africa. Granted that the man was a rascal; that he callously deserted his wife; that he lived for years in open defiance of the law; yet there was a romantic quality about his life and death for which one cannot altogether withhold a grudging admiration. There must have been fine traits in the man's character, or he could not have made himself a virtual king among native tribes in a region where few, if any, white men had ever penetrated. He lived by illicit trading in ivory, in defiance of the British Government, and, if report speaks true, made considerable sums of money out of his transactions. Finally his depredations grew so extensive that an expedition was sent out to hunt him down, the orders being that the force of soldiers was not to return till Rogers was taken, dead or alive. Months later the expedition returned, bringing with it the dead body of the outlaw.

To speak of a man like Rogers as a criminal hardly expresses his connotation; he seems to have been one of a class of men whose instincts are lawless rather than criminal, who are fretted by the restraints which life in a community imposes. Had Rogers lived in the spacious times of Robin Hood, he would doubtless have found an outlet for his activities and talents that was regarded, except by the King's officers, as almost a legitimate profession, and he might have won immortality along with Friar Tuck and the rest of the merry band. It was his misfortune to be born too late, in days when the arm of the law is long indeed, and outraged society can penetrate even into the dark forests of Africa to exact its vengeance.

The victory of the Californians, McLoughlin and Bundy, in the contest for the national tennis championship in doubles, with McLoughlin triumphant also in singles, is one more blow at the Old Guard, a parallel in the world of sport to the readjustment that has taken place in the sphere of politics. So distant is East from West in the minds of many New Englanders and New Yorkers that it is much easier for them to contemplate the winning of the amateur golf championship by an Englishman than it was a year or two ago, at least, to imagine the triumph of players from the Middle West or the Pacific Slope of their own country. In sport, as in many other things, the West looks to the East, and the East, if it deigns to look anywhere else, looks across the water. The victory of the California tennis partners has in this way a moral importance that outweighs its more obvious significance.

A "Special Announcement" is made "to libraries, literary clubs, everybody." It is nothing less sensational than the "Authors and Poets of Michigan." The advertisement continues: "Elegant volume, limited edition. Cloth $5, morocco $7." One's first thought is, how can the publishers afford it? Later follows the painful realization that the great masses who sit in darkness as to any knowledge of the authors and poets of Michigan are more likely to spend five dollars in seeing moving pictures or buying a phonograph than in familiarizing themselves with this neglected school of our literature. Only one voice from the Lake State has penetrated the wilderness without, and how many of our most learned critics could name off-hand a single poem by the "Sweet Singer of Michigan?" We seem to recall dimly a volume by the late Mayor Pingree on his hobby of public potato-patches, but who will add to this slender list of what is generally known of the literature of Michigan? For this obscurity there is, of course, an excellent reason. Until towards the end of the nineteenth century it was the fashion to speak as if we had had no literature outside of Concord, Mass. Then, for causes that are not yet altogether clear, it all at once became the vogue to attribute everything literary to Indiana. Between these two thunderings in our literary sky, the still small voice of Michigan has been lost.

It is a very pretty little tempest in a teacup that has been brewed out of Mr. Hammerstein's decision to abandon grand opera in London. He, naturally a little piqued, berates the English public for not being musical and for not appreciating the enterprise which prompted him to offer them an alternative to Covent Garden. The English press retorts that it doesn't particularly mind being called unmusical, but the fact remains that Mr. Hammerstein failed to give the public what it had a right to expect—"the pearls cast before the Cockney swine were rather faded gems." It certainly seems a pity that Mr. Hammerstein should have dragged international traits into the question, and declared roundly that "nothing pleases the London public better than abuse of Americans." Our own recollection of the tone of the English press when Mr. Hammerstein began giving opera in London is that it was distinctly cordial, though none too sanguine of his success. The fact of the matter seems to be that the impresario entered on his scheme without making a sufficiently careful estimate of his public—he rushed in where other angels (in the theatrical sense) had feared to tread.

In the London *Times* its special representative at the games in Stockholm discusses Olympics at Berlin in 1916. Assuming that the British Empire will enter as a unit, he analyzes the figures of this year's competition and points out in what directions lies Britain's best chance of improving her record. The scores at Stockholm ran: Sweden 133 points, the United States 129, the British Empire (taken as a whole) 118. The Empire's best showing was in swimming, rowing, and lawn tennis, and in these events this year's scoring is unlikely to be bettered. So far as the track events are concerned, the *Times* correspondent does not expect any marked improvement in 1916, except that a few additional points may be picked up in the short distances—in the long distances his opinion is that the Empire did almost better than could have been expected. For possible improvement, then, there remain the field events, in which the British showing of 4 points out of a total of 96 was "deplorable," and the shooting, riding, and yachting. He recommends that attention be devoted to the field events, but relies principally upon the three last-mentioned sports to make up the deficiency in points.

A London dispatch should do something to counteract the painful impression about the situation in China created by recent alarmist telegrams. Dr. George Ernest Morrison, who was recently appointed special adviser to the President of China, is at present in England, and has written to the papers a forcible protest against the "wild and irresponsible sensationalism" which is published in the English press regarding conditions in China. He warmly supports President Yuan Shi-Kai and declares the suggestion that he is aiming at a dictatorship totally unfounded. The execution of Generals Chang and Feng he regards as entirely justified by the circumstances, as there is not a shadow of doubt that they were plotting against the Government, and attempting to sow dissension in the army. The rivalry among the three factions in the Assembly which has been reported as threatening the existence of the Republic, Dr. Morrison states, has no more significance than the political divisions which are common to all countries. It may be argued, of course, that by reason of Dr. Morrison's official position, his point of view is necessarily an *ex parte* one, but his standing and reputation are such as to put him above the charge of special pleading, and the later reports from China direct tend to confirm the opinions which he has expressed.

In its "Notes from Paris" the London *Truth* gives what its correspondent asserts to be "the truth at last" about the mysterious disappearance of Mona Lisa from the Louvre. We shall never see the famous painting again, he assures us, because it was not stolen, but destroyed. He "learns" that it perished in the Louvre, a vengeful employee, smarting at dismissal, having poured sulphuric acid over the picture. This act of vandalism was committed a year or more before the reported theft of Gioconda. The custodians, it seemed, hoped that the original could be restored, and hung a copy in the galleries. But when it was certain that the acid had done its work too fatally, burning the varnish and destroying the colors, and when experts began to whisper their doubts about the substitute, it was decided to let the painting be "stolen." The police were allowed to work on that theory, although high officials from the first perceived its improbability. This was thought to be kinder to the public than frankly to admit that Mona Lisa was gone forever, while to let out the true story would have reflected even more severely than the report of the theft of the masterpiece upon the laxness of the Louvre staff. The Paris correspondent of *Truth* is kind enough to point out that some parts of his revelation cannot be vouched for with "the same certainty" as others; but it is obviously a very pretty unveiling of the truth, as it stands.

Rumors of peace negotiations between Italy and Turkey persist, and despite official and semi-official contradictions, it seems more than probable that a measure of credence may be attached to them. The recent "conversations" in Switzerland, we are informed, were entirely unauthorized; but so were some of the conversations that preceded the settlement of the Russo-Japanese war. The best argument for peace is that neither side has anything to gain by prolonging the struggle. War is a costly luxury, and, although Italy has for some time enjoyed a period of great prosperity, the conduct of the campaign in the interior of Tripoli is a serious drain upon her resources. Turkey has even more cogent arguments than her rival for desiring peace. Unable to reinforce her troops in Tripoli, the best she can accomplish there is to carry on a desultory guerrilla campaign. Her domestic situation is such as to cause the greatest anxiety, while the ever-smouldering Balkans have again burst forth into a flame that it may need intervention from the Powers to quench. In the struggle Turkey has acquitted herself better than was expected, and the best that she can hope for now is a settlement that she may honorably accept.

Of all the problems which the British have to face in governing India, none is more difficult or more complicated than that of education. It is gratifying to find that the Indian Government is at last attacking the question in the right way, beginning at the bottom with primary education and not, as heretofore, neglecting that and devoting most of its attention to higher education. In the House of Commons, the other day, Mr. Montagu, Under-Secretary of State for India, outlined the scheme of reform which has been inaugurated. The total number of primary schools will ultimately be increased by 90,000, or 75 per cent., which will double the school-going population. The average expenditure on each primary school is to be doubled, and the salaries of teachers, at present miserably insufficient, are to be increased. In University education extensive reforms are contemplated in the way of developing residential universities, as opposed to the old system under which universities were little more than examination boards, and played no part in the formation of character. Such a university is shortly to be established at Dacca and others are projected at Benares and Rangoon.

Those persons who so persistently try to have it appear that Germany menaces our influence and the Monroe Doctrine in South America assert that Germany needs more land in order to take care of the hordes of Germans who are compelled to emigrate in order to live. Recent figures show that this argument is just about as fallacious as most jingo utterances. Thus it appears that in 1910 the total emigration of Germans was only 25,531, as against 120,089 in 1891. Of these 25,531 wanderers of 1910, 22,773 came to the United States, while less than three thousand Germans sought new homes elsewhere. Certainly there is nothing in this to make the German Emperor at all anxious; indeed, he might scornfully point to the thousands of American farmers who are crossing over into Canada, as the beam in our own eye. Moreover, it is plain that the Germans who go elsewhere than to the United States move again in large numbers. In no other way can the German authorities account for the fact that our American officials reported 71,380 arrivals of German-born citizens in 1910.

RE-STAGING 1904.

Presidential campaigns cannot be again fought eight years after they were decided. The water has flowed over the dam. But we certainly can now understand the events of the election of 1904 much better than we could at the time. Many of its secrets have since come to light; perhaps more will follow. What some guessed at then, to-day everybody knows. The whole affair wears a very different aspect now from what it had at the time. Suppose we could re-stage the Presidential drama of 1904 as we now know it to have been actually performed? New characters would figure in the scene. The audience of eight years ago saw them dimly flitting near the wings; now they would be in the centre of the stage. Wholly new motives, too, would appear in the plot, whose dénouement would be very different from that of the play as first given. And who can say that the curtain would now fall to the applause of 1904? At all events, the "revival" of the melodrama, "The Hero and the Octopus," ought to be undertaken if only for the sake of bringing it up to date and making it more realistic.

In order to appreciate the matter justly, let us seek to place ourselves back in the autumn of 1904. Judge Parker had been made the Democratic candidate, supposedly in the conservative interest. He was freely called the nominee of Wall Street. As such Bryan had attacked him; as such the Rooseveltian press assailed him. It was the friend of Belmont and the Trusts, the ally of big corporations, against the man who had broken up the Northern Securities Company, had forced the anthracite magnates to agree to arbitrate with the miners, and who in general was the champion of the masses. Roosevelt, it was said, could hope for no campaign contributions from Wall Street. All the big corporation purses were to be drawn upon for Parker. So ran the first act of the drama.

But suddenly the scene shifted. The candidate who was reputed to be in a way to receive the money from the Trusts, came out in a public speech and asserted that the other man was the real beneficiary. This declaration was several times made by Judge Parker towards the end of the campaign. He specifically affirmed that the Standard Oil Company was contributing to Mr. Roosevelt's campaign fund. We all remember what followed. President Roosevelt issued his sweeping denial and violent arraignment of Judge Parker. The latter rejoined, but was able to produce no proof; and there is no doubt that the fact of his having made the charge, with failure to substantiate it in detail, injured his campaign, while greatly helping Roosevelt's.

But imagine that we were to reconstruct the theatrical piece with the new material at present in our possession. What would have been the effect at the time if Judge Parker had, in reply to Roosevelt's vehement giving him the lie, produced the Harriman letters? That it would have been most damaging to Roosevelt, we have the highest authority for saying—namely, Mr. Roosevelt himself. For in his blast against Mr. Bryan in 1908, he innocently admitted that it would have been ground for calumnious suspicion of himself, four years previously, if the fact of Mr. Harriman's contribution of $260,000 had been made public. At that time, Mr. Roosevelt was arguing against publicity of campaign funds before elections. That is now, according to him, eternally right, but then he thought it eternally wrong. In illustration, he adduced the harm that would have been done him in supposing that he could be bought with Harriman's money. But that is sufficient to show how serious a blow would have been the knowledge that Harriman was helping finance his campaign. Another thing which the public did not know was that the insurance companies were being bled to aid Roosevelt. Fancy the sensation if Judge Parker could have given even a hint of the testimony which Mr. Hughes extracted from George Perkins a year later! And if he had been able, in addition, to tell only a part of what Mr. Archbold swore to on Friday, about the relations of Standard Oil officials to Mr. Roosevelt's Treasurer, the country would have listened aghast. All these things with which we are familiar now would have seemed incredible then.

It is important not to lose sight of the real significance of the subsequent revelations. They do not prove that Roosevelt sold himself, or that, in return for campaign contributions, he made any promises of Government favors to corporations. Undoubtedly, the men who gave the money thought that they were making a friend in a high place. They always spoke afterwards of Roosevelt's course as one of betrayal. He took their money and then cut their throats. But that is too brutal a view of the infinite finesse with which that most adroit of political managers played his part. He was undoubtedly afraid that the big business of the country would favor Judge Parker's election. And he set about reassuring the heads and managers of large corporations, with the result of finally, in one way and another, detaching them from Parker and winning them to himself. That he did this by baldly corrupt means, is not to be supposed. He had his go-betweens. He knew how to have suggestions made where they would do the most good—suggestions that were not promises. But the point is that he succeeded in doing secretly what he would not have even attempted openly. It was true, as Judge Parker alleged, that the Trusts gave money to Roosevelt's campaign fund. But there is no evidence, and no probability, that he gave any pledges in return. The misery of the transaction was that it was done under cover, that it was apparently denied with great heat by Roosevelt at the time, and that now the facts are leaping to light greatly to his discomfiture.

A DISAPPOINTING CONGRESS.

The general verdict on this session of Congress will be that it was unusually prolonged without good reason and to no public advantage. No great act of constructive legislation held it to its midsummer labors; while all the routine work which it actually got through might easily have been wound up months ago. Indeed, it was perfectly clear in February or March that nothing of importance would be done during the session except to pass the appropriation bills, and they could have been whipped into shape and put through both Houses by the first of June. But it was not to be. There had to be time to "play politics"; and that amusement has been the chief occupation of Congress for two months past.

This was perhaps inevitable in a Presidential year which from the beginning promised to be confused and critical almost beyond example. Congress could not bring itself to disperse until the campaign was well going. An additional reason for dilatoriness lay in the fact of party differences between House and Senate, and in the lack of a good understanding with either on the part of the President. We have often had an Executive at odds with Congress, but never, so far as we can recall, just the peculiar sort of cross-purposes which have marked the relations of Mr. Taft to the present Congress. It should seem that might have got on better with the Senate Democratic as well as the House. For though the Senate is nominally Republican, there is no firm party control in it, and it has failed, on many occasions, to stand by the President. It has even seemed that the Senate was, at times, as eager as the House to "put the President in a hole." In fact, ever since Mr. Taft's first year in the Presidency, when insurgency appeared in the Senate, he has not been able to count upon loyal support in either branch of Congress. Such antagonisms have existed before in our political history, but they seem to have extended to exceptionally petty matters during this session of Congress. We believe that no President ever vetoed so many appropriation bills as has Mr. Taft. This fact testifies to the absence of friendly and conciliatory relations between the White House and the Capitol, even in matters of necessary legislation.

The great disappointment of the session, however, is the complete failure to give the people the slightest relief from tariff taxes. In no respect was the state of logger-heads in matters legislative at Washington more unfortunate in its results. If there was one thing upon which the country could be said to have agreed, it was that unnecessarily high protective duties should be cut down. All parties and every political leader professed a desire to do this. In a very real sense it seemed possible to say: "We are all tariff-reformers now." Yet every attempt to carry out the pledges so freely made to the people fell between two stools. It is needless to go over the mournful story. What the President desired, he could not get; and what the House and Senate gave him, he would not take. It was plain that there was, on either side, a play for political position, and that this bedevilled all. The net result, we are convinced, is to leave the strategical advantage with the Democrats. Their campaign means nothing if not resolute purpose to do away with tariff iniquities, and they can now argue with redoubled force that the only way in which the work can be done is to put them completely in power. Gov. Wilson's prompt approval of the Wool bill which the House passed over the President's veto —though it could not get the requisite two-thirds in the Senate—showed his just sense of the situation. Whatever Mr. Taft's motives in refusing to sign the bills reducing the rates on clothing and iron and steel manufactures, he certainly appears to have placed a new weapon in the hands of his political opponents.

In the matter of bringing forward new leaders, or heightening the reputation of those already recognized as such, the session was not notable. In the Senate, to be sure, some admirable speeches were made. Both Senators Root and Burton added to their repute for ability by the part they took in the debate on the Panama Canal bill. Their addresses were of the sort that should have changed votes, even if they did not. They also displayed a high-minded independence of position, and a jealousy for the national honor that are beyond praise. In the House, Mr. Underwood held, if he did not much enlarge, the fame which he has acquired as a calm and sagacious leader who possesses in a remarkable degree the confidence and esteem of his party followers. His closing tariff speech, with its imitation of Sydney Smith's famous characterization of taxes pursuing the citizen from his cradle to the grave, was of a pungency that ought to make its circulation during the campaign highly effective.

It cannot be said that President Taft emerges from the session with enhanced prestige. The difficulty is not simply that he had endlessly recurring differences with Congress. Some of them were perhaps unavoidable; but in them all he bore himself with a certain awkwardness. Where he was in the wrong, he had not the adroitness to make his cause appear the better; and even where he was right, he had no facility in evoking popular support. His friends will say that all this is merely fresh proof of what they have always admitted—namely, that he is "a very poor politician." But it is also another evidence that he has no instinct for reading the signs of the times, or for discharging the high duties of his office in a way to arouse enthusiasm for inspiring leadership.

POLITICAL VERBOMANIACS.

Again it is to a Frenchman that we owe an acute study of a prevalent weakness in our modern public life. A recent book by M. Ossip-Lourié deserves to be ranked with Gustave Le Bon's writings on the psychology of the crowd. He calls it "Le Langage et la Verbomanie," and of it the main thesis is that we are producing in our political affairs a constantly increasing number of men with an excessive development of the faculty of speech. This is so abnormal that it almost requires to be called morbid. The verbomaniac is one whose principal effort is, not to make speeches, but to refrain from making them. He feels the obsession upon him, and often fights it, but in vain. Sooner or later the floods of talk will burst forth in spite of him. A leading French Deputy once explained the impulse to our author as a "physical necessity." He had no desire to speak, no real reason for speaking; but the words rose to his lips and he could not keep them back. Of such are the verbomaniacs; and M. Ossip-Lourié observes that "the individuals which contemporary society brings to the front are generally verbomaniacs."

We have long been familiar with the type in private life. It is there recognized as a mild form of insanity. Alienists have studied it, and novelists have found material in it. Mr. Beecher had such a character in one of his sketches of New England village life—a woman whose incessant and incoherent talk used to torment her pastor. He once asked her to try to keep still for five minutes, but at the end of two she snatched off his wig and threw it into the fire. Obviously she was under the "physical necessity" to speak. Dickens knew and recorded the species. But the particular merit of our French observer is that he shows the existence of the weakness in public men, and points out its ravages.

Some of his analyses and distinctions may seem to apply to certain figures on our own public stage. He remarks, for example, that it is characteristic of the political verbomaniac to seize upon ideas which are not his own. For him to overflow in endless speech it is not necessary first to have spent any time in reflection. Any notions that are abroad, especially any words and phrases that are current, are enough for him. He pounces upon them with avidity and makes the heavens re-echo his shouting of them. Usually, to be sure, he misunderstands what he has taken from others. He repeats what he has heard or read with the greatest volubility, but he nearly always betrays some inconsistency, or some flat contradiction, going to show, not merely that he has not thought himself, but that he has failed to grasp the thought which he has appropriated. It is another fixed habit of the political verbomaniac, according to our author, to make the most violent and sweeping assertions, and to affirm fact and fancy with entire failure to perceive where one leaves off and the other begins. Moreover, he is frequently a powerful controversialist, for he can never be silenced, keeps on asseverating what has clearly been proved to be false, and by the very impudence of his shifts and dodges, and the torrent of his words, succeeds in imposing himself upon the unthinking masses, and is often able to seem to get the better, in the popular judgment, of an opponent who really has all the facts and all the logic on his side.

It has not escaped our French student that one effect of all this is steadily to degrade public oratory. M. Lourié has as poor an opinion as Carlyle of the popular orator, but for other reasons. The Scotchman's dislike of the "People's William," and fluent speakers of that ilk, was based on his belief that they did not and could not tell the truth, but simply dealt out flattery to their hearers. The Frenchman goes closer to the psychology of the matter. The political verbomaniacs are self-deceived. They are carried away by the sound of their own voices. The mere repetition of words and catch-phrases finally cuts such grooves in their brains that they abandon all thought of reasoning and simply pour out the old language as a kind of "stunt." In time, their very hearers cease to look to them for ideas or arguments, and simply flock to them as to performers. It is consideration of this fact which leads M. Lourié to think that political oratory is certain to decline—to decline, that is, as a means of influencing the progress of ideas or leading men to undertake serious political action. Not that the political verbomaniacs will cease to have their vast audiences. As the crowd pays less and less attention to what they say, it will flock denser than ever to the spectacle and excitement which their very manner of saying it offers. Our Frenchman's prediction is that the evolution of political verbomania will at last have this result:

> In the future the art of oratory will take refuge in the circus—its proper place. People will go to hear a celebrated orator as they go to see a clown, a juggler, a phenomenon, and they will allow themselves to be lulled and soothed by rhythms which appeal deliciously to the ear but say nothing to the understanding. They will go to hear one who charms crowds by his speech as they go to see one who charms snakes by his gaze.

This, we will merely remark, might be cut out and pasted in the hats of timid gentlemen who attach tremendous significance to the crowds that throng to hear our leading political verbomaniacs.

GEN. BOOTH AND HIS ARMY.

Thirty years ago representatives of every official religious organization in England were rivalling one another in sneering condemnation of the methods of the self-styled "General" and his Salvation Army, with its trumpets and tambourines, its mock uniforms, its threatenings of hellfire, and its blasphemous familiarity with the Deity. Now, when the man whose restless energy called this vast organization into being enjoys respite from his labors, there will scarcely be found a religious body to withhold tribute of praise to the memory of a great man who dedicated his life to the service of Christianity.

The revulsion of public sentiment with regard to the aims and methods of the Salvation Army is the justification of William Booth's work. No man of his time has been more bitterly attacked, or with greater weight and authority, and there are many things in connection with the Salvation Army of which it is difficult even now to approve. But the deeds of any man are to be judged by results, and, even if we take the work of the Salvation Army only in its social aspects, ignoring its religious aspirations, the verdict must be given in its favor. That is a view which General Booth himself would have been quick to resent, for first and foremost he was a religious enthusiast. But he possessed the rare combination of the zeal of a fanatic and the executive ability of a shrewd man of affairs. The saving of souls he conceived to be his business in life, and to that purpose he applied business methods. He had a genius for advertisement, and was the first to use modern methods of publicity for the advancement of a religious cause. Such methods may have been vulgar, and, even after their triumphant vindication, the more sensitive may still deplore them, but there is no doubt that they did the work and reached the people whom they were intended to attract—the waifs of the street, the frequenters of the saloon and the dance hall, the criminal and the fallen—with a success that could have been attained by no other means. Just as John Wesley aroused the official church from its apathetic indifference to the religious needs of his generation, so did General Booth show religious bodies how it was possible to penetrate into the by-ways and dark alleys of modern life.

From the very beginning the Salvation Army vigorously attacked the vice question, and refuges for unfortunates, in which they might regain self-respect and be taught the means of self-support, have always been an important feature of its work. It was General Booth, too, who was instrumental in getting up a memorial, which was successfully presented to the House of Commons, to have the age of consent advanced to sixteen years. Another important branch of the Salvation Army is its work in colonization. There are farms in this country, and one at Hadleigh, in England, which grew out of the scheme outlined in the General's book, "Darkest England and the Way Out." One of his latest enterprises, exhibiting at once the originality of his ideas and the practical expression he was able to give to them, was the establishment of "Suicide Bureaus," which intending suicides were invited to enter in order to discuss their plight dispassionately with the captain in charge.

While paying generous tribute to the memory of a great man, it is not unbecoming to inquire whether he will survive the supreme test of greatness, whether the work which he did in his lifetime will remain afterwards a solid and enduring monument to his memory. The sealed envelope in which the

General appointed his successor has been opened, and, as was expected, names his son Bramwell. But the document indicates no change in the administration of the vast sums of money which the Army has at its command. It is on just this question that the most telling criticism has been levelled at the Commander-in-Chief, notably by a man of such influence as Professor Huxley. No one, at any rate in late years, questioned the honesty of the General (his own living expenses were meagre in the extreme), but just criticism was aroused by the autocratic principle on which his administration of the funds of the Army was based. Funds subscribed by the public should be accounted for to the public. That is the only logical basis on which an organization like the Salvation Army can be founded. But General Booth willed otherwise. The great machine which he had constructed was controlled by himself alone; his power was absolute; his word in all matters relating to the organization of the Army was law. The question is: Will this autocratic and irresponsible government be continued?

A SCIENTIST ON SOCIAL TENDENCIES.

The sneering at college professors as men from whom nothing practical is to be expected, dies out so slowly in this country that, as we have recently seen, Mr. Taft's campaign manager thought it justifiable to have a fling at Gov. Wilson as "Professor Wilson." The best cure for this narrow-mindedness would be a residence abroad, in Germany particularly, to see how men in political life there covet the opinions and advice of the men whom we deride as closet-philosophers. Nor is it exclusively to professors of government and history, sociology and economics, that foreigners look. From scientists as well do they seek to acquire knowledge as to current events, for they have learned that the search for causes to explain natural phenomena, and the mental strength which comes by daily application to difficult intellectual tasks, may fit a man to deal with current problems. The very fact that the scientist stands aloof from the crowd gives him a detached point of view in itself of great value. Hence such an address as that recently given in Berlin by Sir Clifford Allbutt, regius professor of physic in the University of Cambridge, attracts wide attention both in his own country and abroad.

He addressed the Congress of the Royal Institute of Public Health on the "Integration of the Social Organism"—a title serious enough to be alarming. But the address itself challenges admiration not only for its wisdom and sanity, but also for its charming style, its wealth of quotation and of illustration, and its deep underlying knowledge of human beings and their world. Few of our American statesmen, we are sure, could equal it in grasp and calmness. It is the deliberate judgment of one who speaks with unfettered tongue, without fear of the voter and the ballot. Why should a physician and a teacher discuss the trying social problems, or the unrest which vexes the whole world? Because, he says, "ethical, medical, and social influences interpenetrate each other," so that "one can hardly discuss any one of them without involving the others." Lord Acton, Sir Clifford quotes as saying that "ideas are not the effects but the causes of public events," and that revolutions explode not on particulars, but on "general abstract ideas." If, as it now seems, our revolutions are coming in the domain of economics, the physician has a particular reason for being heard, because "half of these" economic changes "must be more or less directly medical; they must be founded upon the ideas of public health and the means of its maintenance."

But this physician and professor stubbornly refuses to be sensational or to indulge in wild generalizations. Not even the new science of eugenics sweeps him off his feet. This new science, proclaimed so loudly as the cure-all for every ill of the species, Sir Clifford pictures as really "an infant needing the very nursing which we want for the slum babies." The knowledge of heredity, "with its secret and mazy laws," is too slight to be of much use to us practically. Let us not, therefore, he advises, maim further the stunted bodies of those who are defective for "plain and open lack of nurture, education, and family love." The very questions of insanity, of the wisdom of persons uniting in marriage in whose family cases of insanity have occurred, make this scientist more than anything else feel his "ignorance and ineffectiveness," for some of the happiest marriages he has known were entered into with gravest anxiety because of family taint.

But no such scruples trouble legislators or our most ardent apostles of social reform. By them the world must be made over in a day. They can have no patience with this spirit of inquiry, of careful progress based on knowledge. Why, this good professor actually doubts the value of the minimum wage; for—shades of the Progressives!—he asks whether it is not one of those "explosive, reactionary ideas," "ideas without knowledge," which have rendered many revolutions futile. Yet his desire for social justice is keen, too. He appeals for the children—though he questions whether the diminution of births is the "terrible misfortune we almost passionately suppose it to be." He desires better homes and better schools—to bring up children to be good fathers and mothers, to give them teachers of higher and more humane standards, to provide them with more of out-of-doors life and a closer knowledge of nature.

But throughout it all there is no note of bitterness nor intolerance, no wild radicalism or heady Socialism, no reliance on noisy appeals to the people. He who defines the *scientia vitæ civilis* as the storing of the most energy by a social body "most economically, and the using of it the most fully and effectually and to the highest ends," could hardly believe that the triumph of any rash appeals to passion would really bring nearer the solution of the problems of poverty, of underpayment, of overcrowding, of inefficient government, of inadequate schooling. As to these, Sir Clifford quotes Emerson to the effect that "We are as yet but at the morning star and the cock crowing." Though we are often compelled to act in politics beyond our knowledge, yet this is another reason to urge on the mission of true and calm enlightenment.

MODERN LITERARY REWARDS.

The refusal of James Whitcomb Riley to own the soft impeachment that his poetry had brought him untold wealth must be regarded as an encouragement to poets rather than what it might at first thought seem, a dashing of their spirits. The mere fact that such a report could gain currency is most significant, for how often, since Caedmon discovered that he could sing and was promptly assigned to singing as his life task at the stipend of three simple meals and a hard bed, has a poet been raised to a place beside merchants and bankers in the popular catalogue of material success? Shakespeare's financial attainments must be counted out, for he was a theatrical manager as well as a poet, and plays, even in verse, hardly come under the head of poetry. The other exceptions are so rare as merely to prove the rule. It must, therefore, be admitted that our Hoosier bard has been the recipient of an almost unique distinction in being credited with a fortune made in the service of the muses. His disavowal of the fact should only stir up keener rivalry for the glory of being the first millionaire poet in the history of the world.

But if our poets are not yet able to display a scale of expenditure comparable to that of our baseball stars, it by no means follows that the writer of a book in these spacious times is without his rewards. Publishers take delight in flooding newspaper and magazine offices with information of the movements of those who supply them with the raw material for books. It is impossible to read many of these bulletins without forming the conviction that any writer who does not possess an automobile and go abroad every year for several months of leisurely travelling from one capital to another, is too rare to consider. When we compare this happy state with that of Goldsmith, immured in a garret until Dr. Johnson happened to hear about it and rescued him by the summary process of forcing "The Vicar of Wakefield" down the throat of the nearest publisher, we can but rejoice at the good fortune of literary genius in our brighter day. We would not give the impression, however, that money is looked upon as a reward by our writers. It is only a necessity. What they, in common with their brethren of all ages, really value is fame. And this they have in abundance. The praise that the hard-hearted publisher is so reluctant to grant to the newcomer with a manuscript in his hand, he pours out like water upon the same individual when his effort has been accepted. Where, for instance, is the writer of even many books who would not be satisfied with the following estimate of his accomplishment?

> The book is a masterpiece; it is a work of the finest humor; it is intensely human; its creative power and characterization equal the very best of Sterne or Dumas.

Beside this, it seems poor and mean to say merely that "the author has a pleasing wit and an ignenious fancy, and the book is just the sort to be read aloud to a summer gathering," but who was there to say even so much for Cervantes or Geoffrey of Monmouth?

Not a few of our writers add to their literary reputation political fame and position. This is not a new phenomenon, as Milton and Addison attest, but, like these other rewards, it has a flavor that in former times it lacked. The author of "Comus" was not benefited in a literary way by his political activities. On the contrary, it forced him to suspend writing for so long that he might well have despaired of turning out a work of any length again. With our authors, the case is different. Booth Tarkington's election to the Indiana Legislature did not seriously interfere with his writing. As soon as he had gained the maximum of political repute with the minimum of attention to politics, he resigned and settled down to write for the larger, or at least, more interested, public that then gave heed to him. This beautiful enlistment of political activity in the service of literature is one of the artistic triumphs of our time. The experience of Edward Bellamy, it is true, seems to point in the opposite direction. His "Looking Backward" was hailed, not as the simple piece of fiction which he had meant it to be, but as a programme of reform, and he found himself, to his embarrassment, regarded as the prophet if not as the protagonist of a new order. He had set out to write a novel, and was taken for a revolutionist. But 1887 is not 1912. We and our writers understand each other better now. To-day, under proper advice, Bellamy and Tolstoy, too, would go on writing novels while announcing each one as a restatement of his social ideas.

Novels—or plays. For we are in grave danger of wrongly distributing our literary rewards. To be a novelist is nothing, but to write for the stage, even by the roundabout process of first writing a novel and then having it dramatized, is the acme of literary success. Why should one laboriously turn the pages of a thick volume when one can get the best parts of it in three hours by merely sitting in a theatre, and, as Squeers would say, watching the actors go and do it? Still, we are no worse than our ancestors in this also. What chance had the novelist in Elizabethan days when a hundred unscrupulous playwrights were waiting to pounce upon his story and transfer it to the boards without so much as a thank you? It is something to recognize the right of the fiction-writer to the product of his pen. Copyright, national and international, is not the least of the rewards which Homer and Holinshed went without, but which are the portion of the humblest modern author.

FRENCH BOOK NOTES.

PARIS, July 31.

"Napoléon Ier et le Monopole universitaire" (A. Colin, 4 francs), by A. Aulard, the well-known Radical historian of the French Revolution, appeared some time ago. In subject and treatment, it is a book of present-day importance; but it is also valuable for the knowledge it gives of one among the many activities of Napoleon's organizing mind. And it touches essentially, though incompletely, the little understood upspringing of old intellectual habits that survived all Revolution and, particularly, the spontaneous revival of religious education. These latter questions are in the line neither of M. Aulard's understanding of history nor of his method of writing it; but their discussion is not necessary to the question he proposes to himself:

> I should like to dispel confusion and set inaccuracy right by an impartial historic view for readers of every sentiment, whether hostile or favorable to what is called the principle of liberty of teaching, hostile or favorable to what is called the eminent right of the state to teach and to teach alone. I should like all such readers to be able, both with profit and security, to read my narrative and find in it authentic and significant facts to check off their opinion or to help them form an opinion.

It may be safely said that we have here the most enlightening study yet made of the "origin and working of the Imperial University," that is, of the facts and official documents connected with its existence under Napoleon himself. It is only a few years since the one "University of France" meant the entire organization of public instruction in the country, and the conferring of certificates and diplomas and degrees of every kind, from the most primary to the highest specialized instruction, still remains the exclusive function of state examiners. An exact acquaintance with this Napoleonic idea and its application in years when he was legislating France into conformity with the inevitable outcome of the Revolution is of obvious utility now. For, under the present Third Republic, Radicals are demanding a yet more absolute state monopoly of education, while Moderate Republicans still plead for the liberty of private initiative.

The book is the least controversial work of an author whose acknowledged mastery of documents has not relieved him of the suspicion of partisan misunderstanding and incompleteness in their use. In the present case, he frankly explains that he has been obliged to leave whole departments uninvestigated; and this has been made a subject of rather unnecessary criticism. In reality, the historical school of the document, of which Professors Aulard and Seignobos are the chief representatives in France, can work only within limits. In polemics against Taine, incompleteness is a legitimate reproach. In the study of Napoleon's organization of the state as educator, the case is not the same. The present volume shows all the qualities which have won for its author his singular reputation as an historian. There is the same persistent method of handling only what may be called "official" documents, to the neglect of those which are individual. This is sufficient for the present purpose, since it is an official monopoly of education which is in question.

For M. Aulard, Napoleon was more or less the dupe of his own instruments, and of Fontanes in particular; but it also seems that he knew this and accepted it as inevitable in his one-man restoration of law and order in France. At the time, our author thinks the experiment resulted rather in a strict state supervision of private teaching, with disagreeable fiscal operations. The lesson for our republican time, with a many-man Parliament in place of Napoleon, is not so clear. For the moment France is veering towards toleration, and the Radical idea of a complete state monopoly of education is not likely to be realized. It is of interest to the world at large to make acquaintance with this historical realization, however imperfect, of the "eminent right of the state to teach and to teach alone."

"Les Transformations du droit civil" (A. Colin, 3.50 francs), by Joseph Charmont, professor at the University of Montpellier, follows up to the present day another work of the master organizer—the Civil Code promulgated in 1804 as a part of what is known outside of France as the Code Napoleon. The book is not technical, and starts from the work of those who drew up this code of civil or "private" law. Its evolution is followed in successive French legislation down to our own time amid changes intellectual and moral, political and social. The author first takes up the family which, in spite of Rousseau and Revolution, remains the traditional unit of French society. He finds three economic causes working on it through new legislation: the compulsory division of property among inheriting children; the practice of stock companies, which has made France a nation of investing families in possessions not of the family; and the industrial system. Next come legislative measures concerning marriage, in virtue of which family power has dwindled without becoming extinct, and the condition of woman and child in and out of marriage. The evolution of private property has been twofold, in contrary directions—a gradual disappearance of agrarian communism and a successive restriction of property-holders' rights. The book closes with a study of the origin and consequences, not yet worked out, of the new idea born from the development of industries and machinism, that is, the idea of professional risk in law. It is rich in references and will prove useful to those interested in social problems.

"L'Evolution de la France agricole" (A. Colin, 3.50 francs), by Michel Augé-Laribé, deals chiefly with the present agricultural activity of France. By the intensive cultivation of her own comparatively limited territory, France has come nearer than any other European country to supplying from her own production her people's demands for food. This has always been the national tendency, even in times when agriculture has been weighed down by extraneous and unnecessary burdens. Arthur Young was struck by it in the days preceding the Revolution. In Henry Reeve's "Royal and Republican France" may be found contemporary witness to the immense progress made up to the Second Empire. Our author, fifty years later, studies from the most recent documents the economic situation of French agriculture to-day; the technical progress that has been made in it; the division of property; rural depopulation; associations and the development of Agrarian Socialism; and the political and moral work of Peasant Democracy. Among the many bright spots, he points faithfully to the dark defect—cities and factories have taken men and money away from the country, not to speak of the invading city fashion of small families. The same defect, without the partially counterbalancing thrift and minute industry of the French people, is becoming the urgent rural problem in other civilized countries. A book like this presents France as an object-lesson to the world.

"La Crise française" (Librairie Plon, 3.50 francs), by André Chéradame, is a complete and systematic summary of "facts—causes—solutions" as presented by those who are sure there is a "crisis" in France. It is certainly an interesting, and almost a necessary, book for those who wish to know France from within rather than judge like shrewd Sir Philistine who all his life on the outside passes. Its author, by schooling and training, by experience abroad and political journalism at home, has been prepared for his work. The defect of Nationalism like his is to be satisfied with labels and formulas resonant to one's sympathies and with general assertions and classifications of facts which will not stand close analysis. Edouard Drumont is an extreme example, and his life of brilliant polemics has only exasperated the evil, whatever it may have been, which he set out to attack. It would be unjust to class M. Chéradame with him or his school; his analysis of the factors in the Dreyfus Affair is sufficient to reassure us on this point. His book also is too full of ideas, representing what he sincerely takes to be facts, to leave space for partisan rhetoric. There is, however, the tendency to generalize and to accept the generalization as reality, whereas Locke, like the scholastics before him, warns us that only "particulars" do really exist—with men as with other things. With this reservation, the book is what its author wished it to be, a repertory of the leading facts which, in his opinion, have united in creating in France political, social, moral, and military disorganization. It is undoubtedly in tune with the present popular movement away from a Republic that was weak because its people were divided against each other towards a government, not necessarily un-republican, which shall be strong by ceasing to divide. Translated into "particulars," this may mean nothing more formidable than that a generation which wishes to go automobiling will not allow itself to be distracted by a preceding generation that has lived on politics. From the methodical table of contents and his pronounced marginal titles, the foreign readers of M. Chéradame's book will easily find those reasons of the prevailing French discontent which are likely to interest them. With a view to the irrepressible conflict between France and Germany, of which he laboriously studies the least elements, our patriotic author proposes a detailed adaptation of the military, naval, diplomatic, financial, and administrative forces of his country. The reserves of strength which he discovers very properly among his fellow-citizens may, after all, delay the conflict indefinitely.

"En pensant au Pays" (Hachette, 3.50 francs), by Cornelis de Witt, deals essentially with the same problems as M. Chéradame's book, and the conclusions are not essentially different; but its good literature, so different in form, its touching sentiment and immethodical pensive looking before and after with elderly eyes, make it more convincing to the outsider. Here we have French "particulars" in real life as actors and witnesses—farmers and schoolmasters, priests and officers. The author begins with the last patriotic words of Guizot, his grandfather, and gives his own living impressions of France as he has seen her gradual transformation since the rude shock of war and defeat in 1870. What is her people's hurt? and what shall cure it, and how? As might be expected, it is the book of an old-fashioned Liberal Protestant, so liberal that he all but seems a Reactionary, and not Protestant enough to wish a revenge for the revocation of the Edict of Nantes, which should bring the whole French people down to a moral slough of despond. In beautifully written pages, he too appeals to French youth—and, doubtless, the not easily managed vitality of youth will leap from the ruts in which he sees the republic fallen on to smooth ground again. S. D.

NEWS FOR BIBLIOPHILES.

In the introduction to Volume V of the admirable Knutsford edition of Mrs. Gaskell's Works, Dr. A. W. Ward says (page xii) concerning the first appearance of the author's story "The Manchester Marriage," that it "seems to have been first printed in Littell's Living Age, a paper published in Boston, U. S. A., in 1859." On page xxv we find the definite statement that "Mrs. Gaskell's story of 'The Manchester Marriage' was first printed in 1859, in a Boston (U. S. A.) journal bearing the name of Littell's Living Age."

Those familiar with the "paper" in question may wonder at this, but Dr. Ward could perhaps not be expected to know that the *Living Age* is made up of reprinted articles. Axon's "Gaskell Bibliography," it may be mentioned, does not list the first appearance in periodicals of those of Mrs. Gaskell's writings which were subsequently printed in book form. It does, however, say under "Right at Last, and other Tales," in which "The Manchester Marriage" was printed in 1860: "The preface states that the tales are reprints from 'Household Words' and 'All the Year Round.'"

Dr. Ward evidently assumed that the entry in "Poole's Index" assigning the story to the *Living Age* meant that it was first published in that periodical.

A reference to the number of the *Living Age* (February 5, 1859), containing "The Manchester Marriage," shows that the story was reprinted from the Christmas, 1858, number of Dickens's magazine, *Household Words,* to which Mrs. Gaskell was a frequent contributor.

This (extra) Christmas number consists of a story entitled "A House to Let," in six chapters, as follows:

(1.) Over the Way.
(2.) The Manchester Marriage.
(3.) Going into Society.
(4.) Three Evenings in the House [in verse].
(5.) Trottle's Report.
(6.) Let at Last.

Chapters 1, 5, and 6 form the framework of the story, while the other chapters are really independent tales, each relating an incident in the history of the House. The editors of "The Letters of Charles Dickens," and later Mr. Hutton, in his "Letters of Charles Dickens to Wilkie Collins," have pointed out the connection of a letter of September 6, 1858, from Dickens to Collins with this Christmas number of *Household Words.* Dickens contributed the chapter "Going into Society" (which is to be found in his works under the same title), while Collins evidently wrote the framework story and the links connecting the different chapters. Charles Dickens the Younger states in his edition of "Charles Dickens's Stories from the Christmas Numbers of 'Household Words' and 'All the Year Round'" that "only a small portion of the framework (if any) was written by Charles Dickens."

There is no reason to suppose that "The Manchester Marriage" was written with a view to its incorporation in "A House to Let." The story as it appeared in *Household Words* is the same, word for word, as printed elsewhere, with the exception of a few insignificant external changes, as, for example, in the first sentence, which reads: "Mr. and Mrs. Openshaw came from Manchester to London and took the House to Let" instead of "Mr. and Mrs. Openshaw came from Manchester to settle in London."

"A House to Let" is most accessible in the regular reprint of *Household Words* by Frederic A. Brady, N. Y., or in the separate edition published by T. B. Peterson & Bros., Philadelphia, 1859.

Correspondence

DR. FURNESS.

TO THE EDITOR OF THE NATION:

SIR: Less than a week ago I received a letter from Dr. Furness in which, after speaking of the loss of several dear friends, he went on: "My nepenthe, however, is work, into which it is impossible at eighty to throw as much energy as at thirty. If all goes well I hope to deliver 'Cymbeline' to the mercies of the printers in a month or two. And then I shall rest and patch up my old body for heaven." In the light of the event the last words seem prophetic.

Since the news of his death reached Baltimore, I have been turning over various letters which I have had from him, letters full of kindly encouragement and advice, with comments on theatrical and literary affairs. A few lines from a letter which I received in Rome some years since may be quoted:

> Your mention of Tours reminds me that when I was there two or three years ago, I was regarded, in the fine hotel there, . . . as a venerable curiosity, because I remembered the great historic inundation of 1856, when I sailed in a boat through the streets and saw the bakers in boats delivering bread into the second-story windows, and remember the Emperor when he came down personally to cheer the inhabitants. What a delightful country Touraine is, and, indeed, all France. After travelling there for a while, we learn that Paris is not France and does not in the least represent it. I respect England, but I love France, where there is a geniality in the atmosphere which the fogs of England chill.

This passage is typical of the light touches of reminiscence and comment with which the letters abounded.

To know Dr. Furness one had to see him in his library, surrounded by books among which he had worked steadfastly for more than forty years. The many thousand volumes were ranged all around, the higher shelves being reached by a staircase and balcony built in the room. He had assembled a collection of Shakespeareana probably unsurpassed in the world. On "Hamlet" alone there are more than four hundred works. He had a complete set of the folios, the First Folio being kept in a special case and consulted only when the final revision of proofs was under way. A few of the quartos were in his possession, though for editorial purposes the various photographic facsimiles have in recent years been amply sufficient. His collection of souvenirs and relics of actors and actresses in Shakespearean rôles was most interesting. I recollect, for example, the crown of straw worn by Kean in the mad scenes of "King Lear," and the bond carried by Booth in the court scene of "The Merchant of Venice." Most remarkable of all, as is well known, and kept in a case like that containing his First Folio, were the "property gloves" said to have belonged to Shakespeare. Their history goes back without a break, through Mrs. Kemble, Mrs. Siddons, and Garrick, to a certain John Ward who received them in 1746 from "a descendant of the family" of Shakespeare. Long ago Mr. Percy Fitzgerald spoke of these gloves as a "doubtful relic," but one should not always "smile at the claims of long descent," and in such matters credulity is its own reward and is a faculty to be cultivated. At least I thought so when Dr. Furness opened the case and let me touch the gloves which may have covered Shakespeare's hands.

Snatches of Dr. Furness's talk come to mind. I remember his delight when I told him of Miss Marlowe's now well-known reading of the word "sun" in the last act of "The Taming of the Shrew," a reading which he called "a stroke of inspiration bordering on genius." He spoke of the Baconian theory, which he said was almost as prevalent as the measles and from which most people recovered as soon. With mock indignation he demanded that the Baconians should read the Essay "Of Gardens" and the fourth act of "The Winter's Tale," or the Essay "Of Love" and the third act of "Romeo and Juliet." "If they still believe that the man who wrote the essays wrote those scenes, I give them up!" he said. He was impatient of the endless disputes as to the exact date of the composition of the individual plays, and like Professor Saintsbury was inclined to be skeptical as to the value of minute details of biography, preferring to leave the divinity which hedges the kingship of Shakespeare. In spite of years of the minutest textual criticism, he disliked (while appreciating its importance) the ceaseless poring over commas and semi-colons which to some editors is not only literally but figuratively bread and meat. He spoke with pleasure of a visit to Baltimore when he lectured, I think, at the Peabody Institute, and of friends at the Johns Hopkins, particularly of Professor Haupt, with whom he had been associated in some Biblical studies, and of Professor Bright, to whom he was indebted for several notes in the New Variorum.

Of Dr. Furness's achievement as an editor this is not the place to speak. Though his own contributions to disputes were frequently enlightening (and they greatly increased in number in the later volumes), he did not lay claim to be an æsthetic and philosophic critic. Among such critics of the present day he accorded first place to Mr. A. C. Bradley, of whom he once wrote to me: "In the Shakespearean world at present I hear no voice but his," and again: "To me, he is certainly on a level with Coleridge, if, in some respects, he does not surpass him." The only position he claimed for himself was that of a pair of scissors, and he sought to eliminate all signs of personality. That was impossible; I venture to say that in no scholarly work is the editor's personality more delightfully apparent. It showed itself in that rarest of editorial endowments—humor, which appears in most unexpected places (as when at the close of a discussion about the folklore gathered round the man in the moon he remarks: "After all the only thing which concerns us is his premature arrival and strange desire to go to Norwich"), and which lightens up the darkest dispute and refreshes the student in the most arid desert of controversy. He brought to his work personality, enthusiasm, and singleness of purpose. He was no dry-as-dust pedant, and was broad in his interests, but his life was Shakespeare. In one of his letters I find these words: "To know that fresh, young, enthusiastic spirits are entering the world of Shakespeare, wherein there lies for them illimitable growth, cannot but fill with measureless content one who is finishing the journey, and to whom that world is fast vanishing in the lengthening shadows." Throughout that "journey" he went "dietro alle poste delle care piante." His was the constant service of the antique world, which in that good old man appeared, indeed, well.

These are but random recollections and impressions, but perhaps they will serve as a tribute from one who valued his friendship as a precious gift.

PROFESSIONAL MOTIVES.

TO THE EDITOR OF THE NATION:

SIR: The letter from a college professor on "Professional Motives," which you published last week, brings up the greatest of all questions, namely: What is any rightminded and normal man living for? or, as the old Catechism put it: "What is the chief end of man"? Grant that we all begin on the selfish or egotistic level. Nevertheless, we become presently aware, if we once have a fair chance to open our eyes, that while there is a constant "give and take" in the course of our lives, it makes all the difference in the world on which side of the balance we put the habitual emphasis of our will. Issues constantly arise to try us and discover what we are about. Do we seek to get all we can, and to give as little as we can? That way lies the slow death of manhood and happiness. Do we seek and desire to give and do as much as we can, and to be as socially useful as possible? This seems immediately, and more and more, to agree with our constitution. I mean that this ensures the largest possible flow of life and power.

It matters little what one calls this resolute good will which characterizes all the best men and women. I like as little to call it "altruism" as your correspondent seems to do. This word makes an unfortunate division of interest between the self and others. But I do not think that "egotism," even of the most refined sort, is an accurate word by which to describe what we have in mind. Though a man, at his best, in doing righteous and social things, is doing precisely what he likes best to do, this is a "selfishness" that would send him to death on occasion, at the call of conscience or of love. People ought not to use "egotism" for this quality. I suppose that, in the best sense of the word, this type of will and character and conduct is religious, inasmuch as the life from which it comes seems to be simply borne in upon us, with the same gladsome and compelling power as that which makes the trees bear their fruit, or the birds sing.

May I add a word of deprecation of the idea that the predominant social motive is specially characteristic of the so-called "Professions." As the son of a Congregational minister, I was brought up to believe that there is nothing holy in the ministry that is not equally to be found in every honest calling. Is there any decent business in which men are engaged, which is not a form of social service? Ought not, then, all men who work, to have the satisfaction, not merely of being paid and of getting a living, but better yet, of knowing that the best quality of their work is never too good to be put out for the common welfare?

LECKY ON THE DEMAGOGUE.

TO THE EDITOR OF THE NATION:

SIR: The letter in your issue of August 15, entitled the "Method of the Bull Moose," quoting Le Bon's book on "The Crowd," leads me to quote a passage from Lecky's "Democracy and Liberty," pp. 18-19 (English edition of 1896):

> Every one who will look facts honestly in the face can convince himself that the public opinion of a nation is something quite different from the votes that can be extracted from all the individuals who compose it. There are multitudes in every nation who contribute nothing to its public opinion; who never give a serious thought to public affairs, who have no spontaneous wish to take any part in them; who, if they are induced to do so, will act under the complete direction of individuals or organizations of another class. . . . And in a pure democracy the art of winning and accumulating these votes will become one of the chief parts of practical politics. . . . The demagogues will try to persuade the voter that by following a certain line of policy every member of his class will obtain some advantage. He will encourage all his utopias. He will hold out hopes that by breaking contracts, or shifting taxation, and the power of taxing, or *enlarging the paternal functions of government*, something of the prosperity of one class may be transferred to another. . . . Every real grievance will be aggravated; every redressed grievance will be revived; every imaginary grievance will be encouraged. . . . To set the many against the few becomes the chief object of the electioneering agent.

Ripon, Wis., August 21.

A PROFANATION.

TO THE EDITOR OF THE NATION:

SIR: As one whose reverence for the sacred things of the Church's belief has been offended time and time again by profane use or reference to them on the part of politicians, I wish to protest against the following:

The "grand old party" is a-mouldering in the grave,
It came and saved the nation, *but itself it cannot save*,
It's Boss Barnes's plaything, and it's Guggenheim's slave,
But we go marching on.

The phrase italicized gets what dignity it has in the wretched context from its reflecting the dramatic use made of a similar thought in regard to the One who lived in suffering and poverty and died in agony to save mankind. The association is intolerable.

OSCAR WOODWARD ZEIGLER.

Baltimore, August 18.

THE FUNCTION AND THE MACHINERY OF GOVERNMENT.

TO THE EDITOR OF THE NATION:

SIR: Among the inconsistencies kindly pointed out by the reviewer of my "Origin of the English Constitution" (*Nation*, July 25), there is one that occasions me some remorse. It is the contradiction which is said to exist between the statement that "the Norman state was simple and undifferentiated," and another that "we seem to have the right to say that the legislative, judicial, conciliar, and military functions of the state in their ordinary operation were thoroughly feudalized and the administrative system partially so." I ought, I think, to have made more clear the distinction between the functions of the government and the machinery by which it exercises those functions. I suppose that all governments which have developed far enough to be at all worthy of the name perform the same great functions of the state, but the institutions through which different governments exercise any one function are apt to differ widely; it is possible, indeed, for a state to perform more than one function through the same institution, and the business of the constitutional historian is to describe and account for differences and similarities of machinery. He has little to do with function in itself. That duty falls to the student of political science. The distinction is one of considerable importance at any given moment of the historian's work.

My form of statement was undoubtedly careless, but it did not occur to me that any one would think I really intended to say that function was feudalized, to confuse function with machinery, or to imply that because a state performs various functions, therefore its government machinery is of a differentiated type. The Norman state, as I believe, and the Anglo-Norman state certainly, performed the legislative, judicial, and conciliar functions, and a part of the administrative, by the use of a single, simple, and undifferentiated piece of machinery which was thoroughly feudalized. The administrative system was a partial exception in both respects, because of the necessary use, in addition to the central institution, of a local officer who under neither government made his office feudal. In England the sheriff was, I think, an entirely non-feudal officer, despite a slight tendency to hereditary shrievalties, and, as a connecting link between the local and the central governments, the office is a most interesting instance of the influence of Saxon institution on details of the Norman general government, the most interesting, I think, of the several cases of the sort. The sentence in regard to the Norman government being made to read, as it should have been in the first place, that the piece of machinery by which it exercised the functions named was thoroughly feudalized, it follows, I believe, that the statements which your reviewer puts together are both accurate, and that no contradiction exists between them. I the more regret the opportunity which I have here given to misunderstanding, because I have a feeling that among the many shortcomings of the book a lack of clearness is not in many places to be counted.

Newport, Vt., August 15.

Literature

CHINESE PROVINCES.

In Forbidden China. The d'Ollone Mission, 1906-1909, China—Tibet—Mongolia. By Vicomte d'Ollone. Translated from the French of the second edition by Bernard Miall. With 146 illustrations, a map, and a portrait. Boston: Small, Maynard & Co. $3.50.

The history of China is the story of a gradual process of conquest and amalgamation that began, probably, two thousand years before the Christian era and still continues. For the reason that European knowledge of the empire has been acquired from its costal side, where this secular operation was long completed, Western observers until recent years have generally ignored the fact that even China proper is yet a nation in the making, while the great husk of sterile territory surrounding the eighteen provinces remains as foreign to the China of history as India is to England. The peoples against whom this culture conquest has proceeded may be roughly divided into three convenient groups, the aborigines who occupied the fertile lands draining into the ocean, the Tibetans on the west, and the Tartars on the north. During the past millennium the last named have advanced far to the south and imposed their rule upon the older state under successive dynasties, effecting a mixture, like that of the Celts and Teutons in France, ending in complete infusion, while preserving the culture of the more highly civilized group. The Tibetans, though less successful as invaders, have conquered at different times various portions of the empire. Their main contribution to China has been the form of religion that now controls a majority of its inhabitants. Of the aborigines who occupied China before the Chinese, there remain only scattered bands that survive the pressure of many centuries of compulsion in mountain fastnesses, where they have defied the overwhelming odds arrayed against them.

Several attempts have been made by Europeans to explore the districts still preserved to these barbarians, out of whose tribes and territories the Chinese have developed their own nation. Chinese writers know almost nothing about them, and give them all a bad name; Chinese officials are uniformly shy of them, and object to investigations on the part of others. It may be asserted with some confidence that no one of them recognizes any relation to the genesis of China. It is characteristic of the Gallic sense of method and collocation that the French should have been the first to conceive a plan of examining the problem of Chinese origins as a whole by equipping an expedition to investigate existing remains of these survivals in turn as they can be found in the western highlands of China. The scientific results of the d'Ollone Mission, which performed this task with success during three years of hard travel, are being given to the world in seven large volumes by the French Government. The work before us is a readable narrative of its experiences—a book full of human interest, of the charm of the picturesque and unfamiliar. But it is more than this. It reveals at once the operation of racial struggles that penetrate the remote past of Chinese history, and the sturdy character of an opposition to the domination of a people which we have been taught to regard as homogeneous throughout the length and breadth of the provinces. In its way it is the most important contribution that has ever been made to our knowledge of the racial sources of the Chinese and of the enclavement of primitive survivals.

Three considerable groups of these survivals have retained independence of the Chinese. They are the Lolos, in southern Szechuan; the Miao-tze, in Kweichow, and the Si-fan, in the eastern projection of Tibet which marches on the northern border of Szechuan. "Their countries," declares the author, "forbidden to the foreigner, are the only portions of the globe which are to-day unexplored." Each of these regions was approached in turn by the Frenchmen and their few attendants, and into each they had to proceed against not only considerable physical obstacles and tribal attacks, but the objections of the Chinese provincial authorities. The Lolos visited appear to be a section of a tribe once in Kweichow, who abandoned their country when the Manchu dynasty was powerful enough to drive them further from the centre, but not sufficiently well supported to compel their subjection in the magnificent mountain knot to which they fled. Here in an Alpine land, some two hundred miles north of Yunnan-fu, these doughty tribesmen have maintained their feudal array, served by slaves obtained in frequent raids upon the neighboring Chinese, and managing somehow to procure from their ancient enemies such necessities as rice, cotton, and tobacco. The explorers were able to penetrate their lofty haunts by being passed from one friendly clan to another, but no Chinese guards were allowed to accompany them. When doubts arose as to permitting the strangers to advance from the domain of one chief to another, the Frenchmen would give an exhibition of the carrying power of their rifles, an argument to which no Lolo was insensible. There was no fighting, for the intruders would have been snuffed out in a minute, but the respect of these warriors for the power which such instruments of precision indicated was impressive. An ancestral suit of armor was exchanged by one noble for a carbine which he would never be able to use, for want of cartridges; yet he was satisfied to have it so as a sufficient symbol of authority.

The Miao-tze, in the adjoining province of Kweichow, were visited by the author's two lieutenants, and consequently come in for less detailed attention in his narrative. Their discoveries, however, were scarcely surpassed by their chief's. The so-called "independent Miao-tze" of Chinese geographers were found to have reached this region from Hunan, when they drove out the Yao, but they were in turn driven out by the Tai—racial relatives of the Siamese—and it is these, not the suppressed Miao-tze, who are allowed autonomy under their seigneurs, but who submit to Chinese authority. From this unexplored domain nearly two hundred manuscripts and inscriptions may reveal, when examined, the relationships among the non-Chinese occupants of this sub-tropical wilderness.

The third part of the explorers' journey was devoted to a region which, though called Tibet on the map, appears to be inhabited by the warlike descendants of those Tanguts who have ever been a thorn in the side of China. These Si-fan, "Western Barbarians" of Chinese books, differ entirely from the Tibetans of the Himalayas. "There was no resemblance," says the author, "between this tribe of warriors, who are always in the saddle, lance in hand, and the heavy agriculturists or the timid herdsmen hitherto described. The difference was complete and explained by the difference of language; the vocabularies we compiled have nothing in common with the Tibetan language nor the derivatives we had met on the confines of the country. We were apparently dealing with a people absolutely unknown to Europe, although apparently ancient and illustrious." Much the most difficult and dangerous experience in the three years' expedition was met among the clans of this savage confederation, amid mountains eighteen thousand feet high, where every man's hand is raised against his neighbor. The lamas, who are the real rulers of these nominally independent tribes, and who watched the advent of the strangers with jealousy, nearly brought about the ruin of the caravan. Deprived of their yaks and their drivers, the party succeeded at last in reaching the monastic seat of Lhabrang—a splendid city of three-storied houses and twenty huge monasteries administered by the Living Buddha—under a Mongol prince who actually proved to be a descendant of that Subatai of Genghiz's horde who once conquered Russia and bathed his horses in the Adriatic. From this terrible country the Mission passed to the ancient haunts of Mongol power beyond the Great Wall.

The end of this remarkable tour brought M. d'Ollone by a wide détour along the great bend of the Yellow River, past several sites of archæological interest, to Wu-tai-shan, where he obtained an interview with the Dalai Lama the day before his departure to Peking; from thence he reached the railway and the familiar civilization of China Proper. The importance of the discoveries made can hardly be overestimated, though it would be premature to speculate before the publication of the official record upon the value of some of the conclusions presented. While this popular account of the journey suffers from extreme condensation and a consequent meagreness of details as to the researches involved, its style is sufficiently vivid to render it interesting even to those who are indifferent to what can be learned in the great hinterland of China.

CURRENT FICTION.

The Goodly Fellowship. By Rachel Capen Schauffler. New York: The Macmillan Co.

Miss Schauffler's name is guarantee for her competency to write of missionary work in Persia, and this, her book, is proof of her marked ability in constructing a novel. Jean Stuart of New York and Bar Harbor, travelling alone in Persia, would naturally meet adventures. When out of great peril she is delivered into the safe-keeping of the American Mission at Muramna, leaving in her wake a baffled and enraged Moslem courier, material is seen for the tale of danger and difficulty that follows. Jean, a red-haired society girl, of high temper, kind heart, and great common sense, makes the best of her enforced winter's domestication among the mission workers. There are twenty-five of these all told, adults and children. Most of them we learn to know intimately, several gladly; but the spirit of the place is the acquaintance most worth making for those who think of foreign missions as fields of narrow bigotries on a prescribed level.

The extreme expression of the modern impulse is found in the hero, a brawny doer of deeds. If at last religion claims all, there is little bigotry and no cant. The characters of one or two of the missionaries are of a saintliness that even the world must love. The martyrdom of one is an echo of the fate that actually befel Miss Schauffler's brother-in-law, the Rev. Benjamin Labaree. To this tragedy the book is said to owe its inspiration. With great tenderness is described that devoted side of missionary life which will not use the word self-sacrifice. Yet an outsider seeing with eyes of humor or prejudice is made to interpret the scene, and from scoffing is made to arrive at praying by the route of practical sympathy and under the gentle compulsion of noble example. The unworldliness of the leaders is offset by characters of more average clay, whose foibles, humorously described, heighten the naturalness of the group. Outside the city walls, industries, errands of mercy, and perils are vividly described, with the sick, the benighted, or the ferocious ever at hand. Condensation could be endured in respect of the heart-struggles and facial grimaces of the hero and of feats of voice and eye on the part of the heroine. "My!" is a hoary sinner, and universal "chuckling" a growing blemish. But these are flecks, and do not avail to dim the interest or merits of the book.

The Forest on the Hill. By Eden Phillpotts. New York: John Lane Co.

It is said that Mr. Phillpotts is about to abandon Dartmoor, feeling that he has done all that he can profitably do with that theme and setting. This is perhaps wise, though one doubts if there can be any other spot on earth which he can hope to interpret half as happily. Two-score novels in a single narrow provincial setting are about "all the traffic will bear," no doubt. And one must admit that in the later stories the stream begins to run a little thin. Or, rather, it begins to return upon itself. The general situation upon which the present story is based is much like that of more than one of the earlier novels. Drusilla Whyddon, the woman of simple and bountiful nature, doomed to suffer by her very excess of virtue, has been this writer's heroine from "The Whirlwind" to "Demeter's Daughter." And the two men who strive for her are the familiar two who figure antithetically in so many of the stories, the puritan and the pagan —upper and nether millstone, so far as the woman herself is concerned. Here also is one of those rude primeval natures, Lot Snow, a grim old savage close akin to Iron Mortimore of "The Beacon" and to other more dimly-recalled figures of our Dartmoor past. The scene shifts, as usual, from cottage to open, and from open to the inn, with its talkative and even choral bar. And, as always, there are passages of lyrical description, in which the writer displays an almost voluptuous abandon to the charm of nature—never as a solitary nature, but as a stage, beautiful or grim, upon which little man plays his leading part. The story of Drusilla Whyddon and her two men is sombre enough; but human nature shines through it, as always in these Dartmoor tales—a possession worth having, however luckless its immediate experience. Drusilla, as we leave her, is a forlorn figure, but not a figure of feebleness or mere pathos.

The Adjustment. By Marguerite Bryant. New York: Duffield & Co.

The author of "Christopher Hibbault, Roadmaker" shows in this, her latest novel, many of the traits of the earlier book. There is the same high-mindedness, the lofty patience, the passionate sympathy with hurt creatures, the half-mysticism, the mild humor, the unsparing detail. Put together in a decidedly ingenious plot, of injuries, penalties, and pardons, they yield a story which holds the reader even while he kicks against the pricks of improbability. The saints of Miss Bryant's story are very, very saintly; the worldlings are witty or prosy, as required; the sinners are touched with charm and an infinite capacity for being reformed. With Rachel Massendon the law of love was the law of life. So fully did she trust this law that, having imbued her daughter Christina with the doctrine, she had no fear, when called by duty to a distant land, in leaving the young girl to her own guidance. On so high a plane of unselfishness the story moves that conventionalities appear only as unreal and jocular accompaniments to life. It testifies to the good faith of the book that the reader, after gasping awhile in the rarefied atmosphere, accepts the writer's attitude and follows without undue criticism the most unafraid ventures of pity and generosity into regions of error and discouragement. The world is in good hands. All good things, including good endings to miserable beginnings, are "meant." To further the "meaning," the weakest may dare all. The most incorrigible may be drawn back within the pale. Even for the gambler and forger there may be a future of self-respect and peace. Mystic, Roman Catholic, Protestant, all are invested with the mantle of charity, and the impression strongly survives that, though unnamed, the guardian divinity of the novel is Christian Science.

The Citadel. By Samuel Merwin. New York: The Century Co.

Mr. Merwin calls his story "A Romance of Unrest." In a romance there must inevitably be a dragon to be slain and a stronghold to be captured. Mr. Merwin's dragon is fixity in human institutions; his stronghold the Constitution of the United States. This his hero calls "The Citadel of Reaction and Restraint"; and his heroine, "an ignorant attempt to block, to retard, the biological law of change." The hero's ambition is "to smash the *rigidity* of the Constitution."

A Congressman of the present time, representing sundry conservative interests in an Illinois town, one day suddenly breaks out in a speech denunciatory of the Constitution as a bar to progress. Denounced by Conservatives and disowned by the alarmed Insurgents and Progressives, but warmly applauded by a young woman, a biologist in the Department of Agriculture, he breaks with his constituents and becomes a candidate for reëlection by the poorer districts of his city. To his standard flock the radicals, the Socialists, the single-taxers, the woman's suffrage party, all advanced thinkers and theorists, not to say all the honest, the virtuous, and the oppressed. Something like the millennium is to follow the crippling of the Constitution and the adoption of the initiative, the referendum, and the recall. The weapon which is to lay low the citadel is revealed in a flash of insight to Congressman Garwood, as "just an amendment making the Constitution easy and simple to amend instead of difficult." So the dragon-slayer goes through his campaign; and the bosses are against him and the people are with him. Theft, trickery, fraud fight for the Constitution, and all the virtues fight against it. And though the powers of darkness temporarily win, our hero and his bride, who have eloped—from nothing—and been married by an alderman, intend to fight on and educate youth into their own enlightened views. Much preaching is done by politicians and lovers. John, the Congressman, is a forceful lecturer, and may be credited with clear-cut statements of the want of faith that is in him. The novelist has presumed on his power to array all evil against all good, and his vehicle runs lopsidedly. It is almost laughable to find all decency arrayed in hot insurgency, all rascality on the side of law. "The President," on a speechmaking visit, is described as advocating a "quite harmless and toothless progressivism." How different his from Margaret's, who feels the "big concept"; foresees the "revolution brewing in education as in every other department of our haphazard old civilization"; —has seen it coming for years, but hasn't "connected it up"—to which her spouse replies, "That's the problem—connecting up."

HIERATIC TEXTS.

Egyptian Hieratic Texts, transcribed, translated, and annotated by Alan H. Gardiner, D.Litt., Laycock student of Egyptology at Worcester College, Oxford. Series I: Literary Texts of the New Kingdom. Part I: The Papyrus Anastasi and the Papyrus Koller, together with the Parallel Texts. Leipzig, 1911.

The appearance of the first instalment of this series marks the inauguration of a new and important literary enterprise. Even the material form of these documents collected by Gardiner commemorates a great literary contribution. We refer to the fact that, whereas Babylonia contributed to the Mediterranean civilizations the use of the stylus for incised writing on a plastic medium, later continued in the wax tablet of the Roman, the Egyptian, on the other hand, originated and transmitted to the later world the use of pen and ink, making possible writing upon a thin and convenient membrane, papyrus paper. The heavy and inconvenient clay tablet, like its successor of wax, was long ago displaced by the larger surface of the handy roll or still more convenient *page* of Nile paper, while the stylus gave place to the Egyptian reed pen and carbon ink. For individual use the modern world has not been able to devise a mechanical system of writing essentially different from that so long used on the Nile, nor can the typewriter ever wholly displace the pen and ink discovered some five thousand five hundred years ago by the Egyptian scribes.

It is with some feeling of familiarity and even kinship that we greet the outward form of these documents written with black ink, the paragraphs marked by a word or two in red at the beginning, the ancestor of our rubric, the whole in regular lines on the light brown surface of the papyrus-paper. This cursive hand, written so rapidly by the scribe that little resemblance to the hieroglyphs of the lapidary style survives, has yielded more slowly to the process of decipherment than the elaborate hieroglyphs sculptured on stone, with which we are familiar in our museums or on the temple walls and obelisks of Egypt. It is commonly termed hieratic, and in the task of its decipherment the scholars of England have had a prominent and honorable part. The brilliant work of Goodwin in the early days of such research has been an inspiration to all scholars laboring under adverse and discouraging conditions. Who can but take courage as he looks back upon Goodwin, undauntedly continuing his hieratic studies in a consular office in China? To our understanding of the difficult Middle Kingdom hand, the able Oxford Egyptologist, Griffith, has contributed much, and it is but the continuation of an honorable tradition that his former pupil, Gardiner, should devote his fine abilities and unusual training to a comprehensive edition of a great body of early papyrus documents to which little or no attention has been given for a generation in the British Museum, where most of them are housed.

Gardiner's plan does not involve the reproduction of the original hieratic, of which he gives instead a careful transliteration into hieroglyphic, his text being based on repeated collations of the original papyrus in every case. This hieroglyphic transliteration he publishes in autograph on the left page, while the right is occupied with textual remarks and critical apparatus. To the technical student of Egyptian language and civilization this material is invaluable and fills a long-felt want. On the other hand, all students of ancient literature will find that the introductory summary of contents and the complete translation of each document afford a fascinating glimpse into a long vanished world.

The work which Gardiner has chosen for his first instalment is known among scholars as "Papyrus Anastasi I," one of a group of papyri purchased by the British Museum in 1839 from Signor Anastasi, Swedish Consul in Egypt. It is a contest of wits between two scribes of the reign of Rameses II (thirteenth century, B. C.), in which the weightier contestant writes a letter displaying his superiority over his adversary, to whom the letter is addressed. The writer Hori overwhelms his opponent, Amenemope, with a flood of good-humored raillery at the latter's meagre abilities. In the usual accomplishments and graces of style which should be possessed by the scribe the unhappy Amenemope is shown to be altogether lacking. The scribe must, furthermore, be a man of affairs and display administrative ability. In digging a lake or reservoir Amenemope is unable to calculate the amount of rations required for the troops employed, and when a great ramp or inclined plane is desired, up which to drag the stone for a public building, Amenemope is baffled by the complicated computation of the necessary number of sun-dried brick. A dispatch from the crown-prince arrives, telling of the execution of an obelisk some seventy-three feet in height; but it is not yet in position, and the luckless Amenemope, as caricatured by his merciless adversary, is entirely unable to say how many men should be employed, etc. His caricaturist, displaying noticeable familiarity with the geography of Phœnicia, Syria, and Palestine, passes jauntily from one Asiatic city to another, exposing his victim's ignorance of the foreign world as necessarily known to the well-informed scribe who would maintain correspondence with the cities of Asia in the days of the Hebrew Exodus. Place-names familiar to students of the Old Testament are common in this list, and even the Jordan emerges here for the first time in history.

A collection of four model letters (Papyrus Koller, Berlin Museum), on which the schoolboys of three thousand years ago practiced their hands, forms the second part of Gardiner's first instalment.

When a sufficient number of parts have appeared to make a volume, indices covering all the material contained in it will be issued, and the paging has been so arranged that it will be possible to bind texts and translations each in volumes by themselves. On the completion of the literary series Gardiner plans to publish others, containing magical texts, business documents, juristic texts, letters, and the like. The author is to be congratulated on the sound and methodical treatment, as well as the literary ability, evident throughout the work. The project when completed will constitute an important achievement in the Oriental field, and it is to be hoped that it may go steadily forward without interruption.

English Apprenticeship and Child Labour: A History. By O. Jocelyn Dunlop. With a supplementary section on the modern problem of juvenile labour, by O. Jocelyn Dunlop and Richard D. Denman, M. P. New York: The Macmillan Co. $3 net.

Problems of juvenile employment have been much discussed in England in recent years, and many books and pamphlets have been called forth. One of the most important products of the discussion is this bulky and scholarly volume on the history of English apprenticeship from the Middle Ages to the nineteenth century. Though the author may not have discovered anything essentially new, he has brought to light considerable fresh and interesting material of illustrative character from the records of the gilds, companies, cities, and courts of law. The investigation was suggested by Mr. and Mrs. Sidney Webb, and as a piece of research approaches in excellence the well-known historical work of the Webbs.

The story of child labor before the nineteenth century is the story of apprenticeship, which had obtained a firm hold in England by the fifteenth century, and in the sixteenth was crystallized in the Elizabethan Statute of Artificers. From that epoch until the advent of the factory system England had thus a compulsory, cheap, and efficient system of technical training, which at the same time succeeded in avoiding the serious evils of modern child labor. In mediæval times and until the introduction of the factory system children were employed in as many kinds of labor, at as early an age and for as long hours, as since the industrial revolution, but with this marked difference in favor of the earlier period, that employers felt a personal responsibility for the health, morals, and industrial future of the boy; and the gilds were strong enough to punish any delinquency on the part of the masters in their treatment of their apprentices.

The growth of capitalism and the elevation of the doctrine of *laissez faire* into a political and industrial creed removed this personal responsibility and destroyed the gilds, so that the nineteenth century has come to stand out as the period in which child labor has been most ruthlessly exploited.

The leading rôle played by the gilds in enforcing the beneficent features of apprenticeship Mr. Dunlop sets forth in a clear and interesting manner; but it also appears that in the hands of the gilds apprenticeship became a powerful weapon for creating and preserving an industrial monopoly. The apprenticeship system, although capable of providing a sound industrial training, soon became undemocratic and narrow. This the Government was powerless to prevent, because, lacking the necessary administrative machinery, it had to depend on the gilds to enforce the apprenticeship regulations, and the gilds too frequently enforced them in a monopolistic spirit. The gilds, in other words, gradually diverted apprenticeship from its proper function, and this was undoubtedly one of the chief causes of their overthrow. The revolt against apprenticeship in the eighteenth century was apparently at bottom but opposition to gild monopoly.

Apprenticeship as the sole means of entrance to a trade had, from a variety of causes, completely broken down by 1780, though the act itself was not finally repealed until 1814, two centuries and a half after it came into being.

Although most students of the problem agree that it is now impossible as well as undesirable to revive the institution of compulsory apprenticeship, many are inclined to look upon its passing with deep regret, feeling that it represented very wholesome conditions of juvenile employment. It should not be overlooked, however, that in certain respects the situation was far from ideal. The evil of gild monopoly has already been referred to. Technical training and membership in a skilled and honorable trade or profession was only for a chosen few. "Gild limitation of numbers must have closed the door of training and protection in the face of many who would be obliged to occupy themselves, therefore, in unregulated fields of work." It is well to remember, also, that apprenticeship was from the very beginning regarded as a method of poor relief. Parish officers and overseers of the poor apprenticed their pauper children, and as a rule to an inferior class of masters, who had but slight appreciation of their duties. It is, of course, a well-known fact that it was the miseries of the pauper apprentices in the cotton mills that finally stirred to action the child-labor reformers of the early part of the nineteenth century.

Furthermore, a system of industrial training for boys alone would certainly find few champions at the present day, though that was a marked feature of the old apprenticeship. Women and girls were employed in every branch of industry, even in those requiring heavy manual labor, but there was no systematic training and instruction for them, as there was for the boys.

Although in large measure a presentation of the results of research into the history of child labor and apprenticeship, the book shows from the first pages that its underlying purpose is practical, namely, to emphasize the fact that at the present time too many children and young persons are drawn into "blind alley" occupations, or those "which have little or no prospect of permanence and no educative value either for citizenship or for adult work. Consequently, when they are no longer able to support themselves upon juvenile wages, they are turned adrift and younger workers are taken in their place." The problem to-day is the same in the United States as it is in England. We must show the legislators and the public that "juvenile labor is merely a prelude to adult labor"; that it should not be regarded as an "independent factor in the labor market."

Notes

"Sir Gawain and the Green Knight" has been put into modern English by the Rev. Ernest J. B. Kirtlan, who has also written an introduction on the author and on the Gawain stories in English. The work will be published shortly by C. H. Kelly of London.

The Countess d'Aulnoy's "Memoirs of the Court of England in 1675" will appear shortly from the press of John Lane, edited by G. D. Gilbert. Mr. Gilbert attempts to explain the mystery surrounding Lucy Walter, the mother of the Duke of Monmouth.

Two novels are promised for this month by the Appletons, "The Inheritance," by Josephine Daskam Bacon, and "Marcus Holbeach's Daughter," by Alice Jones.

Lothrop, Lee & Shepard announce "The Sanctuary," a new novel by Maud Howard Peterson, and "The Boy with the U. S. Fisheries," by Dr. Francis Rolt-Wheeler.

"The Man Who Bucked Up," by Arthur Howard, and "Princess Rags and Tatters," by Harriet T. Comstock," are forthcoming stories in the list of Doubleday, Page & Co.

Jean Webster's "Daddy Longlegs" and Hugh Walpole's "A Prelude to Adventure" are new novels announced by the Century Company.

The Hungarian Literary Society is bringing out a volume of Petöfi's Poems. The translator is William N. Loew. The proceeds from the sale of the volume will go towards the erection of a statue of the Magyar poet in New York.

Stokes has in press for issue next month, in fiction: "Between Two Thieves," by Richard Dehan; "Lifted Masks," by Susan Glaspell; "A Whistling Woman," by Robert Halifax; "Miss Wealthy, Deputy Sheriff," by Elizabeth Neff; "The Bride's Hero," by M. P. Revere; "Eve's Other Children," by Lucille Van Slyke; "King-Errant," by Flora Annie Steel, and "My Robin," by Frances Hodgson Burnett.—Miscellaneous: "At Prior Park and Other Papers," by Austin Dobson; "The Spirit of Christmas, and Other Prose Poems," by Arthur H. Gleason; "The Story of the Idylls of the King," by Inez McFee, and "The Lovers' Baedeker," by Carolyn Wells.

Among the books which Cassell will publish this autumn are, in fiction: "The Strong Hand," by Warwick Deeping; "The Man at Lone Lake," by Virna Sheard; "The House of Windows," by Isabel Ecclestone Mackay; "The White Gauntlet," by Percy Brebner; "The Adventures of Napoleon Prince," by Mary Edington, and "Violet Forster's Lover," by Richard Marsh.—Miscellaneous: "First Sketch of English Literature," by Henry Morley, revised; "The Story of the Renaissance," by William Henry Hudson: "Thackeray," by Sidney Dark; "A History of the Modern World," two volumes, by Oscar Browning; "The Man of No Sorrows," by Coulson Kernahan; "High Road to Christ," by the Rev. Richard Roberts; "Evangelicalism: Has It a Future?" by R. C. Gillie; "Personal Power," by Keith Thomas; "Among the Heretics," by J. A. Packer, and "Social Studies," by Oliver C. Malvery and the Rev. J. Marchant.

Little, Brown & Co. have several new novels in their autumn list: "The Court of St. Simon," by Anthony Partridge; "The Gift of Abou Hassan," by Francis Perry Elliott; "All the World to Nothing," by Wyndham Martyn; "The White Blackbird," by Hudson Douglas; "Good Indian," by B. M. Bower; "A Little Book of Christmas," by John Kendrick Bangs; "A Cry in the Wilderness," by Mary E. Waller; "The Tempting of Tavernake," by E. Phillips Oppenheim, and "The Destroying Angel," by Louis Joseph Vance.—Illustrated books: "Romantic Days in the Early Republic," by Mary Caroline Crawford; "A Book of Hand-Woven Coverlets," by Eliza Calvert Hall; "Colonial Homes and Their Furnishings," by Mary H. Northend; "Historic Summer Haunts from Newport to Portland," by F. Lauriston Bullard; Jeffery Farnol's "The Broad Highway," with twenty-four full-page pictures in color by Charles E. Brock; "Switzerland in Sunshine and Snow," by Edward B. d'Auvergne; "Tramps Through Tyrol," by F. W. Stoddard; "The Cathedrals of England and Wales," by T. D. Atkinson; "Keats's Poems" and Kingsley's "Water Babies."—Juveniles: "Heuley's American Captain," by Frank E. Channon; "The Fourth Down," by Leslie W. Quirk; "Buddie at Gray Buttes Camp," by Anna Chapin Ray; "Dave Morrell's Battery," by Hallis Godfrey; "Donald Kirk, the Morning Record Copy-Boy," by Edward Mott Woolley; "The Fir-Tree Fairy Book," by Clifton Johnson; "Curiosity Kate," by Florence Bone; "The Bunnikins-Bunnies and the Moon King," by Edith B. Davidson; "Ned Brewster's Year in the Big Woods," by Chauncey J. Hawkins; "The Wonder Workers," by Mary H. Wade; "Cherry-Tree Children," by Mary Frances Blaisdell; "The Boy's Parkman," compiled by Louise S. Hasbrouck; "The Young Crusaders at Washington," by George P. Atwater; "Mother West Wind's Animal Friends," by Thornton W. Burgess; "When Christmas Came Too Early," by Mabel Fuller Blodgett; "Folk Tales of East and West," by John Harrington Cox; "Josefa in Spain" and "Donald in Scotland," by Etta B. MacDonald and Julia Dalrymple. "The English History Story-Book," by A. F. Blaisdell and F. K. Ball, and two "Children of History" books, by Mary S. Hancock.—Miscellaneous: "The Intimate Memoirs of Napoleon III." translated from the private diary of Baron d'Ambes: "Myths of the Modocs," by the late Jeremiah Curtin; "The Party Book," by Winnifred Fales and Mary H. Northend; "Modern Italian Literature," by Lacy Collison-Morley; a translation of Emile Ollivier's "The Franco-Prussian War and Its Hidden Causes"; "Woman in the Making of America," by H. Addington Bruce; "John Hancock, the Picturesque Patriot," by Lorenzo Sears; "In the Footsteps of Richard Cœur de Lion," by Maud M. Holbach; "A Polish Exile with Napoleon," by G. L. de St. M. Watson; "Lords and Ladies of the Italian Lakes," by Edgcumbe Staley; "Penal Philosophy," by Gabriel Tarde; "A Short History of English Law," by Edward Jenks; "A History of Roman Law," by Andrew Stephenson; and English translations by F. C. de Sumichrast of Théophile Gautier's romances and travels.

The head of Windermere, the haunt of Wordsworth, comprising the meadowland between the mouth of the River Rotha and Waterhead, will be used for building purposes, unless a sum of £4,000 can soon be raised to purchase the site for the English nation. Two thousand four hundred pounds has already been contributed, the major part by residents of the locality, and we are asked to urge any Americans who are able to do so to help make up the remainder. Checks may be sent to Canon H. D Rawnsley, honorable secretary to the National Trust, Crosthwaite Vicarage, Keswick, England.

"The Garden of Eden and Its Restoration," the opening article in the *Geographical Journal* for August, by Sir William Willcocks, is a description of the proposed irrigation works which will give to Mesopotamia a firm foundation for its future prosperity. Referring to the fact that Mehemet Ali proposed to the Sultan of his day to exchange Egypt for Babylonia, Sir William said that "England would make no bad financial bargain if she were to exchange Egypt for Babylonia." An interesting and encouraging account of Northern Nigeria is given by C. L. Temple, one of the small band of pioneers who set up an administration there some twelve years ago. One characteristic of the country is the innumerable races and tribes to be found in it. In one area of about 25,000 square miles sixty-four languages and dialects are spoken. Another is the industry of the natives, illustrated by the fact that from whatever point one approaches the town of Kano "he will travel for three days through country every inch of which is highly cultivated." The land revenue has increased in eight years from $80,000 to $2,300,000, and foreign-made trade spirits, which have wrought so much evil in Western Africa, are prohibited. Other subjects treated are the relations of kames and eskers, formations deposited by water from melted glacier-ice, by Prof. J. W. Gregory, and the distribution of early Bronze Age settlements in Britain, with sketch-maps and illustrations by O. G. S. Crawford.

The *National Geographical Magazine* for July opens with an account of some little-known parts of Panama by Henry Pittier. Its most interesting feature is the description, with many reproductions of photographs, of the three aboriginal tribes still in existence, who retain most of their ancient customs. Of the Chocoes he writes: "Never in our twenty-five years of tropical experience have we met with such sun-loving, bright, and trusting people, living nearest to nature, and ignoring the most elementary wiles of so-called civilization." The chief of the United States Forest Service, H. S. Graves, describes the methods adopted by the Government for fighting the forest fires, for 33 per cent. of which the railways are responsible. The importance of this work of reducing a loss which reaches about a million dollars annually is shown by the fact that the production of timber by growth is one-third less than the amount used. Among the preventive works of the Government in the national forests are numerous lookout stations, 10,000 miles of trails, above 5,000 miles of fire lines, and 7,000 miles of telephone lines.

H. A. L. Fisher's "Republican Tradition in Europe," published in 1911, and reviewed by us on September 7 of that year, has been brought out by Putnams in a Students' Edition.

In a very readable biography of "William the Silent" (Baker & Taylor), J. C. Squire, late scholar of St. John's College, Cambridge, has made good use of the great statesman's published correspondence and of some of the English Calendars of State Papers; otherwise his dependence upon Motley, Ruth Putnam, and Frederic Harrison is almost complete. He tells his story in a lively, dramatic fashion, but seeks to impress his reader with William's greatness by an extravagant use of adjectives rather than by a simple statement of the facts upon which that greatness really rests.

Prof. E. J. Urwick, of King's College, London, in his "Philosophy of Social Progress" (Methuen), throws down the gauntlet to the sociologists by declaring that there cannot be, in any proper sense, a "science" of society, but only a philosophy of social development. In his view, the elements of social life are too numerous and complicated to admit of scientific synthesis; moreover, the power of man to determine, in considerable measure, his own action makes it impossible to formulate laws as to what society, the aggregate of these innumerable free wills, will do or ought to do. From Professor Urwick's standpoint, the influence of environment in affecting social activity has been overworked. On the contrary, the conduct of society in any given case is likely to be the result of an appropriation, by an increasing number of persons, of ideas or examples originating with individuals. Peculiarly interesting is his view of the purposive character of social development, and his recognition of spiritual and religious forces as elements in progress. For loose generalizations and illogical conclusions the author has frank contempt, and his own contribution, while avowedly controversial, and not in all respects so novel or revolutionary as he apparently thinks, has a solid basis of clear thinking and pertinent illustration.

If the old fisherman in the twenty-first idyll of Theocritus had not dreamed that he caught a golden fish, it is possible that there would be to-day no occasion for such a book as Dr. Henry Marion Hall's on "Idylls of Fishermen: A History of the Literary Species" (Columbia University Press; Lemcke & Buechner). So definite was the impulse which came from the Sicilian. Despite the fact that fisherman's luck was a favorite topic with ancient writers, it required the artificial setting of an idyll before it could create a body of traditions sufficient for the making of a literary species. This was Theocritus's contribution. Virgil, oddly, left the type virtually untouched, yet exerted great influence upon it indirectly. For Sannazaro refashioned the details of Virgil's pastorals into the fisher mould of Theocritus. In his piscatory eclogues are lists of fishes corresponding to the Augustan's groupings of trees; men sing while they fish, so that the poor victims rise to listen; there are contests for prizes, etc.; in short, all the devices of the pretty fad into which the eclogue proper had developed. Through Italy, Spain, France, and England the fisher idyll ran a long and wide course. For a couple of centuries there was hardly a branch of literature into which it did not enter. The sonnet, the romance, the drama, the romantic epic sheltered it. In England Phineas Fletcher is found by Dr. Hall to be the most significant figure in this movement. Fletcher, it is interesting to note, made the same use of Spenser that Sannazaro had made of Virgil, adapting wherever the plan of his "Piscatorie Eclogs" permitted the substance and manner of the "Shepherd's Calendar." By this time it is evident that the fisher idyll had assumed an artificiality far removed from the only slightly exaggerated setting furnished by Theocritus. This gave trouble to its later votaries, and an effort was made to correct blunders by squaring the work with such an authentic treatise as Walton's "Compleat Angler." Further ramifications of the type are too complicated to be sketched here. A list of the chief English piscatories includes: Donne, Milton (in "Paradise Regained"), Gay, Moses Browne, William Thompson, Monk Lewis, Scott, and Keats. Dr. Johnson, as might be expected, had his say about this fashion. In the *Rambler* he objects to Sannazaro's eclogues because the sea presents less variety than the land, and because a sea poem for one dwelling inland will always remain as unintelligible as a chart.

Seven years ago the H. W. Wilson Co. of Minneapolis, Minn., began publishing a thin and unpretentious quarterly called *Library Work*, which provided an index and a brief digest of the more important articles appearing in current library periodicals. As the list of periodicals included was short and the period covered by each issue was brief, tho material in each number was too scant to be of much service, and the publication received little encouragement from librarians. The work, however, was continued, gradually including a wider range of periodicals, and now the whole series of separate issues, with much added matter, cumulated and arranged in one straight alphabet, is published in a large octavo volume of 400 pages under the title "Library Work." It furnishes an entirely new and unique tool for reference in the field of library economy. With this tool in hand, tho busy librarian can in a minute put his finger on every reference to any specific library topic or problem that has appeared during the past seven years in any and all of the twenty-six leading library periodicals in America, England, Scandinavia, Holland, Germany, Denmark, and Italy; and for about one-third of these references—and those the most important—he has in the index itself a summary or digest of their main points. There is in English only one other work of reference in its field to be compared with this—the comprehensive "Bibliography of Library Economy," compiled by H. G. T. Cannons and published in London in 1910 (Stanley, Russell & Co., 7s. 6d.). The latter has the advantage of including the whole period from 1876 to 1909, and of being arranged in both classified and alphabetical order. The former has the advantage of being two years nearer to date and of not merely pointing to, but in many cases providing, the material needed. For the librarian who wishes to be exhaustive, both indexes are needed, but for one who has access to only a limited number of library periodicals, "Library Work" is by far the more useful. With this cumulation, the quarterly issues are brought to an end, the work being taken over by the *Library Journal*, of which it will hereafter be a regular feature. In one important respect the volume deserves severe criticism, and that is the cheap and flimsy binding in which it is issued. In these days when librarians are working so persistently to raise the general standard of book-binding, it is inexcusable that one of their own professional tools should be supplied in this wretched form.

The proceedings of "The Robert Browning Centenary Celebration," at Westminster Abbey, May 7, 1912, are published in attractive pocket form with a portrait by the Houghton Mifflin Company. Professor Knight is editor for nine short contributions: The Oral Interpretation of Browning, by Bishop W. Boyd Carpenter; two commemorative poems by Canon Rawnsley; Browning on Failure, by Emily Hickey; Browning and Wordsworth on Intimations of Immortality, by Ernest Hartley Coleridge; Browning as a Letter Writer, by H. C. Minchin; Browning as I Knew Him, by William C. Kingsland; An Australian appreciation of Browning, by Prof. Henry Laurie; The Ring and the Book, by Dr. Hill. To these is added a report of the Robert Browning Settlement at Walworth, by the warden, F. Herbert Stead. It is easy to see that these brief addresses may have adequately served their immediate purpose, but one and all they share the literary dreariness that paradoxically the most robust of poets infallibly inspires in his interpreters. Yet doubtless the inner cult will unreservedly welcome this pious tribute to a great memory.

No one knows or loves Paris better than Georges Cain, curator of the Musée Carnavalet. Not long ago, Emile Faguet said of him, "He is the geographer of Paris. He knows all the houses in it, all the streets, the squares, the gardens. And he is the historian of Paris. Of each house, street, square, and garden he knows all the history, from the most remote times down to the other day." His book, "Byways of Paris" (Duffield), translated by Louise Seymour Houghton, like its numerous predecessors, bears out this statement. The curiosities to be found in its pages are as varied as they are interesting: the garret where Napoleon did *not* live; the Hôtel de Ville and the playground of revolutions in front of it; the Théâtre du Vaudeville, where "la Dame aux camélias" had its first night sixty years ago; the brook of Ménilmontant, where Parisians shot ducks in times past, and which now runs underground beneath the Opéra; Balzac's retreat in the rue Raynouard, with one of those deep and shady gardens which give Passy an air of having grown up on a wooded countryside and of still preserving bits of it; the strange northwest slope of Montmartre, undiscovered of Americans who go with a devilish air to the Moulin Rouge. Faguet says a book of Georges Cain is good for people who do not love Paris (as if there were any); for those who do, it is even better, provided they brace themselves for a sharp attack of nostalgia.

The valuable part of the last "Proceedings of the State Historical Society of Wisconsin" is that portion of the Appendix given over to "Historical Papers." This portion is more than two-thirds of the volume. The subjects range from such topics as "Recollections of a Pioneer Woman of La Crosse" and "A Wagon Journey from Ohio to Wisconsin in 1846," to the more pretentious sort indicated by the titles, "The Admission of the 'Omnibus' States, 1889-90," and "Some Aspects of Politics in the Middle West, 1860-72." The last-named paper is by Evarts Boutell Greene, Ph.D., and is an examination of Professor Dunning's thesis that the continuity of the Republican party since 1854 is doubtful, so far as it applies to the political situation in the Middle West during the dozen years following the election of Lincoln. Quotation from the concluding paragraph will best show the trend of the author's reasoning:

> Having recently constructed a building at the University of Illinois, to be known as Lincoln Hall, we have been interested in preparing, after consultation with various persons throughout the State, a list of the Illinois men who, having been associated with Lincoln either in the conflict against slavery or in the work of preserving the Union, seemed especially to deserve conspicuous recognition. An effort was made to have the list representative so far as possible of different phases of political ac-

tion. The nine men finally selected for this purpose were: Douglas, Trumbull, Yates, Palmer, Logan, Lovejoy, Koerner, Davis, and Medill. Of these nine, seven were living in 1872. Of these seven survivors, not more than two were in that year identified with the same political party to which they belonged in 1860. Of the six men living in 1872, who were Republicans in 1860, four were associated with the Liberal Republican movement, and none of the four was ever restored to regular standing in the Republican party. Of the two men who were Democrats in 1860, the one survivor in 1872 was an intensely partisan leader of the Republican party.

The collection is one more piece of evidence of the deep and intelligent interest that the West is taking in its past.

E. L. Miron, in "The Derelict Duchess" (Brentano's), has done his best to give substance to the shadowy figure of Charlotte d'Albret, Duchesse de Valentinois, the abandoned wife of Cesare Borgia. But for all his efforts, all his painstaking researches and analyses of ancient *inventaires*, and, we may add, all his fanciful evocations and flights of sentimental sympathy, this unhappy lady remains but a pallid portrayal. Whether she wished to marry Cesare or whether she married him against her will, what she did or said, how she looked—all this is uncertain. We know only that she was referred to by contemporaries as "one of the loveliest girls of France"; that after her separation from her husband she made sundry unsuccessful efforts to join him in Italy; and that after his downfall she pleaded his cause, with equal lack of success, before King Louis, who was thoroughly out of conceit with his old ally. The omissions of the "master-makers of history" are redressed by the author in a spirit of tender piety. He pictures his heroine first in the Château de Nérac, the home of her coarse-souled and intriguing father, Alain le Grand, the Sire d'Albret, scion of a great Gascon house; then among the ladies-in-waiting of Anne de Bretagne, twice Queen of France, who helped arrange Charlotte's marriage with Cesare Borgia when the originally projected marriage with that other Charlotte, de Tarente, fell through; and then, finally, we see her, after her brief married life with her husband, which seems to have been happy, at Issoudun, immured in her manor of La Motte Feuilly, where she awaited the deliverance which never came. Having mated her to Cesare, the King of France apparently held her as a hostage for his doubtful ally in the ill-placed hope that the latter might thereby be kept faithfully to his engagements. But for the Italian, his French marriage was but the merest incident. Although his wife bore him a daughter, Louise, Cesare never saw her again after leaving France. In 1514, six years after his death, she too died, and was buried, according to the instructions in her last will and testament, in the chapel of the Convent of the Annonciades at Bourges, beside her friend, Jeanne de Valois, the uncrowned Queen of Louis XII. But her heart was removed from her body and placed in the Church of La Motte Feuilly. Here, later, at the order of her daughter, Mme. de la Tremoille, was erected a beautiful monument, the work of Claustre, with the effigy of the Duchesse in alabaster. This was savagely mutilated during the Revolution, but has since been restored.

Science

Dr. Stephen Smith is bringing out, through Frank Allaben, New York, "The City that Was," a treatise on sanitation in New York city in 1864, and "Who Is Insane?"

The House of Cassell numbers among its forthcoming autumn publications several science books: "Electricity in the Service of Man," two volumes, by R. M. Walmsley; "Wireless Telegraphy," by B. E. Jones; "Reinforced Concrete," the same; "Practical Conjuring Up to Date," the same; "Motor Cars and Their Story," by F. A. Talbot; "The Complete Gardener," by H. H. Thomas; "Indoor Gardening," the same; "Wild Flowers as They Grow," fourth series, and "Spiderland," by R. A. Ellis.

Readers need not fear that the new and enlarged edition of "The Field-Book of American Wild Flowers" (Putnam), by F. Schuyler Mathews, has outgrown its convenience as a handbook. It is still fitted to the side-pocket and adapted to ready use in excursions. Severe tests applied to the key leading to the families shows that a great deal of labor has been bestowed upon it, in order to make it trustworthy and simple even for beginners. The engravings, which aim to discriminate puzzling species, are well drawn, and the colored plates also are excellent. Besides, Mr. Mathews gives much first-hand information concerning the relations of insects to our common plants.

"Practical Poultry Keeping," by R. B. Sando, and "Profitable Breeds of Poultry," by Arthur S. Wheeler, two of the Outing Handbook series, give in a condensed and elementary form many axiomatic rules of poultry culture. Mr. Sando has kept on safe ground, and the poultryman who has no other manual on his shelves will find here nothing to lead him astray, and not much that he does not know already. Although the Census Bureau has tabulated returns from 5,655,754 farms which raised poultry during 1909, and although there are as many more town and city amateurs, it is inconceivable that there should be further demand for these trite and elementary manuals, which offer nothing but the reiteration of principles as well-known as the Ten Commandments—and perhaps as often violated. A. S. Wheeler writes in a brisk and assertive style, and his views will attract attention from the fact that he is one of very few writers on poultry topics who come out from behind the old legend, "All breeds are good, and none is better than the others." His enthusiasm for the Rhode Island Red is very great, but he well defends it, and his opinion of the Leghorns is also sustained by the facts. His manual makes good reading.

The purpose of "Earth Features and Their Meaning (Macmillan), by Prof. W. H. Hobbs, is primarily to furnish a readable work on miscellaneous topics of modern geology and physical geography. In his preface the author lays stress on the fact that the book is a series of readings to stimulate the traveller to appreciate the landscape wherever he may go. A special emphasis is laid upon earthquakes, volcanoes, the work of water, desert processes, and glaciers. There is some mention of the mechanism of folding, but virtually no attention whatever has been given to the dynamics of intrusive magma, such as granite. We note in the only reference made to plutonic intrusion a very singular suggestion and a very misleading one, if the author wishes his book to convey generally accepted doctrine. He asserts that "no igneous rock type is known which could be formed by the fusion of any of the carbonate rocks," and then, after showing that the chemical composition of shale resembles that of average igneous rock, he concludes, "This close resemblance is probably of deep significance, for the reason that shales and slates are structurally the weakest of all rocks, and for the further reason that they rather generally directly underlie the carbonate rocks, which are by contrast the strongest. For these reasons, shales and slates are the only rocks which are likely to be fused by relief from load through the formation of anticlinal arches within the earth's zone of flow. If this view is well founded, lavas and other igneous rocks are in large part fused argillaceous sediments, formed in connection with the process of folding." The reviewer would respectfully insist that this view is *not* well founded. That the composition of shale should resemble that of average igneous rock is not remarkable, as shale is the sedimentary product of erosion of igneous rocks, and represents the finest material of all minerals derived therefrom. Shale has not been concentrated as has sandstone, for instance, which consists almost wholly of quartz.

The book is noteworthy for the importance given to the experimental method in geology, for good reading references at the end of each chapter, for an unusually good analysis of weathering, and the surface process of dry regions, such as dune accumulations in the deserts, and for original treatment of glaciation. The work of organic life and the processes of the oceans are almost wholly omitted.

"La Sismologie moderne" (Paris: A. Colin—300 pages, 46 figures in text, 16 plates, 2 maps—4 francs), by F. de Montessus de Ballore, is a much-needed exposition in popular form of the author's large special works on seismological geography and seismological science. It explains with scientific precision, but for the general reader the periodic character of earthquake movements, their measurable elements, and the working of the instruments invented for their measurement; the varying phenomena; the geography of earthquakes and volcanoes; effects and relations of earthquakes with other phenomena; the consequent evolution of the earth's surface relief, and its connection with the internal constitution of our globe; and what man can do to meet the danger of earthquakes, particularly in his buildings. There is a short bibliography of principal works in the different languages, all of recent date like seismological study itself. The figures and maps are excellently chosen to make clear what has become in our own time a necessary branch of physical science, thanks to perfected means of exact observation.

The death is reported from Constance, Baden, at the age of eighty-one of the Rev. Johann Martin Schleyer, the German priest who invented Volapük, the first international language. It was based on English and contained many words borrowed from the Romance languages and from Latin. Schleyer published his first prospectus in 1879. In 1885 Volapük had been taken up in France. The Volapük Academy for the study of the language was founded in 1887, and to the third Volapük Congress, which met in Paris in 1889, 283 societies sent delegates, representing more than a million students. Shortly after this Congress, Schleyer and the members of the Academy divided over an effort to simplify the grammar and vocabulary for commercial use, and Volapük was superseded by other artificial languages.

Music

Critical and Historical Essays. By Edward MacDowell. Boston: Arthur P. Schmidt.

Edward MacDowell is now universally regarded as America's foremost composer. As a boy he exhibited such remarkable skill in the use of pencil and brush that a prominent Parisian artist, President of the Académie des Beaux Arts, offered to give him a free training, which offer it is most fortunate that he declined, for this country has had more great painters than creative musicians. A few years before his death appeared a volume of his poems, most of them written to be set to music by himself; and now, several years after his death, we have in book form some of the lectures which he delivered as professor of music in Columbia University. They are provided with a preface by the editor of the *Musician*, W. J. Baltzell, who explains why there were not more of these lectures to print. MacDowell conducted two courses, one of which was intended to give a general idea of music from its historical and æsthetic side, while the other was concerned with the development of musical forms, piano music, modern orchestration, impressionism, and the relation of music to the other arts. Unfortunately only a small part of the lectures in each course were fully written out. These he read from a manuscript, but the others were given from notes and illustrated by him on the piano. However, enough of them were worked out to make it possible to put together a volume which gives a clear and vivid view of the evolution and the history of music in their main outlines.

One cannot but regret that MacDowell ever accepted the Columbia professorship. There was little understanding of or sympathy with his aims and ideals on the part of the faculty, and while some of his pupils have since made names for themselves, most of those who had the privilege of attending his lectures were little more than "barbarians," as he characterized the university students collectively, speaking from the æsthetic point of view. It was not like teaching at a conservatory, where all the students have a practical knowledge of music. Doubtless the very fact that not a few of his hearers at the University had no such training impelled him to strive for that lucidity of explanation which will agreeably impress every reader of his book. What one regrets is that he should have ever taken the time to prepare these lectures. They are on the whole not much better than a similar set of lectures that might have been prepared by half a dozen musical journalists in the country. But no one in the country can give to the world the inspired songs or piano or orchestral pieces which he might have composed during the months it must have taken him to collect and digest the material for these lectures. Another set of "Eight Songs" or of "Woodland Sketches" would have been of infinitely greater value to the world than this volume of Columbia lectures.

Yet it is in itself a good book, and interesting; a book which may be cordially commended to the attention of all those who are enamored of MacDowell's music. For, beside much that is almost inevitably conventional in the discussion of ancient, mediæval, and modern music, of scales, counterpoint, folksongs, Troubadours, sonatas, operas, and so on, there is also a good deal of the precious individuality of MacDowell's mind. The keynote of his attitude as an historian and critic is struck in these words:

> In my belief, I am no respecter of the written word, that is to say, the mere fact that a statement is made by a well-known man, is printed in a well-known work, or is endorsed by many prominent names, means nothing to me if the thing itself is available for examination.

This independent attitude is exemplified again and again in these pages. The frank and sincere American is indignant at the antics of the European historians who see nothing of the flaws in some modern composers and none at all in some of the old masters. Mozart's sonatas for the piano, for instance, are habitually treated as sublime. Though they abound in bare runs and unmeaning passages, students are informed that they do not contain one note of mere filigree work. In reality "Mozart's sonatas are compositions entirely unworthy of the author of the 'Magic Flute,' or of any composer with pretensions to anything beyond mediocrity. They are written in a style of flashy harpsichord virtuosity such as Liszt never descended to, even in those of his works at which so many persons are accustomed to sneer." The modern style of ornament, as used by Chopin and Liszt, is distinctly an Oriental trait, and MacDowell does not agree with Sir Hubert Parry and others that the Moors in Spain, for example, covered poverty of thought beneath superficial ingenuity of design. The Alhambra outdoes in "passage work," in virtuoso arabesques, "all that an army of Liszts could do in piano literature; and yet the Arabs were the saviors of science, and promoted the greatest learning and depth of thought known in Europe in their time." As for Liszt, "there is such an astounding wealth of poetry and deep feeling beneath his somewhat 'flashy,' bombastic trick of speech he inherited, that the true lover of music can no more allow his feelings to be led astray by such externals than one would judge a man's mind by the cut of his coat or the hat he wears."

Frankness is what MacDowell missed in most of the books on musical history and criticism, as in the attitude towards art in general. People do not dare, he says, to admire the London Law Courts; all things must be measured by the straight lines of Grecian architecture. "Let us have frankness, and if we have no feelings on a subject, let us remain silent rather than echo that drone in the hive of modern thought, the '*authority* in art.'" He is indignant with the musical historians for perpetually parroting the ridiculous assertion that the increasing and decreasing of a tone in loudness as an element of musical expression was first *discovered* at Mannheim, about 1760, whereas Plutarch already referred to this thing. "When we read in Josephus," he says in another chapter, "that Solomon had 200,000 singers, 40,000 harpers, 40,000 sistrum players, and 200,000 trumpeters, we simply do not believe it." He does not join in the admiration of the Mastersingers; they were mainly valuable, in his opinion, for having furnished Wagner a subject for his wonderful opera. Hans Sachs was perhaps the only one of them whose melodies show anything but the flattest mediocrity.

In all these "heresies" one cannot but agree with MacDowell as against the historians. There are other heretical remarks, such as the statement that some of the sonatas of Beethoven, including the so-called "Moonlight," are "sonatas in name only"—an assertion which to some will seem the more audacious as on a previous page (27) the author had poked fun at the critics who said of Chopin that he was "weak in sonata form." While others descant on the rhythmic wonders of Richard Strauss, MacDowell calls attention to what Johann Strauss did by means of "a marvellous use of counterrhythms, thus infusing into the dance a simulation of intellectuality." On the important influence of the dance in shaping music he also dwells. Perhaps the most original and important of his pages are those devoted to explaining the difference between folk song and nationalism in music. Some of his remarks on Wagner's stage art show why he himself never felt inspired to write an opera. These remarks, and those which betray his inability to appreciate the fascination of Chinese and Siamese music, indicate limitations in his otherwise remarkable equipment for sympathetic appreciation and discriminating criticism.

Stokes, next month, will add several volumes to the Masterpieces of Music series: "Beethoven" and "Wagner," by Fred Corder; "Brahms," by Sir Charles Stanford; "Schumann," by Landon Ronald; "Schubert," by George H. Clutsam, and "Mendelssohn," by Sir F. H. Cowen.

It is often contended that, contrary to the prevailing belief, violins made today are just as good as those of the old Italians. A few weeks ago a number of music lovers and experts were invited in Paris to help test this question. In a darkened room several violins were played in succession. They were simply numbered, and the hearers then gave their opinions as to their comparative merits. Almost unanimously, the first prize was assigned to a Belgian instrument made this year. A French violin made in 1911 got the second prize. An old Stradivarius, valued at $12,000, had to be content with third place.

London is evidently not yet ready to give up the operas of Puccini even if Andreas Dippel found he could get along without them in Chicago and Philadelphia. During the season at Covent Garden, which closed on July 29, three of Puccini's operas were in the lead in the number of performances. "La Bohême" was sung seven times, "Tosca" and "Madama Butterfly" each six times. His "Girl of the Golden West," however, did not get more than three hearings. The most important novelty of the season, Wolf-Ferrari's "Jewels of the Madonna," was given six times. Verdi's "Aïda" and Leoncavallo's "Pagliacci" had each five performances. An important revival was Meyerbeer's "Les Huguenots," which was sung four times; four was also the figure for "Louise" and for "Rigoletto." "Carmen," "The Secret of Suzanna," "Samson et Dalila," and "Traviata" were each heard three times. The four operas of Wagner's Nibelung cycle were twice repeated, and two was the figure also for "The Barber of Seville," "Manon Lescaut" (another of Puccini's operas), which is far less popular than Massenet's "Manon." "Tristan and Isolde" was also sung twice; and so was "Conchita." Altogether, ninety-five performances were given of twenty-two operas.

Probably the biggest concert enterprise in the world is Sir Henry Wood's series of annual promenade concerts in Queen's Hall, London. No fewer than 500 numbers will be sung or played the coming season. Of these, 300 are purely orchestral, 60 others are instrumental, and 120 vocal. As in previous years, the Monday evenings are to be devoted to Wagner, the Friday evenings to Beethoven. Five of the concerts will be conducted by George Henschel.

Violoncello players often complain that there are so few pieces for them. But B. Schott's Söhne of Mayence alone publish a 'Cello Bibliothek of no fewer than sixty-five sonatas, with pianoforte. They are edited by Piatti, de Swert, Schroeder, and Moffat. The names of not a few of the composers, it must be admitted, are not widely known.

A book of 430 pages on Beethoven's ninth symphony has just appeared in Leipzig. The author, Heinrich Schenker, makes critical use of all previous treatises on this great work, written by Grove, Weingartner, Riemann, Kretzschmar, Nottebohm, and others.

Besides the "Wegweiser" recently referred to in this column, two other Bayreuth guides have appeared this summer. One of them, entitled "Bayreuth, 1912," is in German only; of the other, "Bayreuther Taschenbuch," there are also English and French editions. Still another of these guides for Wagnerites is entitled "München, 1912."

Germany reports a great shortage in military band players. More than a thousand are wanted—horn-players, cornetists, clarinet and oboe players, etc. A recent number of the *Deutsche Militärmusiker-Zeitung* contained eight pages of advertisements calling for extra men. The shortage is attributed to the fact that players in military bands have fewer opportunities than those in private bands for extra jobs.

Once more the Pergola Theatre of Florence is to be rebuilt. It was originally erected in 1652, and was the property of a society of aristocrats. In 1775 it was torn down and replaced by a building made of more substantial material than wood. It then had 2,000 seats, besides 114 boxes, and gradually became the leading opera house of Italy. In it many first performances were given of operas by Piccini (the rival of Gluck), Paisiello, Cimarosa, Cherubini, Donizetti, Rossini, Verdi, and many others.

The Norwegian city of Bergen, the birthplace of Edward Grieg, also has a theatre which is to be torn down. The present plan is to put in its place an industrial building, but an effort is being made to thwart this and carry out the project of making the new building a hall for concerts and national festivities. This would be appropriate, because the old theatre, known as the National Stage, has played a prominently patriotic rôle in the literary history of Norway, the country of Ibsen, Björnson, and Heiberg. It was built, with money earned chiefly in America, by the great violinist, Ole Bull, with the object of benefiting the national aspect of Norwegian art. Ibsen did much to help along the movement. Dissatisfied with the situation in Christiania, he had several of his plays produced first in Bergen.

Art

Art books in Stokes's list include: "The Tapestry Book," by Helen Churchill Candee; "Epochs of Chinese and Japanese Art," by Ernest F. Fenollosa; several volumes in the Great Engravers series; "Antiques and Curios" (House Decoration series); "Chippendale, Hepplewhite, and Sheraton," and "American Types," by Clarence F. Underwood.

Seven essays, entitled respectively "A Venetian Day," "The Italian Renaissance," "Rural England," "French and English Churches," "The Five Orders of Architecture," "On the Design of Houses," and "By the Sea"—bound up with forty-five pencil sketches—make up "An Architect's Sketch Book" (Houghton Mifflin), by Robert Swain Peabody. One of the oldest and most distinguished of Boston architects, Mr. Peabody has in these seven essays (several of which have previously appeared in the *Atlantic Monthly*) succeeded in conveying some sound and excellent teaching in a style whose easy flow is as far as possible from suggesting the lecture-room or the didactic discourse. The forty-five sketches are of no great importance architecturally, though marked by much charm of handling and crispness and delicacy of touch. In these days of photographs, half-tone prints, and architectural monographs, the *croquis de voyage* has lost its old-time importance as a record of facts. The architect's sketches, save as the making of them quickens his powers of observation and makes more precise his knowledge and memory of a building, are of value chiefly as records of impressions and revelations of the sketcher's taste and skill. Mr. Peabody's book will be valued most by his friends, fellow architects, and former pupils and draftsmen, as a reflection and expression of his own genial personality, his well-informed mind, and broad and fine taste; but it is a good book to put into the hands of any layman or student.

From the Clarendon Press we have received a "Catalogue of Portraits in the Possession of the University, Colleges, City, and County of Oxford," compiled by Mrs. Reginald Lane Poole. Volume I comprises the portraits owned by the University, town, and county. Subsequent volumes will take up the untilled ground of the college collections. The present volume contains 770 entries, in both the graphic and plastic arts, and more than 70 illustrations. The historical and iconographical notes have been carefully done, and there is a considerable contribution of new identifications and attributions. It all represents an amount of labor which those who have never attempted to unravel a portrait tradition can hardly imagine. Since Oxford University possesses few portraits by great masters the interest of the present work is strictly iconographical. Yet there could be no worthier form of antiquarian endeavor than to recover the actual similitudes of the great folk of older days. In fact, portrait iconography is a science only at its beginnings which might well claim the attention of many now devoted to less important fields of art. It is probable that Mrs. Poole's explorations among the colleges may reveal some fine portraits which escaped the notable exhibitions of 1904-5-6.

The Art Institute of Chicago calls attention to important special exhibitions now to be seen in its galleries: A loan collection from Germany of modern German applied arts; collections of paintings, by Jonas Lie and by Charles Morris Young; paintings from the collection of Henry C. Lytton, of Chicago. These collections will remain on view until September 15.

It is feared that the new scheme for bringing the proposed Ostia Railway into Rome will do considerable damage to the buried remains of the Circus Maximus, which, it had been hoped, would some day have been excavated. The present plan is to substitute for the previous scheme of two tubes under the Palatine and Capitol a tunnel across the old Vicus Tuscus. This would also prevent the exploration of the Lupercal.

Commendatore Boni has been continuing his excavations on the Palatine. In the course of them he has found a number of votive offerings, including an admirable representation of a camel. The latter was found at a considerable depth, and is held to confirm the accuracy of Plutarch's statement in his Life of Lucullus that camels were known to the Romans before the time of Scaurus. There have also come to light a marble head of a woman; a piece of gilt stucco from the dining room of Domitian; some fragments of mother-of-pearl, and a number of styli for writing. A splendid piece of pavement found some months ago Commendatore Boni considers to possess great historical as well as artistic value, as proving that the so-called *opus Alexandrinum* existed long before the time of Alexander Severus, in fact probably as early as Nero.

Excavations made in the Forum of Nerva, in Rome, have led to the discovery of the base of the western of the two standing columns, the so-called Colonnacce, the only remnants of the portico of the famous temple of Minerva. These columns had long remained half-buried in the ground, the total depth of the western column below the surface was shown to be no less than sixteen feet four inches. Other excavations are being carried on at the foot of the celebrated Torre delle Milizie, commonly known as the "Tower of Nero," though it was not erected till about the year 1200. It has now been shown, however, that this mediæval tower rests partly upon ancient Roman ruins and partly upon an ancient paved street.

Finance

EVIDENCES OF BETTER TIMES.

There are several directions from which, at a time when people are discussing the probability or improbability of nation-wide trade revival, evidence pointing the one way or the other is to be expected. The state of the steel and iron trade, which in a certain sense underlies all other industries, is one. Increase or decrease in the amount of money changing hands in general business (which is shown by the total volume of checks drawn on the country's banks) is another. Railway earnings, in which the movement of merchandise from city to city is reflected, are still another. The course of prices on the Stock Exchange has similar significance. All of these indications of prosperity or depression, as the case may be, have pointed an unfavorable inference during the past two years. Since it is in the early autumn that the trend of industry and finance is apt to define itself, an examination of these various weather-signs is now in point.

The course of events in the steel and iron trade has already become familiar. Business in that industry, according to the *Iron Age*, "has not been as active as at present since the early part of 1907." In the total money volume, checks drawn last week on all of the country's banks, reported through the various clearing-houses, indicated a 14 per cent. expansion over 1911. Detailed returns show that in the trans-Missouri West, where weekly totals have until lately lagged far behind last year's, the volume of check exchanges is now running 20 per cent. above 1911, and is exceeding all previous records for the period. The great Western railway systems have begun to report their earnings for July, when the first of the great crops of 1912 were starting for the market. Of these, the Atchison, Topeka & Santa Fé, whose net earnings in the twelve preceding months, despite nearly 300 miles' extension of its lines, fell a million dollars below the year before, reports for July a gross revenue $938,000 ahead of 1911 and net receipts larger by $509,000. Last Saturday's fortnightly statement of idle railway cars in the United States showed 11,500 decrease since the last report. The present total of 43,000 side-tracked cars is nearly 60 per cent. below this date in 1911 and is 80 per cent. short of the figure reported even in 1909. Furthermore, it is well known to the railway world that even the relatively small present number of idle freight cars represents largely equipment massed at harvest-distributing points, for instant use when the spring wheat crop begins to move.

The Stock Exchange movement has been to most people less illuminating. It is true that, during August, fifty stocks have touched at New York the highest price of the year, and that twenty-nine of these "new high records" were achieved last week. But a "high price for the year" is a very relative expression. Two questions will naturally be asked about it. The first is, whether it represents a large advance over the lowest of 1912, or a small advance. The second is, how do the "new high levels" compare with the top prices of other preceding years?

From the low prices of 1912—mostly touched in February—the advances have been very considerable. They have run as high as the 14½-point rise in Union Pacific, the 16¾ points in Steel, the 20 points in Louisville, the 25 in Reading, and the 28¾ in Amalgamated Copper. Out of the thirteen leading stocks, none has scored less of a gain than 8 points. But, on the other hand, only five of those stocks have as yet in 1912 reached the highest prices of the summer of 1911, and only one has touched the top level scored in the summer of 1909 or the first weeks of 1910. For exactly one-half of the above-named stocks, moreover, the top prices reached in 1906 or the few preceding years were well above those even of 1909. Was the actual state of prosperity, then, and the outlook for its continuance, greater in August, 1906, and in September, 1909, than it is at the end of August, 1912? Or are Stock Exchange prices relatively lower now, merely because of other and adverse influences which are present in 1912, but were not in 1909 or 1906?

The question is more pertinent, in view of the fact that, during the past three or four weeks, while all the other "industrial barometers" have been giving out positive forecast regarding conditions of prosperity, the Stock Exchange has stood still. Last week, for instance, total sales on the New York Exchange were less than the previous week's by 27 per cent., smaller by 36 per cent. than in the corresponding week of 1911, and rather generally ending in moderate net declines from the previous week.

Now, markets from which the capacity of motion seemed to have disappeared, and in which the narrow backward and forward swing of prices was the mere shadow and pretence of activity, have by no means been unfamiliar to the Wall Street of the past three years. When nothing is happening to alter the *status quo*, and when, so far as any one can see, the situation to-morrow, next week, or next month, will be exactly the same as it is to-day, a motionless stock market is at least entirely logical. But this explanation is as far as possible from fitting the market's action, or rather its inaction, under lately prevailing circumstances.

All the authentic news which has been coming to hand has borne evidence that the industrial situation, especially in this country, was changing radically. The disposition of American markets and business communities to exaggerate the favorable points in a revival of industry is familiar enough; but in this case we have had undisputed facts, whose natural influence, when measured by the criterion of all previous periods of the kind, was certain to be far-reaching. To the minds of some observers, even those of conservatism and experience, this country had reached a perfectly familiar stage in the economic cycle, which warranted expectation of much better times.

We had passed through the first after-panic liquidation of finance and industry; through the period of illusive and premature recovery, of secondary and severe reaction, of renewed liquidation. We had traversed the long stretch of despondent inertia, cautious readjustment of credits, replacing of troublesome international debt with handsome foreign credits, and compulsory economy in business. Instead of talking of the boom which was certain to be resumed to-morrow or next month, our financiers and men of affairs had begun to discuss the "boom period" as a half-forgotten tradition which no one expected to see again in our day. This has usually, in the past, marked the intermediate period which really ended the chapter of depression, and which indicated that normal recovery was at hand. At precisely that juncture, as has so often occurred on similar occasions in our history, nature showered her bounty with unexpected profusion on the United States.

Now, analogies of this sort are never sure enough to warrant the offhand inference that another trade boom of the old-fashioned sort is immediately ahead of us. In some of its essential particulars, every situation of the sort is different from any that has preceded it. But the fact of importance is that at least a real and decided change in conditions is in sight, to which financial markets make no visible response except by remaining idle. Judging the stock market by its movement of the past few weeks, Wall Street is still in doubt as to which way the wind is blowing.

The reason why it may be expected, with some show of reason, that this apathy will at least be in some measure shaken off, as we enter the early autumn, is that events rather than general conditions will begin to dominate financial sentiment. This ordinarily means that markets are forced at least to declare themselves as regards their actual tendency. We shall very soon know—if that was necessary—whether our later crops are to fulfil all the cheerful predictions of a month ago, or are to have their prospects slightly impaired. On the second business day of September, we shall be favored with an indication of extraordinary interest regarding the actual trend of Presidential politics. If the state of the money market is to be a hindrance to financial plans, we are likely to learn it early in September, and if nothing of moment develops in that quarter by that time, it will be a fair assumption that the money situation will not be disturbing during the autumn.

If the Stock Exchange has merely been waiting to make up its mind on such considerations, it will at least have the opportunity to do so then. Thus far, the singular and unusual aspect of the case has been that, with the cards pretty much all on the table, even the alert mind of the Wall Street fraternity has apparently been unable to satisfy itself as to the course of the game. And the odd part of that hesitation is that it is exactly the state of mind which people in general expect to regulate, in their own case, by watching for Wall Street's clear expression of opinion.

READY AUGUST 28th

THE COST OF IT

By ELENOR MORDAUNT
Author of "A Ship of Solace," etc.

This audacious tale presents the exotic life of a far-eastern British possession and of the half-caste mixtures of the yellow, black, and white races—the dangerous, pleasure-seeking women and the shifty and shiftless men—to whom the English-bred hero is unfortunately allied by blood.

Cloth. 12mo. $1.35

THE MOON ENDURETH

By JOHN BUCHAN
Author of "The Watcher by the Threshold," "Prester John," etc.

Mysterious and startling stories that carry the reader from the matter-of-fact world into a strange realm swayed by psychic, invisible, or supernatural powers. Romance, mystery, and adventure abound. Written with power and charm.

Cloth. 12mo. $1.25

STURGIS & WALTON CO.

MESOPOTAMIAN ARCHAEOLOGY

Being an Introduction to the Archaeology of Babylonia, Assyria and the Adjacent Countries

By Percy S. P. Handcock

Assistant in the Department of Egyptian and Assyrian Antiquities in the British Museum.

Fully illustrated with tracings of contemporary inscriptions, etc., and photographs of remains and monuments. Large 8vo. $3.50 net. By mail, $3.70.

An authoritative handbook in which much attention has been given to the subjects of architecture, sculpture, and metallurgy, together with chapters on the cultural evolution of the people of Mesopotamia; the Cuneiform writing—its pictorial origin, the history of its decipherment, and the literature of which it is the vehicle; an historical review of the excavations, etc.

Educational

The Western Theological Seminary

N. S., Pittsburgh, Pa.

Founded by the General Assembly, 1825.

A complete modern theological curriculum, with elective courses leading to the degree of B.D. Graduate courses of the University of Pittsburgh, leading to degrees of A. M. and Ph.D., are open to properly qualified students of the Seminary. Exceptional library facilities—34,000 volumes. A new dormitory, equipped with latest modern improvements, including dining-room, gymnasium and social hall, is now ready for occupancy. Next term opens Sept. 17, 1912. For information apply to Pres. James A. Kelso, Ph.D., D.D.

Morristown School Morristown, N. J. College Preparatory Boarding School for Boys. Small classes. Supervised sports; new gymnasium. Lower School for boys 10 to 14. **Advisory Board**—President Hibben, Princeton; Dean Hurlbut, Harvard; Rev. Anson Phelps Stokes, Jr., Secretary of Yale; Prof. Hallock, Columbia; President Pritchett, Carnegie Foundation.

WEST VIRGINIA, Lewisburg, Drawer 5.
Lewisburg Seminary Preparatory and College courses for girls. Also Music, Art, Elocution, Business. Strong faculty of experienced specialists. Handsome, modern buildings, steam heat, etc. Gymnasium, basket ball, tennis. Invigorating mountain climate. Catalogue on request. R. C. Sommerville, Pres.

THE BRIARCLIFF SCHOOL FOR LITTLE GIRLS

A boarding and day school for girls under fifteen. Address
Mrs. FRANCES MARSHALL, Principal,
Briarcliff Manor, N. Y.

NEW YORK LAW SCHOOL. **Day School, Evening School.** **174 Fulton St. N. Y. City.**
"Dwight Method" of instruction. Location near the courts and lawyers' offices. High Standards. Send for catalogue. GEORGE CHASE, Dean.

Just Published!

Elementary Applied Chemistry

By LEWIS B. ALLYN,
Department of Chemistry, State Normal School, Westfield, Mass.

60 cents.

This book is based upon numerous exercises with common substances—food products, water, textile fabrics, soil, and many others—giving a particularly complete analysis of them, and presenting them in such a manner as to make chemistry a living issue. The order of presentation differs essentially from that of the usual textbook, the common elements, bases, and radicals being taken up as they naturally occur.

Boards of health, inspectors of milk, teachers of domestic science, and all those interested in the pure-food problem will find that the book has a special function in its valuable information relating to their work. The author is already well known for his successful campaigns in the cause of pure foods.

The Nation

NEW YORK, THURSDAY, SEPTEMBER 5, 1912.

The Week

Exceptional interest attached to the elections on Tuesday in Ohio and Vermont, and of the two it may be difficult to say which was of the greater importance. In Ohio the defeat of woman suffrage, the adoption of the initiative and referendum, and the approval of a local-option amendment stand out conspicuous; but there were also many other Constitutional proposals of high importance which have been adopted. In the Vermont election, the interest was of a different kind; and, in the present conjuncture, the significance of the result has a greater immediate appeal to national interest. The outstanding fact is that the Democrats have held their own, in spite of the utmost exertions which Mr. Roosevelt himself, not to speak of other Bull Moose orators, put forward to bring about a showing which should animate Rooseveltians all over the country with the hope of victory in November. They cut deep into the Republican vote, to be sure, but there is no evidence of any defection to their side from the Democratic ranks. If this may be accepted as in any degree a trustworthy indication of what is going on in the feelings of voters throughout the country, it forecasts an overwhelming victory for Woodrow Wilson on November 5.

Mr. George Harvey argues out, in the *North American Review*, the possible failure of any of the Presidential candidates to win the requisite majority in the electoral college; the possible inability of the House of Representatives to decide, as prescribed by the Constitution, which of the three shall be the President, and, therefore, the possible exercise of the Presidential powers, for the next four years, by Vice-President James S. Sherman. As most people are aware, the basis for such a calculation is that if the Third Party were to get the electoral vote of certain States, it might, even though itself standing third in the electoral college, prevent either Wilson or Taft from getting the 266 votes which would be necessary for an electoral majority. The choice would then constitutionally devolve on the House of Representatives, which must, however, vote by States and not by members, and must cast a majority of such vote in order to elect. But, although Democratic by its individual plurality, the House is tied by States—22 of its State delegations containing more Republicans than Democrats, 22 containing more Democrats than Republicans, and 4 being evenly divided. The House, then, might be unable to make a choice. But the Vice-Presidency, if no majority is obtained in the electoral college, is referred to the Senate, which chooses, by majority vote of the individual Senators, between the two highest numbers on the list. Since the Senate now contains 6 Republican majority, it would presumably elect a Republican Vice-President, and the Constitution further provides that if the House shall have made no choice for President by the 4th of March, "then the Vice-President shall act as President, as in the case of the death or other constitutional disability of the President."

We have not taken great interest in these calculations, except as they may be termed an "example" in political arithmetic. Twice in our history has a Presidential election been thrown into the House. On the first occasion, that of 1800, Jefferson and Burr had tied in the electoral college; but the reason for it was that, under an earlier constitutional proviso, now repealed, all States voted for two candidates for President, the second candidate on that vote becoming Vice-President. Burr received all of his votes in the electoral college from exactly the States which voted for Jefferson. The precedent, therefore, could not hold to-day. The case of 1824 was different. There were four candidates in the field for President, and the campaign was so arranged that a deadlock was virtually inevitable. Mr. Stanwood's "History of the Presidency" points out that in only five States were all four candidates presented; that in six others there were only three tickets, in seven States only two tickets, while in six States electors were chosen by the Legislature. In a large part of the East, no Jackson ticket was voted for; in many Southern States there was no Adams ticket. These two candidates led on the popular vote and in the electoral college, but Crawford and Clay, largely because of the peculiar nature of the contest, carried three States each, and thereby prevented any majority in the college. This provides no parallel whatever for 1912. As regards the vote in the House, it is interesting to recall that 36 successive ballots were necessary before Jefferson finally got his majority in 1800, whereas Adams was chosen in 1824 on the first vote of the House.

Some figures just published by the Census Bureau throw an interesting light on Mr. Roosevelt's sudden conversion to suffrage. From them it appears there are no less than 671,396 women of voting age in California alone, 213,425 in Colorado, and 69,818 in Idaho. Wyoming has only 28,890 women who can ballot, Utah 85,729, while in Washington the balance of power is held by 277,727. No wonder, therefore, that Jane Addams is to take the stump in these States, and that every effort is to be made to win the women voters for whom hitherto the politicians have had so little use. In football parlance, the Progressives "have the jump" on the older parties, and even if the latter wished to fall in line, they are now outdistanced in the appeal for women voters. But that does not, of course, mean that all of them are to be for Roosevelt. There are plenty who have seen through him, and plenty of able speakers and writers like Mrs. Harper, Mrs. Atherton, and Mrs. Harriman to present the other side.

Thanks to Attorney-General Wickersham, the American Bar Association at its annual meeting in Milwaukee disavowed the action of its executive committee in voiding the election of the three colored lawyers, Messrs. Morris, Lewis, and Wilson, and confirmed them in their membership in the Association. This was a notable victory for Mr. Wickersham, and constitutes a severe censure for the president, Mr. S. S. Gregory, and the executive committee. Unfortunately, however, it was brought about by a compromise which bodes ill for the future, in that it provides that hereafter any local committee which nominates a candidate must state whether that candidate is white or negro. The resolution also recites in its preamble that it "has never been contemplated" that persons of the negro race should be chosen to membership. What encouragement will there be to negro attorneys hereafter to avail themselves of those advantages of the Association which special committees of the Bar Association have been holding out to lawyers the country over? If the answer is that no encouragement is desired, we can only say that the Association will then give the lie to many of its professions. Fortunately, this is one of the questions which cannot be settled until it is settled aright, and it will return to plague the Bar Association until the color line is done away with.

It is well that the Bar Association did not limit itself to a strong protest against the recall of judges, but had something to say about the scandalous condition into which court procedure has fallen in many of our States. There appears to be much force in Mr. Judson's plea for giving judges more power to expedite the business before them. He cited the rules recently adopted by the Supreme Court of the United States, which have already had the effect of markedly cutting down the delays in litigation. No duty more urgently presses upon the bar than that of finding ways to break roads through the jungle of technicalities that now surround lawsuits, and in particular criminal trials. Take the remark made recently by one of the counsel for the accused New York policeman, Lieutenant Becker. Forecasting the trial of that indicted officer, the lawyer coolly says that it will take two months to get a jury and three months more to try the case. Now, such a state of the law is simply disgraceful. It is shocking in itself and it is the deepest reproach to the legal profession.

Following the Bar Association, the American Institute of Criminal Law and Criminology also had its meeting in Milwaukee. Upon the hearts and consciences of its members, too, the urgency of law-reform lay heavily. The matter was weightily presented in the Presidential address of Chief Justice Winslow of Wisconsin, who outlined the obvious reforms to be fought for. We must make both our criminal codes and our procedure simpler. The prosecution of crimes should be by information, not necessarily by indictment. One of the reports presented to the Institute showed how marked is now the tendency in the States to authorize, or at least make optional, prosecution by information. It is now the law in twenty-four States, though all of them originally required that criminal cases of the grade of felony should be prosecuted by indictment. The report would make short work of the abuses of appeal, and of reversals for non-essential technical error in the court below. The note struck at the Institute was really inspiring. The earnest and able lawyers there bringing their minds together, were evidently thinking less of their profession by itself than of the common good. They felt, as did Romilly, that they as lawyers "owed something" to their country, and that they could pay the debt in no better way than by laboring to make the administration of justice more swift and certain.

We wish that there were some way creditable to the State of South Carolina by which we could explain the renomination of Gov. Blease. But all we can say is that a democratic community has made use of its God-given right to blunder. Primarily, it ought to make us very humble and very slow to criticise the Nicaraguans and Mexicans for their failure to govern themselves as well as we wish them to do. Here was a man who had been accused of downright grafting and met the charges chiefly by threatening to "lick" those who made them; a man who stood openly for mob murder, whose general administrative failings we have not space to enumerate. Yet he deceives a small majority into believing that blackguardism is what should rule South Carolina. Even Senator Tillman would not stand for him, which is saying not a little. At one of his meetings Blease called a little girl over to him, and when she came, said: "You see, even the little children come to me and trust me." Whereupon a man in the audience answered: "That's because they don't know you." "I'll lick the man that said that if he'll show himself," cried Blease. We cannot help feeling that the bulk of the voters of South Carolina are still like the children—they do not know Blease yet.

Collier's Weekly printed last week an attack upon Senator Warren of Wyoming of a detailed severity not often equalled in the press of this country. If a tenth of what it alleges is true, Senator Warren should be written down with Penrose as another Senator who ought to be retired to private life at the earliest possible moment. It has long been known that Senator Warren represented the type of Senator who is in politics for the profit in it, and that he did not hesitate to use his position for the benefit of his family's welfare. But *Collier's* charges specifically that Senator Warren is a perjurer; that his son drew Government pay as a clerk while a student at Harvard; that his sheep are grazed on the Government lands at Fort D. A. Russell, and that he personally has "violated Federal laws, for the violation of which others have been driven from the Senate and to Federal prisons." Besides his son, it is alleged that Senator Warren carried other counterfeit clerks on the Government pay rolls. The merits of these charges will, we presume, be ascertained in court or in the Senate. If they are correct, *Collier's* has surely done a notable public service.

Ninety-five years ago Madison vetoed the Bonus Bill appropriating $1,500,000 to be distributed among the States for internal improvements, on the ground that there was no clause in the Constitution distinctly authorizing such an expenditure. Now the party of strict construction has taken the initiative in voting money to assist—and entice—the States to improve their roads. It is true that the motive in the two cases is not the same. In 1817 it was related to the difficulty of travelling Westward and to the poverty of the frontier communities. In 1912 the purpose is to provide more and better postroads, which will mean much for the rural delivery service and the parcels post. It is to be noted also that the later grant differs materially from the one that Madison stopped in that it may be availed of only as an addition to a local appropriation twice as great as that supplied from Washington. Thus a State or a group of counties may, under the new law, receive up to $8,000 for post-roads if it gives an earnest of its interest in them by voting $16,000 for the same end, and conforming to the Government standard of road-building.

Mr. Wood of the American Woollen Company denies all knowledge of any conspiracy to "plant" dynamite in Lawrence, a crime for which he has been indicted and arrested. Fairness requires that he be given the benefit of his denial until the evidence is produced in court. But whatever be the fact about his personal complicity, there appears to be no doubt that the thing was done. In regard to the nature of that deed it is not necessary to suspend judgment. It was not only a crime but a peculiarly shocking and abhorrent one. To attempt to make it appear that the Lawrence strikers were preparing to blow up mills and kill innocent people by dynamite explosions, is an offence so despicable that any man proved guilty of it should not only receive the extreme penalty of the law, but should be regarded for the rest of his life as a moral outcast.

If the commission form of government can be successfully employed to solve the high cost of living, any doubts of its value must perforce vanish. No less a triumph is claimed for it in Des Moines, where the opening of municipal markets, according to *Civic Progress*, has accomplished wonders. If it be asked why the Iowans did not follow the example set by Mayor Shank of Indianapolis, the answer is that they saw certain disadvantages in the assumption of the rôle of merchant by city officials, which they hoped to avoid in a permanent public market. The results are reported as most gratifying. Although the city is the centre of what it proclaims to be the richest agricultural district in the world, prices had gone so high that necessities, so we are informed, were fast becoming luxuries. The advance in prices, however, was promptly reduced when the farmers began selling directly to consumers. The average reduction is put at 35 per cent. Thus it is demonstrated that "most of the high cost" was caused by the delivery charges, clerk hire, rent, etc., of the dealers. Get rid of them, and you free yourself of the high prices. It is not quite clear why their banishment should have made a difference of only 35 per cent. in an admitted advance of prices of at least twice that.

The latest statistics showing the position of the American automobile industry are doubly interesting at this time, in view of the cry of protest that has gone up from English manufacturers over the competition of American machines. The strides made by our manufacturers in a decade are remarkable. The census of 1900 shows the value of motor cars manufactured in this country as $4,748,000 in 1899, while the census of 1910 gave $249,202,000 as the amount for the year 1909. Wages paid increased in the same time from $1,321,000 to $48,694,000. Imports of automobiles decreased from a value of $4,000,000 in 1907 to $2,000,000 in 1911. The quality of the work turned out here has improved, so that automobiles manufactured in this country are now comparable in most respects with those made in France, Germany, or England. Ten years ago the American automobile (doubtless with reminiscences of the bicycle) was viewed with considerable suspicion in Europe, and we exported then less than a million dollars' worth. Last year our export trade amounted to thirty millions, inclusive of parts and tires.

Mr. Bonar Law was elected leader of the Unionist party because those who cried so insistently "Balfour must go" craved a fighting leader. Mr. Law is certainly that, but the difficulty is that he has set a pace too fast for his party. By his wild talk of armed resistance in Ulster, he has provoked what the *Globe*, a Conservative paper, characterizes as a "piquant" situation. It is more than hinted that, should disturbances take place in Ulster, the Government will deal with them under the provisions of Mr. Balfour's Crimes act, applying to the Ulster gander the sauce that was originally concocted for the Nationalist goose. It would indeed be a fine example of irony if the weapon forged by a Unionist Government to suppress Nationalist disorder were employed by a Liberal Government to deal with an even more serious menace to public safety, aided and abetted by the leaders of the Conservative party. That the Unionists are sensible of the quandary into which the reckless utterances of Mr. Bonar Law and Sir Edward Carson have led them, is evidenced by the tone of their steadier newspapers. It is particularly significant that the Birmingham *Post*, the organ of the powerful Chamberlain section of the Unionists, should remark that "the tools in this matter are sharp-edged, and it is ominous that, coincident with all these alarming—or at best alarmist—reports from Belfast, the words 'treason-felony' are more and more to be heard from Liberals of considerable influence in their party to whom hitherto they have been strange." The leader who should "really lead" seems to have led his party into strange places, and Mr. Balfour might well be excused if, in the privacy of his study, he should permit himself just the vestige of a smile.

"The Passing of the Hat" is the subject of an article in a French newspaper, which inquires into the origin of the new vogue, noticeable this year at fashionable watering-places, that induces men to walk bare-headed in the streets. Naturally, the answer that jumps to the lips is—Americans. We should feel flattered at the wide range of influence that is attributed to us by the older nations of Europe. True, that influence is usually regarded as something peculiarly malign; there is a vague, uncertain quality about it which compels suspicion but defies analysis; it is, in fact—American. Athletics are becoming "Americanized"; the sensational press of London has adopted "American methods"; even the blameless youth of Oxford University is corrupted by our fashions and has taken to disporting itself in wide, baggy trousers. Now we are to be held responsible for the discarding of hats by the *jeunesse dorée* of Trouville and kindred spots. "Already," declares the writer of the article referred to, "the great people of the United States have imposed on Europe the suppression of the beard and of the moustache. . . . To-day men's faces present themselves bare. And it is also from the United States that the bare-foot dancers came to us. Bare face, bare feet, and to-day bare head! The transatlantic people frighten us. Where will they stop, and what will be their demand next year?" Whatever it is, Europe now knows that it is in vain for her to kick against the American pricks.

CENTRALIZATION AND MONOPOLY.

In his principal speech at Buffalo on Monday, Gov. Wilson went straight at the heart of the Roosevelt propaganda. He did not draw up a blanket indictment against it. He indulged in no invective. He did not pronounce the whole thing either a fraud or a menace. What he did was to divide the vast body of proposals and aspirations and promises gathered together in the Bull Moose declarations into two parts, sharply cut off from each other by an unmistakable line of cleavage. The platform of the new party, he said, has two sides and two tones:

> It speaks warm sympathy with practically every project of social betterment to which men and women of broad sympathies are now turning with generous purpose, and on that side it is refreshing to read. But that is not the part of the platform that reads like a programme.

There is another part of the platform that does read like a programme, the part that relates to the tariff and the Trusts. And what is the character of that programme? It can be summed up with a very fair approach to accuracy in two words—centralization and monopoly. This is the point Mr. Wilson drove home in few words, but with telling effect. No part of the Roosevelt programme, he said, can be discussed intelligently without remembering that "monopoly, as handled by it, is not to be prevented, but accepted. It is to be accepted and regulated. All attempt to resist it is to be given up. It is to be accepted as inevitable. The Government is to set up a commission whose duty it will be, not to check or defeat it, but merely to regulate it under rules which it is itself to frame and develop." If the working people are to profit by the adoption of this programme, it must be through reliance on a benevolent and omnipotent administrative machine at Washington. Everything will depend on the complexion of the central Government; every national election will turn, in a degree of which the old-time "full dinner pail" campaigns of the protectionists give but a faint indication, upon the effect which the victory of one side or the other may be represented as entailing upon great capitalistic interests on the one hand and the condition of the wage-earners on the other. "By what means," exclaims Mr. Wilson, in a burst of simple and genuine eloquence, "by what means, except open revolt, could we ever break the crust of our life again, and become free men, breathing an air of our own, choosing and living lives that we wrought out for ourselves?"

Wilson's appeal to the workingmen on this issue is neither more nor less than an appeal to American manhood. If the working people of this country look upon themselves as nothing but a "proletariat," let them invoke the protection of a benevolent paternalism at Washington, to supervise their affairs in every nook and corner of the Union, to deal out to them on the one hand, and to great capitalistic combinations on the other, such measure of "social justice" as may seem desirable or expedient to the powers that be. What the election in November will test, more perhaps than anything else, is whether or not the great masses of our population are ready thus to bid farewell to all that has hitherto been most distinctive of the American people. Wilson and the Democratic party plant themselves firmly on the ground of progress, of relief, of reform, of improvement, by measures that will curb monopoly, revive legitimate competition by repressing unfair and oppressive competition, and preserve the ancient freedom and self-dependence of American citizens. Between this position and that of the Rooseveltians there is a deep gulf fixed. But between the position of the Rooseveltians and a full-fledged socialistic state, taking under its wing all the economic activities of the nation, and leaving no standing ground for individual self-assertion and development, no man can erect any substantial barrier.

This issue of centralized power and regulated monopoly is not only the one great and explicit practical feature of the Roosevelt platform as formulated at Chicago; but it is also the one issue with which his personality and his record are profoundly and unmistakably identified. He may improvise convictions on woman suffrage, or negro rights, or Canadian reciprocity, convictions to which he was a stranger yesterday, and which, avowed to-day, he may summarily discard to-morrow. No such things can be said of his addiction to the idea of centralized and arbitrary administrative power as the master-key to the solution of all the problems of government and society. His cry is "Let the people rule"; but he never conceals his conception of the means by which the people's rule is to be made effective. They must put their faith in a "steward of the people's welfare"; and he must fulfil their desire by undertaking to control, through the agency of powerful and unchecked commissions, every part of the people's concerns. If the American people send Roosevelt to the White House, they will send him armed with a mandate to execute this programme, and animated by an overmastering desire to do so to the utmost of his ability. A third term for him will mean a step of momentous character towards the centralization of all real power in the hands of the Chief Executive at Washington and the establishment of legalized monopoly on a scale hitherto undreamed of in this country.

IN STATU QUO.

Mr. Roosevelt's eighteen-thousand-word letter to Senator Clapp, chairman of the Senate sub-committee on Privileges and Elections, is in a way an able and persuasive campaign document; but it adds nothing of an evidential character to what he had previously stated on the case at issue. It includes extensive repetitions of matter that has already been printed *in extenso* many times; Roosevelt's long letters relating to the Harriman affair, his long reply to Judge Parker in 1904, are set forth in full, as they have so often been set forth before. Of new material there is little.

Now, what is it that reasonable persons are genuinely interested in, through all this controversy? They do not pin their faith to the charges contained in Senator Penrose's testimony, or Mr. Archbold's testimony, just as it stands. They know that the repetition of a conversation eight years old, even by a witness whose impartiality and veracity are unchallenged, cannot be relied on as accurate; and that this is still less the case when the witness is confessedly possessed by a long-standing sense of injury and resentment. On the other hand, they feel virtually certain that, as regards the gross and simple fact of having handed $100,000 to Mr. Bliss, treasurer of the National Committee in Roosevelt's 1904 campaign, Mr. Archbold is telling the truth. Further, they regard it as in the highest degree probable that this transaction was effected in such a manner as somehow to leave upon Mr. Archbold's mind the impression that the contribution would be "appreciated" by the ruling powers in the party of which Mr. Roosevelt was the head and front. The question that remains relates to the nature of Mr. Roosevelt's attitude towards this aid from the Standard Oil people to his campaign. Did he know of it at the time? If not, what did he do when it did come to his knowledge, in case it came to his knowledge at all?

Of all the eighteen thousand words in Mr. Roosevelt's statement, the only part bearing on this central point is that which relates to his letters and telegram to Mr. Cortelyou, of October 26, 27, and 29, 1904. The very fact that he wrote these letters at all, the very fact that he now cites them as evidence of his uprightness in the Standard Oil affair, makes almost all the rest of his apologia irrelevant. That it was not contrary to the law in 1904 to accept contributions from corporations; that the only question in regard to such contributions, since they were not then illegal, turned on the motive with which they were given, and on the spirit in which they were received; that no promises were made to anybody, and that no subsequent act of the Roosevelt Administration was influenced by the receipt or non-receipt of contributions—all these things must be ruled out of this particular case, owing to the simple fact that Mr. Roosevelt himself, in his eager and insistent eleventh-hour communications to Mr. Cortelyou, places himself on record as holding that no contribution from Standard Oil could be accepted without dishonor. Well, then, was such a contribution accepted? If it was accepted, was it returned? If the answer to the first question is Yes, and to the second No, Mr. Roosevelt's position is an ugly one. His offence may not be so deep as a well, nor so wide as a church door; but 'tis enough, 'twill serve.

In his letter to Mr. Cortelyou dated October 26, 1904, Mr. Roosevelt said:

> I have just been informed that the Standard Oil people have contributed $100,000 to our campaign fund. This may be really untrue. But if true I must ask you to direct that the money be returned to them forthwith.

In his second letter, dated October 27, he wrote:

> I request, therefore, that the contribution be returned without further delay.

Two days later, he sent Mr. Cortelyou this telegram, dated October 29, 1904:

> Has my request been complied with? I desire that there be no delay.

Copies of these communications he preserved carefully, and had them ready to produce instantly when the charge was brought forward by Penrose and Archbold the other day. But how about Cortelyou's answer? What evidence does Mr. Roosevelt present either that the $100,000 was not received, or that it was returned? Simply this, and nothing more:

> Subsequent to this telegram Mr. Loeb, my private secretary, called Mr. Cortelyou up on the telephone, and later I did so myself. He notified me first through Mr. Loeb and then directly that no such contribution had been received or would be received. He has informed me within the last two or three days that his memory of the incident is precisely the same as my own—that on receipt of the communications from me he saw Mr. Bliss, showed him the letters and telegram, and that Mr. Bliss then told him that no Standard Oil money had been received and that none would be accepted.

Strange that he should have been so careful of the record of his question, and so careless to procure any record of the answer; strange that he should have relied on indirect oral information, through Mr. Cortelyou, who had failed to reply at all for three days, and who —according to his own recent testimony before the Stanley Committee—knew very little about the collection of funds that was going on; strange that he should not have obtained, rather, a written statement from Mr. Bliss himself. And is it not perhaps strangest of all that he makes no effort, even now, to get at the actual fact from original sources? It is not thought that *all* the records are burned; it is understood that there still exists some schedule of contributions received. Why does not Mr. Roosevelt demand its production? And what will become of his telephone message to Cortelyou if it turns out, when the Senate committee gets together again, that the $100,000 *was* received, after all? That it was not returned Mr. Roosevelt's own statement shows, for he says that Cortelyou told him that "no Standard Oil money had been received." There will, to be sure, even in that event, be one line of defence to fall back upon—that he was deceived by his wicked partners. But it is very difficult to think of the strenuous one seriously asking the American people to look upon him as the mild and innocuous Spenlow, powerless to deal with his inexorable Jorkins in the shape of Cornelius N. Bliss.

AMERICAN SHIPPING FREED.

Into the hodge-podge of the bill ostensibly framed to regulate the tolls and the control of the Panama Canal, went one provision which ought to be widely proclaimed as a great step in advance. It is the amending of the antiquated navigation laws of the United States so that there may be admitted to American registry and the protection of the American flag, for use in the foreign trade of this country, ships built abroad but owned by American citizens. This means that at last American citizens are free to buy ships wherever they may desire, precisely as they may purchase automobiles or locomotives or dredges or aeroplanes; that one of the most benighted laws on our statute-books has been erased, after injuriously affecting our merchant marine virtually since President Washington's Administration. It means, too, that the strangle-hold of our ship-builders upon our merchant marine has been broken at last. No longer will these ship-builders have legislative authority for saying: "Buy ships of us, or you cannot own any under the American flag."

So eminent an authority as Grover Cleveland, when President of the United States, advised Congress that "the ancient provision of our law denying American registry to ships built abroad and owned by Americans, appears, in the light of present conditions, not only to be a failure for good at every point, but to be nearer a relic of barbarism than anything that exists under the permission of a statute of the United States. I earnestly recommend its prompt repeal." But his own party refused to repeal it, and the Republican party, having sold protection to the ship-builders in return for fat campaign contributions, was, of course, not a free agent. The spectacle thus presented has been humiliating and deplorable in the extreme. Ship-builders, for their own profit, have dictated the policy of the United States, precisely as they have been keen for a big navy as their business in merchant ships fell off. For by their stupidity in building this Chinese tariff wall about our coasts, they have helped very largely to kill off our ocean trade. Few of them could have survived had it not been for the millions we have wasted on battleships. Yet they have persevered in their dog-in-the-manger policy, insisting not merely on the navigation act, but on the protective tariff itself, although they have admitted that the taxing of foreign-made materials permitted the American makers of similar materials to add to their prices almost as much per cent. as the tariff called for.

As the matter now stands, there is constituted a clear, straightforward appeal to the patriotism of our country, and an old outlet is reopened for American energy, enterprise, and capital. What will the answer be? A demonstration, we hope, of public readiness to win us once more an honorable place on the ocean; perhaps even supremacy. There are many ships flying foreign flags that ought soon to be under the American. There is the Munson Line running to Cuba under the Cuban flag; surely that ought to come in. Newly purchased or built vessels ought to come in from abroad; the only limitations are that the ships must not be more than five years old when applying for registry; that they must be certified as "safe to carry dry and perishable cargo," and that they are to be wholly owned by citizens of the United States or corporations organized and chartered under a Federal or a State law. They may trade with the Philippines, Guam, and Tutuila, but not with Porto Rico, though near-by Cuba is free to them; nor with Alaska, remote though it is, for that is coastwise trade and the ships for that must still be built by the Cramps and their few competitors in the shipbuilding business. To pacify these men, too, the tariff bulwarks were levelled—Mr. Taft approving, though he had had no report from the Tariff Commission thereon—and all materials necessary for building or repairing ships in the United States are now admitted free.

How deadly a blow this is to the whole protection doctrine one can readily see. If free ship materials, why not free materials in all allied industries? Why favor ship-builders? Yet a Republican Senate pulled out this pillar of the protection temple without a contest, and thereby ruined irrevocably reams and reams of good protection arguments, once so useful in the days of Blaine and Harrison, Dingley and McKinley, but now done away with—we trust forever. Certainly the influence of this remarkable enactment should be far-reaching; at a single stroke American shipping for foreign trade is freed. It is a wonderful illustration of how a great reform based on a sound economic truth may seem to lie dormant and to be hopeless of attainment—and then of a sudden is achieved almost without a struggle. Let every honest advocate of soundly based reforms take heart from this memorable occurrence.

ARE WE A LAWLESS PEOPLE?

We have been told so often that as a people we have no respect for law, and the indictment is now and then backed up with such a formidable-looking array of figures, that no one could be surprised if we made up our minds that it must be so. Accordingly, it is rather novel to see the question seriously raised whether, after all, we are a lawless people, but this is what Victor S. Yarros ventures to do in the *American Journal of Sociology.* Unconvinced by President Taft's confession that we not only do not hold the law as sacred as we should, but that he doubted that we hold anything sufficiently sacred; not altogether persuaded by the dictum of Professor Giddings that we see on all sides a desperate indifference to morals and manners; disposed to suspend judgment even upon a Chicago educator's sweeping assertion, "We are not a nation; we are a rabble," Mr. Yarros boldly sets out to see just what is the matter with us in this regard.

The first thing upon which he puts his finger is that statute law must represent, with substantial unanimity, the sentiment of the community which it presumes to govern, and that our laws by no means always do this. There are our Sunday-observance regulations, for instance. A State Legislature, composed largely of Americans of British descent, enacts legislation commanding the keeping of the day of rest after the manner of the Puritans. At first, the rules are easily enforced. But after some decades, immigration from all parts of Europe results in the building up of cosmopolitan cities, in which it is found extremely difficult, if not absolutely impossible, to preserve the former harmony between what the statute-book says and what the people do. The very officials who are sworn to enforce the law allow it to be broken with impunity. They may even win their election upon a platform of non-enforcement. May we say, therefore, that a community that was once law-abiding has become scornful of law? Hardly. It may be scornful of a particular law that goes dead against the hereditary ideas of the mass of its inhabitants, but this is a very different matter from being possessed of a lawless spirit. The simple fact is that, while the law has remained exactly as it was when it was framed, those who live under it have changed. Nor will any one who is familiar with the composition of our legislatures ask why, in such cases, the law is not changed to suit the changed attitude of the people. There are enough representatives of the older sentiment, from the rural districts especially, to block what appears to their constituents to be no less than an overturning of one of the bases of society, and so that community continues to present the spectacle of general law-breaking.

Another condition that is responsible for our appearance of indifference to law results from our Federal form of government. The open scandal of a divorced man or woman, forbidden by the courts of one State to re-marry, evading the order by taking advantage of the laws of another State, is due simply to lack of uniform legislation, a want which is a positive encouragement to a practice of this kind. Here, moreover, we meet a situation that is not at all to be stigmatized as "American." For what is it, in its legal aspect, but a parallel to the Old World procedure, now reduced to a minimum, of forming irregular marriage alliances because of such technical impediments to lawful union as disparity of religion between the parties, or their residence in different countries, or merely the cost of the formal ceremony? The recognition of these cases as valid by subsequent legislation is proof enough that they have not been the consequences of a law-breaking spirit. Not the people, but the statute-book, was to blame. And if our shameless divorce-and-marriage hunters are morally in a very different category from these Europeans, that disgraceful fact does not affect the legal parallel. They pursue their outrageous course of defying one set of courts by conforming to another, not in spite of the law, but with its smiling approval.

Then there are matters connected

with the interpretation and the administration of the law in this country that tend to weaken the respect for it of the most conservative. But do all these considerations, and others like them that might be mentioned, quite explain away the charge against us? Must we not admit that we are not so ready to obey the policeman's uplifted hand as are other peoples? Can we deny that our business men, big and little, are more prone than their brothers abroad to "take a chance" at violating a law that hampers them, whether it is by allowing their goods boxes to fill the village sidewalk, or by granting rebates? Are not our officers themselves inclined to be charitable in this respect, to give the benefit of the doubt to the citizen rather than to the statute-book, and to be quick to see the doubt? We can hardly clear ourselves wholly of such accusations. Their explanation may lie deep in our psychology, but one remark it is safe to make. We prize liberty above everything else, even equality. Those of us who know Emerson only by his epigram that America is another name for opportunity are his enthusiastic disciples in demonstrating its truth. Did not our fathers create this notion? Is not our Constitution, sacred as it may be, of our own making? And shall we not do what we choose with our own? We have no past, we are scarcely conscious of a present, we really live in the future, and we cannot suffer anything to halt us in our march thither. Is it strange that in such a people the sense of liberty under the law should often give way to the lure of license that defies the law?

A CRITIC AMONG THE PROPHETS.

Edwin Percy Whipple is not a name that comes often to the mouths of men, and surprise is likely to be the first feeling at the appearance of his essays on Charles Dickens, reprinted with all the luxury of neatness which we have learned to expect of the special publications of the Riverside Press. A fairly well-informed reader here and there may even ask, Who was Whipple? The answer is ready in the introduction written for these volumes by Prof. Arlo Bates, who knew the man and tells a pleasant story of his life as journeyman critic among the Boston prophets of transcendentalism. Professor Bates's account of the Sunday evening gatherings at the home of the Whipples in Pinckney Street, and of the hosts who presided over that circle, calls up the picture of an age removed from us by only a few years (Whipple died in 1886), but already as alien to us in spirit as is the word *conversazione* it was so fond of using:

> As a stranger in Boston in the late seventies, I was generously made welcome to these gatherings, and have of them vivid memories. The host, short and slight of stature, with a head disproportionately large and abundantly covered by carelessly tossed dark locks, a head, it must be confessed, a little gnome-like, with wonderfully luminous eyes, was the presiding spirit. Just out of college as I was in those days, I mentally compared him to the descriptions of De Quincy; and although such a comparison suggests too much, it is in the right direction. Mrs. Whipple, of more generous mould, and with intelligent kindness radiating from her pleasant face, was . . . gifted by nature with the gracious power of setting every guest at ease. She did not preside over a salon, she was simply at home on Sunday evenings, and persons with intellectual tastes were fond of gathering where they were sure of finding congenial companionship and good talk. There were never any set exercises, and not often, according to my remembrance, any music; yet now and then a guest read some unpublished manuscript.

Whipple, as Thomas Wentworth Higginson once said, "was an essential part of the literary life of Boston at a time when that city probably furnished a larger proportion of the literary life of the nation than it will ever supply again." And his rôle as counselling critic to his better-known friends brings to mind an aspect of that briefly flourishing New England literature which we are too apt to forget. Indeed, we are in danger these days of forgetting that, with all its limitations, this literature is a thing marvellously precious and worthy of cherishing. The very fact that it stood locally apart from the traditional home of letters, and so is left out of the general histories and literary manuals, emphasizes unduly what may seem a note of provincialism in it. And its real weakness is of a kind which can least be condoned by an age much given to the adoration of "red blood" and "heart interest." The fact is undeniable that our authors of Concord and Cambridge, in following the lure of the spirit, sometimes forgot that they had bodies, and did not understand that height without depth is a contradiction in terms. The passion and sin of the world they passed by with averted gaze; even Hawthorne, who deals directly with evil, changes it somehow into an insubstantial shadow of the imagination. Sometimes as we read Emerson's cheerful disregard of the flesh and the devil, we are tempted to throw at him Luther's *pecca fortiter*, or quote the saying, "He that sins strongly has the stuff of sanctity [and of literature], rather than the languid." This innocence, suggesting a certain lack of experience, is undoubtedly characteristic of the New England school, and can be explained by definite historical causes; but the harm it wrought may easily be exaggerated. Just now we are a little ashamed of innocence; some day we may again see more clearly its compensating beauty.

But if the innocence of these men too often appears to spring from moral ignorance, they were far from ignorant in other ways. We do not, perhaps, often enough remember that their inspiration, with all its ethereal qualities and seeming spontaneity, had a severe intellectual basis and critical discipline. Even the freest of them had their literary reverences and their tincture of learning. There is no more significant incident in the history of the movement than the story of Thoreau's copy of Homer, in the Greek, be it understood, lying open on the deal table of his hut on Walden pond. Emerson, indeed, was too impatient to read much in foreign tongues; but he read the old books and the distant books, and his essays on Plato and Montaigne and Goethe take a place easily among the profoundest critical studies of a critical age. Lowell, locked up with his books in Elmwood by the demon of gout, could whimsically, and not unjustly, write of himself as the last of the great readers. Longfellow, like Lowell, was a master of many languages, and played an important part in introducing German culture to this country. His translation of the "Divine Comedy" suffers, if anything, from pedantic exactness; yet who would wish to lose from memory the picture of the weekly meetings at the Craigie House when the little band of friendly scholars came together to discuss with him the niceties of Dante's style. Even Holmes, the genial and effervescent wit, was for many years a solid lecturer in anatomy at the medical school. And in close alliance with these poets and philosophers were professional scholars and historians, such as Ticknor and Felton and Parkman and Prescott. Not for nothing were these men the spiritual inheritors of the old New England divines who thought sixteen hours in their study the highest and most acceptable worship they could offer to their Lord.

It is well to recall these things when we cast up our estimate of the only literary movement of any significance yet produced in this country. It is well not to forget that our best writers thought it worth while to learn before they began to teach. And we are reminded by the work now so handsomely restored to us by the Riverside Press that among the steadying influences of that society was the critical pen of a man easily overlooked among his more brilliant contemporaries. Whipple, indeed, was not a great critic; he lacked the rich literary flavor which gives value to the essays of Lowell even when they are not very substantial; he had nothing of that philosophic insight which made of Emerson's criticism a work of creation. But he was wise and judicious, honest and unafraid, quick to perceive the worth of what was new without forgetting the worth of what was old. He wrote well, if not greatly, and contributed not a little to the solid intellectual background of the day. He is still good reading.

THE MENAGE OF THE MIGHTY.

One-half of the world doubtless does not know how the other half lives, but it is increasingly anxious to know it. Especially does the submerged tenth desire to understand the ways of life of the upper ten thousand. It is on this longing that "society journalism" waxes fat. Nothing is so fascinating to the wife of a plumber as to read about the doings of a peeress. The occupants of a fifth-floor hall bedroom revel in snapshots taken at great country places or imposing town houses. Usually, in these matters, the gaping outsider is content to take the unknown for the magnificent. But occasionally he is seized with a craving to know the exact details of luxurious living. He is puzzled by the technical terms used by society reporters and by the purveyors of stories of high life to the lowly. Not long ago, an English reader of a newspaper devoted to fashionable folk ran upon a lot of things in the advertisements and social jottings which he could not understand. Determined to go to the fountain-head of knowledge, he applied for enlightenment to Mr. George Russell, the author of "Collections and Recollections." That veteran commentator on the foibles and follies of his contemporaries made an enjoyable column in the Manchester *Guardian* out of his answer to the queries of his troubled correspondent.

This humble student—in his own closet—of the ways of the rich was chiefly perplexed over the question of servants in the homes of lords and dukes. He had been surprised to read of a situation for "a kennel-maid." What on earth could she be? Then there was that compound being, a "butler-valet"—what were his duties? A "head footman" the inquirer thought he could visualize, but two or three of them "under the butler" bothered him. Who pays the bills, the steward or the house-steward? When the whole retinue of house servants is mustered, which has the *pas*, the valet or the butler? These and many questions like them were addressed to the good-humored and supposedly omniscient Mr. Russell.

At the very beginning, he utters one warning. It is that we must dismiss from the mind all representations of the dress and functions of servants, as they are given on the stage. This is, indeed, a blow. Many a man who could never aspire to be admitted into the homes of the mighty, had fondly hoped that playwrights had given him a faithful and vivid picture of what went on there. In particular he has feasted his eyes upon the impersonations of "old family servants" in the theatre—the butlers who look like archbishops, the liveried and powdered footmen. But now comes Mr. Russell cruelly to shatter our faith in all this knowledge by way of the drama. He says:

> The customs of service as there represented have no resemblance to life; they were originally developed with a view to comic situations, and have become as purely conventional as stage-lawyers and stage-children. On the stage, footmen are called by their surname and valets appear with powdered heads. The same caution should be applied to servants in fiction, though with one or two exceptions. I take it that Thackeray and Lord Beaconsfield had observed pretty closely the servants of their time; and in the early chapters of "Tono-Bungay" Mr. Wells has drawn with great fidelity the life of the Housekeeper's Room at a famous house in Sussex.

Powder is going out, Mr. Russell assures us—that is, it is going off the heads of servants. It is now reserved for great occasions. This disappearance of hair-powder has a political as well as social interest. There used to be a special tax on hair-powder, which more than a century ago was grouped as one of the "Assessed Taxes." When Disraeli in 1867 was having drawn his bill to extend the franchise, he found one clause which would confer the vote on every one who paid the "Assessed Taxes." "And, pray, what are the Assessed Taxes?" asked the Prime Minister of the Parliamentary Draughtsman. "Well, one of them is the Powder Tax." "That's enough," said Disraeli. "Strike that clause out. Building our new Constitution on Hair Powder! Good Gad, we shall be the laughing-stock of Europe."

Another politico-social story which Mr. Russell tells has to do with a misunderstood designation of a servant. He had been guilty of a petty theft and a very severe sentence had been passed upon him. The matter was brought up in Parliament when Sir William Harcourt was Home Secretary. He was asked why so heavy a penalty had been inflicted for so light an offence upon a private tutor in a great family. Sir William replied: "The culprit was not a Private Tutor; but I can see where the mistake arose. He was 'Usher of the Hall,' and I would inform the Hon. Member that 'The Usher of the Hall' in a large house is what 'the odd man' is in a small one."

We cannot follow Mr. Russell into the details of service in the (country) seats of the mighty. He freely penetrates the steward's room, "the ark and sanctuary of domestic government"; presents us in person to the Groom of the Chambers, "a tall, able-bodied man who does nothing from morn till dewy eve but arrange the writing-tables, fill the rose-bowls, announce visitors, and preside at luncheon"; and tells us all about the Upper Servants—"a distinction unknown except in England." His minute explanations show that here is a realm of information in which only a lifetime of observation can make a man an authority. They also show how impossible it is for even the most devoted reader of illustrated supplements, periodicals consecrated to fashion, and romances about marble halls, to get an accurate idea of the actual *ménage* of malefactors of great wealth.

RECENT GERMAN POETRY.

It is refreshing to meet among the German poets who, some thirty years ago, set out to revolutionize the intellectual life of their country a few who, without deserting the "cause" of their youth, have kept singularly free from the repulsive or ridiculous idiosyncrasies of that earlier style. One of these few is Karl Henckell. He is the only one of them who has resisted the temptation to turn to more remunerative work than lyric poetry. Of his two last books, one is called "Ein Lebenslied" and is published in an *édition de luxe* with etchings by Hubert Wilm (München-Gräfelfing: Mendelssohn-Bartholdy). The prologue to the twelve poems in the volume is significantly entitled "Berufung"; and it indicates the author's conception of a poet's mission:

Zieh deine Furchen, Dichter, unerschrocken
Durch's Land der innern Unermesslichkeit,
Lass dich ins Quellenreich des Lebens locken!

There is not a line in the book that does not convince the reader of Henckell's reverential attitude towards life and art. He is inspired with an optimism based, like that of Björnson, on boundless faith in the good there is in every man. Out of that faith grow dreams like "Stiller Festzug," vague visions of a fair though distant future. The keynote of Henckell's poetry is a solemn fervor. "Hüttenlicht" is an exquisite specimen of his art, resembling in certain ways the two-tone etching by Hubert Wilm, whose work attracted attention at this year's Munich secession.

Another volume of poems recently published by Henckell, "Im Weitergehen" (München: Die Lese), has a less solemn dignity and more of the joy of living. Henckell's vocabulary is rich in *nuances*, and the book contains not a few gems of delicate imagery. This is apparent in the lines entitled "Gedicht":

Es streift dich mit wehendem Saume
Plötzlich in silberner Früh—
Der Himmel beschert es im Traume,
Dankbar vollendet's die Müh.

Oder ein goldschwerer Tropfen
Fällt von der Schale des Lichts—
Später der Schmied muss klopfen
Emsig den Ring des Gedichts.

There are some charming specimens of poetical impressionism, like the "Seinestimmung," and some poems inspired by the author's intimate feeling for nature. For emotional intensity few poems of Henckell's "Sturm und Drang" period equal his "Carmagnole," in which the lines roll out with eloquent appeal and a spontaneous rhapsodic sweep. Altogether, these two books of verse are among the most enjoyable that have come from German poets of late.

Wilhelm Schmidtbonn, so far known only as a novelist and dramatist, has written a volume of poetry called "Lobgesang des Lebens" (Berlin: Egon Fleischel & Co.). The keynote of the book is struck in the first poem in which Orpheus in his quest for Eurydice leaps into the boat of Charon and promises the dead that throng the halls of Hades to bring joy to their heavy hearts. For joy of life and the fulness thereof is the poet's theme, which he varies with admirable skill. With warm sympathy, the poet traces the portrait of St. Francis of Assisi, whose love for the humblest creatures living on earth appeals to his all-embracing love of life. He adds an interesting incident to the episode of Charles the Sixth's entrance into Antwerp, familiar through Mackart's celebrated painting, and welds it into a ballade of strong dramatic movement. True to the taste of his generation, Schmidtbonn takes a sort of defiant delight in dwelling upon the elemental manifestations of the life-force. It is especially interesting to note how cleverly he makes even old tales like that of the giant Rübezahl and of Snow-white and the Dwarfs serve his purpose. And he proves his close sympathy with the general spirit of modern life by humbly admitting that the laborer, who is one with his people and whose hammer creates what benefits the many, is stronger than the poet who stands apart and sings for the few. Modern achievements like the airship inspire him, and at the sight of Berlin his imagination is red with a vision of the future.

A terse plasticity of style, reminding American readers of the verse of Emily Dickinson and that of Mrs. Biancchi, characterizes the poetry of Ernst Lissauer, who a few years ago attracted attention by a little book called "Der Acker," now reissued in a revised and enlarged edition by Eugen Diederichs of Jena. Within the compass of four or at most eight lines, Lissauer says as much as most of his fellow bards say in as many pages. His meters are simple. His metaphors fall upon the ear with something of an oracular ring:

Glück ist ein Feuer. Seht, die Lohe lacht!
Weit in die Lande wirft es seine Pracht.

Glück ist ein Feuer, raffend, roh und rot,
Drin eine Sehnsucht, Scheit um Scheit, verloht.

It is difficult to analyze the quality of his verse in terms of the æsthetical vocabulary. Interpretation is in his case less effective than quotation. An interesting specimen of his art is "Der Kreis":

Ich sprach zum Kreis: du lebst in Wanderschaft.
Du schreitest langsam in gestillter Kraft.
Dein Weg ist ganz erbaut aus Wegeswende,
Und jeder Schritt ist Anfang, Mitt' und Ende.

Es sprach der Kreis: mein Leben ist nicht Glück.
Ich wandre nicht, ich kehre nur zurück.
Ein Stücklein Welt erglänzt mir lieb und licht.
Mein Weg umkränzt es. Er betritt es nicht.

The second volume of Lissauer's verse, entitled "Der Strom," has just been published. For imagery, delicate and suggestive, and for light and rippling movement, it would be difficult to find in German a poem equal to the one in this volume called "Brise," in which he speaks of the breeze that runs over the meadow, blonde, with sunlit hair and fleet of foot, her fingers picking leaves and flowers and scattering them in the air as she passes, leaving behind her a streak of haze like a fluttering ribbon. Sonorous strength is the attribute of another poem in which he likens the city street to a stream. His vocabulary is richer and his feeling for form more perfect than before, yet the book breathes the same spontaneity as the first.

Alfons Paquet is another strong personality. He is a great traveller and keeps his eyes open for aspects of life that are characteristic of our day. Nothing is commonplace to him. That is his point of resemblance with Whitman, whose lines he also employs with good effect. The message of his book is the praise of that heroism which is not invested with a halo, like that of his "Held Namenlos" (Jena: Eugen Diederichs). The volume contains a charming idyll of Colorado Springs, which shows Paquet's rare feeling for the foreign and the alien. In fact, his strongest poems are those that treat of subjects as remote as possible from the standards of modern German life. Three poems in the book are on Chinese topics; one is of Norseland and contains a fine tribute to Finland, and there is also a song of the comet and a song of the airship. Something of his æsthetic creed may be surmised from the introductory lines of the book where he suggests that it be taken as a whole:

Ein Dom, ein aufwärts brückenreich Gemäuer,
Ein Raum der Seele in des Himmels Feuer.

The new volume of "Balladen und Lieder," by Börries Freiherr von Münchhausen, "Das Herz im Harnisch" (Egon Fleischel) shows no decline in the author's gift to shape the legends and tales of old into the form least popular with the poets of modern Germany, though still the most popular with the verse-reading public. The ballad requires a certain objective attitude which is rather foreign to the modern poet eager to express himself and exploit his "personality." But Münchhausen by the spontaneity and sincerity of his work has disarmed even critics unfavorably inclined.

Bruno Frank's book of verse, "Die Schatten der Dinge" (Albert Langen), is somewhat handicapped by the title, which raises expectations the author does not quite fulfil. Frank has so far been known only as a clever story-writer. He has a fund of original poetic ideas, but has not yet found the corresponding original form. The theme that we see only the shadows of things, but not the things themselves, occurs in several poems, but is sufficiently varied not to become monotonous. There is too much, however, of the four-line stanza in iambic meter. Humor of a robust, drastic sort is represented in "Kirchweih" (Albert Langen), a volume of verse by "Peter Schlemihl," otherwise known as Ludwig Thoma, and collected from the pages of *Simplicissimus*. It is bubbling over with the daring heroism that makes this periodical of protest such a welcome tonic to readers cloyed by the note of intellectual imperialism and loyalty to race and sovereign which dominates the ordinary German press.

A new volume by Maria Janitschek reminds one that she belongs to the generation of literary hotspurs dubbed by Henckell "Gründeutschland." For her first poems, "Im Sommerwind," appeared when the strife between the Old and the New in German letters was hottest, and her emotional intensity, visionary imagination, and formal independence were characteristic of the verse of that period. Some of her early work reappears in this book, "Gesammelte Gedichte" (Leipzig: G. Elischer). In her shorter poems she sometimes strikes a touchingly wistful note, as in "Woher?":

Tiefblau der Himmel,
Hell glänzt der Firn,
Da fällt ein Tropfen
Auf meine Stirn.

Ich wend' mich um
Und spähe, spähe,
Nicht Wolken, nicht Menschen
In meiner Nähe.

Du schöner Himmel
Von Glanz umwoben,
Sag, weinen denn
Auch die, dort oben?

The publication of this volume of Maria Janitschek's verse makes one regret that she has been almost entirely absorbed in the writing of fiction.

A. VON ENDE.

NEWS FOR BIBLIOPHILES.

Most, if not all, of the English translations of "The Swiss Family Robinson" now on the market are cut to some extent, and some of them are very much abridged. There is confusion, too, in the names of the characters, which vary considerably in the various editions. Even Mme. Voïart, whose French translation, which appeared in 1840, and which has been turned into English, is perhaps the best, altered the names of the boys from the Fritz, Ernst, Jack, and Franz of the original, to Frédéric, Ernest, Rudly, and Fritz, respectively. The studious Ernest is, I believe, the only one who retains his name in all the versions. In details, also, no two independent translations in French or English appear to be very much alike, and one editor, some thirty or forty years ago, even brought out an expurgated edition! But one cannot go far in an examination of the many editions without finding differences that are not to be accounted for by mere editorial liberties and the exigencies of cost of manufacture. A few of the French and English versions of the complete book have an ending that is absolutely different from the others, with nothing but the names and characters of the shipwrecked family in common. This surprising discovery suggests an investigation into the history of the book in search of an explanation.

Of the millions of persons who have read "The Swiss Family Robinson," how many can tell you the author's name? I suspect that the number would not run into four figures. More than once in print the book has been fathered upon the tutor of Humboldt, Joachim Heinrich Campe; but Campe's book, "The New Robinson," is of a different character, a philosophical affair in dialect form, never intended for youthful readers. Editors and librarians, however, know that the authorship lies between the Swiss pastor, Johann David Wyss, and his son, the historian and *littérateur*, Johann Rudolf Wyss, and some of them, knowing a little more, know things about the book that are not so.

The story which is known in English as "The Swiss Family Robinson" was originally the invention of Johann David Wyss, a Swiss pastor, who told it to his children for their amusement and left it in manuscript form upon his death. What was afterwards known as the first part was published under the name of "Der Schweizerische Robinson," by Wyss's son, Johann Rudolf, in 1813, after the death of the father; this was printed in Zürich, in two volumes. It was translated into French by the Swiss novelist and writer of juvenile books, the Baroness Isabelle de Montolieu, and was brought out in Paris in 1816. It was also published in English. The French translation proved popular, but Mme. de Montolieu regretted its evidently unfinished condition, and wrote to Rudolf Wyss, begging him to provide a proper ending for it. Wyss was too busy to undertake this at the time, and Mme. de Montolieu asked permission to write the sequel herself. This she proceeded to do, bringing out the new and completed edition of the book in Paris in 1824.

So far, the history of the book is well known, and has been printed in several introductions and prefaces, but, strange to say, editors have overlooked the fact that the second part of the story as most editions have it to-day is *not* the work of the Baroness de Montolieu. The facts are these:

Though the Baroness apparently obtained Wyss's permission to complete the story, there seems to be no evidence that her ending met with his approval, as is generally stated. We learn from her preface to this second part (1824) that, owing to pressure on the part of her publishers, she was obliged to send her manuscript to the press without submitting it to Wyss; so that he never saw it until after it was printed. How well he liked it when he did see it is indicated by the fact that three years later, in 1827, he published in Zürich an authorized ending, in two volumes, in the second of which (the fourth of the entire work) he says in his preface: "It will be understood that the ending of the book as here given owes nothing to the work of Mme. de Montolieu." And he goes on to say:

> I follow my father's original manuscript just as before; but always with the same freedom that I used in the earlier volumes. Many things are not suitable for publication, which, in the author's family circle, where the manuscript up to this time had alone been read, were entirely in place. Also the end of the story appears [in the original manuscript] rather sketched than carefully worked out.

The Baroness's ending was translated into English and printed in some editions, together with the first part, but most of the English editions—all, I think, that are now in print and that give the whole book—have Wyss's ending. And very properly, for, aside from its being the authorized text, it is a much better piece of work and more in harmony with the first part. The Baroness unfortunately knew little or nothing of natural history, and was wise enough to avoid it for the most part; but "The Swiss Family Robinson" is hardly itself without natural history, and, moreover, even as a story her contribution is decidedly unsuccessful. It begins with a rather pointless illness which comes to the good mother of the family; then follows shortly the incident of one of the boys frightening the others by wearing his rubber boots on his hands—just why, I have forgotten; then the island is invaded by a band of cannibals who shout the strange word, "Ouraki." By these signs you may know the Baroness's version.

It may seem strange that this confusion as to the authorship of the second part should be so persistent, but I suspect that I have discovered one reason for it in the fact that during or before the fifties a French edition of the book was published containing Wyss's ending, but bearing on the title-page the name of Mme. de Montolieu as translator. This edition was published in Paris by Arthus Bertrand, the regular publisher of the Baroness's works, who had brought out the edition of 1824, in which the Baroness's ending had first appeared. The title-page bears the words, "Traduit de l'allemande sur la dernière édition par Madame la Baronne Isabelle de Montolieu. Nouvelle et seule Edition complète." The edition, or, at least, that impression of it of which the Boston Public Library owns a copy, is undated, but from dates on the paper used in binding and from other evidence, internal and external, it seems certain that it was printed in 1850, or soon after. Mme. de Montolieu died in 1832, and whether or not this translation of the second part appeared in her lifetime I have been unable to ascertain in the limited time I could give to the investigation. Perhaps some one else can inform us whether she actually had anything to do with it or not. At all events, it seems to me that the publication of this edition, under her name as translator, taken together with the well-known fact that she had written a conclusion of her own to the story, may well be responsible for the widespread notion that she was the real author of the second part as we know it to-day.

FRANCIS H. ALLEN.

Correspondence

THOMAS JEFFERSON'S BULL MOOSE.

TO THE EDITOR OF THE NATION:

SIR: Roosevelt's preoccupation with the "Bull Moose" recalls the fact that this animal figured prominently in the history of another President of the United States—no less a one than Thomas Jefferson. It is not generally known that Jefferson was as great a stickler in natural history as the Colonel himself, especially in regard to big game. In the year 1789, notwithstanding the momentous questions then occupying his mind, Jefferson, as his letters show, entered into a discussion with Count de Buffon, the noted French naturalist, concerning the animals of America, and undertook to establish the fact that the Count underrated them. But his zeal seems to have proved very costly to him. He had been writing to his Virginia friends to procure for him the skeleton and horns of a large buck deer, but had not received them. He then wrote a letter to Gen. John Sullivan of Maine to send him the skin and skeleton of a moose. In due time a bill came from Gen. Sullivan, which he presumed must be for the moose, except that the amount appeared exorbitant.

Jefferson very good-humoredly mentions the matter in a letter written to Col. Smith, Mr. Adams's son-in-law, who was then in London:

> You ask me if you shall say anything to Sullivan about the bill. No. Only that it is paid. I have, within two or three days, received letters from him, explaining the matter. It was my fault, that I had not given him a rough idea of the expenses I would be willing to incur for them. He made the acquisition an object of a regular campaign, and that, too, of a winter one. The troops he employed sallied forth, as he writes me, in the month of March—much snow—a herd attacked—one killed in the wilderness—a road to be cut twenty miles—to be drawn by hand from the frontiers to his house—bones to be cleaned—etc., etc., etc. In fine, he put himself to an infinitude of trouble, more than I meant: he did it cheerfully, and I feel myself really under obligations to him. That the tragedy might not want a proper catastrophe, the box, bones, and all, are lost: so that this chapter of Natural History will still remain a blank. But I have written to him to send me another. I will leave it for my successor to fill up, whenever I shall make my bow here.

From a subsequent letter to the Count, it appears that the skeleton of the moose, which was to vindicate the insulted honor of its country, later arrived and was presented in due form.

This story was known to Daniel Webster, who frequently told it to his friends in Washington, but in a different form from that related here. In Jefferson's account of his current expenses for the year he entered for this moose 46/17/10 sterling, equivalent to $220, which was probably ten times as much as he had expected to pay.

SHAKESPEARE IN THE PSALMS.

TO THE EDITOR OF THE NATION:

SIR: That indefatigable Baconian, Sir Edwin Durning-Lawrence, Bart., has of late been distributing copies of his little pamphlet, "The Shakespeare Myth," in this country, whether for the sake of advancing the cause of truth or of advertising his book, "Bacon is Shakespeare," I can only surmise. One of these pamphlets was recently sent to me. In it Sir Edwin repeats several of the gross absurdities which characterized his former work, notably the statement that Bacon "fixed upon the year 1910" as the year in which the secret of his authorship of the plays should be brought to light. It is needless to point out the innumerable fallacies of the work, but I wish to call attention to the use made of a passage in "The Cambridge History of English Literature." Sir Edwin cites as proof that the Shakespeare myth is dead some sentences from Professor Saintsbury's much-criticised article on Shakespeare, in which, with characteristic indifference to minutiæ, the results of recent research into particulars of Shakespearean biography are put aside as valueless. But Sir Edwin does not cite the following passage, also from the pen of Professor Saintsbury:

> It is sufficient to say that, up to the present time, they [the Baconians] have not commended themselves to a single person who unites accurate knowledge of Elizabethan and other literature with the proved possession of an adequate critical faculty. (Vol. V, page 249, American edition.)

An especially curious instance of Sir Edwin's methods is afforded by the word "honorificabilitudinitatibus," which, he says, "gives us the Masonic number 287, and really tells us with the most mechanical certainty that the plays were Francis Bacon's 'orphan' children" (p. 26). This may be true, but, if so, the New Variorum Shakespeare gives a long list of Bacon's other "orphans." The word occurs in two old German comedies (*c.* 1580), in several dictionaries, in the "Catholicon" of Johannes de Janua (*c.* 1286), in Mussato's "Historia Augusta" (*c.* 1312), and in Dante's "De vulgari eloquentia" (*c.* 1300). Can it be that the Baconians are about to claim the "Divine Comedy" for their hero, having "definitely established" that he wrote Shakespeare and the Bible?

For the benefit of any reader who has been half-convinced by the Baconians, attention may be called to the following conclusive proof that Shakespeare wrote the Psalms. The author's name appears in at least three forms: Shakespeare, Shakespear, and Shakspere. There are other varieties of spelling; the point is that three, four, or five vowels are admissable. Any one acquainted with "Masonic numbers," emblem writing, and Rosicrucian signs will tell you that the golden mean must be taken. This is obviously FOUR. Moreover, the number of consonants is SIX. The mystic number is, then, FORTY-SIX. Turn now to the King James Bible, and to the Forty-sixth Psalm. Count from the beginning and you will find the forty-sixth word to be SHAKE; count from the end and you will find the forty-sixth word to be SPEAR. Does any Mason, emblem-reader, or Rosicrucian need more convincing evidence than that?

Hasn't the Baconian theory come to the point where it is a matter of medical rather than literary interest? Can't one of our philanthropic millionaires establish an asylum, along the lines of Holmes's institution for punsters, for aged and decayed Baconians?

SAMUEL C. CHEW, JR.

Roland Park, Md., August 31.

CAMPAIGN "GIFTS."

TO THE EDITOR OF THE NATION:

SIR: Where do Presidential campaign funds come from? Is it true that they are contributed by "Trusts," "plutocrats," "railway kings," etc.? If this be true, why do these industrial forces supply money to elect Presidents who profess to be violently hostile to them?

Logically considered, industrial combinations are not an evil. They are a benefit to the people, and especially to the poor people, because an industrial combination can undoubtedly produce a better article, and can afford to sell it cheaper, than the small manufacturers. What earthly good did it do to the people to dissolve the Standard Oil combination? I am told that the price of oil has advanced since that achievement.

High prices represent the profits of the unproductive wholesale and the greedy and extortionate retail dealers.

Intelligent persons have long ago discovered that the outcry against industrial combinations is for the most part nothing but a mischievous political trick to cajole votes from a class of envious and easily duped voters, and perhaps, even, to extort campaign "gifts" from the business interests.

BERTRAND SHADWELL.

Chicago, Ill., August 25.

THE CONGRESS OF THE HISTORY OF ART.

TO THE EDITOR OF THE NATION:

SIR: In my letter to you on the Congress of the History of Art, published in your issue of August 1, the date of the said Congress was inadvertently omitted. It will be held in Rome, from the 16th to the 21st of October, 1912.

Rome, August 17.

Literature

IN MOSLEM LANDS.

From Constantinople to the Home of Omar Khayyam. By A. V. Williams Jackson. New York: The Macmillan Co. With 200 illustrations and a map. $3.50 net.

His first twenty-five pages Professor Jackson spends in getting to Baku by way of Constantinople and the Black Sea. We rather grudge him this space, for he is not on his own ground, and we have from him mere traveller's talk, however picked out with Keats and Tennyson, about Alexander's sarcophagus and Balaclava and the like. But with Baku and its oil-wells and inscriptions we are on soil Zoroastrian by modern Western tradition at least, and of that tradition we are given a very pretty statement and analysis. The fire-temple at Baku, it appears, in its present form at least, is a Hindu product, a centre of fire-worship constructed within the last two hundred years for Indian merchants far from their own land. As for the Arabic inscription produced in photography opposite page 36, whatever its interpretation, the date A. H. 194 is an utter impossibility on account of the titles used. The thousand may have been dropped. Derbent with its Gog and Magog rampart closing one of the only two passes across the Caucasus between the Black and Caspian Seas, and with its remains and memories of Sasanians, Greeks, and early Moslem conquistadors—Anushirvan, Alexander, and Haroun ar-Rashid—and of later border scufflings of Arabs, Persians, and Turanians, is the next point of lingering. There Zoroastrian traces are stronger; fragments of Sasanian carvings are found, and a square vaulted chamber, which may well have been the sanctuary of the sacred flame. Thence there is more travel-talk to Teheran, at that time under the brief rule of Shah Mohammed Ali. The point of investigation there is the Peacock Throne asserted to have been carried off in 1749 by Nadir Shah from India, where it had been constructed for Shah Jehan, the Mogul, in 1634. Doubt had been cast on this story by Lord Curzon, and Professor Jackson here goes over at least part of the gorgeous evidence.

The second part of the book opens with departure from Teheran, to follow the route of Alexander when he was hunting Darius down. This is not very easy reading. Topography, especially historical, must either be very detailed and scientific, or else very pictorial and suggestive. In this case the full scientific treatment has been reserved for publication elsewhere, and the scraps given here only obscure the grandeur and suggestion of these vast plains and of the Caspian Gates. Nor is the triumph of Alexander or the tragedy of Darius heightened by Professor Jackson's verses; they could have more safely slumbered in his note-book. With the memories of Alexander rise those of still older wars of legend between Turan and Iran, record of which has to be gathered at best from the *Shahnama* of Firdausi. Through these "Marches of Terror" then he passed, tracts so more lately named from the forays of the Turcomans, broken and ruled at last by Russia only a generation ago. We in the West, like the Persians themselves, are too apt to forget that struggle of millenniums on life and death, and that it was a *pax Russica* which ended it so recently. But for Professor Jackson the interest, as he went, was either very ancient or quite modern—Zoroastrian and Greek or the Persia of to-day. For remains of Islamic times and their stories he has, it is true, an eye and ear, but only on account of some link of connection. Yet Omar Khayyam needs no introduction or excuse, and so to Nishapur he turned.

This is the part of the book which will have most interest for all except professed Orientalists and antiquarians. And the account here of Nishapur and its history will amply repay that interest. The three chapters given to it form an excellent little monograph, a good example of the combination, characteristic to the whole book, of elaborate historical research and modern descriptions. More perfunctory is the description of Mashhad, a day's journey from Nishapur, with its sanctuary-shrine of the tomb of Imam Riza, a place of pilgrimage for all the Shi'ite world. It is a curious comment on local and religious popularity that the tomb of Haroun ar-Rashid, which lies beside that of the saint, is either neglected or kicked in contempt by the pilgrims. How many in these Western lands know anything of Imam Riza, and what child does not know Haroun?—though Riza may easily have been the better man. But from the modern (comparatively) and Moslem Mashhad, Professor Jackson's interest passes quickly to Tus, a city with its roots deep in the farthest Iranian legend and linked for ever with the great name of Firdausi, one, with Hafiz and Omar Khayyam, of the immortal three everywhere known, of Persian literature. But Tus is now a wilderness, and the search even for the tomb of Firdausi is a search in dust and ruins and nothingness—no garden of Paradise, as *Firdaus* means, but desolation itself. There only a dubious grave was found for the great poet. Yet another and an even greater man, so far as influence on the thought of the world is concerned, lies buried at Tus, and in a search for his grave there would probably have been better fortune. Professor Jackson barely mentions the philosopher-theologian Ghazali, and evidently does not know that he applied the pragmatic idea to spiritual life and thought centuries before pragmatism was to be, and that from him the threads of influence run to Aquinas and to Pascal. Such is the dust which mingles in the dust of Tus.

A final chapter takes us over the Persian border into the land of Turan, now at last lying in peace under the shadow of the Russian eagle. We leave the traveller there facing Samarcand, Bukhara, and the Oxus.

Turkey and Its People. By Sir Edwin Pears. New York: George H. Doran Co. $3.50 net.

Until "Odysseus"—now known to be Sir Charles Elliot—shall recast his "Turkey in Europe" to post-revolution conditions, this book may most usefully take its place. Its author has a long and honorable newspaper record. It was he who, in the *Daily News*, first sounded the alarm at the Bulgarian atrocities of 1876. Through a long life as a publicist, he has shown himself a watchful friend both of Bulgaria and of Greece, and has been trusted by each. As to his intimate knowledge of conditions and possibilities in European Turkey and the Balkans, and also in the Asiatic provinces, there can be no question.

If any one thing is needed for a judgment on that situation, viewed as a single gigantic fact, it is sensitiveness to balance and proportion. "Cries" of all kinds—lo here, lo there, the one hope of escape!—must be sedulously avoided. And there exactly—and most wonderfully for a newspaper man—Sir Edwin Pears is above all strong. His balanced estimate of the Greek genius, for example, in its failure and its accomplishment, is beyond praise. He has talked with survivors of the struggle for freedom and knows its discords, disloyalties, illusions, and failures, and, worse, he saw himself the wretched war of 1897, bred of ignorance, vainglory, and heedless oratory and ending in disaster near to utter ruin. He knows the headstrong individualism of the Greeks, their violent prejudices and unpractical ideas. But he knows, too, their light-hearted courage, their enterprise, their intelligence, their self-sacrificing patriotism, and—what is stranger—their heroic tenacity in life and death. If a football team—for in such matters the boy is not only father of the man but the clearest of clues to him—even of Turkish boys can beat a Greek team in combined play, the Turks can never as a race make head against the sheer ability and energy of the Greeks. And so, remembering Athens as a jumble of hovels, he sees the accomplishment in the present ordered city with its university, museums, hospitals, and schools; he sees Greece a prosperous, well governed country; and he sees the far-scattered Greek people always looking back in helpful affection to their own land. With similar open-eyed fairness he deals with the Bulgarians, the Servians, the Albanians, and the Armenians. It is well for us, once in a while, to have the Servian point of view, in its constant guard against Austrian aggression, made clear, and Albania is now the centre of the whole unhappy Macedonian imbroglio. The very latest situation in Albania is not, of course, presented here, but all the materials are given for the understanding of it.

When, however, Sir Edwin Pears passes to Asia, his certainty of knowledge in some measure fails him. The Greeks of the islands and the coasts he still thoroughly understands. There is a good tale, for example, on page 141 of Poseidon surviving in St. Nicholas. To the Asiatic Armenians, too, he has a clue from those whom he knew in Europe.

But on the little peoples and sects his touch is less firm. The Druses and their sacred books are no such mystery now as he suggests, nor indeed have been since De Sacy's time, and on the Yezidis he is equally in the dark. To all these and their like he has not the key, and so he can only describe them externally and make guesses at the rest.

And with this same weakness is touched his whole treatment of the Turks themselves. It is time that writers on the East should realize that as thorough if not as long an education is needed if they are to understand its peoples as now enables them speedily to see their way through the institutions of any European country. Our education is based upon the civilization of Greece and Rome. We add to that, perhaps, a knowledge of the Holy Roman Empire and of the Europe that has sprung from it. Our sole touch with the East, in the years in which we are laying these foundations, is through the history of the Christian Church. But to understand even the East of to-day we must frankly go to school again and laboriously acquire another and a very different education. No reading up of authorities, nor even year-long contact with Orientals will suffice. The real authorities are still at the stage of writing for one another and not for the public; on the enormous majority of what popularizers there are, the least said the better. Certainly, those on Islam quoted in this book have again and again misled. And as to contact, we have only to consider what would be the success of an intelligent Moslem who should live twenty years with us, reading at the most our newspapers, and who should then attempt to write on our religion, law, and institutions generally. His remarks would be more interesting than illuminating, and his book would be a curiosity of literature. He would be able to describe what he saw; but the essential nature of even those phenomena would be hidden from him because he could not know their origin and history, and would be entirely alien, by education and training, to their spirit.

Thus Sir Edwin Pears gives a clear and thorough account of the Capitulations because they are survivals of legal conceptions familiar to the Roman jurist. Only on one point does he apparently slip. It was not the Turks who took over this attitude from the Byzantines. From the earliest Moslem times not only strangers had so been treated, but also all non-Moslem elements in the native population itself. All Christians and Jews, for example, were strictly resident aliens, and lived their own community-lives by themselves. But, on the other hand, his whole treatment of the Caliphate as a constitutional question is full of confusion and error. To it he had no approach through the Roman law, and Moslem constitutional treatises were not accessible to him. Similarly, he has no clear understanding of the bases of Moslem religion and law. It is evident that experience had shown him that the Koran was by no means the one sole source of these. But what the other sources were, how they had originated, functioned, and were now regarded, above all how much they had really displaced the Koran—on these points he is quite in the dark. There is a reference or two to "traditions," none to "analogy," and none to that great principle of the Agreement of the Moslem people which has become the final validator of all theological and legal doctrine.

Thus in the dark on principles, it is natural that he should often have been misled in details. He gives a quite baseless distinction between divorce and "repudiation" (pp. 69, 329), which was evidently palmed off on him by some Moslem reformers desirous to make a case for early Islam. Again, his statement (p. 365) of the status of a slave who has borne an acknowledged child to her owner is not correct. She cannot be sold, but becomes automatically free only on her owner's death. Again, whatever Turkish usage may be, the punishment given on page 323 for breaking the fast of Ramazan is not legal. It appears to have originated in traditions from Mohammed which told that such sinners would have melted lead poured down their throats in hell.

There are other exasperating things in the book, even as to simple modern conditions. Thus on page 81 a remark is dropped casually about the apparatus of the Turkish witch, that she lives "of course with the traditional black cat." But there is no "of course" about it. Whatever may be traditional as to cats in European diablerie, they are quasi-sacred animals in Islam. There are too many traditions as to the fondness of the Prophet and his companions for cats for them easily to have Satanic associations. The cat must have come into the magical world through some extra-Islamic influence. As a matter of fact, both in Syria and Turkey, black cats and black hens do belong to that world. And the difference between the two is significant. The cat is used with Christians and the hen with Moslems. The magician, being like magicians in general of a fine catholicity, varies his method and apparatus to suit his subject, and in the end becomes confused himself. So much, and probably a great deal more, lies behind that simple "of course."

But in spite of such weaknesses, this is a solid, suggestive, and very largely trustworthy book. Its treatment of the woman question is exceptionally good. So, too, is its balanced view of the present situation and its carefully hopeful outlook into the future. The author has lived long enough in the East to see the wood as well as the trees. It is a pity that he did not read his proofs more carefully.

CURRENT FICTION.

[ANOTHER ENGLISH FIND.]

The Borderland. By Robert Halifax. New York: E. P. Dutton & Co.

Low Society. The Same.

Once more the enterprising house of Dutton presents a new English storyteller to the American audience—not a novice, that is, but a writer of experience whom Britain has hitherto, for some unexplained reason, kept to herself. These we understand to be the third and fourth novels of Robert Halifax, and a fifth is announced for publication (in America) within a few months.

Unlike other recently discovered novelists, Mr. Halifax does not choose a provincial setting: shabby London is his scene—the London of the slums, or of those dingy suburbs which, as it were, out-Bursley Bursley itself. The "Borderland" of his story is slumland, a "borderland of lost souls and human wreckage." Hither comes John Laverock, a Christian Brotherhood worker, fresh from the country, a dreamer, and, to tell the truth, a prig. He is full of sensibility, and his ignorance of city conditions is abysmal. The slum people pity him and tolerate him. A personal problem is added almost at once to the problem of his work, and becomes the real theme of the story. He sees in the street a girl of the street, and falls under her spell. She has the dress and manner of her class, but is of uncommon beauty, a morbid beauty, the product of the slums—amber hair, tea-rose yellow face, wax-like fingers, and "two turquoise eyes—eyes slightly filmed, yet consciously fathomless." But the robust and pious John Laverock looks upon it and is lost. He begins a slow and clumsy pursuit of the girl—in the interest, as he honestly thinks for a time, of her soul. She has been the mistress of a slum villain, who makes several attempts upon his rival's life, but finally vanishes from the scene, leaving "Amber Lou" to become first the mistress of Laverock and finally his wife.

Another young woman figures in the story as a foil, but her elegant attractions are of no potency beside the savage charm of the borderland heroine, and in the end she gives the strange pair her blessing. Unfortunately, Laverock and the lady, types with which we are familiar, fail to impress us as real persons; and the fact leads us to look upon the slum figures with some suspicion. However, Mr. Halifax has been generally hailed in England as a master-painter of the low life of London, and his sketches of scenes and types, when he is not hampered by the requirements of plot, are full of color and vigor. He has, in fact, an always marketable combination of qualities—extreme realism of detail linked with extreme sentimentalism of motive. So we find one English critic declaring that he "has just that rare quality which endeared Dickens to his readers." There is a resemblance of a sort, though luckily not in manner.

"Low Society" is a far better story. It involves no such feat as the union of Laverock and his amber enchantress. The scene is Barking Town, and the persons are consistently "low," with the exception of three who are introduced for purposes of romantic contrast. Young Hungerford and his child wife exhale a faint Copperfieldian aroma. He has given his home and easy prospects for her sake: it must be said that the vindictive lady mother, with her single savage appearance in the poor little household, is as extravagant a caricature as ever stalked in melodrama. Casswade also, whose huge figure fills the centre of our vulgar stage, is hard to credit in the large. His eventual conversion is little short of preposterous. But, as we have intimated, Mr. Halifax is really a romancer who has chosen an unexpected setting for his romance, and who endows it with piquancy by playing with the materials of the onetime realist. In Baversham, the true hero of the story, the method scores a real triumph. All of his surface and nine-tenths of his essence are cad and bounder. In tastes and manner he is an outrageous person. This is equally true of the maiden of his choice, but he is even more a bully than she a cat. The process by which he is caused to appear as friend and rescuer of the Hungerfords, as adversary of the unspeakable Casswade, and even as true lover of his lady, is somewhat obscure; but there is no denying that the thing happens. Mr. Halifax has made the invaluable contribution of a new flavor to the dish of current fiction.

Sharrow. By Bettina von Hutten. New York: D. Appleton & Co.

Though a novel of to-day, with telephone and motor, this book has an old-fashioned quality. It was written to interest the reader and not to prove a theory or describe a triangle. It relies not only on its story, but on the details which garnish the story, whether related or unrelated. There are descriptions of Georgian houses and Victorian furnishings; houses in town and country, in England and Paris and Rome; there are nursery scenes, deathbeds, weddings, dinners, teas, concerts. There are city dissipations and village improvements. There are landscapes and climates with figures to correspond, and unlimited weather. And there are discerning portraits, many and varied. It seems unending, but it never keeps one waiting, and it is never dull. The writer's confidence in the reader's interest is justified. The whole mass of detail has a kernel, to wit, the English estate and family of Sharrow, which traced its history in unbroken line to the days of King John. The heart of the kernel is Sandy Sharrow, of whom this book is the biography. All Sharrows having been red-haired and ugly, Sandy was a red-haired, ugly child. He needed but to see the old house on his first visit to it as a child to feel the dawning of the passion for it that was to govern his life, and was to be the bond between him and his terrible old granduncle, Lord Sharrow—a bond never wholly ruptured even by their quarrels. To break off a marriage which Sandy has at heart, the old lord and a governess in love with the younger man enter into a conspiracy, as obnoxious, surely, as any ever devised by novelist. For years Sandy's life is a thing of reproach, and it is only through shadows and tragedies that he is redeemed and reinstated, free to enjoy the Sharrow he worshipped "as a system, an idea, a fabric." The inconstant moon of the novelist here outdoes herself by rising in the west.

COLONIAL PENNSYLVANIA.

The Relations of Pennsylvania with the British Government, 1696-1765. By Winfred Trexler Root, Ph.D. University of Pennsylvania. New York: D. Appleton & Company, Agents. $2.

The author, who is assistant professor of history at the University of Wisconsin, has expanded the present painstaking and scholarly study of the workings of British Government in a chartered province of America from investigations first undertaken in partial fulfilment of the requirements for the degree of Doctor of Philosophy at the University of Pennsylvania. The material is drawn chiefly from the papers and journals of the Board of Trade and Plantations, transcribed from the original manuscript in London for the Pennsylvania Historical Society. His list of authorities, however, covers some ten closely printed pages, and indicates the formidable nature of his undertaking and the thoroughness of his performance. The writing of an adequate history of Pennsylvania, owing to the variety of racial and other elements in the society of that colony, has so far baffled the numerous individuals who have contemplated or actually undertaken the work. The volume assigned to that State in the American Commonwealth series, announced many years ago, has been abandoned in despair by one writer after another and has never yet been prepared.

Professor Root's aim has been to treat the chartered province, not from the provincial point of view, but as part of the Empire. He suggests that this is a broader view than one which merely reflects the colonial side of the story. It is perhaps open to question whether he has not unduly subordinated the colony, although the desire to be fair is manifested in every page. The critical reader will ask why the purpose and effect of laws in restriction of colonial manufactures and commerce, which were so offensive to the colonists, are disposed of incidentally, or sometimes are mentioned merely by title. The phrase "at home" in these pages always means England, but "home rule" applies only to the colony. Occasionally the author makes comparisons without giving the basis for them. This is especially noticeable in the presentation of his view that the failure of the Quakers to support the war against the French and Indians, their refusal to furnish men and money, led to the Stamp Act and presumably to the Revolution. While the author names large sums of money appropriated in different years by the Pennsylvania Assembly and explains the contests between the proprietary and the popular interests which in 1755 caused the Governor to veto the act appropriating 40,000 pounds, there are facts relating to the Braddock campaign which are necessary to a complete understanding of the situation.

For some political reason, or because of a question of commissions to Virginians, it was ordered that the movement of the army should start from Virginia. Horses and wagons were to have been furnished by Virginia and Maryland. Both colonies failed to do so, and the army could not move. Within two weeks Pennsylvania furnished 150 wagons and 259 pack horses. Pennsylvania also furnished 14,000 bushels of wheat. Virginia voted 20,000 pounds, but the sum was expended by the province, and did not reach Braddock. Pennsylvania voted 5,000 pounds. Massachusetts did nothing for this expedition. It is Massachusetts which the author uses to draw a comparison which should obviously be modified by the facts just presented. Again, Pennsylvania cut a road to the West at a cost of 3,000 pounds, and had 100 men working on it. Orme, who kept a journal, wrote on May 20, 1755: "Arrived here 80 wagons from Pennsylvania to assist in the expedition"; and Braddock himself said that he should have starved and the expedition would have failed but for the supplies received from Pennsylvania. Braddock was defeated. In 1758 John Forbes captured Fort Duquesne. He had under him 2,700 Pennsylvanians. Furthermore, the author's comparisons unfavorable to Pennsylvania's military services in the contest with the French and Indians should have been fortified, it should seem, by a presentation of the appropriations made by other colonies in all cases where a comparison is made. It is possible that his theme, the difficulties encountered by the British Government in ordering its colonies, in America, could have been better illustrated by the selection of a more recalcitrant colony than Pennsylvania as an example.

Nevertheless, the reader is presented with a careful and intelligent analysis of the commercial motives of a Government whose main object was the promotion of English trade and the restriction of Colonial activity in manufactures and commerce. The government of Colonial affairs by the British bureaus seems to have been fair enough in unessentials and unbearable in matters of vital interest to the colonists. A duty on negro slaves imported into Pennsylvania was promptly negatived in London because the duty would interfere with British trade. The inefficiency of the bureaus, the hindrances caused by distance and the Penn charter, the meddlesome attitude of some of the Governors, the unworthy position assumed by the Episcopal Church in Philadelphia, the struggle over the courts of justice, and the steady encroachment of a growing democracy upon a feeble British control over the colony, as well as the many minor evidences of this encroachment, are all set forth with full understanding of the issue.

The author seems to think that a proper exercise of Parliamentary power and an abrogation of the charter would have produced a different result. This conclusion is perhaps warranted from a consideration of the subject strictly confined to official documents, correspondence, testimony, etc. When the human element of a problem, so inadequately expressed by such evidence, is reckoned with, it may well be doubted whether any system of government other than that actually used would have proved efficient from the British standpoint for any length of time. The loyalty of the Canadians to the Empire is strongest among those Canadians whose families have come from England and Scotland. New York was largely populated by descendants of the hereditary rivals and foes of England; the many thousands of Germans, Swedes, Dutch, Irish, and Huguenots before the Revolution in Pennsylvania and New Jersey, the large racial element other than English in Maryland, Virginia, and the Carolinas in the colonial period, taken in connection with the substantial causes for a complete separation from the mother country, would have soon broken down any form of paper government arrived at across the ocean.

Notes

Houghton Mifflin open their autumn season September 14. Among their important publications are the Riverside Popular edition of George Eliot in twenty-two volumes; Keats, Burns, and Scott in the Autograph edition of Poets; and the "Life and Letters of John Rickman," the friend of Charles Lamb.

The autumn list of G. P. Putnam's Sons includes: "The Poetical Works of William Henry Drummond," with an introduction by Louis Fréhette and an appreciation by Neil Munro; "The White Shield," a volume of short stories, by Myrtle Reed; "Who?" a detective story by Elizabeth Kent; "The Japanese Nation: Its Land, Its People, and Its Life," by Inazo Nitobé, professor in the Imperial University of Tokio; "Boys of Other Countries," new edition, by Bayard Taylor; "The Indians of the Terraced Houses," an account of the Pueblo Indians of New Mexico and Arizona, by Charles Francis Saunders; "The Story of the Bronx," by Stephen Jenkins; "Love Poems of Three Centuries (1600-1900)," compiled by Jessie F. O'Donnell, and a revised and enlarged edition of Hester E. Hosford's "Woodrow Wilson."

The remains of Sophocles's satyric drama, the "Ichneutæ," recently published for the first time in Part IX of the "Oxyrhynchus Papyri," will shortly be available in a short volume, to be called "Tragicorum Græcorum Fragmenta Papyracea," which is being prepared by Dr. Hunt for the Oxford Classical Texts; it will be issued by the Clarendon Press (Frowde). Besides the new pieces of Sophocles, the book will include the other more important additions made up of the fragments of the Greek tragedians by Egyptian discoveries during the last few years.

The Bibliotheca Sacra Co. announces for publication early in the autumn "Origin and Antiquity of Man," by G. Frederick Wright, D.D.; "Pentateuchal Studies," by Harold M. Wiener, and "The Deciding Voice of the Monuments in Biblical Criticism," by Melvin Grove Kyle.

On the Century Co.'s autumn list are "Russian Wonder Tales," edited by Post Wheeler, and "The New Industrial Day," by William C. Redfield.

"San Francisco: As it was, as it is, and how to see it," with above 200 illustrations, will be brought out in the autumn by Paul Elder & Co.

Albert B. Osborne is bringing out, through McBride, Nast & Co., "Picture Towns of Europe."

The fourteenth annual meeting of the New York State Historical Association will be held at Saratoga Springs, N. Y., September 17-20.

In a generation in which nearly everybody travels and most people write, there is no longer room on crowded bookshelves for the old-fashioned chronicle of a *grand tour* such as our grandfathers, and more particularly our grandmothers, used to write with much complacency. In self-defence nowadays we demand either a guide-book or something quite different from a guide-book, something touched, in the essay manner, with the lights and shadows of personal impressions. Between Baedeker and Ruskin there is no *via media*. Mrs. Julia de W. Addison, in "The Spell of England" (L. C. Page) has essayed such a path, and the result, it must be admitted, is but dull reading. Aiming to write a book about England that should conform with her title, she has only succeeded in giving a description of her own passage over a well-beaten tourist route. Mrs. Addison must know her England well, but her book hardly gives the impression of much familiarity with English customs. Her naïve description of a court of law, where "it is so strange to see the judge taking down the testimony himself, with a quill pen, writing it laboriously in long hand," is delicious, while her account of the bumping races at Oxford is almost, not quite, as good as the lady novelist's 'varsity boat race, in which "all rowed fast, but stroke faster than any." For one thing, Mrs. Addison's book is to be commended: she quotes freely from well-known writers concerning different localities, and on that account the volume might be handy for occasional reference

In writing "The Life of William Robertson Smith" (Macmillan), the authors, Sutherland Black (himself one of the most learned scholars in Britain) and George Chrystal, state that they "have attempted to present a picture of the time in which he lived. to record as completely as possible his many achievements, to explain and justify the part he took in events of critical importance in the religious history of his country, and to convey to their readers something, at least, of the vivid and happy memory which they cherish of their common friend." That they have succeeded admirably in their endeavor, and that the subject is worthy of their labor of love, every reader will cordially admit. Prepared for Aberdeen in a Free Church manse by parents, both of whom had been teachers, Smith distinguished himself at the University, not only in the classics, but also in the exact sciences; even during his theological course he was lecturing on physics at the University of Edinburgh for Professor Tait. The vivid account of his subsequent career, first in the Free Church Theological School at Aberdeen as professor of Hebrew, and then at Cambridge as lecturer on Arabic, as librarian, and, finally, as the successor of Wright in the chair of Arabic, explains adequately the unanimous testimony of his friends, both to his warm-hearted, generous, dominating, if not domineering, personality, and to his boundless knowledge, readiness, and force. "When rallied about his omniscience he would retort by a reference to the fact that he was among the few men who had read through the ninth edition of the "Encyclopædia Britannica."

About one-half of the book is devoted to Smith's ecclesiastical troubles, occasioned in the first instance by the article "Bible" in the encyclopædia just referred to, troubles familiar even to those who have but a bowing acquaintance with recent Scottish Church history. The biographers make clear that the Free Church was unable to prove that the critical opinions expressed by Smith contradicted the standards of that church. In fact, in the first case, the professor, by a narrow majority, to be sure, was let off with an admonition, a decision, by the way, that led him to decline a call to Harvard. But no sooner was the first case ended than the second began. Smith not only was the superior of his judges in the points at issue and a controversialist as skilled as Huxley, but also was convinced, and remained so to the end of his days, that his critical views did not conflict with the doctrine of inspiration as stated in the standards of the Free Church. The ecclesiastical leaders therefore settled the matter by compromise, that is, by dropping the "libel" (*i. e.*, approximately, "indictment"), ousting the professor from his chair, without suspending him from the ministry. The quality of Smith's work as contributor, editor, and editor-in-chief of the ninth edition of the Britannica, as a member (the youngest) of the committee for the revision of the Authorized Version of the Bible, as a writer on Old Testament subjects, and as an Arabist, gives him a permanent place in the field of Semitic scholarship; but his greatest achievement is, perhaps, his "Religion of the Semites," a work that entitles him to be regarded "as a founder of the new science of comparative religion, which is based on the study of social anthropology." As a companion volume to the "Life," the biographers have published, under the title "Lectures and Essays of William Robertson Smith" (Macmillan) a selection of papers and addresses which are interesting, both for their intrinsic merit and for the light they throw on the extraordinary versatility of the man.

The most notorious and influential courtesan in an age when courtesans were the power behind the throne is decorously set forth by Philip W. Sergeant in "My Lady Castlemaine" (Dana Estes). The events of Barbara Villiers's life are not made dramatic by any intrusion of the imagination, nor is her character disclosed by disconcerting flashes of insight. From her fourteenth year, when she began a less than ingenuous flirtation with the second Earl of Chesterfield, to her sixty-seventh, when she obtained a divorce from her new husband, the rascally Beau Feilding, because he had been careless enough to marry another woman two weeks before his union with her—between these dates her career is patiently pieced together by a pretty thorough ransacking of the letters, diaries, reminiscences, and official documents of that fertile period. With the full record before him, the reader is allowed to ferret out the secret of that sway which she held over Charles II for the first ten years of his reign, and which she retained in a measure to the day of his death.

Two reprints this spring of useful books on China indicate the response which publishers are preparing to make to a reawakened interest in that country. The first of these, Dr. W. A. P. Martin's "Lore of Cathay" (Revell), is reproduced after ten years, from the old plates on a slightly smaller page at a reduced price, with a brief introductory note by James S. Dennis, D.D. The venerable author of this volume redistilled most of its chapters from his own essays previously published in China and America, and it is likely to remain the work which will in future years be associated with his name. While Dr. Martin has not been fecund in contributions of the first importance to Oriental scholarship, his writings are wholly derived from original studies, and owe nothing to the translations of others at work in the same fields. The independence of his opinions was shown twenty-two years ago in a plea before a missionary conference for the toleration of ancestor worship by Christian converts. His paper, which appears in this volume in a less polemical form, aroused considerable antagonism, but it will commend itself to liberal-minded Christians who realize more fully than the propagandists of a passing generation the necessity of leaving the settlement of dispensable doctrines to the growing church of China. The author of the "Lore of Cathay" is at his best when explaining the content and style of Chinese literature. It is a source of regret, in view of the enormous task which yet remains to be done in the way of sifting the heterogeneous materials constituting the mass of that literature, that more of his long life in the Far East has not been devoted to the service of interpreting it to the Western world.

The other reissue, Archibald R. Colquhoun's "China in Transformation" (Harper), has been rearranged and largely rewritten to comprehend the changes introduced since its publication fourteen years ago. The difficult task has been imperfectly accomplished, but there are substantial merits in the work as a basis of instruction in Chinese affairs for general readers. Mr. Colquhoun, a publicist with a wide range of interests, and considerable experience in Asia, possesses that inimitable style which characterizes the old London *Times* correspondent. His views are those of the typical upholder of Palmerstonian traditions of British policy, who attributes the decreasing influence of England in the East to her departure from the old practice of bullying Asiatics whenever it was desired to advance her interests. He ascribes "the relapse of Great Britain into an effeminate, invertebrate, inconsequent policy, swayed by every wind from without or within, and opposed to the judgment of her own experienced representatives," to the Burlingame Mission of 1868—which does little credit to Lord Clarendon's personal acumen, or to the sense of indignation which a half-century of browbeating had aroused in the minds of honorable Englishmen in Reform-Bill days. It will take some time for British writers to realize that Burlingame was only the moral agent who aroused their nation to an appreciation of the iniquity of the "gun-boat policy" in China.

The Philadelphia Museums, organized for the purpose of aiding the manufacturer to take a larger share in the world's commerce, undertook a few years ago to make a history of commerce from the dawn of trade to the present time, and one result of their labor is "The Periplus of the Erythræan Sea" (Longmans, Green), translated from the Greek and annotated by Wilfred H. Schoff, secretary of the Commercial Museum. This work is believed to be the first record of organized trading with the East in vessels built and commanded by Westerners; its author is unknown, its date is now commonly held to be near the middle of the first century of our era. The voyages, starting, apparently, from Berenice on the west shore of the Red Sea (on or near the Tropic of Cancer), passed around Arabia up to the mouth of the Persian Gulf, crossed over to the mouth of the Indus, went down the coast of India to Ceylon, and then on the east side up as far as the Ganges. Formerly, says our author (§57), the voyage was made in small vessels which hugged the shores; it was Hippalus who, by studying the ports and the conditions of the sea, made it possible to sail straight across the ocean. The author of the Periplus seems to have been an intelligent observer and investigator as well as a good seaman; the chief value of his narrative lies in his enumeration of the articles of commerce of the ports at which he touched and the regions of which he heard. The identification of the places and products mentioned is not an easy task. The editor has consulted all the principal works on the subject, and his notes give a great mass of information on ancient commerce and things connected with it. The obscure points, which are numerous, are treated judiciously, and in an excellent introduction the commercial background of the Periplus is described. In several places on p. 3, however, the editor appears not to have observed his usual caution. There is no authority for the statement that "for thousands of years before the emergence of the Greeks from savagery, or before the exploits of the Phœnicians in the Mediterranean and Atlantic, human culture and commerce had centred in the countries bordering on the Persian Gulf." For the commerce of that early period we have no records in Babylonia, India, or elsewhere. Nor have we the right to say that Egypt came into being with (that is, through) the spread of culture from the region of the Persian Gulf. Egypt and Babylonia were contemporary cultural centres; each may have been influenced by the other, but their general developments were native and independent. The statement, also, that the early Arab traders concealed or guarded their commercial undertakings requires explanation. These points, however, do not impair the value of the volume as a commentary on the Periplus.

The second and revised edition of W. U. Hensel's study entitled "The Christiana Riot and the Treason Trials of 1851" confirms the impression of his judicial fair-mindedness and unusual thoroughness in dealing with this interesting and significant prelude to the Civil War. Nothing brought out more clearly, prior to John Brown's raid, the irrevocable conflict in the points of view of North and South than this bloodshed in Pennsylvania over a determined effort of a Maryland slaveholder to recover fugitive slaves under the Federal law of 1850, with the result that the raiding master lost his life September 11, 1851. As a result there were indicted "more persons for treason than were ever before or since tried for that crime in the United States" Mr. Hensel, who is a former Attorney-General of Pennsylvania, gives a good summary of the political causes leading up to the riot, and has covered all the ground with commendable thoroughness, particularly in its legal aspects, availing himself of careful local studies, the stenographic report of the trials, narratives of survivors, etc. It is hard to see how this narrative could be improved upon. It is well illustrated, and ought to be in every library of Americana of the slavery period. (New Era Publishing Co.)

According to the view taken by Gustavus Myers in his "History of the Supreme Court" (Chicago: Charles H. Kerr & Co.), that tribunal has been engaged from the beginning of its history up to the present time in a conspiracy against the rights of the people. During its entire existence it has "incarnated into final law the demands of the ruling class"; its history is the history of the origin and progress of capitalism, "which has been accompanied by ceaseless fraud and bribery," and "which necessarily began with the appropriation of land and the dispossession of workers." The numerous decisions upholding statutes intended to remedy social evils, or enforcing laws to curb unlawful combinations of capital, are brushed aside with the remark that they were based not on conviction but on fear. The decision sustaining the initiative and referendum law of Oregon, for instance, was probably due to the fact that Senator La Follette at the time was "wildly applauded, when he advocated the recall of the Justices of the Supreme Court." None of its members, past or present, escapes condemnation. Marshall's opinions are full of "evident subterfuges and the grossest contradictions." His decision that the Supreme Court had the power of annulling legislation, which was held to be an impairment of the obligations of contracts, was inspired by personal interest. Story was nothing but a satellite of Marshall. Judge Holmes is "hide-bound by class views and class associations," and owes his appointment to the fact that his father "had been an essayist of tolerable fame"; Judge Hughes, while personally honest in money matters, is guilty of "intellectual and class dishonesty which in its results far exceeds pecuniary dishonesty." The Supreme Court, like all other human institutions, is fallible, and no one will object to a fair and honest criticism of its decisions. But extravagant accusations, based to a great extent on popular rumors, insinuations, articles by muck-raking writers, and ex-parte statements, recoil on the author and discredit the cause he advocates. Mr. Myers says in his preface that he seeks "to go to the basic depths"; it certainly would be difficult to sink any lower.

The subject treated by Robert H. Whitten, 'Valuation of Public Service Corporations" (Banks Law Publishing Co.), has attained to great importance within recent years, owing to the development of public control over public service corporations. Since the courts have decided that such companies are entitled to earn a fair return on the fair value of their property, the courts and the commissioners have been put to it to determine of what elements this value consists. The author has done his work in a thoroughly practical way. He has examined not only the decisions of the courts, but the unpublished reports of arbitrators, masters, and appraisal commissioners, and also the decisions of Public Service Commissioners. The quotations are full, and these together with the additional information furnished, compose an accurate statement of the essential facts in each case.

The publication of Part 2 of the second volume of Abu'l-Mahasin's "History of the Rulers of Egypt," in the University of California Publications in Semitic Philology, edited by William Popper, has now been completed (Berkeley: The University Press); the paging has been made continuous with that of Juynboll's edition of Vol. I and Vol. II, Part 1. For the text five manuscripts have been used, and the editor has had the assistance of Nöldeke, Seybold, Gottheil, Macdonald, de Goeje, and others. The editor hopes to continue the publication of the work (the Nujum az-Zahira), but he gives an index of proper names to the portion so far edited by him, and a glossary of words and phrases not found in Lane or in Dozy. Abu'l-Mahasin's History covers the period from the Moslem conquest (year 638) to the accession of the Mamluk Sultan Kait Bey (1467); the present publication comes down to the year 1020. Professor Popper and the University of California have laid scholars under obligation by bringing out this critical and well-printed edition of an important historical work, and it is to be hoped that they will give us the rest of the Nujum.

Prof. Theodor Gomperz, philosopher and classical scholar, is dead in Vienna. He was born at Brünn in 1832. On graduating from the University of Vienna in 1867, he became privat-docent and later professor of classical philology. In 1882 he was elected a member of the Academy of Science. Professor Gomperz received the degree of doctor of philosophy from the University of Königsberg, and that of doctor of literature from the Universities of Dublin and Cambridge. Of his many published works we may mention: "Demosthenes der Staatsmann," "Herkulanische Studien," and his great history of Greek philosophy, "Griechische Denker."

Science

Science books in the autumn list of Sturgis & Walton Company include: "Sleep and the Sleepless: Simple Rules for Overcoming Insomnia," by Dr. Joseph Collins, and "Pygmies and Papuans," an account of a scientific expedition made in 1911 under the auspices of the Royal Geographical Society and the Ornithologists Union to the Snow Mountains of Dutch New Guinea, by A. F. R. Wollaston.

McBride, Nast & Co. are adding to their House and Garden-Making Series "Making a Garden with Hotbed and Coldframe"; "Making a Fireplace," and "Making a Bulb Garden."

"The Home-Life of the Osprey" (Brentano's), by Clinton G. Abbott, is the third in a series of home-life studies of birds, each of which is photographically illustrated. Gardiner's Island is the scene of most of Mr. Abbott's studies, and he gives us abundant proof of patient labor with field-glass and camera, omitting no phase of the nesting habits or life of the young birds. The thirty-two excellent photographic facsimiles bring to mind one of the most interesting traits of this bird, its extreme attachment to the nesting site. Year after year a pair of birds may breed at the summit of a tall tree, but when at last the tremendous weight of the nest results in the fall of the tree, the birds use the shattered mass of débris on the ground as the basis for a new home, and thus gradually accumulate a mound of sticks and seaweed, which elevate the eggs and young birds to just a convenient height for photographic work. With such facilities one can readily see how Mr. Abbott has been able to make most intimate studies of the home-life of the fish-hawk. A book, even of this popular nature, would be rendered much more valuable by the addition of an index.

Mrs. Gene Stratton-Porter's "Moths of the Limberlost" (Doubleday, Page) is a happy relief from the made-to-order nature books which flood the market at the present time. Instead of a mass of good, bad, and indifferent photographs, purchased by some publisher and turned over to a hack writer who is supposed to supply enough text to tie the series together, we have a collection of exceptional photographs made by the author herself, and by her colored in the most life-like manner. It is virtually true, as she states in her introduction, that the illustration of every moth book that has attempted colored reproduction proves by shrivelled bodies and unnatural position of the wings that it has been painted from subjects mounted from weeks to years in private collections and museums, and that a lifeless moth fades rapidly under the most favorable conditions. Her own illustrations are, in nearly every case, of moths photographed before they had taken flight, and their colors were copied as soon as the down was dry and fluffy. They have been reproduced with remarkable fidelity in the beautiful book before us. It goes without saying that the author of "The Harvester," "The Girl of the Limberlost," and other stories, has written entertainingly of her insect friends. The life-long interest in nature which shows in all of her writings, is here given free rein, and we have many experiences recounted which have been elsewhere interwoven with her fiction. The habits and the life-histories of the large moths which she has studied, are described with the same accuracy and charm which are shown in her illustrations. When it comes to generalizing, Mrs. Porter is not so fortunate. Like all careful students of insect life, she has been able to observe many facts not recorded in the textbooks, and even to correct some commonly accepted statements. This has hardly qualified her to pass upon moot questions of insect psychology, morphology, or metamorphosis, or to criticise so freely the writers who "fail to explain the absolutely essential points over which an amateur has trouble." However, the few faults of the book are such as may be attributed to over-enthusiasm. Author and publisher have coöperated in producing a book which is attractive from cover to cover, and which will do much to stimulate study of a group full of interest for the nature lover.

The "Supplément Général" (Paris: Berger-Levrault, pp. 404) marks the completion of a military encyclopædia—the "Dictionnaire Militaire"—that has dragged its weary length through twenty years of preparation and publication. In many cases this supplement renders reference to the main work almost unnecessary. The subject of aviation is, of course, well to the front, with but scant justice to the Wright brothers. A new feature is a brief but adequate and accurate summary of the military strength of the civilized nations. We have to criticise the paucity of illustrations an unpardonable defect in a subject in which illustrations would mean so much; we could easily spare, for example, the diagram of the Norwegian ski, (p. 368), for a few illustrations of the modern rapid fire gun, of which not one is furnished.

F. E. Fournier d'Albe's "Contemporary Chemistry" (Van Nostrand) is "intended to give a bird's-eye view of the whole field of modern chemistry," and is written in the breezy style characteristic of the majority of the publications attempting to present a "concise summing-up" of the achievements of chemistry for the general reader. At first glance, it seems to be attractive, but, while it may stimulate interest in chemistry, it is decidedly inadequate. The author states that "the aim throughout has been to include the latest phase of each subject, down to the end of 1910." This may have been the aim, but the work gives neither a rational nor a connected account of the important lines of contemporary chemistry; the whole book shows an unfamiliarity with the state of chemistry to-day and its recent progress; and if written in an entertaining style, it is nevertheless the product of hasty and indiscriminate compilation. The author's indiscrimination is instanced in the chapter on Affinity, wherein the many experimental methods of measuring chemical affinity, which, in conjunction with comparing the great amount of data thus far accumulated, constitutes the real work of the present time, are not mentioned; on pp. 21 and 22, where no mention is made of Svedberg, Perrin, and others; and on pp. 56 and 57, where ordinary and electrolytic dissociation, and specific conductivity and molar conductivity are confused. There are other confusions and inaccurate statements. The author is evidently unfamiliar with the investigations of Marcellin Berthelot, for he attributes the usual remarkable knowledge and discoveries to Geber, Basil Valentine, and other pseudo-alchemists. The book is well indexed; the printers have done their work well; but the work fills no space in chemical literature, and was therefore uncalled for.

Drama and Music

David Garrick and his French Friends. By Frank A. Hedgcock. New York: Duffield & Co. $3.50 net.

This book contains new matter, in some hitherto unprinted, though not unknown, correspondence between the actor-manager and French friends, but none of it is important or throws any new light upon the personality or abilities of the modern Roscius. Nevertheless, the volume has conspicuous merits. It is the work of a conscientious and accomplished scholar—Mr. Hedgcock is lecturer on French literature in the University of Birmingham—it is agreeably written, furnishes a full and intelligent epitome of what most of the recognized authorities have contributed to the subject, dwells chiefly upon those features of David's career which are least familiar to the general public, and is uncommonly rich and honest in the matter of references. Moreover, it is distinguished by a sobriety of judgment in which many of the biographies of Garrick are markedly deficient.

For instance, the chapter on The Admirer of Shakespeare, while giving Garrick full credit for mere histrionic achievement, disposes pretty effectually of his right to be regarded as an enlightened or reverent interpreter of the bard. Especially interesting and acute is the connection which it establishes between contemporaneous French criticism of the Shakespearean drama and his own abominable mutilation of the masterpieces of which he habitually professed himself so devout a worshipper. Such plain speech on this topic is welcome. As a matter of fact, there was almost as much justice as malice in Cibber's savage ridicule. Mr. Hedgcock again displays sound judgment in his estimate of Garrick's poetic abilities, which were of an exceedingly moderate order. He could write a sprightly line, turn a neat epigram, pay a pretty compliment, or make a dexterous allusion, but his imaginative and creative literary powers were small. In his most effective verse the inspiration is manifestly the memory of the experienced performer.

The speculations concerning the motives and the incidents of Garrick's first visit to Paris (1751) are founded on somewhat insufficient data and, in any case, are not particularly profitable. Much more interesting is the chapter devoted to the French dancer Noverre and the testimony of the latter to the astonishing powers of Garrick's pantomime. The Gallic artist is entitled, of course, to be regarded as more or less of an expert on a question of this kind, but at the same time some allowance must be made for the fact that he was seeking the good will of a powerful manager from whom he expected a highly remunerative engagement. From the beginning the public exchange of mutual adulation among theatrical celebrities has been much more common than sincere. But it seems clear that it was Noverre's close observation of the effects of Garrick's gesture and vivid facial expression that led him to abandon the harlequin's mask and modify the more arbitrary symbols of his profession, and to originate the more realistically dramatic ballets in which he was to achieve fame and fortune. His description of Garrick's tragic acting is full of ardor, but, if taken literally, undoubtedly tends to justify the suspicion that the most highly belauded achievements of the actor had in them more of melodramatic exaggeration—mere frenzied vehemence of voice and action—than of true tragic inspiration. It has always been difficult to reconcile the theory of Garrick's perfect realization of the loftiest of Shakespeare's ideals with his stupid and callous mangling of the text which enshrined them. On the other hand, it is only fair to point out that he criticised the illustrious Dumesnil for her employment of unnatural and artificial gestures.

It is perfectly plain that Garrick maintained the most intimate relations with such eminent French performers as Dumesnil, Clairon, Le Kain, and Préville, and repaid them, and all his ecstatic French entertainers, with a most generous measure of the flattery with which he himself was laden, though never overwhelmed. He probably regarded all the flowery tributes offered to his genius as richly deserved and perfectly sincere, but it is safe to say the eulogies which he bestowed, in turn, upon his kindly critics were due to his politeness rather than his convictions. It is evident, indeed, that if the French system of acting, with all its traditional mannerisms of gesture and utterance, were correct, his own must have been all wrong. That he did, in the main, in his acting hold the mirror up to nature cannot be doubted. The cumulative evidence on that point is too strong to be disputed. In each dramatic situation he was called upon to interpret he followed the dictates of his instincts and perceptions. That he learned something from French example, especially in the direction of artistic restraint, is altogether probable. At all events, he has been accepted as the nonpareil of his time. But there still remains an uncertainty as to the actual extent of his versatility, of his power to create those absolute metamorphoses with which he has been credited. Was he, within certain limits, a veritable Proteus, or was he simply extraordinarily facile in the representation of certain phases of his own elastic personality? The latter supposition appears to be the more reasonable, but the problem is one that cannot be solved now.

It is an interesting suggestion that Garrick's acting lay at the bottom of Diderot's much-quoted paradox. Unless all contemporary testimony is fallacious, the Drury Lane manager was never so wrapped up in his part as to be oblivious of his surroundings or the attitude of his spectators. The same thing might be said of almost every first-class actor since his time.

Of the letters now first published by Mr. Hedgcock none is important enough for quotation. Those of the actor Suard are the most entertaining. There are interesting chapters also on Madame Riccoboni—one of the liveliest and most excitable of correspondents—and on Jean Monnet, who testified to his profound appreciation of and affection for Garrick, by executing all imaginable commissions for him with indefatigable industry and care. No doubt, Mrs. Garrick read most of his letters, as they were largely devoted to her affairs. Whether she really read and approved of all those which passed between David and the inflammable Riccoboni is another matter. The book is an admirable bit of press-work—printing, paper, and illustrations all being excellent.

The text of Richard Grant White's "Shakespeare" has been revised for a pocket edition in twelve volumes, which Little, Brown will issue in the autumn. Those in charge of the work are Prof. W. P. Trent and Dr. Benjamin Wells, the late Prof. John B. Henneman having also contributed to the undertaking.

"The Perplexed Husband" of Alfred Sutro, just produced in the Empire Theatre and described as a four-act comedy, is actually a farcical skit on some of the more extravagant features of the woman's rights question, is meant for amusement only, and requires but brief critical notice. Two propagandists, one a male humbug and the other a female bigot, inspire in a young wife, Sophie Pelling, the spirit of revolt against her affectionate and inoffensive husband. She astonishes the latter by telling him that he must acknowledge her equal authority in all matters or lose her forever. By the advice of his sister he introduces into his house a romantic "typist," who professes a great passion for the beautiful, dresses in Greek fashion, and calls herself Kalleia. His object is to bring his wife to her senses by exciting her jealousy. In this latter object he succeeds easily enough, and all sorts of complications, generally of an obvious kind, ensue. Finally, Kalleia ends them by carrying off the male agitator, to the infinite despair of his female associate, who has already abandoned husband and children as proof of her independence. Sophie then seeks reconciliation with her husband, to whom she has always been devoted. Plainly, this is a wholly artificial story, with no social and very little dramatic significance, while the personages are, in the main, merely theatrical puppets. But the piece has some comic situations and many effective lines, including some that are admirably witty. Moreover, the popular actor, John Drew, finds a congenial part in the character of the hero.

In "The Model," his new comedy which was produced in the Harris Theatre on Saturday night, Augustus Thomas has not reached the high level of much of his maturer work. It exhibits some neat workmanship—that is always expected of him—contains some admirable dialogue and one or two effective comedy scenes, but the story is conventional in itself and is handled in thoroughly conventional fashion. This is all the more unfortunate as the piece purports to be a plea against the restrictions imposed upon art and education by narrow and ignorant social conventions. His hero is a high-minded and highly endowed artist, who loves his model, a young woman of supposedly poor origin but singular grace, refinement, and beauty. The girl is modesty personified, has never posed for anybody but himself, but is so inspired by artistic intuition, so interested in his success, and is so devoted to him personally, that she willingly becomes a model for the nude, and so enables him to realize certain ideals which win for him great artistic triumphs. He wishes to marry her, but feels that he is bound in honor to an heiress, to whom he has long been engaged. This difficulty, however, is solved by the heiress, who dismisses him upon the promptings of a jealous rival, a scheming cousin, whom she prefers. Then his best friend, an illustrious French novelist, who is in New York hunting for a long lost daughter, denounces his folly in dreaming of marrying a model—which, he argues, could result only in his social ruin and the unhappiness of both—and suggests that his one wise course is to wed the heiress and make the model his mistress, as any sane Frenchman would do. This counsel, which is equally offensive to both the persons principally concerned, is productive of lively discussion of social morals and ethics, much of which is written in Mr. Thomas's best style and is full of sage and liberal reflection. Finally, as has been evident from the first, the model is proved to be the missing daughter of the Frenchman, who straightway declares that now that the girl's social respectability has been established, the only obstacle to the marriage has been removed. Thus all ends happily. Such a story is obviously artificial and insignificant. Its relation to real life is of the slightest, and the destined course of it is too obvious to excite dramatic interest. What Mr. Thomas, through his mouthpieces, has to say about the differences between the naked and the nude, idealization and exposure, the nastiness of Pharisaism, the narrowness of prejudice, and the blindness of ignorance is all sound and helpful, but there is nothing that is conclusive and little that is reasonable about his illustration. His angelic model is not a convincing or sympathetic personage. But, even if she be accepted at her face value, she is scarcely a demonstration of the general desirability of models as wives and mothers. The play is not without its attractive features, and may run, but it will add nothing to Mr. Thomas's reputation.

The latest of the monumental catalogues printed by the British Museum is concerned with the printed music published between 1487 and 1800. It makes two volumes of small type, the first containing 775 pages, the second 720. The name of the compiler and editor, William Barclay Squire, is a guaranty of thoroughness and reliability. Price, three guineas. Prominent among the composers represented are Handel, who occupies forty columns, and Haydn, who has eighteen. A feature of the catalogue is that it contains the first list ever made of the music which was so prominent in many French and English periodicals of the eighteenth century. There are special headings for hymns, psalms, motets, and so on.

Some of Wagner's most interesting literary productions, mostly written to earn his daily bread during his three years' sojourn in Paris, are not to be found in the ten-volume editions of his works. They will all be included in the new edition now being issued by Breitkopf & Härtel in twelve volumes at the low price of a mark a volume ($3 the set). Coming just before the Wagner centenary, this edition will doubtless have an enormous sale. It is to be hoped that the final volume will include a genuinely helpful index, after the model of those made by the ingenious Mr. Ellis for his English versions of Wagner's essays and letters.

Cleopatra seems to be in high favor just now with opera composers. A few years ago the young Danish musician Enna chose her as his heroine, and now report has it that Massenet has in his desk a "Cleopatra," while the Paris Opéra has promised Camille Erlanger to mount his opera on the same Egyptian Queen.

Lilli Lehmann, Kubelik, and Richard Strauss will be among the artists taking part in a gala concert which is to be given in Dresden on September 21 in honor of Schuch's fortieth anniversary as conductor. The Dresden Opera, over which Schuch has so ably presided decade after decade, opened its season as early as August 11.

When Richard Strauss's "Rosenkavalier" was nearing completion, the London *Times* was the medium for giving to the world the first authentic details regarding it. This time *Kunst und Bühne* has succeeded in being first in the field with reliable information about his new work. This work, it now appears, is a composite production—a play with incidental music, followed by a one-act opera. The play is a condensation by Hugo von Hofmannsthal, of Molière's "Bourgeois Gentilhomme." This comedy is in five acts, but the German playwright has reduced it to two, omitting the numerous lines which would not appeal to a modern audience. He has carefully retained, as a matter of course, all the situations offering a chance for a musical interlude, and of these opportunities Strauss has made abundant use. There is an overture, and each of the personages in the play, on appearing on the stage, gets a musical tag of identification. The citizen Jourdain, for instance, who imitates the ways of noblemen, is heralded by an imposing trumpet fanfare. Jourdain also sings a song in which he gets off the key woefully. Among the musical numbers are also a minuet, a pastoral duet, and a dance of the tailors. The first three performances of this composite novelty are to be conducted by Strauss himself, and a cycle of his former operas follows them. The Stuttgart Theatre, in which all these things will be heard, is a beautiful new building, which deserves a more savory and truly musical send-off.

The outcome of the London opera season was almost as unsatisfactory as the concert season. How Oscar Hammerstein fared is known to all, as he made no secret of it. He had hardly any singers known to universal fame, and without such singers opera prospers not anywhere. Covent Garden had a few singers of the highest rank, but not enough of them to make its season a success. The heroine of the year was Emmy Destinn; yet even with her in the cast the last performance of "The Girl of the Golden West" drew only half an audience.

Arthur Nikisch's list of novelties for the coming season's Philharmonic concerts in

Berlin includes E. W. Korngold's "Overture to a Drama," Richard Mandl's "Overture to a Tournament," Walter Braunfels's "Carnival Overture," Holbrook's "Queen Mab Scherzo," Gustav Mrazek's "Max und Moritz." For composers little known, as some of these are, it is a great triumph to be represented at these Nikisch concerts, which stand at the head of the 1,800 concerts given in Berlin each year.

Samuel Coleridge-Taylor, tho most important of negro musical composers, and one of the best known of modern composers, died recently in London, where he was born August 15, 1875. He was the son of a doctor of medicine, a native of Sierra Leone, and an English mother. In 1891, he entered the Royal College of Music, as a student of the violin, studied composition with Sir Villiers Stanford, and gained a composition scholarship in 1893. In 1898 the first part of his Hiawatha trilogy, "Hiawatha's Weddiug Feast," was produced at the Royal College. His fame in America rests mostly on this choral work. The second part, "The Death of Minnehaha," was brought out at the North Staffordshire Festival in the autumn of 1899, and the third, "Hiawatha's Departure," by the Royal Choral Society, at the Albert Hall, on March 22, 1900. In the following May the overture to the whole was heard for the first time. He wrote incidental music for many of the plays which Sir Herbert Beerbohm Tree produced at His Majesty's Theatre. This included accompaniments to the dramas, "Herod," "Ulysses," "Nero," and "Faust," all by Stephen Phillips. In 1904 he became conductor of the London Handel Society.

Art

Hellenistisches Silbergerät in antiken Gipsabgüssen. Von Otto Rubensohn. Festschrift zur Feier der Eröffnung des Pelizæus-Museum zu Hildesheim. Berlin: Verlag von Karl Curtius.

The art of plaster casting is not an invention of modern times, but was known to the ancients and was frequently practiced, especially during the early Hellenistic period, that is, the end of the fourth and the beginning of the third century B. C. This we know not only from the statements of writers, such as Pliny and Plutarch, but from actual specimens found chiefly in Egypt and Southern Russia. A valuable contribution to our knowledge of this practice is made by Rubensohn's study of the casts in the Pelizæus Museum. The pieces were all bought together in Cairo, and are said to have been found in a number of adjoining houses in ancient Memphis. The majority of the casts are reliefs taken from metal originals, as can be seen from the sharpness of the lines, which presuppose the use of the chisel. They are derived from a variety of objects, such as vases, mirror-covers, weapons, horse-trappings, jewelry, etc., and appear to have served as models in the workshops of metal workers—presumably both as a useful stock of motives for the designers themselves and as patterns from which the buyer could choose to his liking. There are also several heads, evidently cast from sculptors' preliminary sketches, as well as a number of moulds. The subjects represented are very various, comprising both decorative and figured motives. Of special interest are a milking scene, quite idyllic in conception and executed with charming naturalism, and the representation of a woman worshipping before a statue. Noteworthy are also several portraits of the Ptolemies, which formed central medallions for cups.

All this material is of great importance, not only for our knowledge of plaster casting in antiquity, but even more for the light it sheds on the metallurgy of the early Hellenistic period; though of humbler material, this find ranks in scientific and artistic value with the famous treasures of Hildesheim, Boscoreale, and Bernay. And there is another fact upon which the author rightly lays stress. This discovery teaches us that we must once for all cease regarding Alexandria as the only centre of Hellenistic art in Egypt; for it is now clear, as other finds had already intimated, that Memphis, the old centre of the country, long maintained her importance side by side with the new capital.

The publication of the material is excellent. Each piece is well illustrated, carefully described and discussed, and, where possible, correlated to kindred representations. The Pelizæus Museum is to be congratulated, both on its acquisition of this collection and on the method in which it has made the collection accessible to students by a full and careful publication.

We have received from F. Gutekunst, the Philadelphia photographer, an imperial sepia platinum picture, 13⅝ by 16 inches, of the late Dr. Horace Howard Furness. The picture, which is suitable for framing, is regarded as an excellent likeness by members of Dr. Furness's family, and was so regarded by Dr. Furness himself.

Louis McClellan Potter, whose death was announced last week from Seattle, Wash., was born in Troy, N. Y., in 1873. He graduated from Trinity College, Hartford. While in college he began the study of art under Charles Noël Flagg, painting under Montague Flagg in summer vacations. In Paris he studied painting under Luc-Olivier Merson, and modelling under Jean Dampt. After working in clay for a year and a half, he exhibited in the Champs de Mars a bust of his friend Bernard Boutet de Monvel, son of the distinguished artist, and himself a painter. For a time he studied in Tunis, received commissions from that Government, and was decorated by the Bey. After returning to this country, Potter made a specialty of American Indian groups. He had become by this time definitely a sculptor, although he still worked in color, and discovered and perfected a method of making prints of extreme beauty.

Finance

NEW INFLUENCES.

With the opening of September a quite unusual group of new influences, or of old influences in a new form, is appearing on the financial markets. Last Tuesday, the very first business day of the autumn month, the Government gave out a highly important estimate on the cotton crop's condition; it showed that condition, with the second largest acreage on record, to be above that of 1911, and above the September average for the past ten years. On the same day occurred the Vermont election, with its traditional bearing on the drift of the Presidential campaign. The Maine election is to be held next Tuesday; the Government grain crop estimates will be published on the same day; the Steel Corporation's "unfilled-orders statement," as of August 31, will appear September 10, giving further light on the state of the steel and iron trade. In the meantime, all the financial community has been watching for some possible light on the tendencies of the autumn New York money market.

This last-named consideration is a matter of singular interest. Last Thursday the Bank of England advanced its official discount rate to 4 per cent. —the highest reported at this time of year since 1907. On Saturday, the New York weekly bank statement showed the smallest surplus reserve reported at the end of August since 1906.

Neither in London nor in New York did the money market make any excited response to these occurrences, though the New York call money rate rose above 4 per cent. last Monday. But it was quite inevitable that the question should be asked, whether or not the money market is likely to interfere with the favorable course of finance and industry. It was the more inevitable, in that a very large demand by the West on Eastern bank resources, for use in connection with the great harvests and the Western trade revival, was believed to be impending, and that the fixing of a high discount rate by the Bank of England is apt to mean that its managers either feel already, or else foresee, a demand of more than ordinary proportions on the money markets of the world at large.

Perhaps the question as to the money market's bearing on trade affairs may be met by putting another question—whether people may not already, consciously or unconsciously, have prepared for exactly such a condition of affairs. Nobody doubts that revival of trade activity in the United States—especially when accompanied by harvests of a possibly unprecedented total value, whose purchase, transportation, and marketing must be financed in a few months' time—will impose unusual requirements on the supply of floating capital. It will not have been forgotten that in 1905 and 1906, under somewhat analogous conditions, credit facilities were strained to the breaking point, and that, in fact, the breaking point was actually reached in 1907.

But it has not been the habit of the business community to place the blame for that world-wide and very serious stringency on bumper harvests, or even, primarily, on trade expansion. The manifest trouble in that period was that the financial and industrial world was attempting to do everything at once. With trade activity at its absolute maximum and enormous harvests in process of distribution, speculation was running absolutely wild. There was scarcely a staple commodity of production which was not being held in prodigious quantities for the rise, with borrowed money.

Stock Exchange speculation was also being pursued on a scale of recklessness and audacity rarely witnessed in the history of finance. The richest men in America had virtually cornered stocks with a value running well towards the hundred millions, were putting up prices at the rate of 10 or 20 points a week, and were using the stocks, at their new quotations, to borrow 10 or 20 per cent. more money from the banks. Along with this, promoting and underwriting enterprises of the most extravagant sort were on the boards. The late M. Leroy-Beaulieu, with his customary clear insight into world finance, had already shown to the public that the borrowing world was asking for the immediate use of more fresh capital than the money lending world had been able to accumulate.

The question to ask at the present time, then, is whether the situation now confronting the money market is similar to that of those other years, and most observant people will probably answer in the negative. In the United States, at any rate, it is a chastened promoting and speculating community on which the great harvests and the trade revival of 1912 are descending. Some of the reckless financial adventurers of 1905 and 1906 and 1909 have disappeared forever from the scene. Some have ended their period of activity. Some have had their financial wings so clipped that they will do no more flying in Wall Street. Some are devoting to amateur politics the energies formerly applied to over-promotion, over-capitalization, and over-speculation.

Their successors are mostly men who have been able to learn something from experience. No better evidence of these changed conditions could be had than the spectacle which the New York stock market has presented throughout the month of August. Along with the enforced abandonment of these activities, business itself has spent nearly three years in retrenchment and conservative economy.

Commodity prices, it is true, are high, and the marketing of new securities has been large; but there has at least been an annual accumulation of free capital to take care of them. A sudden demand for capital from expanding trade and increasing production will, of course, draw heavily on such supplies. It may make money dear; it may cause liquidation of stocks to provide the capital for which genuine trade makes a higher bid. Even in so comfortable a financial year as 1898, legitimate business requirements of this sort caused a 6 per cent. call-money market in the autumn, and brought the New York bank surplus down to $4,000,000 in September. What followed on that occasion was a large gold movement from Europe to America, which London readily provided, because it had the gold (as it has to-day) and because we had credits instead of debits to exchange for it (as we did not have between 1904 and 1911). In the end, the American trade recovery was financed with little inconvenience. We are presently to see what the course of events in these directions is to be, at the present interesting juncture.

"Destined to mark an epoch in the history of modern thought."—John Burroughs in *The Atlantic Monthly*.

Henry Holt & Co. 34 W. 33 St. New York

Marie

AN EPISODE IN THE LIFE OF THE LATE ALLAN QUATERMAIN

By SIR RIDER HAGGARD, Author of "She," "King Solomon's Mines," "Allan Quatermain," etc. With Colored Frontispiece and Two Other Illustrations. Crown 8vo. $1.35 *net; by mail*, $1.45.

". . . As a literary creation, Allan Quatermain is worthy to rank with any of modern times as a hero and a gentleman. We can hardly hear too much of him. . . . The story is admirably told in Mr. Haggard's accustomed manner, and in such a way as to satisfy us from the sentimental point of view. . . . Among stories of adventure it would be hard to find any so deservedly high as the Quatermain series."

Founders of Modern Psychology

A New Book by Dr. G. STANLEY HALL

D. APPLETON & COMPANY - NEW YORK

JUST PUBLISHED

THE MOONLIGHT SONATA

By Johan Nordling

The love of Beethoven for the beautiful Countess, Julia Guicciardi, to whom the Moonlight Sonata was dedicated, is the theme of this story which has just scored a success abroad in three countries. Romantic emotion dominates it, without lessening its value as a faithful picture of the Master, of his fair inamorata, and of the social and artistic life of Old Vienna. A work of rare artistry, and a true and sympathetic study of a master-musician. *Cloth, 12mo. Color frontispiece and other illustrations. $1.25 net.*

STURGIS & WALTON CO.

31-33 East 27th Street, New York

"I have read your last book with solid satisfaction and it shall be one of my pleasures to make as many people read it as I can reach. It is full ripeness and mellowness—worth tons of ordinary socialist prattle on the subject," writes John Graham Brooks to Charles F. Dole, author of "The Burden of Poverty." *Postpaid* 55 *cents.*

THE BEGINNINGS
OF THE
American Revolution
By ELLEN CHASE

An intimate personal account of the individual attitude before the war, told from letters and diaries. Opinions are given with a freedom which indicates that the writers had not intended them for public inspection, not then at least. That is why they are readable, as well as remarkable historical documents. The press of two countries recognizes the volumes' worth.

"To the student of popular movements, these volumes will prove invaluable."—*Chicago Evening Post.*

"The picture of Boston is distinctly impressive. The author by allowing the actors to speak, as far as possible in their own words, preserves a virility that elevates, and often a humor that relieves."—*Liverpool Post and Mercury.*

A VARIETY OF NEW BOOKS

The Normal Child and Primary Education

By Arnold L. Gesell and Beatrice Chandler Gesell. Illustrated. $1.25.

A concisely comprehensive manual for those interested in elementary education. In scope, the book, after a brief historical sketch of the sciences in their relation to child life, discusses the genetic background, with special treatment of certain fundamental factors of child development. Actual experience is the basis of this discussion. The book is fully illustrated.

Pageants and Pageantry

By Esther Willard Bates. With an introduction by William Orr. Illustrated. $1.25.

A collection of original historical pageants drawn from Roman, Mediæval, English, and Colonial history and literature, with comprehensive suggestions for their production. The introduction affords a general discussion of the history, development, and value of pageantry. The illustrations are from photographs of recent successful American and English pageants.

European Beginnings of American History

By Alice M. Atkinson. Illustrated. $1.00.

An interesting and important book for those desiring an insight into the origin of American history. It puts the history of our country against a significant background of European history and forms an extremely readable and purposeful narrative, especially adapted to young people.

The Friendship of Nations

By Lucile Gulliver. Illustrated. 60 cents.

An interesting history of the Peace Movement for young and old. The story tells in detail of the development of peace between the nations, and being charmingly and vividly told and splendidly illustrated, it is an ideal supplement to the studies of history, civil government, and geography.

Old Time Hawaiians and Their Work

By Mary S. Lawrence. Illustrated. 60 cents.

A new book that will be delightful to American children or to any one who is interested in the history of the Hawaiian Islands, on account of its artistic illustrations, its description of primitive customs, and its charming story, which carries the reader from the earliest times to the present.

The American Short Story

By C. Alphonso Smith. 50 cents.

One of the author's interesting lectures delivered at the University of Berlin.

Principles and Practice of Poultry Culture

(*Country Life Education Series*)

By John H. Robinson. Illustrated. $2.50.

This is a comprehensive treatise written by a leading authority among poultrymen. It forms a decidedly practical course in the industry of poultry-raising. It is profusely illustrated.

Illustrations of Design

By Lockwood de Forest. In Biflex Binder, $2.00.

A portfolio containing fifty large plates reproducing the exquisite work done by the mastercraftsmen of India and showing clearly how they work from the simplest to the most intricate patterns by the same notes of line. This is a most valuable book for every student of design and for classes in manual training, wood carving, modeling, and jewelry making. The plates may be detached from the book for individual work in classes.

Examples of Industrial Education

By Frank Mitchell Leavitt. $1.25.

A study of the present-day demand for industrial training on the part of the manufacturer, organized labor, the social worker, and the educator, and a discussion of the relation of this training to existing economic, social, and educational conditions. The operation of certain prominent industrial schools is reviewed in detail, and a comprehensive plan is suggested for bringing the school system into closer relation with industrial training.

Palgrave's Golden Treasury of Songs and Lyrics

(*Standard English Classics Series*)

Edited by William Peterfield Trent and John Erskine. 50 cents.

A particularly satisfactory edition for the general reader, offering the recognized best of editing at the lowest cost.

Sargent's Fine and Industrial Arts in Elementary Schools

By Walter Sargent. Illustrated. 75 cents.

The wide experience of the author has enabled him in this new book to present material of unusual value to teachers who have any association whatever with art in the schools. The educational and practical values of elementary instruction in fine and industrial arts are shown, and a definite outline of work through each grade is included.

The clear half-tone illustrations made from the actual work of children present graphic examples of many phases of the suggested courses in drawing, manual training, basketry, and the other subjects included.

Elementary Applied Chemistry

By Lewis B. Allyn. Illustrated. 60 cents.

This book is based upon exercises with common substances—food products, water, textile fabrics, soil, and many others.

Boards of health, inspectors of milk, teachers of domestic science, and all those interested in the pure-food problem will find that the book has a special function in its valuable information relating to their work. The author is already well known for his successful campaigns in the cause of pure foods.

Elementary Entomology

By E. Dwight Sanderson and C. F. Jackson. Illustrated. $2.00.

An excellent general course for any one interested in entomology.

The text is untechnical. There are concise laboratory directions, keys for tracing the more common insects, and full directions for the preservation of insects. The illustrations are abundant and excellent in quality.

The Students' Hymnal

Edited by Charles H. Levermore. 50 cents.

The two hundred and fifty hymns in this collection are those which have been best known and loved through many generations. They have been chosen with especial reference to their sincerity in the expression of religious experience, depth of feeling, and poetic merit, and because they possess dignity, strength, and musical beauty. The collection is rich in morning and evening songs, in processional music, and in hymns appropriate to the festivals of the Christian year.

Ben Jonson
Every Man in His Humour, Volpone, Epicœne, The Alchemist. With an introduction by Ernest Rhys, Editor of Dekker's Plays, etc.

Philip Massinger
The Roman Actor, The Maid of Honour, A New Way to Pay Old Debts, Believe as You List. Edited by Lucius A. Sherman, Dean of the Graduate School, and Head Professor of English, University of Nebraska.

Oliver Goldsmith and Richard Brinsley Sheridan
The Good-natured Man, She Stoops to Conquer—The Rivals, The School for Scandal, The Critic. Edited by Isaac N. Demmon, Professor of English, University of Michigan.

It is the aim of this series to present a scholarly and satisfactory edition of representative plays of the great English writers, outside of Shakespeare, from the later years of the reign of Queen Elizabeth to the latter part of the eighteenth century. The volumes are attractive in appearance and inexpensive in price. They are judiciously annotated and adapted for use in the classroom. In many respects this edition differs widely from any other already published.

It is the purpose of this series to present the principal dramatists covering English dramatic history from Marlowe's *Tamburlaine* in 1587 to Sheridan's *School for Scandal* in 1777. Each volume contains four or five plays, selected with reference to their actual worth and general interest, and also because they represent the best efforts of their authors in the different varieties of dramas chosen.

The texts follow the authoritative old editions, but with such occasional departures as the results of recent critical scholarship demand. Spelling and punctuation have been modernized, and obsolete and occasional words referred to the glossaries. This makes the volumes suitable for the average reader as well as for the advanced scholar.

Each volume is furnished with an introduction by a British or an American scholar of rank dealing with the dramatist and his work, with special reference to the plays selected. In some cases the editor has also prepared the notes and glossaries; in other volumes this has been done either by the general editor of the series or under his supervision. Each volume contains a brief biographical note, and each play is preceded by an historical note, its source, date of composition, and other kindred matters. Adequate notes are furnished at the end, explaining difficult passages in Elizabethan grammar, historical and literary allusions, and other points that seem obscure. Besides obsolete and unusual terms the glossaries include the exceptional meanings of common words that are not for the most part found in an unabridged dictionary, a gazetteer, or an encyclopedia. Over-annotation, however, has been carefully avoided.

The volumes have specially prepared title pages, hand-lettered and ornamented in the manner of the original editions of the dramatists. Most of the volumes contain half-tone portraits of old engravings of the playwrights. The lines of the text are numbered by scenes, thus facilitating reference, either to the notes or to other parts of the text, in classroom use. The half lines are metrically arranged, something not usually done in modern popular editions of the old dramatists. This not only renders much more easy the study of the plays as poetry, but also gives the page a more pleasing appearance.

The books are printed in good clear type, are of convenient size (12mo), and are handsomely bound in uniform cloth.

"It is indispensable to every student of Shakespeare."—**The Nation**

A NEW
VARIORUM EDITION
OF THE WORKS OF
WILLIAM SHAKESPEARE

EDITED BY

HORACE HOWARD FURNESS, Ph.D., LL.D., Litt.D.

This edition of the works of Shakespeare, prepared by one of the foremost Shakespearian scholars, has been received everywhere with the greatest possible favor. It is the most exhaustive edition of the plays of the great dramatist, containing, as its name implies, a record of the notes and textual readings of all the editions that have preceded it. Dr. Furness also added new notes, and articles on the text, date of composition, sources of plot, etc., of the different plays.

The Value of the New Variorum Shakespeare

To lovers and students of Shakespeare, the value of the New Variorum Edition is apparent. Dr. Furness's Shakespearian Library contains several thousands of volumes, including the four Folios and some Quartos. Whosoever, therefore, possesses a volume of the New Variorum possesses all that, in his library, the Editor has deemed of value in regard to that particular play; whereby the library becomes virtually the common property of all. The last Variorum Edition was published in 1827 and is therefore eighty-five years old. In the years that have elapsed since its publication, Shakespearian criticism has made greater progress than in any former corresponding period. And in the *New Variorum Edition*, and in it alone, is all that is of value in the last variorum, and much of the best that has been done in America and Europe since its publication.

To the teacher, these volumes are invaluable. Each student required to study the text may not be able to have his own New Variorum, but the school with any pretense to a library should surely have a set, where may be sought out and found the fullest information on a point in question. The teacher or professor of English literature, who does not make a regular practise of consulting the New Variorum Edition, can not expect to be able to give his students the best instruction on the subject.

The theatrical profession, will find these volumes of great assistance, as they contain comments on the different actors and actresses who have gained fame in the roles of the particular play; on the costumes appropriate to the various characters and worn by celebrated interpreters of them, and on the music used in the various productions.

The SIXTEEN VOLUMES of the Variorum Edition which have thus far appeared are:

Romeo and Juliet
Hamlet (two volumes)
King Lear
Othello
The Merchant of Venice
Antony and Cleopatra
Macbeth
Revised Edition by Horace Howard Furness, Jr.
As You Like It
The Tempest
A Midsummer Night's Dream
The Winter's Tale
Much Ado About Nothing
Twelfth Night
Love's Labour's Lost
Richard the Third
Edited by Horace Howard Furness, Jr.

Royal octavo, gilt top, uncut edges, $4.00, net, per volume.
Half morocco, gilt top, $5.00, net, per volume.

WHAT CRITICS SAY OF THIS EDITION

"The admiration of every true student of Shakespeare."—*Dr. Wm. Aldis Wright.*

"Nowhere, probably, has more labour been devoted to his [Shakespeare's] works."—*Dr. Sidney Lee.*

"The very best and most complete edition."—*Blackwood's Edinburgh Magazine.*

"A truly monumental edition."—*Pall Mall Gazette.*

"Encyclopœdic and exhaustive."—*Dr. William J. Rolfe.*

"To the honor of the American branch of English literature."—*Richard Grant White.*

"Splendid alike in conception and execution."—*Atlantic Monthly.*

IMPORTANT TEXTBOOKS

OUTLINES OF ECONOMICS DEVELOPED IN A SERIES OF PROBLEMS

By Members of the Department of Political Economy in the University of Chicago

ENLARGED EDITION

The problem of improving the current methods of teaching elementary economics is now attracting widespread interest. This book is planned to answer the demand for improved courses. The ideals which have most fundamentally determined the character and content of the book are: (1) A belief that the elementary course in economics offers exceptional opportunities for training in thinking and reasoning; (2) A desire to connect the theoretical principles of economics with the actual facts and with current problems of the business world.

The result is a careful, analytical syllabus of the subjects usually covered in the introductory course, accompanied by some 1,200 questions and problems. It is expected that the *Outlines* will be used in connection with some textbook. Wherever adopted, the book has improved conditions in a marked degree. It has stimulated interest, vitalized the subject, and aroused independent thought.

160 pages, interleaved, 12mo, cloth; net $1.00, postpaid $1.13.

A LABORATORY GUIDE IN BACTERIOLOGY

By PAUL G. HEINEMANN

SECOND EDITION, ENLARGED AND REVISED.

The field in bacteriology is rapidly enlarging, and the knowledge gained is being put to vitally practical use, not only in medicine, but in several of the commercial industries. With the exception of the Laboratory Guide, there is no practical handbook for students preparing for work in the various branches of the science in the fermentation industries, in agriculture, in medicine, in the municipal control of milk and of water-works, etc.

The new edition of the Laboratory Guide is designed to cover the outlines for work in elementary courses in the various branches of bacteriology. It is intended to serve as a guide not only to the instructor, but especially to those practically engaged in applying the fundamental principles of the science. In technique and method it has been carefully revised and brought down to date, and itself represents the progress made in the science since the first edition appeared in 1905. 216 pages, 12mo, cloth; net $1.50, postpaid $1.59.

TWO STANDARD SERIES

FIRST-YEAR MATHEMATICS FOR SECONDARY SCHOOLS

378 pages, 12mo, cloth; net $1.00 postpaid $1.15.

SECOND-YEAR MATHEMATICS FOR SECONDARY SCHOOLS

269 pages, 12mo, cloth; net $1.50, postpaid $1.63.

TEACHER'S MANUAL FOR FIRST-YEAR MATHEMATICS

176 pages, 12mo, cloth; net 80 cents, postpaid 89 cents.

By GEORGE W. MYERS

Professor of the Teaching of Mathematics and Astronomy, College of Education, University of Chicago,

And the Instructors in Mathematics in the University High School

The most striking departure from the old way of teaching consists in the fusing of arithmetic, algebra, and geometry into a single study. To confine the student to the handling of symbols for one year and to the study of forms for another is to shut out all possibility of natural development. Instead he is now led to express geometrical facts by algebra and to illustrate algebraic ones by geometry, and thus to grasp the *essential* facts that underlie both.

ENGLISH POEMS

Selected and Edited with Illustrative and Explanatory Notes and Bibliographies.

By WALTER C. BRONSON

Professor of English Literature, Brown University.

OLD ENGLISH AND MIDDLE ENGLISH PERIODS. 436 pages, 12mo, cloth; net $1.00, postpaid $1.15.

THE ELIZABETHAN AGE AND THE PURITAN PERIOD. 550 pages, 12mo, cloth; net $1.00, postpaid $1.15.

THE RESTORATION AND THE EIGHTEENTH CENTURY. 541 pages, 12mo, cloth; net $1.00, postpaid $1.15.

THE NINETEENTH CENTURY. 635 pages, 12mo, cloth; net $1.00, postpaid $1.15.

This series of four volumes is intended primarily to afford college classes in English literature a convenient, inexpensive, and scholarly collection of the most important English poetry.

Other Volumes in Preparation.

HOUGHTON MIFFLIN COMPANY
BOSTON NEW YORK CHICAGO

The Nation

NEW YORK, THURSDAY, SEPTEMBER 12, 1912.

The Week

At Des Moines Mr. Roosevelt again elaborated his tariff views. "We stand," he said, "against the doctrine, the Republican party's tariff doctrine, that is a tariff for privilege. We stand against the Democratic doctrine which is a tariff for destruction, and we believe in a tariff for labor, a tariff to help our wage-workers, and the justification for which is to be found in the actual way in which it does help the wage-earner." Now, in the first place, it is to be observed that Mr. Roosevelt ran for Vice-President and President upon platforms which embodied the good old Republican protective tariff doctrine as being the sole hope of American labor, and that during the seven years he was President he never made a single protest against that tariff or sought in any way to alter it. More than that, he never spoke about it during his incumbency as President. But waiving that, and assuming for the moment that the Democratic doctrine does spell destruction to labor, just what kind of a tariff, one may ask, will be found in an "actual way to help the wage-earners"? Of course, Mr. Roosevelt has not the faintest idea. If the Republican high tariff spells privilege and the proposed Democratic low tariff spells destruction to labor, what is the magic tariff like on which labor thrives? Mr. Roosevelt could not answer; but this claptrap illustrates anew the complete confusion of his mind on tariff questions, on which he has never had any real conviction since he was a member of the Free Trade Club.
